Global Connections: GDO Broadening the AOM Experience for Emerging International Members (session 2)

Our broad goal is to connect and integrate emerging international members - scholars from emerging economies (e.g., South Africa, India) and other geographies where our GDO membership is underrepresented (e.g., Latin America, Eastern Europe, Middle East, Oceania). The GDO's Global Ambassadors will partner with AOM sister organizations to identify and recruit Management scholars around the world to take part in our PDW. Participants will be matched with mentors who will help them feel more integrated at the conference and more confident in their future AOM paper development efforts. Five panelists with connections to/in underrepresented/emerging economies will present ideas and facilitate roundtable discussion on overcoming outsider status at AOM and developing high-quality conference submissions. In alignment with AOM's four driving goals, our PDW aims to (1) connect and integrate members of the global management/organization community who might otherwise be overlooked at AOM, (2) enhance the diversity of the membership to which AOM provides indispensable value, (3) advance knowledge relevant to an even more diverse set of stakeholders/institutions around the world, and (4) enhance AOM's standing as a globally-led association. Key takeaways to participants of the PDW include stronger (1) connection to and integration within the GDO community, and (2) honing of paper development skills, making future AOM attendance more likely.

What is the Point of the Practical Implications? (session 4)

This panel discussion addresses a core ideological dichotomy and barrier to the dissemination of actionable, relevant, influential, and helpful managerial advice arising from our research. On one hand, we lament the research-practice divide and provide practical implications sections in many of our articles, presumably because we hold that our work does have practical implications. Yet this practice is not universal. Many practical implications are poorly written, pro forma, and/or not actionable. On the other hand, organizational scientists do not universally endorse the importance of practical implications in academic articles. Bartunek and Rynes (2010) stated that there is another divide among scholars themselves in the extent to which they view practical implications from our research as necessary or indicated. The goal of this panel symposium is to gather senior scholars to discuss and debate the purpose of the practical implications sections of journal articles. Why do we write them at all if practitioners are not reading them? We will debate 5 potential viewpoints.

Broadening our In-sight by Developing Self-Awareness of Faculty and Future Business Leaders (session 5)

Self-awareness is vital for business leaders and faculty who are classroom and research leaders. Subtle and strong emotions arise in business and research settings, in classrooms, and in general in dialogue with others. However, as part of our work in academia or business we are expected to be rational; emotions are not acknowledged or addressed in meaningful ways. Further, faculty and business leaders' emotional states influence students' and employees' learning effectiveness and performance. Research tells us that leaders' emotions and self-awareness are important in relationships, motivation, learning, and performance, and are at the root of what we value and experience. Therefore, it behooves us as faculty and business leaders to learn how to work with our inner experience and emotions by developing our self-awareness individually and in group settings. This not only fosters enhanced learning, but also models positive leadership abilities to students who will become business and community leaders. The purpose and expected outcome of this PDW is to advance participants' skill in developing self-awareness and working with emotions. This is achieved by modelling behavior in a safe group setting, the collective assisting of participants in managing emotion-laden situations in academic life. Through demonstrations of vulnerability around our own emotional work, the panelists encourage participants to delve into an emotional space. Becoming more comfortable with feeling and discussing emotions is critical to the development of self-awareness. Developing this skill and modelling it in classrooms will influence students to apply it as leaders, thereby improving the lives of students now, with a trickle-down effect to the people that they will work with in their future organizations.

Rise and Shine! How to Present Your Academic Research (session 6)

With this workshop, we continue our successful previous AOM PDW and draw attention to the importance of presenting academic research in the best possible way. In academia, presentations at conferences or during seminars are key to communicating one's work. Conference presentations are a great way to reach a large audience, and seminar presentations are often required when on the job market. Presentations are even more important in these unprecedented times, because they often are the only point of contact with potential employers. Yet presentation skills receive scant attention during PhD programs and academic careers in general. To address this gap, in this PDW we identify the best (and worst!) ways to present academic research by focusing on the content and design of academic presentations, as well as presenter skills. In addition, we will address the important role of the context, or setting, in which the presentation takes place, with special attention to the intricacies of presenting online. The presenters, who have ample experience in presenting their research in different settings and to different audiences (academic and practitioner conferences, workshops, companies, television, YouTube, radio), will shed new light on the art of presenting using illustrative data from a dedicated survey among academics. Workshop participants will gain an understanding of the important components of an academic presentation and will gain hands-on experience in applying their new knowledge. With this PDW, participants will broaden their sight and learn how to develop academic presentations that are tailored to their own discipline, preferred design style, and personal skills.

Gandhi's Way in Greta's World: Ahimsa/Non-violence and Satyagraha/Truth for Swaraj/Self-determination (session 7)

Mahatma Gandhi inspired Dr. Martin Luther King, Nelson Mandela, and others who fought for justice and left a lasting legacy, in India and abroad. 150 years after he was born, his name remains synonymous with his values of non-violent civil disobedience for holding on to truth as a path towards self-determination. As the world faces unprecedented global challenges of ever widening political divisions, climate emergency, gross economic inequalities, and the youth are rising up in social movements in many countries, it is time to have a necessary conversation about the Gandhi Way. We propose that the Gandhi Way is the path of ahimsa (non-violence) and satyagraha (holding fast to truth) towards swaraj (self-determination), at individual and collective levels, with non-cooperation, if necessary. This workshop brings together a panel of speakers with pluralistic perspectives on Gandhi's values, so that through a participative public dialog we can assess their relevance today. Gandhi is both revered and despised enough to have been assassinated by a fellow Hindu. His values are reflected in the struggles of the oppressed worldwide. Are the youth movements an example of living the Gandhi Way? Greta Thunberg, Malala Yousefzai, Emma Gonzalez and Yolanda Renee King are making news for speaking their truth. They are inspiring others and facing violence for it, just like Gandhi did. What are the alternative ways for those struggling for justice to reclaim their right to self-determination?

STR

Strategic Management Division (STR) Dissertation Consortium Part 1 (session 13)

The STR Division will sponsor the Dissertation Consortium during the pre-conference period of the 2020 Annual Meeting of the Academy of Management in Vancouver. The consortium is intended for PhD candidates who will be on the job market during the 2020-2021 academic year (i.e., for jobs beginning in Fall 2021). The main focus of the 2020 Dissertation Consortium will be on providing participating students with an opportunity to discuss their job market papers in small groups with distinguished faculty and peers. Catherine Magelssen (London Business School) and Luis Ballesteros (George Washington University) are the co-chairs for the 2020 Dissertation Consortium, and panelists include Theresa Cho (Seoul National University), Ilya Cuypers (Singapore Management University), Andrew Delios (National University of Singapore), JP Eggers (NYU), Javier Gimeno (INSEAD), Ha Hoang (ESSEC), Suresh Kotha (University of Washington), Elena Kulchina (NC State), and Dennis Yao (Harvard Business School).

Interested PhD candidates should apply by May 31st via the following website:
https://lbs.eu.qualtrics.com/jfe/form/SV_097Ly3cll8qb
 Session is by invitation only. The session organizer will provide the approval code for registration.

Strategic Management Division Doctoral Consortium 2020 Part 1 (session 14)

The Strategic Management Division will sponsor a Doctoral Consortium during the pre-conference period of the 2020 Annual Meeting of the Academy of Management. The objective of the Doctoral Consortium is to support students in their PhD programs. The Consortium will focus on providing participating students with opportunities to discuss their dissertation proposals in small groups with distinguished faculty and peers, and to learn about various academic and professional steps and tasks they will encounter in the senior years of their doctoral studies and thereafter. To qualify for the consortium, a candidate must be at the proposal stage of his or her dissertation. Application requirements will be announced on the STR listserv (February/March) and in the Spring STR Newsletter. By invitation only.

This session will be held offsite at Simon Fraser University's downtown campus. Registration information is posted in the STR Digest and Newsletter. For more information please contact John Joseph (johnj2@uci.edu) or Isin Guler (guler@unc.edu).

Leader-Member Exchange (LMX) Research Incubator PDW (session 456)

Leader-Member Exchange (LMX) has been studied for over 40 years in the Management literature, and scholars have repeatedly demonstrated its relevance and importance in the organizational context showing significant relationships with almost every leadership outcome variable (Gertsner & Day, 1997; Sin et al., 2009). Studies have been conducted across the globe and consistent results have been found, indicating its international importance (Dulebohn et al., 2012; Rockstuhl, Ang, & Shore, 2012). LMX is the 3rd most studied leadership model over the period from 2000-2013 (Dinh et al., 2014); however, the LMX literature is in need of a critical rejuvenation with regards to new directions for theory and research, lest this prolific research advancement stagnate. This PDW will provide a forum for scholars to discuss several promising areas of inquiry for future LMX research and perhaps develop collaborator relationships. The session will be focused around seven different LMX topic group discussion areas: LMX Theory, Foundations, & New Directions; Leader/Follower Congruence; LMX Development/Newcomer Adjustment; LMX Emotions; LMX Differentiation/Teams; LMX & Networks; and Culture/Diversity/International LMX Issues. Each table discussion will be led by a dyad of topic-specific LMX scholars. The session will begin with a 2-3 minute introduction of each discussion table theme. Participants are encouraged to bring their research ideas and research in progress, and ask questions related to their present research directions. Time is allotted to allow attendance at 4 of the seven tables.

This PDW will provide a forum for scholars to discuss several promising areas of inquiry for future LMX research and perhaps develop collaborator relationships. The session will be focused around seven different LMX topics: 1) LMX Theory, Foundations, & New Directions, Terri A. Scandura & Robert C Liden 2) Leader/Follower Congruence: HP Sin & Claudia C. Cogliser 3) LMX Development / Newcomer Adjustment: Jennifer D. Nahrgang & Talya Bauer 4) LMX Emotions: Herman Tse & Jeremy D. Meuser 5) LMX Differentiation/Teams: Smriti Anand & Prajya Vidarthi 6) LMX & Networks: Cecilé Emory & Kristin Cullen-Lester 7) Culture/Diversity/International LMX Issues. Thomas Rockstuhl & Lynn Shore In order to facilitate maximum feedback, we request that participants submit an extended abstract (650 words; 2 double spaced pages) of their idea to Jeremy D. Meuser (jmeuser@bus.olemiss.edu) by JULY15th. This should contain: 1) Reason/justification for the LMX related study. 2) What LMX phenomenon are you planning to explore? 3) Brief theoretical framework that tells the overall "story" of the LMX research/model, not individual hypotheses. 4) Formal hypotheses are not required. 5) A model diagram, if appropriate (does not count towards word limit). 6) References (do not count towards word limit). 7) Please indicate which of the table topics fit with your idea (maximum of 4), that is, which scholars with whom do you wish to speak?" Our panelists will then review these before the discussions to maximize the quality of discussions and feedback. Please contact the session organizer to obtain the approval code.

Leadership and HR Analytics: How to Prepare Leaders and HR Professionals for the Future of Work (session 450)

The transformation and digitalization of human resources (HR) over the past three decades has enabled the emergence of HR analytics - the collection and analysis of workforce data to aid in strategic decision-making. In light of this digital transformation, the demand for professionals who can effectively conduct, perform, and interpret analytics has seen a dramatic increase in HR leading to the development of a new and distinct role within the HR function: the HR Analyst. Additionally, this digital transformation has several implications for organization and HR leaders such as power structures and approaches to decision-making change, and leaders need to be even more flexible, adapt to changes more quickly, and utilize HR Analytics for evidence-based, strategic decision-making, often working closely with HR Analysts. The objective of this PDW is to create a dialogue between HR researchers, educators, and practitioners by gaining insight into how researchers and educators can better address the HR analytics skills gap to equip HR professionals and leaders to successfully embed HR analytics for strategic decision-making in organizations.

Exploring the Research Frontier on Individual Responses to Organizational Change (session 9)

How individuals experience and respond to organizational change projects has been deemed as critical for successful change implementation. Research on this important topic has received substantial attention from scholars in various management disciplines over the last couple of decades. This PDW aims to bring leading 'micro-perspectives to organizational change' scholars together in a panel discussion to provide a critical view on the current state of the literature and ignite an active dialogue. This session also allows for meaningful connections to be forged between panelists and participants. In the first part of the workshop, the panelists present brief statements summarizing their perspective on the current state of the organizational change literature, followed by an interactive question-and-answer session. Drawing on the results of these discussions, we hope to derive suggestions for an agenda of continued integrative theory building and empirical research on organizational change. In the second part of this workshop, panelists and junior researchers will be grouped by theme to share feedback on selected research projects in roundtable-style discussions. Overall, this PDW aims to inspire a fruitful dialogue between scholars to push the boundaries of, and to broaden our sight on, organizational change research.

The workshop is designed to span 2 hours in total. The first hour will include panelist presentations on the topic along with a question and answer session. All are welcome for this portion. The second hour of the workshop will be open to pre-registrants, where panelists and researchers will be grouped by theme to share feedback on research projects in roundtable-style discussions. To apply and pre-register for the second part of the workshop, please submit extended abstracts of your work (4 pages max, excluding references) to Katerina Gonzalez (katerina.gonzalez@suffolk.edu) and Rouven Kanitz (kanitz@bwl.lmu.de) including: (1) relevance of topic, (2) theoretical foundation, (3) research

Perfect Review Responses Clarifying Editors' Visions and Requirements (session 458)

Many new researchers consider journal publishing an opaque environment, both strange and alienating, yet they need to understand it for their future career. This PDW offers an opportunity to understand the views of editors by enabling participants to work closely with them discussing both the reviewing process and actual reviews. It is designed to support doctoral candidates, early and mid-career researchers in turning a Revise and Resubmit (R&R) into a published article. The transformation of scholarly interest and research practice into a published article is an inherently complex process and a potential source of major stress for novice researchers. As well as the systems and protocols to be addressed when the researcher receives feedback on articles submitted for publication, there may be a tension between organizations - such as universities or publishing houses - and the individual, creating confusion. More than ever, university governance systems emphasize the need for researchers to submit to top ranking journals early in their careers and, predictably, they receive reviews critical of their work. When they are invited to undertake a R&R, the potential challenge is to understand the tacit knowledge of the publishing world. Preparing an appropriate review response for editors requires careful balancing of both the feedback received and an understanding of the nature of the review process. In small groups of no more than eight persons, editors from a range of peer-reviewed journals will discuss specific examples of reviews and more general issues of peer review governance.

If you are planning to register to take part in the PDW, submission #11444 titled "Perfect Review Responses Clarifying Editors' Visions and Requirements" at the 2020 Academy of Management Meeting, please remember you will need to bring a paper with you that has either been rejected (with reviews not desk reject) or is a major revise and resubmit so that you can talk about this at the session. We look forward to seeing you in

question/hypotheses, (4) (proposed) methods, (5) (if applicable) results, (6) theoretical and practical implications, and (7) a brief description of current challenges the author(s) face.

Classifying Work-Related Life Events from Tweets: A Hands-on Tutorial and an Interactive Discussion (session 461)

New methods for extracting, processing, and analyzing social media data (e.g., machine learning techniques) have been developed in computer science, especially natural language processing, and related fields. Management research - particularly research on work and career-related events that can significantly impact productivity and well-being of workers and organizations - can take advantage of these new methods. The primary goal of this PDW is to provide a hands-on tutorial on techniques for extracting and classifying work-related life events (e.g. injury and job loss) from Tweets. These techniques are generalizable to other types of social media data. This PDW also aims to engage the audience and speakers from multiple divisions and disciplines in an interactive discussion about methodological issues related to using social media data in research. First, we will provide an overview of management research working with social media data and describe the features of social media data. We then describe a general pipeline of working with Twitter data, starting from accessing raw data to classifying work-related life events from filtered Tweets by applying machine learning techniques. Throughout the workshop, we will share relevant codes to the audience and provide a demonstration of the key steps in the pipeline, all in a user-friendly way that does not require any pre-work before the workshop. In the second part of the workshop, we will have an interactive discussion with the audience on methodological issues related to working with social media data in multiple areas of research and practice, as well as collaborating across multiple disciplines.

New Ways of Seeing Theory (session 3)

Over the past years, we have witnessed a growing crisis of confidence in the standard model of theorizing through propositions and hypotheses (“if, then” clauses), and the degree to which this model can by itself conceptually capture the complexity and dynamics of managerial and organizational phenomena (Alvesson, Gabriel and Paulsen, 2017; Delbridge & Fiss, 2013). The crux of this crisis relates to the dominance of this style of theorizing across theoretical and empirical work in our field, and indeed across quantitative and qualitative studies alike (Bluhm et al., 2011; Cornelissen, 2017). Critics highlight not only the rote and oftentimes blind adoption of the model (Kilduff, 2006; Cornelissen, 2017) but also point to some of its inherent weaknesses such as the ‘general linear reality’ (Abbott, 1988) that it presupposes and the correlational ‘net-effects thinking’ (Ragins, 2008) that lies at its core. As a way of theorizing, it often falls prey to a fallacy of reasoning by consequences (Elster, 2015) and of following a rather linear and deterministic model that projects a strong form of intentionality, force and agency onto “root” causes (whether human or otherwise) that offers little room for change, chance or circumstance. The result, in the eyes of many, is a rather ‘stale’ body of knowledge (e.g., Alvesson & Sandberg, 2013) that has led “to a relatively (and inappropriately) homogeneous management research field and an impoverished understanding of our phenomena of interest” (Delbridge & Fiss, 2013, p. 329). Based on these criticisms, we have also seen a flurry of suggestions towards alternative ways of theorizing. Some of these approaches start conceptually and suggest a different way of conceiving of the operational ‘units’ of theory – away from variance-based propositions or hypotheses to a consideration of events or processes (Cloutier & Langley, 2020). Yet others suggest turning our gaze to the meta-assumptions underpinning a theory and propose a form of theorizing that through

problematization and critique prods the field into new ways of conceptualizing and understanding organizations and management (Alvesson & Sandberg, 2013). And again others suggest that the solution lies in considering a different notion of causality than the traditional deterministic 'nuts and bolts' of a regression or formal proposition, proposing instead a focus on broader 'mechanisms' (Davis & Marquis, 2005) or on a 'conjunction' of causes (Fiss, 2011) where the presence of many interacting parts collectively bring forth an effect. Despite these developments, and the continued criticism of the standard model, the classic canon of how we theorize (Whetten, 1989) still persists to this day. For example, despite continued suggestions by AMR editors not to equate theory building with the stating of formal propositions (Kilduff, 2006; Delbridge & Fiss, 2013), the model continues to be the basis of over 80% percent of the papers published in AMR each year (Cornelissen, 2017). In other words, the traditional model seems to have a continuing hold over our practices, and particularly over the ways in which we think about theory and about legitimate theoretical contributions. In this PDW, we aim to raise awareness of viable alternative forms of theorizing, but we aim to do so in ways that give real practical insights and advice on such alternative forms. The reason for this is that we believe that participants will be best served by more practical, hands-on practical insights on the conventions and best practices associated with a particular mode of theorizing besides spotlighting the existence of these modes (as published work has already done). In other words, we want to make the session as practical as possible; so that besides raising awareness of alternative legitimate forms of theorizing, we also give colleagues practical tips as well as the confidence to theorize and write in a different idiom.

Equity Issues in Hospitality and Tourism (H&T) – Exploring (in)Equalities (session 449)

MED

Management Education and Learning Writers Workshop (session 453)

Asynchronous

The hospitality and tourism (H&T) industry (including airlines, hotels, resorts, cruise ships, restaurants, etc.) is the mainstay of many economies. According to the latest UNWTO World Tourism Barometer in 2018, international tourist arrivals grew by 6% to 1.4 billion worldwide, churning \$1.7 trillion in tourism receipts (UNWTO 2019a, b). The H&T sector is a major source of employment, though the proportion of part-time, temporary, or seasonal work and self-employment is generally higher than in the overall economy (ILO 2014, 2017). Very often the work requires little or no formal training and involves precarious working conditions, such as low wages, long and disagreeable working times, high work pressure, etc. (EU 2004; ILO, 2014). The H&T industry attracts mainly young people, migrants, and women, the latter even representing 60 – 70 % of the global H&T workforce (ILO 2014, 2017). This employment situation could foster social inequalities across multiple dimensions. This PDW aims to raise an awareness for the (in)equities faced by workers in H&T, such as gender, race, and class issues, and to discuss ways to address them. The experts (panelists and organizers) will present their views and raise topics to generate discussions and advance research on: (1) H&T, and the impact of global capitalism and transnational service work, (2) H&T, and intersections of gender and/or body related inequalities, (3) Luxury H&T, and experiences of inequalities, and (4) research methods and approaches to inequalities in H&T.

Paths Towards Sustainability (session 10)

Agri-Food and Planetary Stewardship: A Cosmopolitan Lens

Designated as a "Best Paper" for ONE

Author: **Jose M. Manuel Alcaraz**; Berlin School of
Business and InnovationAuthor: **Francisco Tirado**; U. Autonoma De
BarcelonaAuthor: **Anna Gálvez**; U. Oberta de Catalunya

Embracing a planetary 'geographical imagination', the scholarly tradition of Cosmopolitanism (illustrated by the old saying, 'I am a citizen of the world') offers important insights to analyze the ethical, political and global sustainability efforts of multinational corporations (MNCs). In this conceptual paper, we develop a three-dimensional Cosmopolitan framework centered on agriculture, the sector with the highest planetary environmental impact. The framework examines and advances key issues on private agri-food environmental governance through a planetary stewardship lens. It highlights cultural and ethical aspects; outlines an expanded understanding of responsibility that rests on materiality and causality chains; and offers several tenets for MNCs' involvement with multi-engagement environmental governance. Our work advances existing discussions around Cosmopolitanism and the normative implications of considering multinational corporations as political actors. It contributes to both the literature on private agri-food environmental governance, and to the nascent body of work on corporate sustainability addressing the stewardship of the planetary boundaries.

Towards a Scientific Approach to Sustainability: The Overconsumption Theory of the Firm

ONE Division Best Paper Award

Designated as a "Best Paper" for ONE

Author: **Kunjika Prasai**; Aix-Marseille U., IAE –

CERGAM

Author: **Emmanuelle Reynaud**; Aix Marseille U., IAE-CERGAM

The literature on corporate sustainability continues to grow but subsists to be an aspect of dilemma difficult to navigate. Improvement and understanding of consumption dynamics within organizations cannot be burdened with neglect when high levels of consumption is a dominant root to our environmental problems. As a restarting point to this deeply lost firm-environment relationship, we take a cognitive approach in this article to apply the consumption lens into the business perspective. We perform a rigorous integration of the particularly interrelated attention-based view, sensemaking and the ethical decision-making process for an organizational model of consumption to explain the overconsumption theory of the firm. Our findings provide an original scientific approach to estimate sustainability. By inspiring how we can truly embrace well-rounded corporate sustainability, our novel quantification provides guidance not just at the business level but also at the individual, governmental, societal and the global level at large.

[view paper \(if available\)](#)

Towards Degrowth-Conform Organizational Models: Framework Development and Application

Designated as a "Best Paper" for ONE

Author: **Stephan Hankammer**; Alanus U. of Arts and Social Sciences

Author: **Robin Kleer**; Vlerick Business School

Author: **Lena Mühl**; Institute for Technology and Innovation Management at RWTH Aachen

Author: **Johannes Euler**; Alanus U. of Arts and Social Sciences

Economic growth is predominantly seen as a central economic and political goal. Recently, this view has been increasingly criticized and the idea of sustainable degrowth emerged as an alternative paradigm in order to ensure human wellbeing within planetary boundaries. As business activity is a key driving force behind economic growth, the role of corporate organizations in a transition towards a post-growth society is a particularly challenging

question. It is for instance still unclear how business models for degrowth- conform organizations could look like. In order to address this research gap, our study aims to elaborate the role and design of organizations and their respective business models within the degrowth context. In this exploratory work, we use a two-step approach: Firstly, based on a systematic literature review we provide an overview on business-oriented findings in the degrowth literature. Based on this, we derive elements for a conceptual framework development to consolidate fragmented findings within the degrowth discourse. The resulting framework serves to describe principles for the design of degrowth-conform organizations. Subsequently, we conduct interviews with three CEOs of certified Benefit Corporations (B Corps) and an in-depth case study with four interviewees with a prime example of a B Corp: Dr. Bronner's. Overall, our findings show that B Corps to some extent successfully implement numerous degrowth- conform elements within our current economic system. However, tensions regarding growth-orientation remain, and further need for research regarding the role and design of organizations for degrowth is identified.

SIM Doctoral Consortium I (session 12)

This professional development workshop (PDW) aims to inspire and inform doctoral students about elements leading to success in their scholarship, teaching, service, and lives as academics, especially in the area of Social Issues in Management (SIM). We anticipate considerable faculty involvement beginning with a SIM Division Welcome on Thursday evening, August 6th, and finishing with a wrap-up in the afternoon on Friday, August 7th. Numerous distinguished scholars in the SIM division will share their knowledge, participate in panel debates, and engage with students. In addition, junior faculty will share their recent experiences with their fruitful dissertation process, job market, and mastering teaching. The PDW is designed to be informative and interactive, including breakout sessions matching students and faculty by interests. In addition, we will help the doctoral students interact to create a next generation of the SIM community. In general, participating students will develop a 'survival toolkit' for their doctoral program and early professional career. Participation is limited to students who apply and are accepted prior to July 2020.

Attendance of the SIM doctoral consortium is by application only. Applications are due by June 15, 2020 to SIMDocCon2020@gmail.com. Please contact the session organizer to obtain the approval code.

ONE

Organizations and the Natural Environment Doctoral Consortium Part 1 (session 16)

The ONE Doctoral Consortium aims to offer a networking, learning, and research reflection opportunity to doctoral students engaged in organizations and the natural environment (ONE) research. In addition to doctoral students with a primary interest in environmental research, this doctoral consortium is designed for doctoral students whose focus research area is outside of ONE but who also focus on environmental issues in their work. A maximum number of 24 doctoral students will be selected based on their research quality and representation of a diversity of academic institutions, geographic interests, and research topics. The aim of the doctoral consortium is to provide doctoral students the opportunity to have faculty members reflect on their work, to integrate them in international research networks, and to create new networks of their own. The consortium will be cross-disciplinary and open to different theoretical perspectives and the faculty members involved come from different cultural and research backgrounds. The format of the doctoral consortium is informal and open, but doctoral students will come well-prepared to optimize the interaction with other doctoral students and faculty. The format will be a combination of dynamic sessions with the group as a whole as well as small roundtable sessions to ensure that doctoral students are able to get profound advice, learn about the work of others, and get to know each other. In this way, doctoral students will get to know and engage in dialogue with senior and junior ONE faculty from various parts of the world who will share their knowledge and experiences from their research, teaching, and careers.

The Organizations and the Natural Environment Doctoral Consortium is strictly invitation only and limited spaces are available. Doctoral students wishing to attend may contact the organizers Steve Kennedy skennedy@rsm.nl and Sara Soderstrom capasb@umich.edu for the approval code.

Organizational Behavior Doctoral Student Consortium 2020 Part 1 (session 19)

The Organizational Behavior Doctoral Consortium is held annually and designed for doctoral students who are in the final stages of their programs. The consortium includes a mix of presentations, discussions, and interactive sessions designed to help doctoral students navigate the job market and launch them into their academic careers. The consortium will begin on Friday afternoon (4:00-7:00 pm) and will continue on Saturday (8:00 am - 1:00 pm; student participants must attend both days). The program will include faculty presentations and roundtable sessions on topics such as crafting the right academic job, succeeding at research and publishing, and preparing for effective teaching, as well as other related topics. Approximately 40 faculty members have volunteered to present or serve as roundtable hosts for this session. Students who want to attend the consortium must be nominated by their programs and endorsed by their advisors. Only one student can be nominated from each program at a respective institution.

TIM

TIM Junior Faculty Consortium - Friday (session 24)

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead four interactive discussions about how to balance the competing pressures of teaching, research and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals, and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their "research trajectory" from their peers and senior faculty. The consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation.

A Research Agenda for Business and Human Rights: Exploring Synergies with Other Disciplines (session 23)

We firmly believe that Business and Human Rights should be an integral part of studies on business and society, combining research areas such as business ethics, CSR, political science and/or international business with business and human rights. Drawing from other disciplines, possible research questions include how firms can respond to human rights challenges, how they can influence policy-making with respect to human rights concerns, or if and how firms can integrate BHR with 'regular' CSR activities, also in an international context. In order to address the overall question of how to break down barriers to launch BHR into mainstream management research and speak directly to the conference theme of "Broadening our Sights," we have invited a group of experts with different perspectives and from diverse disciplines to discuss how their work can inform the BHR research agenda. This interactive PDW intends to spark debate on an important yet understudied theme in management research, aspiring to attract a diversity of participants.

Broadening our Sight Through Agility: Strategies and Considerations (session 464)

The world in which businesses operate today is changing more rapidly than ever before, often shifting in an instant. Organizations are realizing they need to become more adaptable while still remaining strategic; leaders and OD practitioners have been searching for methodologies to allow them to survive and thrive. For this AOM PDW panel, Agility is one such methodology we must explore to remain organizationally strategic. Agility is an organization design capability "that can sense the need for change from both internal and external sources, carry out those changes routinely, and sustain above-average performance" (Worley & Lawler, 2010). This PDW session is in alignment with the 2020 AOM theme of "Broadening our Sight." Broadening our sights in this PDW session by exploring Agile may create synergies, increased value-added, and positive results for individuals, organizations, society, and the field of management and organizations. In this session, five experts in management consulting and organizational change (OD) provide five unique perspectives on Agile knowledge and applications. These five different perspectives include presentations on a) U.S. Military; b) Information Technology; c) Church Leadership Succession; d) Higher Education Institutional Change; and e) Agile's origins in Organization Design. There are three elements to this PDW session. First, the introduction of the presenters and each of their unique topics is provided; second, the presentation by each panelist provides a unique approach and/or application of Agile; and third is the rich discussion and dialogue with the audience, totaling 120 minutes.

International Early Academic Careers: Authentic Networking and Relationship Building (session 22)

This Professional Development Workshop (PDW) will focus on the importance of authentic networking and relationship building for early career academics working in an international context. It is tailored to PhD students and early career scholars in the Strategizing Activities and Practices (SAP) Interest Group and is designed to be part of the SAP Doctoral & Early Career Program 2020. The first part of the PDW is a facilitated panel discussion between six experts with a range of experience, including early to mid-career academics and leading researchers from the SAP and qualitative research community. The focus of the panel discussion is to share advice and experiences around how to network authentically and the sort of relationships you need to build as you develop your early academic career. In part two, participants will attend two pre-arranged roundtables which will provide an opportunity to delve more deeply into specific questions and for participants to share their own insights. Participants will be asked in advance about their specific areas of interest and level of experience and we will use this to allocate attendees to roundtables. In Round 1, we will group people with similar experience and topic interests; for example, those wanting to focus on the concept of "authentic" networking, or on networking for publication. In Round 2 we will mix people with a broader range of experience and interests. We will end the workshop with feedback from the roundtable discussions.

Can We Do It, Yes We Can: Strategies for Non-US Scholars to Succeed in the US Jobs Market (session 25)

Many management scholars from outside of the US are interested in working in American business schools. Despite this interest, many non-US candidates in the job market lack information on how to best navigate this competitive jobs market and obtain commensurate employment. This PDW is designed for both young and mid-career OB scholars who would like more information on seeking and obtaining employment at US business schools. It will bring together panelists currently working at schools in the US, who were trained overseas, and faculty who have been involved in recruiting scholars from outside the US. By hearing from each side, participants will be able to hear different perspectives from both those seeking employment in the US as well as from those on the hiring side for US institutions. The panel will highlight strategies for applying for and obtaining employment in the US, identify the key challenges faced by non-US scholars in the job search, application and interview process, and reflect on the tacit knowledge gained from their own experience. Topics for discussion include: What does the job search, application and selection process look like? What types of business schools are there in the US and how do different schools evaluate non-US candidates on the jobs market? What are key challenges faced by candidates in adapting to the national culture and university system? The PDW includes individual presentations by panelists, roundtable discussions focusing on strategies for job candidates at different stages in their careers, and a closing Q&A.

OSCM

OSCM Doctoral Student & Junior Faculty Consortium (Part 2) (session 26)

The primary focus of the consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing and the development of research streams. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

Preparing to Become a Global Faculty (session 465)

The demand for faculty is global and business schools draw their faculty from multiple countries. Despite the global demand, the expectations criteria for career advancement is complex and divergent. The opaqueness of expectations is potentially a deterrent to new PhDs and early-career academics as well as experienced academics wishing to move from one country to another or across types of institutions. Visa and work permit regulations differ across countries and they hinder the mobility of academics across countries. Such barriers are detrimental to developing effective diverse faculty for enriching students' experience and research plurality. The aim of this PDW is to offer a broad perspective of expectations from a selection of countries with large business and management education offerings in English – that is Australia / New Zealand, Brazil, Canada, China, India, Singapore, France, Germany, Netherlands, Belgium, UK and USA. Moreover, the PDW aims to offer perspective on how to successfully manage academic careers across institutions.

New Doctoral Student Consortium (NDSC):Day 1 (session 29)

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. This year's virtual NDSC will allow participants to connect with fellow doctoral students and to learn from experienced scholars on topics such as succeeding in a doctoral program, publishing research, and managing an academic career. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large. This year, the NDSC will run across three days/sessions: •Friday, August 7th: 10:00am-12:00 (noon) EST Session ID# 19680 •Saturday, August 8th: 10:00am-12:00 (noon) EST Session ID# 23347 •Sunday, August 9th :10:00am-12:00 (noon) EST Session ID# 23348

Pre-registration is required for this workshop as space is limited to 110 participants. The deadline to register online is July 30th, 2020. Participants only need to register once but must commit to participate on all 3 days. To register online, please visit:

https://docs.google.com/forms/d/e/1FAIpQLScdKVoj2gO1f73M7TZ3kkXqvFSrjEw/viewform?usp=sf_link
Registered participants will receive a confirmation e-mail with further information on the virtual sessions. In case of any questions, please reach out to us on aom.ndsc2020@gmail.com.

Sexual Orientation & Leadership Constraints & Vehicles for Aspiring LGB Leaders (session 28)

Stigma and marginalization are considered as relevant for the enactment of leadership (Fassinger et al., 2010) and may hinder LGB workers from pursuing a career in leadership. Yet despite a growth of scholarly interest in LGB issues in recent years (McFadden, 2015; Köllen, 2016; Webster et al., 2017), research on LGB issues in the context of leadership is scarce (Salter & Libermann, 2016; Fassinger et al., 2010). Fassinger and colleagues (2010) point out that the negative effects of stigmatization and marginalization of LGB leaders are likely experienced at all levels of leadership career development. Accordingly, LGB individuals may experience low self-efficacy with regard to assuming leadership roles, be denied as leaders within certain occupational fields due to discrimination as well as the influence of self-selection, experience having their achievements devalued, and be perceived as ineffective even if successful. Research about these four issues is scarce or even non-existent. The final point about perceptions received recent empirical scholarly attention by Salter and Libermann (2016), who analyzed the influence of sexual orientation and gender on the perceptions of effective leadership characteristics. The PDW aims to broaden our sight regarding diversity and inclusion in leadership development. Three dedicated table discussions led by experts in the field will shed light on individual and organizational factors that drive or hinder LGB people's career in leadership. Discussions focus on themes such as (1) Individual perception and behavior regarding leadership, (2) organizational constraints regarding LGB leadership development, and (3) groups and networks as vehicles for aspiring LGB leaders.

If you have any questions about the PDW or in the meantime want to begin an exchange of ideas, you can reach out to Georg Tamm on georg.tamm@unimelb.edu.au

From Founders to the Future: A 20/20 Look at Organization Development (session 31)

In the mid-2000s, scholars were concerned that organization development may have become a dying field. Since then, others have studied a number of developments associated with OD, including discourse analysis, agility, coaching, appreciative inquiry, complexity theory, and dialogic OD, to name a few that surfaced in the late 2000s and 2010s. The emergence of these practices created for practitioners a tension between the legacy of the founders of OD focused on interpersonal relationships, groups and teams, and internal organization relationships, and the requests of clients for assistance in these new areas. Further, practices once part of OD work, such as organization design, coaching, project management, and change management, became the purview of other professionals. Last, the role of human resource professionals was changing from transactional to more strategic engagements in organizations that at times closely resembled OD work. Both the extension of practices within the field of OD and the wide array of historic OD work now performed by HR and other professionals led to a sense of fragmentation in the OD field. This PDW presents the results of work by OD scholars and professionals during the Founders to the Future Project to both honor the past and recommend a coherent future for the field of OD. In an interactive setting, participants will provide feedback on reports in four areas provided to registrants prior to the conference: vision for the OD field, values for the future, competencies that will be needed, and a dynamic definition of OD.

Teaching Global Leadership: Exercises, Curriculum Development, and Best Practices (session 466)

Even as anti-globalization sentiment rises, organizations continue to operate and expand to multiple countries, requiring employees to work across geographic, cultural, linguistic, and institutional boundaries. Global leadership skills are vital for working effectively in such contexts, yet the shortage of global leaders has been well documented from the mid-1990s to the present, and few business schools have courses or programs on global leadership. The purpose of this PDW is to share valuable teaching knowledge from highly experienced global leadership professors and practitioners who have taught courses and developed programs on global leadership. This highly interactive PDW is designed to provide participants with several benefits, including: 1) an up-to-date summary of research and best practices for developing global leaders, 2) roundtable discussions (with handouts) of teaching tools, exercises, and curricular considerations in developing modules, courses, and programs on global leadership, 3) a forum for participants to discuss their own ideas and concerns related to applying best practices in their own settings, and 4) the option to become part of an online global leadership network. Participants will leave this workshop with practical information on best practices along with a variety of different approaches and exercises for teaching global leadership, as well as network of individuals passionate about improving global leadership skills.

Next Stop – Nerd Central: How to Get on the Research Methods Train (session 470)

This workshop is for people who are interested in writing about methods but don't know where to start. The first part of the PDW features a panel discussion from experienced methodologists. As part of the registration process, participants will be asked to provide a brief reflection on what kind of help they believe they need to write methods papers and perhaps become methodologists. These responses will be used to identify common issues and concerns that will be addressed by panelists. Possible topics may include active problem solving to address difficulties that arise in the writing, but may also cover advice for publishing, career planning, and teaching methods. Part 2 is a paper development workshop, along with informal roundtable conversations focused on aspects of writing and publishing methods articles. Those interested in Part 2 are encouraged to submit an abstract (not to exceed 300 words) describing an idea for a methods paper. Participants who submit an abstract will be paired with a mentor possessing relevant expertise on their paper idea. Participants will be able to ask questions of their assigned mentor, and mentors will offer advice and guidance directed towards helping participants develop their idea into a paper. If participants do not submit an abstract, they are welcome to participate in the round table discussions. The goal of this workshop is to encourage budding methodologists, and to also strengthen engagement in research methods scholarship throughout the broader AOM community. This PDW is endorsed by Organizational Research Methods, the Consortium for the Advancement of Research Methods and Analysis (CARMA), and Sage Publications.

Please sign up for Part 1 using the registration system. To sign up for Part 2, please email your abstract to Truit Gray (truit.gray@okstate.edu) or Anna Zabinski (anna.zabinski@okstate.edu) by July 15, 2020. Selected attendees will be notified by email.

Transitioning from a Faculty to an Administrator Role (session 33)

The purpose of this Professional Development Workshop (PDW) is to help faculty moving into administrative roles, such as a department chair or head of school, program director, or associate dean. Faculty members selected or asked to serve in administrative roles have very little formal training or background and often struggle through the assignment. In this PDW, we will discuss key issues that confront administrators and provide participants with the opportunity to share experiences with - and learn from - other experienced administrators. The number of session attendees is limited to facilitate interaction. To register, please contact the organizer, Dr. Jim Jawahar, via email at jimoham@ilstu.edu. Registration is open to those who are currently serving as chairs, program directors, associate deans or individuals who will be taking on such administrative roles in the near future. This two-hour workshop includes a lead-off plenary session with two speakers highlighting key challenges and issues that entry level administrators face today. Following the plenary session, there will be five breakout sessions, each of which will be moderated by one to two department chairs (listed below). While most of these administrators have many years of experience, some with less experience have been included to provide perspectives on the challenges that new administrators face. These breakout sessions will focus on the following topics: (1) evaluating and mentoring faculty on research and teaching, (2) dealing with power, politics, and cultural change (3) dealing with low-performing faculty, (4) recruiting and retaining a diverse faculty, (5) managing time and conflict. Participants will rotate through these breakout sessions in 20-minute intervals. There will be a short break during these sessions, providing an opportunity for participants to have individual conversations with other participants. The workshop will end with a wrap-up session where the moderators (topic chairs) will recap and summarize the key issues discussed at their roundtables.

Culture in Management Research: Best Practices for Use of the GLOBE Culture & Leadership Dimensions (session 35)

This interactive professional development workshop is designed to illustrate how GLOBE – the Global Leadership and Organizational Behavior Effectiveness Study - can be effectively used in different areas of management research. GLOBE is a multi-phase research program that has put forward validated measures of societal culture (cultural values and cultural practices) and culturally shared implicit leadership theories. After a brief introduction to GLOBE, a panel of established authors discusses how they have used GLOBE theories and measures in international research on firm strategy, human resources management, corporate social responsibility/sustainability, leadership, and entrepreneurship. The panel will highlight exemplar papers and best practices across areas of study using GLOBE concepts and data to highlight the value of this research within management. Interactive question and answer segments and roundtable discussions will allow participants to engage with the panel and share their own experiences. The chairs will facilitate a discussion about common pitfalls, challenges and reviewer concerns as well as ‘tips & tricks’ on how to address such concerns. The PDW will be of interest to (1) researchers who contemplate incorporating culture in their work, and (2) researchers who have started using, or have questions about, GLOBE theory and data.

Processes and Practices of Digital Strategizing: Perspectives and Avenues for Future Research (session 36)

Digital technologies such as platforms, big data analytics, and algorithms are reshaping how firms strategize. They are altering the strategy-making processes by rendering them less exclusive and secret and by making them more flexible. Digital technologies are also redefining practices of strategy-making, allowing actors to participate from afar or to utilize the wisdom of the crowd. Building on the panel symposium on Digital Strategizing organized at the AOM 2019, this PDW aims to (1) give an overview of recent theoretical and empirical advancements in process and practice studies on digital strategizing; (2) discuss the suitability, advantages and disadvantages of selected theoretical perspectives and methods to further advance corresponding research; and (3) synthesize and share with the scholarly community the PDW outcomes to sharpen the future research agenda on the processes and practices of digital strategizing.

Part I, the presentation of perspectives on processes and practices of digital strategizing, is open for all. For Part II, the PDW please 1) write around 250 words why you are interested in digital strategizing and 2) provide two preferred roundtables. All should be sent to georg.reischauer@wu.ac.at.

HR Division Middle-Stage Doctoral Consortium Part 1 (session 38)

This workshop is geared toward HR doctoral students in the middle of their program. The goal of this workshop is to help these students navigate the collection of career issues that begin to emerge when students are about halfway through a doctoral program. In many PhD programs, the middle stage is critical point. Students are expected to begin the transition into independent scholars, start building professional networks, move beyond the structure of courses and exams, and develop skills as an instructor. The workshop topics are designed to help these students develop the knowledge and skills required to be successful at this middle-stage and continue their development into strong researchers and teachers. It is also a way for HR doctoral students to build connections with others and become more involved in the HR Division.

Pre-registration for the HR Division Middle-Stage Doctoral Consortium is required. In order to request registration, please send your CV to Dr. Karina van de Voorde (F.C.v.d.Voorde@uvt.nl). Thank you! Contact the session organizer to obtain the approval code.

Designing an Accelerated Classroom: Sharing Best Practices (session 40)

More and more MBA programs, EMBA programs, and online classrooms are re-engineering the traditional semester to suit the working student population needs (e.g., move through degree programs at a faster pace). Accelerated formats are commonly defined as learning formats where students take courses in less time than a traditional semester (Boyd, 2007). This format may include shorter semesters, week-long programs, weekend courses, or hybrid online/on-ground classes. Although not a new platform, there is a lack of understanding and training in terms of selecting appropriate curriculum and more importantly, re-engineering a course for acceleration (Lee & Horsfall, 2010). This PDW is designed to engage attendees in a discussion of the accelerated classroom and to offer quality time with accelerated design experts. After a brief discussion of each area to consider, attendees may then choose to discuss up to three accelerated decision points in a more intimate, roundtable setting. Topics including: Selecting acceleration method (e.g. online, on-ground, hybrid; weekend, week, etc.); Eliminating the superfluous (e.g. identifying concepts of importance); Andragogical methods (e.g. experiential, lecture, cases); Assessment and grading (e.g. assignment types, timing); Saving yourself (e.g. instructor enthusiasm, sustainability). Attendees will be encouraged to bring a course they have already accelerated or need to accelerate and will be provided an opportunity to ask questions from topical experts using a roundtable, rotation format.

Attendees should bring a course syllabus which has already been accelerated, or is in need of acceleration. There will be opportunity to work through these with the topical experts.

Creating Impactful Research as a Junior Scholar: Advice from IM Division FIU Business Emerging Scholars (session 475)

Developing a research stream as a junior scholar, let alone an award-winning one, can be a difficult task. Are you a junior scholar who could use some advice on how to create an impactful research stream? Do you have questions for others who have been recognized for carving out influential international management research in the early years of their careers? If so, this session is for you! Recipients of the FIU Emerging Scholar Award will be present to talk about their experiences and share advice with you that may be valuable to your current research.

**OMT Junior Faculty Consortium
(session 54)**

The Organization and Management Theory Division is pleased to announce the 2019 OMT Junior Faculty Consortium. If you have started a faculty position in the last few years, this consortium is for you! The consortium provides an intimate forum for interacting with senior colleagues and peers about how to prosper in your academic career. The content of the consortium focuses on three areas; 1) developing your research for publication with the help of seasoned scholars in your area, 2) strategies for impact and growth as a researcher and teacher, and 3) navigating the early years of building a successful faculty career in diverse institutional settings. In addition, you will have a chance to interact and build connections with an exciting team of Faculty Fellows and diverse peers through developmental feedback on your research, panels, roundtable discussions and informal conversations.

Broadening our Sight to "Artificial Intelligence in Management" (session 45)

Whereas Artificial Intelligence (AI) has been identified as a way to create “an impact on a broader set of stakeholders than the research community” (Aguinis et al., 2019, p. 25), AMP is one of the only journals published by AOM where the words “Artificial Intelligence” appear in an article title within the past three years. By contrast, most of the top ranked journals in the field of Information Systems (IS) issued calls-for-papers for special issues about AI, including MISQ, EJIS, ISR, and JAIS. Such concerns about this lack of research were echoed in an editorial in AMJ where the authors argued for the need for more research on the digital workforce and the workplace of the future and for greater understanding of societal grand challenges through management research. AI is now a practical problem, related both to job destruction and creation. Therefore, this PDW will try to develop a greater understanding of AI management value. In many divisions at AOM annual meetings, theories have been suggested for the evaluation of AI management value. This workshop will address these concerns with a further goal of promoting publishable research on them. Therefore, AI in management may be a way to respond to the All-Academy theme question: “How can management and organizations build meaningful collaborations with other fields?” The response to this question might be a “convergence across different domains to tackle common theoretical and practical problems” by broadening our sight to AI in management.

Presenting in the Rough: Using Storytelling to Enhance Your Presentations (session 51)

Presentation skills play a central role in the dissemination of knowledge. Are you a doctoral student or faculty member who studies cognition in organizations and are looking for ways to dynamically present your research to a variety of audiences (researchers, practitioners, or the general public)? The purpose of this PDW is to bring together a group of scholars who are interested in finding new, innovative, and compelling ways to craft and deliver presentations. The PDW will be conducted in three parts — a series of presentations, a moderated discussion, and breakout discussions during which participants will have the opportunity to engage with panelists. The theme for this year's PDW is "Using Storytelling to Enhance Your Presentations." Panelists will present on specific topics such as using stories to set the "hook" and to present qualitative data, incorporating your own personal story and the life stories of research participants, and integrating compelling visual figures. At the end of the workshop, we hope participants leave with a set of strategies to improve their presenting. Toward that end, the workshop will be especially useful for those who are early in their careers or may not currently categorize themselves as polished presenters. With that said, we welcome those who are already comfortable with presenting and in search of new ideas. We plan for this to be an enriching PDW with a lively, interactive, and relaxed atmosphere.

Designing Innovative Executive Education Programs that Make Impact in a Changing World (session 50)

Multiple significant disruptions including, the COVID-19 crisis, digitalization, artificial intelligence, increasing labor costs, trade tensions, and the growing role of transforming economies like China, are putting pressure on firms to change like never before. Executive education programs should have an important role to play in helping firms to successfully adapt to these disruptions. However, executives are also increasingly finding that they want to spend less time in executive education programs due to the rapid pace of today's business, have part of programs delivered digitally, find ways to design executive education programs to have more impact since some question the value of executive education programs since information is becoming more readily available, and find ways to help clients implement taught content better. This session will explore how we can overcome these and other current challenges executive education faces using innovative approaches to executive education which are more impactful. The session will have three parts. 1) We will start with a brief overview of the session and an introduction to challenges facing executive education; 2) The four presenters will each run a 30 minute interactive segment on the following topics - using business improvement projects, developing innovative global teams, developing personal development plans for executives, and achieving more impactful learning and development without ignoring our executives' need for speed and immediacy; and 3) We will have discussion with session participants where all can contribute their ideas, critique, and ask questions about innovative approaches to executive education that make impact. The session will be interactive.

Content and Text Analysis in Organizational Research: Techniques and Applications (session 52)

This is a two-part PDW. Part 1 provides an introduction to content and text analysis as a research methodology. Presenters will discuss appropriate applications, reliability and validity concerns, data curation, programming, and different computer-aided content analysis tools. Experts will also walk through examples of content analysis techniques from published research and offer publishing tips. Part 1 is open to all AOM attendees and does not require pre-registration. Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Experts and authors will interact in small groups to discuss the content, structure, techniques, and potential journal outlets of submitted proposals. Part 2 requires pre-registration and a submission of a two-page proposal to contentanalysis1@gmail.com. The deadline for proposal submissions is July 13. Details are available via AOM listservs or by contacting the organizers at contentanalysis1@gmail.com.

Advances in Topic Modeling: Curating Corpora, Using Structured Models, and Theorizing with Visuals (session 57)

Our PDW's goal is to engage participants from OMT, RM, STR and SAP in big text analysis and theory generation with some of the latest advances in rendering with topic modeling (Hannigan et al., 2019

SAP

Strategizing as Communicative Practice - Connecting the SAP with the CCO Community (session 477)

This Professional Development Workshop (PDW) aims to bring together early and advanced career scholars from two communities in the field of organization and management studies, namely from the 'Strategizing Activities and Practice' (SAP) and the 'Communicative Constitution of Organizations' (CCO) communities. Emerging and experienced scholars

for a review). This includes methods of curating large textual corpora, modified versions of the core (Latent Dirichlet Allocation – LDA) topic modeling techniques, and refined visualizations for building theory. Topic modeling is at the interface of method and theory, big and little data, quantitative and qualitative analysis, induction and deduction (DiMaggio, 2015; Grimmer and Stewart, 2013; Mohr and Bogdanov, 2013; Mützel, 2015; Nelson, 2017). Participants (who need no more than basic programming knowledge and an interest in theory building) will be guided through pre-built programs in Python and R, which will be available on GitHub. The programs will be based off of the standard unstructured topic modeling routines (LDA), but include structured topic modeling (STM) and also bi-term (BT) analysis. We will also explore topic mapping via LDAvis and Gephi network software in order to help build conceptual relationships. The analyses will be guided by co-leads who have published and have an ongoing topic modeling research program: Tim Hannigan, Richard Haans, Dev Jennings, Hovig Tchalian, and Rodrigo Valadao. Academics with experience in theory building from mixed methods, Tim Hannigan, Vern Glaser, and Dev Jennings, will discuss different methods and examples for moving from analysis to theory in article writing. The PDW is targeted to researchers in OMT and STR, along with methodologists from RM.

PDW (WORKSHOP)

who successfully advanced SAP and/or CCO research with publications in top-tier management journals will provide participants of this PDW with insights, inspiration, and advice to further develop work-in-progress papers with a focus on the nexus between strategizing and communication. In line with the AoM 2020 theme of “20/20 Broadening our Sight” this PDW tries to foster high-qualitative academic research to broaden and challenge existing SAP concepts within and beyond organizational boundaries by integrating a communication perspective. Further, it aims to support a vivid exchange between the two communities and to discover and address blind spots in both research areas. Our PDW is two-parted. In the first part, five scholars who have recently published SAP and CCO research in top-tier journals - Nicolas Bencherki, Nada Endrissat, Jeannie Holstein, Tim Kuhn, and Virpi Sorsa - will present their theoretically and empirically driven perspectives on the nexus between strategizing and communication. The presentations will be followed by a Q&A session. In the second part, the breakout sessions, up to four attendees of the PDW will each meet with roundtable facilitators and discuss work-in-progress research. This PDW requires a pre-registration to productively use the breakout time.

Pre-Registration: The PDW, timed for two hours (120 minutes), is two-parted. While the first part (60 min) includes panel presentations and a brief Q&A session, the second part consists of breakout sessions in a roundtable format to discuss and further develop selected participants' current research projects/ideas more individually. While Part 1 is open for 40 participants, Part 2 can only be attended by 20 participants. Therefore, we kindly ask all people who would like to take part in Part 1 to send an informal registration request to the organizer (milena.leybold@uibk.ac.at). Those of you who would like to take part in Part 2 as well are asked to hand in a one-page application containing an abstract on a current research project/idea and questions you have regarding further development of this project/idea. The 20 selected participants for Part 2 build half of the participant group for Part 1. The rest of the participants for Part 1 will be chosen by lottery. Please feel free to contact us in case of any questions (milena.leybold@uibk.ac.at). Please contact the session organizer to obtain the approval code. There is a limit of 40 attendees.

Digital Technologies and Platforms: Reshaping Entrepreneurship, Business Models, and Ecosystem (session 476)

Digital technologies and platforms are transforming the environment within which companies and industries operate. Until recently, academia and practitioners were engaging in research activities to shed light on the implications of the platform economy and especially on the shift in the paradigm from the traditional to the platform- dependent entrepreneurship. These changes have important implications for the study of Entrepreneurship, Business Models, and Ecosystem Dynamics. Accordingly, there is a need to explore these implications for future scholarship, practice and society at large, promoting interdisciplinary dialog aiming to highlight research directions and spell out effective research designs and methods to pursue such an agenda. Moreover, the first subsection of this PDW is connected to a call for a paper on this very topic, to appear on the journal "Industrial and Corporate Change" in 2022.

Advancing Theory with Review Articles: How to Advance the Prospects for Publication (session 56)

Review articles provide a unique opportunity for scholars to make a theoretical contribution to management and organization studies. However, compared to methodological aspects of review articles, limited guidance currently exists for how to advance theory with review articles. The purpose of this PDW is to offer interesting and promising avenues (e.g., challenging assumptions, establishing boundary conditions, theorizing with mechanisms) for developing reviews which advance theory, in ways which enhance theoretical development in management and organization studies and thereby also increase the prospects for publication in high quality journals. The PDW will consist of a 90-minute workshop, the bulk of which focuses on interaction between: (i) participants with ideas for review papers that have the potential to make a theoretical contribution and; (ii) scholars with expertise publishing review papers that advance theory. The organizers will kick-off the PDW with a welcome and introduction. Then, three experts on writing review for advancing theory will deliver prepared remarks, followed by Q&As. Next, we will organize participants into tables, each handled by scholarly experts on review articles, for a discussion on how to develop the participants' ideas for review papers in ways that advance organization and management theory. The PDW addresses an important developmental need by offering researchers an opportunity to explore proven avenues for advancing theory with review articles, and apply that learning to ideas they have for theoretically contributive reviews in discussion with experienced scholars who have published such reviews.

Please submit your 1-page summary of ideas for advancing theory with literature reviews, which should include your name and email to Dr. Corinne Post cgp208@lehigh.edu or Dr. John Prescott prescott@pitt.edu by August 1, 2020. After August 1, we will allow participants who have not submitted a summary to register for the PDW and sit in on the discussions.

Qualitative Analysis Boot Camp V: Theoretical Hunches and How to Theorize from Data (session 58)

This PDW will help researchers develop and expand their qualitative data analysis skills, specifically in relation to building the link between data coding, analysis, and theorizing. This session focuses specifically on working with analytical and theoretical 'hunches' that emerge as you work with and code data. The session will begin with a panel of experienced qualitative scholars reflecting upon their practice of undertaking qualitative data analysis to enable the publication of interpretive qualitative research that aims at theory building. This panel of scholars will discuss the role of 'theoretical hunches' in interpretive data coding and analysis, zooming in on inductive and exploratory nature of the process, followed by ample time for questions from the audience. The second half of the session will be spent working with real (anonymized) data that participants bring to the session. Taking turns, we will move through various 'bits' of data to develop 'theoretical hunches' and look at various ways in which we can theorize from the data. Therein, we will work through and demystify the process of going from initial codes through to emergent themes and early theoretical ideas. This PDW is designed to help researchers identify practical ways to improve their analytical strategies when working with qualitative interpretive data. The PDW is relevant to both junior and more experienced scholars. On the one hand, the workshop will help doctoral students and junior scholars with limited experience in qualitative data coding and analysis to gain insights into the practicalities and key decisions associated with the process, which is hard to extract from published research articles or the extant methodological literature. On the other hand, the workshop provides an opportunity for experienced scholars to review various practices that facilitate linking data and theory, ask targeted questions about specific approaches to improve their analysis, and discuss

current projects with other experienced qualitative researchers.

Scaling Up Accelerator Research (session 47)

Over the past decade, accelerators have become an important feature of the global entrepreneurial landscape (Wright & Drori, 2018). This has led to a growing body of research that examines the types and organization of these accelerators, their role in evolving entrepreneurial systems, and their contributions to the growth and scaling activities of startups. Given the variety of the goals accelerators pursue and their different histories, ownership structures and internal organization and processes, researchers have also examined how these factors influence startups' gains (outcomes) from their affiliation with accelerators. Researchers have examined how these accelerators provide a forum for knowledge creation, technology development, commercialization, and new business model development. This research underscores the importance of accelerators for new ventures' strategic decisions such as funding, timing of exits, scaling up strategies, technology commercialization, and international expansion. Focusing on accelerators as a new phenomenon that aims to enhance entrepreneurial activities is in line with the theme of the 2020 AOM Meeting - "20/20: Broadening our Sight". In this PDW we will: (1) assess the current status of research on the contributions of accelerators to new ventures, (2) identify promising areas of research, (3) share research experiences tackling issues related to longitudinal data access, (4) study the learning process of successful versus less successful new ventures in accelerators, and (5) identify promising research opportunities to pursue, with important implications for the field of entrepreneurship as well as research on technology development, international management, strategy, and organization theory. Drawing on their extensive fieldwork in different countries (e.g., Brazil, Chile, Germany, France, India, Israel, UK, and the US), the authors aim to promote more impactful, rigorous and creative research on accelerators and their contributions to new ventures' growth.

TIM

Leading for Creativity (session 480)

This PDW addresses issues regarding leading for creativity in the context of the rise of digital technologies. Digital technologies are not only making creativity possible but also essential. Not surprisingly, CEOs reportedly consider creativity a key leadership need. Simultaneously, interest in creativity is rising; 79% of the publications covered by a recent review were published since 2001. Nevertheless, this recognition of creativity's increased importance may not be enough. Research suggests business people espouse creativity but don't necessarily follow through with decisions, and creativity may not open paths to the top positions. In this PDW, we will address questions such as how the organizational, environmental, and technological contexts shape how we lead for creativity; whether current archetypes of the creative leader are sufficient to cover the current state of affairs; and how we might simultaneously address the digital tools that are increasingly making creativity easier and the human-focused needs that can make the use of those tools difficult. As PDW speakers will elucidate, tools get blunted if the psychology and sociology of creativity isn't understood. Conversely, if the profound impact of digital tools is ignored, the traditional study of creativity will lose relevance. In roundtable discussions, participants will engage in questions such as what cross-disciplinary research and collaboration opportunities emerge from these trends; how we may teach these perspectives when education in most schools is still too discipline-based; and how we may make creativity in business become more than the adoption of design thinking and rapid prototyping.

Exploring Management Consulting Value Creation for Micro Enterprises (session 479)

Micro Enterprises represent over 90% of the businesses in both the USA and Europe. The challenges faced by these types of firms range from poor knowledge of strategy and competition, to limited financial and human resources. For this PDW, we will adopt the European Commission's definition of micro enterprises as '... enterprises that employ fewer than 10 persons and whose annual turnover or annual balance sheet total does not exceed EUR 2 million'. The aim of this PDW is to explore some of the main challenges faced by micro enterprises and how consultants can create value for and with them. Many micro enterprises fail over time or never embark upon a growth path due to their inability to overcome on their own some of the challenges they face. Most micro enterprises are reluctant to engage the support of Management Consulting firms. They either find them too costly, or do not necessarily believe in the value they can help them create. The PDW will do a deep dive into the Management Consulting practices used during interventions with micro enterprises and identify practices that work best for such companies. The presenters will draw from their own consulting experiences working with micro enterprises in industries as diverse as Healthcare, Legal Services, and Entertainment across multiple countries (e.g. Spain, France, USA). This interactive workshop will allow sufficient time to discuss lessons learned from the application of Management Consulting practices in micro enterprises, as well as explore "how-to" questions about possible ways of improving praxis going forward.

The Faith and Work Integration Spheres of Influence (FWSI) Model as a Personal Application Tool (session 61)

This professional development workshop will present the recently published Faith and Work Integration Spheres of Influence Model (FWSI) (Buszka & Ewest, 2020) as a personal and professional development tool that can be used by spiritual individuals of various backgrounds or belief systems. Though the tool was initially applied within the context of Christianity, the authors maintain that further research and application with different religions or general spirituality can prove useful for individuals, organizations and the Academy. Therefore, this workshop is designed to stimulate further application and research by involving participants in personal reflection and small group discussion of the FWSI. During the session, participants will consider the four levels of analysis included in the model; individual, occupational, work organization, and faith organization. Participants will discuss how they integrate faith and spirituality in own their work activities. They will also share personal, occupational, and organizational barriers to FWSI. Based on participant demographics, discussion groups will be configured (as much as possible) to represent a cross-section of management disciplines, faith groups, gender categories, ethnicities and races. After participating in this PDW, participants should have a greater insight into the various personal and contextual factors that encourage or impede FWSI. They will become familiar with a tool that may be used in teaching, mentoring, or determining areas for further FWSI research. In addition, comments and recorded insights from the workshop may be used to provide a rich and diverse narrative about faith, religion, and spirituality in the workplace.

Broadening our Sight: Preparing Students to Succeed in the Gig Economy (session 483)

The gig economy is a relatively recent phenomenon involving a shift from traditional employer-employee relationships to alternative work arrangements involving independent contractors and freelance workers. Given the rapidly increasing prevalence of this global phenomenon, management faculty and other professionals in higher education must broaden their sight to focus on preparing students to successfully participate in the gig economy. The purpose of this workshop is to explore ways to develop courses and curriculum that support students' success in the gig economy. Through a world café, guided self-reflection, and small group discussion activities, participants will engage in conversations to share ideas on ways to develop and assess a curriculum that lends itself to successful participation in the gig economy. As a result of their work in the session, participants will be able to identify essential skills required by the gig economy, apply the concept of essential skills to their teaching practice and curriculum development, and generate strategies to address challenges in assessing essential skills. Participants will address potential changes needed in the culture of management education to foster student success in the gig economy.

Reviewing in the Rough: A Professional Development Workshop for Doctoral Students and Junior Faculty (session 73)

Reviewing is a critical “professional responsibility” and an integral part of participating in the academic community (Trevino, 2008). Yet Tsang and Frey (2007: 129) noted that “there is no formal training for referees who usually pick up their review skills through learning by doing.” This raises a perplexing question for doctoral students and junior faculty: how to develop critical reviewing skills with so few opportunities to practice the art of reviewing? This PDW provides participants with a rare opportunity to learn and practice the art of reviewing. Prior to the conference, participants will be asked to prepare a practice review of Burak Oc’s manuscript, “Head Above the Parapet: How Minority Subordinates Influence Group Outcomes and the Consequences They Face for Doing So” (Oc, Bashshur, & Moore, 2019). The actual workshop will consist of two parts: (1) presentation on the reviewing process from editor’s, reviewer’s, and author’s perspectives, as well as (2) interactive roundtables. The panel will provide participants an opportunity to gain key insights about the review process and quality reviewing from scholars who have served as Associate Editors and Editorial Board Members at leading journals in our field. In the interactive roundtables, Burak will provide background information about the original submission of his manuscript. Participants will then break into small groups, each facilitated by an experienced faculty member, to discuss and receive feedback on their formal reviews. Burak will share the actual reviews he received and how they helped shape the final manuscript. The PDW will conclude with a question and answer period with Burak.

Impacting Grand Challenges: A 'Both/And' Approach (session 71)

In this panel symposium, we seek to build on growing efforts by management scholars to engage with grand challenges and the United Nations’ Sustainable Development Goals (SDGs). Reflective of the All- Academy Theme description, we note that research and scholarship around addressing these important issues traditionally adopts an either/or approach, reflecting a false self-imposed dichotomy that prevents more expansive and synergistic thinking. To advance scholarship and insights about the management of grand challenges, we turn to paradox theory, an organizational lens gaining attention among organizational scholars that explores the nature of competing demands and unpacks approaches to move beyond either/or thinking into more both/and approaches. We structured this session to be an interactive panel discussion with scholars who have deep and rich knowledge of specific SDGs. They will both share their knowledge and engage in a robust and provocative discussion to address important questions about the role of both/and thinking to address grand challenges, and how management scholars can advance that work. We hope that bringing a paradox lens to these issues will deepen our scholarship, as well as help push forward on practices in academia that allow us to be more relevant and impactful in building a thriving and sustainable world.

Tips, Tricks, and New Ideas for Approaching Diversity and Inclusion in the Classroom (session 72)

Matters relating to diversity and inclusion (D&I) have become increasingly critical on university campuses and in classrooms over the past several years. This is due in part to growing heterogeneity in student populations as well as to changing norms and perspectives stemming from influential societal events such as #BlackLivesMatter, and #MeToo and #Time’sUp movements. This workshop is aimed at scholars, whether doctoral students, junior or senior faculty, interested in (a) sharing and generating ideas for fostering inclusive classrooms and managing sensitive topics, (b) learning how to translate diversity and inclusion research for classroom materials, and (c) developing pedagogical tools and materials that incorporate relevant societal topics into classes to enhance lessons about gender, diversity, and inclusion. The proposed format for this workshop is a 2-hour event consisting of a panel discussion and a break-out development activity. The structure of this workshop will provide advice from expert scholars on innovative teaching techniques and activities, encourage sharing of experiences between participants, and create a space that fosters the generation of new ideas for teaching “hot-topics” related to D&I in organizations and in society. Finally, this PDW supports the AOM theme, “20/20: Broadening our Sight” by breaking down dichotomies to integrate knowledge creation and dissemination as well as teaching and research.

Broadening our Sight to "AI Implementation" (session 488)

Whereas AI is acknowledged by the editors of AMJ as one of the "grand challenges" that can disrupt work and the social order, AI also presents opportunities for radical organizational change. However, the word "implementation" never appears in the AMJ or AMP papers related to AI for several reasons: first, AI may be considered as an organizational capability and implemented in a mode closer to "strategy-as-practice"; second, the scope of evaluation of AI should be the process; third, AI implementation may benefit from the knowledge developed in OCIS division about socio-technical systems; and finally, AI implementation may be considered as a socio-economic approach to management (SEAM). Indeed, the challenge is to transform activities that can be cleaned up through AI while developing new activities that are value added to the companies and to their stakeholders. One of the MC approaches to this transformation process is SEAM, as it consists in pinpointing low added value activities and hidden costs into value creation through a change process aimed at developing the company, as opposed to downsizing (Savall, Zardet & Bonnet, 2008). The goals of this PDW are threefold; First, to compare different IS implementations, organizational transformation methods, and change management methods and evaluate their relevance to AI; second, to provide representatives from all divisions with an opportunity to share their views on the impact of AI implementation research; and, finally, to develop plans for the future to build bridges between different research and practice and to broaden our sight to "AI implementation".

Welcome to the PDW on AI! Last year in Boston, so many of you came that, this year, you will be connected to the "AI community" much in advance, with a follow-up after the PDW in Vancouver. A good opportunity to exchange expectations and knowledge in the spirit of AOM. If some of your colleagues did not register, tell them to come anyway, but in Boston, half of the participants had to stand in the corridor. We would like to accommodate you better in Vancouver. If you have any questions, please contact Emmanuel in Shanghai (monod@suibe.edu.cn or emmanuel.monod@outlook.com). Pre-Registration is required for this session.

Necessary Condition Analysis (NCA): Logic, Theory, Methodology, and New Applications. (session 490)

In this workshop you will learn how to conduct Necessary Condition Analysis. This emerging method was recently published in the journal *Organizational Research Methods* (2016, 2018) and is further described in the Sage book 'Conducting Necessary Condition Analysis' (2020). NCA is now used in many fields including Strategy, OB, HRM, Operations, and Entrepreneurship and International Management. NCA understands cause-effect relations as "necessary but not sufficient" and not as additive and average logic that is used in regression analysis. "Necessary" means that an outcome will not occur without the right level of the condition, independently of the rest of the causal structure (thus the condition can be a "bottleneck", "critical factor", "constraint"). In practice, the right level must be put and kept in place to avoid guaranteed failure, and to allow the outcome to exist. NCA can be used as a stand-alone tool or in combination with regression and other approaches. By adding a different logic and data analysis approach, NCA adds both rigor and relevance to theory and data analysis. This interactive session familiarizes scholars with the method and has two parts. Part 1 is a general introduction discussing the importance of necessary conditions, illustrated with examples from different fields. Part 2 helps participants to become the first users of NCA in their field, with a practical demonstration about the application of NCA on how to build necessity theories, and how to analyze data for testing such theories using the NCA software.

For more information about NCA see www.irim.eur.nl/nca or contact jdul@rsm.nl. No preparations required.

HR Division Late-Stage Doctoral Student Consortium (Part 1) (session 76)

The HR Division Late-Stage Doctoral Student Consortium will take place at the Academy of Management Annual Meeting in Vancouver on Friday and Saturday August 7-8, 2020. Highlights of this year's Consortium include: free dinner and networking event on Friday; a keynote address by Emeritus Professor David E. Guest (King's College); a research feedback session with leading scholars in the field of HR; a variety of panels and discussions about job talks and campus visits, evaluating and negotiating an offer, getting published, effective teaching, and international opportunities; and, finally, a panel meeting with the major journal editors. The ideal candidates are doctoral students who have finished coursework and are currently working on their dissertations. There is no attendance fee, but pre-registration is required. To register, email the following to Professor Bård Kuvaas (bard.kuvaas@bi.no) by June 1, 2020. *A nomination form (found here: <https://goo.gl/u7i3hV>) endorsed and signed by your doctoral program. *A 1-2 page current CV with contact information, education, research/teaching interests, publications, and conference presentations. These will be distributed to all attendees.

Pre-registration is required. Please write the following url in your browser <https://goo.gl/u7i3hV> to download the nomination form.

Update Your Teaching Game Plan: Case Teaching Innovations (session 492)

This PDW exposes participants to three innovative instructional formats which can help teach international business more effectively: 1) PodCases, 2) an interactive multimedia case and 3) a searchable, research-grounded database and website and that uses visualization techniques to supplement case studies. Different from many sessions, participants will be involved in the activities. There will be three presentations involving participants, followed by a question and answer period. Participants will leave the PDW being able to add relevant active learning content to their courses. The session will be facilitated by a group of professors who have excelled at teaching for many years who will share their experience with participants.

The MED Division Ambassadors Program: Broadening our Sight on Management Education Internationally (session 493)

How to broaden our sight on management education at AOM? How to find original answers to the important challenges our universities and education institutions are currently facing? Following the lead of the HR Division, which launched the Ambassadors Programs in 2008, the main objective of this PDW is to share the way the Ambassadors Program at the MED Division has developed and collectively learn from other similar initiatives about best practices to adopt or even collectively develop innovative models for teaching and learning. The questions raised in this PDW include: What are some of the similarities to, and differences from, the HR Ambassadors Program and other initiatives? What are the expected impacts of the MED Ambassadors on the MED Division? What are some of the outcomes the MED Ambassadors have managed to achieve already, and are planning to achieve? Several MED Ambassadors will introduce their projects (expectations of effectiveness) and key challenges they (may) face (difficulties encountered during project development and execution). The founder of HR Ambassadors Program will reflect on their suggestions. Thus, interested divisions and interest groups (DIGs) will be able to think of new ways to increase inclusiveness, involvement, and commitment of international members by means of the Ambassadors network.

20/20 Broadening our Sight on IMPACT: Dealing with a Perennial Challenge for Management Scholars (session 77)

The workshop is aimed at two specific target segments within business school faculty: (1) mid-career scholars who are seriously thinking of how to develop an impactful career and are keen to engage in a meaningful conversation with experienced and peer faculty; and (2) senior faculty leaders, who are department chairs, associate deans, and program leaders who are interested in developing specific programs to expand the impact of faculty research and teaching on real world. In this PDW, we want to continue and deepen the successful exchange we had during the 2018 AOM meeting in Boston on the topic of impact and transfer into the community of practice. In particular, we want to deliberate as a community of scholars and teachers on how our notions of impact are being challenged as a result of the evolving environment we described above. Through interactive discussion and application of concepts, participants will gain some insights on how to advance the research impact of their institutions. As faculty and administrators at business schools around the world, we are increasingly asked to demonstrate a real impact on the practice of business and public policy. This relates both to the research we produce and how we engage with students and executive education participants in the classroom. We explore four related themes in the workshop: (1) What is impactful research? (2) What is impactful teaching? (3) How do we measure impact? (4) How do we engage the stakeholders to produce meaningful change?

Impact of Mental Health and Well-being on Productivity of Small and and Medium-Sized Enterprises (session 495)

Mental health (MH) and well-being problems faced by staff in small and medium sized enterprises (SMEs) has been reported in developed economies such as Australia, United Kingdom, United States, and European countries, therefore much of the management research has focused on these countries. Research, though sparse, has found similar issues in developing economies such as India, Bangladesh, Thailand and Vietnam. Mental health problems are potential barrier to faster adoption of circular economic model in SMEs, which is key to achieve the sustainable development goals and business productivity in the developing economy [SDG 11,12]. This workshop will present the first conceptual model derived from interdisciplinary literature to analyse the impact of workforce mental health and well-being problems on business productivity and economic sustainability. The model will facilitate longitudinal research studies in India and other developing economies to understand the MH issues and its impact on productivity. This will facilitate interdisciplinary, international collaborations and cooperation to develop a research agenda and strategies driving the direction of international and national dialogue in the thematic area. Therefore, the workshop will co-create knowledge bringing together interdisciplinary perspectives to foster long-term collaborations realised through longitudinal research studies, joint publications, research projects, and engagement with businesses and policymakers.

A SLACK group will be set-up for this workshop and all the attendees will be emailed the link, in due time. Pre-Registration is required for this session.

Publishing in Top-Tier U.S. Journals for non-US Scholars (session 496)

Once a research project has been completed, one of the most prestigious forms of publication is a journal paper. There is not only increasing pressure to publish, but to publish in 'top-tier' journals. There is vast and comprehensive information about the range and scope of refereed research journals in every field. The objective of this Professional Development Workshop is to provide insight to – and engage with – non-U.S. scholars who intend to publish in top-tier US journals in the HR field. Publishing in top-tier US journals is very important for non-U.S. scholars for several reasons. Top-tier journals receive a particularly heavy weighting in promotion, salary, and tenure decisions. High article concentration would also be of interest to administrators of graduate programs. Research output increases school and department rankings, which in turn attracts the most qualified candidates. Better candidates then further improve a program's ranking.

Bridging Positive Organizational Scholarship and Diversity, Equity, and Inclusion (session 79)

This session is targeted to scholars interested in the study of diversity, equity, and inclusion (DEI) from strengths-based approaches. The aim of this innovative PDW is to provide a forum for researchers to discover new forms of inquiry that will advance research on DEI within positive organizational scholarship (POS). Part of the workshop will include empirical research puzzles presented by DEI experts known for their work in this area. We will feature current empirical and theoretical work that explores positive processes and outcomes associated with diversity in organizations. We will then encourage participation from participants through roundtable discussions and report-outs. Ideally, participants will be required to pre-register for the session and provide a brief summary on their interests at the nexus of DEI and POS, so that the organizers can assign them to an initial table based on the similarity of their interests of other participants and our facilitators. Participants will be asked to rotate to a new table following each panel presentation to allow cross-fertilization of ideas during the session. We will provide discussion questions for participants to reflect on theoretical, methodological, and practical puzzles they face in their own research and practice in DEI. Further, they will focus on collaboratively brainstorming how adopting a POS lens enhances their study of DEI topics, and how DEI research expands the study of POS. Participants will also consider the implications of empirical research on POS and DEI for individuals and organizations. The session will conclude with a report out on from each table and a summary of future directions presented by the organizing committee.

Greetings attendees! We hope that you will join us for an invigorating session with leading experts in the study of diversity, equity, and inclusion (DEI) from strengths-based and positive organizational scholarship approaches. In order to make this session fully inclusive to you, we ask that you please

Developing Teaching Ideas into Impact Intellectual Contributions (session 80)

Most management academics have been trained to do rigorous research in their chosen field, but few receive any guidance about how to translate that research into learning activities or create impactful intellectual contributions from their classroom activities. This professional development workshop is intended for authors, experienced or new to the management education and learning discipline, who are interested in developing their teaching and/or learning technique(s) into management education and learning academic conference presentations, publishable case studies, peer reviewed journal publications, and other intellectual contributions. This workshop brings together experienced management education teaching- scholars, teaching and learning journal editors, and publishers in a collegial environment that will allow participants to learn about and discuss ideas on converting research into classroom activities and the scholarship of teaching and learning, as well as build participants' networks and resources in this area of scholarship.

Decolonizing the Curriculum: An Exploration of Black and African-Centered Histories of Management (session 81)

When slavery ended, blacks were thrust into a world where they needed to understand the tenets of capitalism in a country that didn't allow them to be truly free citizens of the United States (Prieto & Phipps, 2019). The newly emancipated slaves did not possess financial wealth, but many still possessed the knowledge and traditions that were passed down from Africa, including traditional systems of cooperation that were practiced on the continent (Prieto & Phipps, 2019). As time elapsed, their knowledge, philosophies, and traditions lived on, and combined with experience that facilitated further learning. They were able to manage businesses, lead ventures, and impact both management theory and practice, as well as contribute to society. Unfortunately, however, their imprint is mostly unknown as there is a paucity of black and African-centered histories of Management. Amid the growing calls for the decolonization of the management curriculum, scholars are urged to seek out new histories and explore areas that have largely been ignored, inclusive of the black voice, experience, and contribution. It is time to heed the call of Cummings, Bridgman, Hassard, and Rowlinson (2017), who stated that there is a need for alternative perspectives on management. This additional historical narrative would contribute not only to the entrepreneurial self- efficacy of students of color, but also to their entrepreneurial knowledge, skills, and abilities, so that their critical and creative thought can be strengthened by a more solid awareness and understanding of management and entrepreneurship in the black/African context (Prieto, Phipps, Osiri, & LeCounte, 2017).

Obtaining Data from the Internet: Data Crawling in Management Research (session 500)

One benefit of the ubiquitous digitization is the increasing availability of data on the Internet that is relevant for management research. Data crawling is the method of using automated programs to extract large-scale data sets from the Internet. In this professional development workshop, we show that data crawling has quickly gained popularity in disciplines such as marketing or information systems, but is so far much less used in management research, although it has huge potential for management research. Even though it is very easy to write the first crawler, a lot of pitfalls can challenge the success of using crawled data for research. We therefore present in this Professional Development Workshop guidelines for crawling projects and address how many of the regularly occurring challenges can be solved in order to successfully use data crawling for management research. Participating in this workshop gives newcomers to data crawling a good idea of what is possible and how they should start, but also provides valuable insights for more experienced users of crawling methods.

Experiencing the New Live Case Methodology Combining Gamification, Teamwork, Role Play & Simulation (session 501)

The traditional case methodology has been a fundamental part of business education since the first half of the twentieth century. We are now well into the twenty-first century and are at the dawn of a new significant decade. The time has come for the next generation of the case study methodology. In this workshop we introduce and experience the 'live case' methodology, which leverages the traditional case study method, but puts the participants at the heart of the case, where they experience the case in question, rather than just reading about it. The learners (students and executives) are protagonists in the story being told. A story in which they are faced with real-world business management challenges, confronted with dilemmas and given the opportunity to present their solutions in a dynamic, competitive learning environment. The workshop uses the innovative web-based live case technology platform. While the simulation engine provides a gamified experience, the participants are not glued to their screens entering decisions. Rather, the technology is a tool which complements the in-person interactions between team members and provides and captures data to help the participants work through their challenges. The participants will come away with a knowledge of a new pedagogical tool, frameworks and decision-making models, and practical ways of applying these to their own content and teaching.

Observers, Offenders, and Allies: New Insights on Men's Roles in the Post #MeToo Era (session 83)

OB Division Best Symposium Award, sponsored by Cambridge University Press

In 2018, the popularization of the #MeToo movement exposed the pervasive problems of workplace sexual harassment and gender inequality, raising new questions about men's role in the prevention of sexual harassment. In this presentation, we explore how men - as observers, offenders, and allies - influence women's experience of harassment in the workplace. We ask: In the wake of #MeToo, are men aware of women's experience of harassment in the workplace? When and why do men believe women who come forward? How do men accused of harassment influence perceptions of the case and victim? And, moving forward, what do women want from their male allies? In order to move from awareness to action on sexual harassment, this symposium provides novel insights into men's role in the push for gender- equitable organizations.

Broadening Our Sight on Research Partnerships in India (session 506)

This PDW seeks to fulfill the mission of the Indian Academy of Management to build a vibrant and supportive community of scholars by expanding opportunities to connect and explore new ideas. In addition, this PDW is designed to serve the specific goal of building research capabilities within India. The PDW addresses this year's theme of broadening our sight on key challenges in the Indian context and is primarily targeted at researchers/young scholars in India who are just beginning to develop a research stream, and scholars elsewhere seeking to conduct research in India. The mentoring relationships and research partnerships formed during this PDW will hopefully translate to more impactful and higher quality scholarly output.

Pre-Registration is required for this session.

Fifty Shades of Entrepreneurial Action: Engaging Contextual, Processual and Non-Deliberative Facets (session 508)

Following McMullen & Shepherd's (2006) influential conceptualization of Entrepreneurial Action (EA), the study of EA has been identified as a key concept in understanding entrepreneurship. Going forward, we identify three challenges facing EA research. Firstly, recent work has suffered from insufficient attention to context (Dimov, 2018; Welter, 2011; Welter, Baker & Wirsching, 2019). Secondly, EA is sometimes treated explicitly as a process, but not consistently (Wood et al., 2019; Packard et al., 2017; Gartner, 2014). Lastly, while McMullen & Shepherd's definition assumes that EA is intendedly- rational, there is a need for inclusion of non-deliberative logics as sources of EA (Lerner, Hunt & Dimov, 2018). With this 2.5-hour PDW, we endeavor to bring together myriad expert perspectives to better appreciate the diversity of contextual, processual as well as non- deliberative facets shaping entrepreneurial action (as well as inaction!) (EA/I), and consequently, help build an appreciation of EA/I as a multi-stage, multi-level process.

This is an inclusive, interdisciplinary conversation and open to not only ENT Division members but also relevant to STR, OMT and OB Divisions, amongst others. All are welcome. Having said that, we do suggest that you have some appreciation of the Entrepreneurial Action construct and/or some appreciation of Action Theory. We would highly recommend that you read McMullen & Shepherd's seminal piece (2006) on the same. If you have any questions, please feel free to write to the organizers – Anna Long (Anna_Long@baylor.edu), Ketan Goswami (kgoswami.phd@ivey.ca) and Trey Lewis (jlewis88@vols.utk.edu). We look forward to you joining us for an invigorating conversation! Pre-Registration is required for this session.

The Third Mission and the Transformation of the Traditional Business School (session 509)

Universities and their business schools are engines of the knowledge-based economy. Over the past twenty-five years, a 'Third Mission' for universities has been articulated in addition to the traditional missions of teaching and research. No longer are universities simply teaching and research institutions—they are now increasingly expected, and often required, to engage formally with the local economy, government, and with society. Shifting policy imperatives towards increasing the scope and magnitude of externally-oriented engagement have served as a catalyst for institutional change that is markedly redefining the traditional role of universities and business schools. Indeed, the commercial engagement of universities with the local economy has become a cornerstone of national and regional innovation policies. This professional development workshop will provide participants with a greater understanding and appreciation of the rewards and risks associated with transforming business schools in pursuit of a Third Mission. While exploring the notion of the Third Mission as it relates to the traditional business school, this workshop will explore the institutional, economic, and political forces that impede business schools and their academic faculty from fully embracing it. The workshop will focus on identifying the ways that business school faculty attitudes and behavior might be shifted in support of the Third Mission, while addressing the many inherent tensions, conflicts, and contradictions that problematize this shift.

Exploring the Professional Identity of Scholar-Practitioners from Multiple Perspectives (session 510)

Management scholar-practitioners have one foot in the world of research and the other in the world of practice (Tenkasi & Hay, 2008). Their professional identity inherently makes them boundary spanners between groups, such that they are comfortable in multiple groups, but do not fully “fit in” with any of them (Bartunek & Rynes, 2014). In this workshop we explore that professional identity from the perspectives of multiple fields: management consulting, organization development, psychology, finance, engineering, information technology, human resources, and medicine. Each perspective on the scholar-practitioner reveals an identity that is both similar to and different from the others. Exploring these perspectives will lead to a greater understanding of our hybrid roles for the participants.

Rethinking Management Education in Africa: Ethics, Quality of Scholarship, and Knowledge Production (session 511)

This Professional Development Workshop (PDW) brings together management scholars and educators who are interested in management education in Africa to discuss the proliferation of business schools in Africa by examining their impact on the quality of management education, the ethical issues and implications of management education, and factors related to the production and dissemination of management knowledge and scholarship through research. The PDW will include three sections. The first section will consist of brief presentations of four topics from a group of management scholars. These presentations will lay the groundwork for group discussions aimed at identifying issues and the state of management education in Africa with special emphasis on the quality, ethical challenges, and the environmental challenges affecting research productivity of business school faculty. The second section will consist of roundtable group discussions among attendees to identify emerging research topics and suggest recommendations for solving the issues discussed in the first section. The third section will consist of a general discussion outlining the key research avenues to pursue and integrate major themes into a unified framework for developing actionable recommendations to advance the quality of business education, ethics and knowledge creation in Africa. The deliverables of the PDW are twofold: 1) develop a networking opportunity for researchers who are interested in business and management research in Africa, and 2) formalize the recommendations so it could be shared with the Association of African Business Schools (AABS) Deans.

Get Ready for Working With AI: AI Influences on Both Employees and Organizations (session 84)

The papers in this symposium examined AI when it is adopted in different stages and used to perform different roles, and its impact on both employees and organizations. Specifically, in terms of adoption stage, the papers focus on the impact of AI before and after it is adopted. As to AI's role in organizations, the studies focus on AI's influence on employees' reactions when it is used to make performance appraisal and perform leadership roles. Last, considering the potential downsides caused by AI development, innovation responsibility of organizations is important.

How Do Managers Fire Employees? A Theoretical Model of Termination Decision Making

Designated as a "Best Paper" for HR

Author: **Lyonel Laulié**; U. of Chile

Author: **Boram Do**; Yonsei U.

Author: **Gabriel Ignacio Briceño**; U. de Chile

In spite of the theoretical and practical importance of understanding involuntary turnover in organizations, few studies have explored termination decisions from a managerial perspective, with the vast majority of research focusing on the effects of involuntary turnover on terminated or remaining employees. Drawing from the theory of performance and the model of repeated decision making, we propose and test a theoretical model that explains how individual managers decide to terminate other individuals within organizations. Using a policy capturing method with a sample of 3,300 termination decisions about 30 termination scenarios from 110 participants, we found evidence that perceptions of task performance, contextual performance, and termination costs are significant determinants of a termination decision. We also found individual-level cross-level effects, such that individuals with previous termination experience put a higher weight on task performance when making termination decisions. Theoretical and practical implications are then discussed.

[view paper \(if available\)](#)

Legal Compliance and Human Resource Practitioners: A Reasoned Action Approach

Designated as a "Best Paper" for HR

Author: **Shayna Frawley**; West Chester U. of Pennsylvania

Author: **David J. Doorey**; York U.

Author: **Marie-Helene Elizabeth Budworth**; York U.

Author: **Parbudyal Singh**; York U.

Although violations of work law are a widespread issue in industrialized countries and HR practitioners play a leading role in promoting compliance, limited research has explored how HR practitioners interact with regulations governing work. Using the reasoned action approach as a theoretical framework and a survey of Canadian HR practitioners analyzed through bootstrapped multiple regression, this exploratory study examines how HR practitioners decide to comply (or not comply) with work law. Findings indicate that reasoned action models are very well-suited to examine compliance at an individual level. Perceived norms, self-efficacy, advantages/ disadvantages, attitudes, self-assessed legal knowledge, and tenure all directly influence compliance, and a number of indirect relationships were also significant (particularly involving risk). Contrary to expectations, practicing HR in a unionized firm and having a professional HR designation had a weak influence on compliance. The implications of this study are discussed, as are limitations and opportunities for future research.

[view paper \(if available\)](#)

CEO Positive Framing and Employee Participation in ESOPs

Designated as a "Best Paper" for HR

Author: **Jiangyan Li**; Sun Yat-Sen U.

Author: **Marie Dasborough**; U. of Miami

Employee stock ownership plans (ESOPs) can increase employee productivity and improve firm performance, but we know little about what encourages employee participation in ESOPs. This study investigates the influence of CEO positive framing in public speeches on employee participation in ESOPs. CEO positive framing can increase employee ownership when employees internalize CEOs' positive beliefs about firms' accomplishments and prospects, but can also decrease employee ownership when employees question the credibility of CEOs' positive framing. Using a sample of 3,144 U.S. listed firms from 2002 to 2013, we find that CEO positive framing increases employee participation in ESOPs. In addition, CEOs' internal attributions ("who") in public speeches weaken the effectiveness of their positive framing on employee participation in ESOPs, while CEOs' language concreteness ("how") and CEOs' present focus ("when") strengthen the effectiveness. Findings from this study advance employee ownership research by highlighting the important role of CEOs' public language use in promoting employee ownership.

[view paper \(if available\)](#)

The Impact of Obesity Level on the Relationship Between Weight Bias and Employment Discrimination (WITHDRAWN)

Designated as a "Best Paper" for HR

Author: **Dongyuan Wu**; Fudan U.

Author: **Mark V Roehling**; Michigan State U.

Author: **James Dulebohn**; Michigan State U.

Despite the recognized heterogeneity among obese individuals, research in the weight discrimination in employment literature has, overwhelmingly, ignored potential differences in the functioning of weight bias across target obesity levels. This study helps address that limitation. We used an experimental design involving a simulated hiring decision task and manipulating multiple levels of job applicant weight (normal, obese, morbidly obese) to examine whether 1) the underlying mechanisms of weight discrimination (automatic or controlled) vary across target obesity levels (obese versus morbidly obese), and 2) the relationship between weight bias measures (explicit and implicit) and discriminatory behavior varies across target obesity levels. Participants' hiring decision response times indicated that discrimination toward obese job applicants involves a more controlled (cognitive) process, whereas discrimination toward morbidly obese job applicants involves a more automatic process. Further, the relationship between both weight bias measures and discrimination in hiring decision varied significantly across job applicant obesity levels; weight bias measures, both explicit and implicit, have predictive validity for obese candidates, but not for morbidly obese candidates. Overall, the results, point to the need for future research to give greater attention to the ways in which discrimination against morbidly obese individuals may function differently than discrimination against individuals who are merely obese or overweight. Implications and future directions are discussed.

Social Networks and Inequality: Where Do We Go from Here? (session 90)

Research finds that social networking is often based on homophily principles (McPherson, Smith-Lovin, & Cook, 2001) and old boys' club memberships (Schmuck, 1986), thus leading to unequal treatment and extraction of benefits across different individuals. Recently, questions - such as 1) who has higher likelihood to create effective social network ties and 2) who capitalizes on social network ties more efficiently - have begun to permeate scholarly interest. However, little is known about the motivations driving individuals to utilize their social networking for professional advancement, the extant barriers allowing some people to utilize their networks more efficiently than others, and the potential consequences of such utilization for inequality. In this symposium, we explore the intersection of social networks and inequality by investigating how disadvantaged individuals (by gender or SES) create and utilize their social network ties. Further, we explore core motivations (loyalty) and barriers (gender stereotypes) that intervene with individuals' likelihood to create and utilize their social network ties, by looking at the utilization of social networks and the imminent consequences from such utilization. In four presentations, we tackle questions that will contribute to a greater understanding of how precisely social networks and inequality interplay with one another.

OMT Global: Doing Organizational Research Around the World (session 92)

The Organization & Management Theory Division proposes to host a “Global PDW” for the third consecutive year at the 2020 Annual Meeting of the Academy of Management, titled “Doing Organizational Research Around the World”. The objective of the workshop is to (1) Get high quality and specific feedback on research, based on international settings, from experienced mentors; (2) To build networks with scholars across the world with similar research interests; and (3) Discuss common challenges and opportunities of planning, implementing, and publishing high quality organizational research using international settings.

If you have research that uses a setting outside North America, and your research focuses on organization and management theory related topics, we encourage you to apply. To facilitate close personal engagement and feedback from the mentors, space for this consortium is limited and participation is by application only. Applications consist of a research proposal of an unpublished study based in a setting outside North America. The research proposal should not exceed 4000 words (this word count includes all text in the charts, graphs, diagrams, etc. and references). Please be sure to include a clear description that summarizes the research question, findings, and theoretical and substantive contribution. Please send your abstract to aomomtglobal@gmail.com by May 15 2020. Contact the session organizer to obtain the approval code.

How to Manage Academic Collaborations: Tips and Strategies from Team Scholars (session 91)

In this PDW, we draw from current research on team boundary spanning, multiple team membership, and virtual teams, to learn how we can successfully manage complex academic collaborations. The primary goals of this PDW are (1) to enhance participants' awareness of how they can effectively work together in multiple and/or virtual teams, and (2) to derive practical strategies they can use after the PDW to increase their own success in academic collaborations. The PDW will begin with a brief introduction to the concepts of team boundary spanning, multiple team membership, and virtual teams, followed by small group discussions in which participants reflect on when they were most successful in their academic collaborations. Dr. Deborah Ancona, Dr. Bradley Kirkman, and Dr. Tammy Rapp will then present their cutting-edge research in this field, proposing a set of practical strategies to help participants find opportunities to make their academic collaborations more rewarding and fruitful. Finally, participants will develop an action plan for incorporating strategies in their daily lives to make their collaborations more effective and share them with other participants. The PDW will conclude with a summative discussion of key learnings.

Multilevel Trust in Organizational Contexts: Insights, Challenges, and Future Research Directions (session 519)

Trust in organizational contexts is multilevel in nature with top- down influences from the environment and system and bottom-up effects of interactions and processes jointly affecting trust. However, research at different levels of analysis has largely developed independently with little cross-fertilization. This is despite recent work suggesting trust is not isomorphic across levels, and that a multilevel approach to trust should provide a more nuanced and realistic understanding of its roles and functions in organizations. To address these challenges, this PDW takes a focused multilevel perspective on trust in organizational contexts. It brings together ten leading international trust scholars to offer new conceptual developments and empirical insights on the multilevel nature of trust, drawing on their contributions to a forthcoming SIOP (Society for Industrial and Organizational Psychology) Organizational Frontiers Series volume to be published in 2020 entitled Trust in Organizations: A Multi-Level Perspective (edited by Nicole Gillespie, Ashely Fulmer, & Roy Lewicki). Collectively, the panel and roundtable discussions will clarify what we currently know about trust from a multilevel perspective, discuss forthcoming conceptual and empirical advances, highlight various options and methods for applying a multilevel perspective to trust research, and set out a future research agenda for the field. The workshop will be of relevance to scholars and PhD students interested in obtaining a deeper understanding of trust in organizational contexts, and how multilevel theory and analysis can inform future trust research.

Registration for this event is required due to the limited number of spaces.

SIM

SIM-ONE Junior Faculty Consortium (session 97)

The Junior Faculty Consortium (JFC) is an annual event that provides an opportunity for early career faculty members and postdocs that are members of the Social Issues in Management (SIM) or Organizations and/or the Natural Environment (ONE) division to network with senior faculty members and develop their research ideas. This year, the lead host for the JFC is the ONE division. The JFC is routinely over- subscribed and often cited by participants as one of the most worthwhile experiences of their Academy Annual Meeting. By bringing together junior and senior faculty that span ONE and SIM divisions, the JFC is well positioned to contribute to the Academy's mission to "build a vibrant and supportive community of scholars by markedly expanding opportunities to connect and explore ideas". The goals of the session are twofold: (1) provide junior faculty with an opportunity to meet and interact with other junior and senior scholars in the field, and (2) discuss research ideas, career trajectory, publication issues, and non-research issues salient to the junior faculty's current position. In addition to getting feedback on a working paper, we have designed activities to generate dialogue around issues such as building a coherent research and teaching program in time for key evaluation milestones (like contract renewals or tenure decisions); funding; developing a scholarly identity; balancing work and life as an early career scholar; and publishing specific issues such as navigating the review process, determining 'fit' between a paper and journal, and getting ONE/ SIM scholarship placed in leading journals.

What Is 'Systematic' About Systematic Literature Reviews? (session 527)

In this PDW, we will offer (1) a lively intellectual discussion with journal editors at leading management journals on the best approaches and best practices for systematic synthesis of management literature, and (2) a hands-on training session on how to design systematic literature reviews, describing methodological innovations for conducting them and more rigorous standards for reporting them. First, we will discuss the purpose of systematic literature reviews (compared to other types of literature reviews) and their relevance for advancing management scholarly efforts. Second, we will illuminate why most literature reviews often fall short of their potential, and how unrecognized variance in methodological rigor undermines the usefulness of different types of reviews for evidence-based management. Third, we will present state-of-the-art techniques and approaches for conducting systematic literature reviews; in doing so we show how adoption of advanced systematic review practices facilitate an accumulated body of knowledge to guide in management scholarship and practice. There will be opportunities to both interact with journal editors and participate in interactive activities designed to advance skills for planning, selecting, formulating, conducting, reporting, and publishing systematic literature reviews.

This workshop consists of two parts: 1) Panel with journal editors, and 2) Hands-on training session. Attendance is open as long as space permits.

Introduction to Social Network Analysis (session 526)

Social network analysis is a field of study that focuses on social relations among a set of actors — people, teams, and organizations — rather than focus on the attributes of the actors. Network researchers have developed a set of distinctive theoretical perspectives and methodological techniques for collecting data, statistical analysis, and visual representation. This PDW's goals are to: Introduce members of the Academy of Management to social network theory and analysis; Discuss both micro and macro management research based in social network theory; Introduce participants to UCINET and other social network analysis tools; Guide participants on how to learn more about social network analysis

Broadening Our Impact: Publishing in HBR, SMR, CMR, & PSJ (session 520)

Many research studies have commenced with the hope they will have significant theoretical and practical implications and that these implications will be published. Many researchers want to make a difference within their scholarly communities as well as within organizations where managers and professionals practice. Yet these important insights are often not read by "real world" leaders, managers, and professionals. In our quest to be more inclusive in sharing our research it is increasingly important to consider new ways of providing managers greater access to our research findings. This PDW focuses on how researchers can have greater impact on practice by thinking about practical implications early on in the project development and by publishing in journals that are circulated beyond the Academy. Senior editors representing "bridging" journals (Harvard Business Review, MIT Sloan Management Review, People + Strategy Journal) will share insights on how to publish in venues that impact both academics and practitioners. In addition, researchers will share a priori research development strategies that set up projects with a greater chance to make a difference beyond the Academy in the "real world" to improve lives. Researchers and editors will lead a highly interactive and participative session on this topic, which will include audience dialogue and roundtable discussions.

Common Methodological Problems in Operations Management Research and How They Can Be Addressed (session 96)

Increasing methodological sophistication of quantitative empirical research creates a challenge for the traditional journal review process. First, as the methodological toolbox of empirical researchers expands, it becomes more difficult to find reviewers that are able to check these methods. Second, studies using leading edge techniques may not explain these techniques and their results in the clearest possible way. To address these issues, Journal of Operations management has introduced a separate methods review track along with the traditional review process. In this PDW, we explain the common methodological problems from simple research design issues to complex data analysis issues that prevent articles from being published in the journal and how these issues could be potentially addressed by authors. This PDW has two goals: First, we will provide an overview of the common problems in submitted manuscripts and explain some potential reasons for these problems. Second, we will present ways that these problems can be either avoided or addressed by authors. Ultimately, the workshop aims to improve the methodological quality of the manuscripts submitted to the journal.

Rationality in the Entrepreneurship Process: Is Being Rational Actually Rational? (session 513)

The 2020 version of the “Innovating How We Teach Innovation” Professional Development Workshop (PDW) builds on the success of four prior PDWs and addresses topics that will have a substantial impact on innovation education and pedagogy over the next five years. The first topic focuses on the role of digital design, and how we employ new digital technologies to prototype and test ideas. The second topic is on the role of makerspaces in fostering inclusive environments for innovation. The third topic is on using experiential approaches to teaching crowdsourcing, involving students not only on the concepts but the practice of crowdsourcing. For each of the three topics, there will be short presentations from faculty actively engaged in each area, followed by Q&A. In the second half, the PDW features roundtable discussions among presenters and PDW attendees to exchange experience around these three topics and report out findings to the group.

Building Meaningful International Collaborations (session 516)

The Building Meaningful International Collaborations PDW is intended to foster and create new rich collaborations with colleagues around the world through sharing experiences and best practices of international research and teaching endeavors, with a mind to breaking the barriers associated with the different national and topical locating of colleagues. It is part of a series of such PDWs that commenced in 2008. This session answers the conference theme challenge, "How can the Academy of Management serve the diverse interests of its global membership?" The conference theme statement notes that the Academy of Management aims to "inspire and enable a better world through our scholarship and teaching about management and organizations." Addressing this with an expansive international exchange is an approach imbued with the spirit of innovation spawned by diversity that the 2020s ought to support. Some nations have rich traditions of international collaboration and have many strong centers of research. However, other countries might have one institution that is the center of international collaboration or in some cases might have several competing centers that dissipate the resources available for such ventures. Bringing together scholars and academics from nations that have been underrepresented in cross-country partnerships with those from well-funded and experienced institutions will enhance our discipline of Management. The workshop will be focused on collaborations among academicians, their students, NGOs, government institutions, and businesses s will open new ways and methods of collaboration among them. It is hoped that these exchanges will lead to future collaborations among the presenters that will be productive and successful both in research as well as in teaching areas.

Service Learning and Change: Workable Models for Project-Oriented Learning (session 524)

Service-learning, action research, experiential learning, 'capstone' projects, and corporate social responsibility (CSR) are all popular topics in the literature as well as being featured within the curricula of undergraduate and graduate management programs. This PDW explores the amalgamation of these constructs as a way to accomplish multiple educational and institutional goals while optimizing the opportunity to provide learners with valuable field experiences. The model used by the facilitators of this PDW helps learners internalize key management theory as they help client organizations execute planned change using a value-set that emphasizes the transference of the students' change-related skills into the client system. This PDW aligns with the conference theme, "Broadening our Sight," as it encourages academics and practitioners to continue to foster opportunities for learners to develop within the management field as well as to contribute to the resolution of pressing challenges faced by societies in the 21st century. Keenly aware that there are many approaches to this work, the PDW is structured to welcome diverse perspectives and interests, be highly interactive, and emphasize sharing knowledge and conceptualizing new ideas, processes, and practices for service learning experiences with an emphasis on organizational change. We expect attendees to include a cross-section of colleagues who have extensive experience with service learning as applied to organizational change as well as colleagues who are interested in growing their own efforts from the ground up.

Nuts and Bolts of Research on B Corps: Empirical Methods and Research Design (session 525)

Research on Certified B Corporations, commonly known as B Corps, has grown manifold in the past few years. With a strong mission to pursue social good, B Corps offer a bounded phenomenon for scholarship in areas of sustainability, entrepreneurship, and corporate social responsibility. The many layers in the B Corp phenomenon, ranging from a comprehensive certification mechanism to Benefit Corporation legislation have attracted a wide array of research questions and continue to inform theories related to institutions, social movements, social evaluations, certification, and categories. Further, as avant-garde social enterprises that are also for-profit, B Corps are a new context for entrepreneurship scholars to test mainstream theories and push new boundaries of understanding. In responding to the increasing plurality of research on B Corps, this PDW aims to help the research community define and push boundaries of B Corps research, especially as related to empirical methods and research design. In this PDW, we will take stock of the vibrant research in this area, showcase compelling research approaches, and discuss challenges and opportunities ahead. We have invited accomplished B Corps researchers to present and participate in the panel discussions. The panel discussions are open to everyone. We will also organize a small group table discussion session to help participants develop their B Corp-related papers. The organizing team and many of the table facilitators have conducted similar workshops in other settings, such as the Global B Academics Roundtable, and have the experience to skillfully facilitate such discussions.

The small group paper sessions are by invitation only. Pre-Registration is required. Please contact the session organizer to obtain the approval code.

For a Limited Time Only: A Practice-Based View of Strategizing in Temporary Organizations (session 529)

Temporary organizations – organizations that are deliberately created with a starting point and termination date – reshape organizing practices that are common to permanent organizations. Organizational permanence is still the taken-for-granted assumption in much of strategy and organizational research. Finite temporal horizons create tensions and paradoxes that challenge existing generic practices and give rise to new practices. Temporal routines are disrupted or discarded. Coordination and collaboration in temporary organizations is subject to the forces of “isochronism”, whereby actors must subscribe to common timing norms if they are to accomplish the goals set for the temporary organization. Strategizing temporary organizations therefore calls for greater awareness of temporal structures - the temporal rhythms that pace behaviour and the temporal constraints that shape practices. The purpose of this PDW is to bring together researchers who are working on temporary organizations and temporary organizing with a view to focus on a practice-based view of temporary organizations and temporary organizing that explicitly takes account of temporality. This PDW is also an opportunity for researchers who follow a practice-based view of organizations to engage with researchers that work on temporary organizations and temporary organizing.

From Firm to Industry: Bridging Levels of Analysis in Qualitative Research in Entrepreneurship (session 514)

The goal of this workshop is to bring together scholars interested in conducting research on entrepreneurship topics using qualitative data at the firm and industry levels of analysis. Despite increased interest in these levels of analysis using qualitative data, there has been minimal dialogue across scholars from these two approaches.

Firm level analysis allows for the in-depth examination of new venture processes, while industry level analysis has been used to explore the emergence of new industries or the dynamics of entry, exit, and survival of a population of new ventures. Yet, while each of the two approaches has its distinct benefits and, at times, emphasis on different data sources (e.g. interviews vs. archival data), they also share commonalities (e.g. topical interests) and exhibit potential complementarities (e.g. exploring the fine-grained actions of new ventures in an industry over time). In this PDW, we bring together scholars with a track record of publishing rigorous research at the firm and industry levels of analysis using qualitative data to share their experience and create a dialogue. Ultimately, the goal of this PDW is to seed a community of scholars interested in using qualitative data to examine firm and industry level dynamics in entrepreneurship.

Part 1 of PDW: Panelist discussion on conducting firm and market/industry level qualitative research. The first half of the PDW (discussion, Q&A) will be open to anyone and no specific requirements are needed to attend. Part 2 of PDW: Roundtable discussions and feedback. For those interested in participating in the second-half roundtable sessions, participants must register by submitting a brief abstract of a current research project using qualitative data to Suho Han (shan33@syr.edu) by July 22, 2020. Each abstract should follow the following guidelines: Two to four pages (maximum, double-spaced); Title page (not included in four page maximum) with author name(s), affiliation(s), experience (e.g. PhD student, faculty), and the project's specific level of analysis (e.g. firm or market/industry); Brief overview of research project (e.g. motivations, research question, research design, initial findings); And two to three questions/challenges related to the project that you would like to discuss or get feedback on. These abstracts will be used to assign attendees to tables for more detailed discussion and feedback among both attendees and panelists.

Climate Change (session 95)**Management Scholarship's Contribution to Climate Change Research: A Bibliometric Analysis**

Designated as a "Best Paper" for ONE

Author: **Franz Wohlgezogen**; Faculty of Business and Economics, U. of Melbourne

Author: **Angela McCabe**; La Trobe U.

Author: **Tom Osegowitsch**; Department of management and marketing, The U. of Melbourne

Author: **Joeri M. Mol**; U. of Melbourne

As climate change pervades natural and social systems, the integration of social sciences in interdisciplinary climate change research is crucial but often lacking. In this study, we use bibliometric analyses of management research on climate change to understand how management scholars have navigated interdisciplinarity, and what impact their efforts had on top-tier climate change research. We find that management scholarship (1) features substantial engagement with an interdisciplinary knowledge base through backward references, and (2) fails to attract the attention of climate change research in top-tier interdisciplinary journals, as evidenced in very low and stagnant forward citations.

Return on Carbon: Profit and Social Costs of Greenhouse Gas Emissions

ONE Division Best Student Paper Award

Designated as a "Best Paper" for ONE

Author: **Angie Otteson Fairchild**; Kenan-Flagler Business School, U. of North Carolina at Chapel Hill

How can firms embrace sustainability and financial performance? We seek to establish a new measure and concept – Return on Carbon (ROC) – that can help expand our perspective on the costs and benefits surrounding climate-disrupting greenhouse gas (GHG) emissions and shift managers' agenda to treating them as scarce and valuable inputs that have literal financial value – to be managed efficiently in order to generate profits. In particular, ROC captures profits that accrue to firms, normalized by their total volume of GHG emissions. While similar to conventional measures of firm performance, ROC compares the financial value produced for each unit of GHG emissions against the estimated social and regulatory costs of those emissions. This "new way of seeing" provides an opportunity to contextualize the financial value that firms generate within the broader social, environmental, and regulatory costs of GHG emissions. We first compare ROC to other eco-efficiency metrics used in the existing literature in management and ecology and then discuss comparable estimates of the costs of carbon from an ecological, social, and policy perspective. Finally, we offer a discussion of the ethical implications of these findings from the perspective of firms, regulators, and society.

Issue Framing and Environmental Performance: The Moderating Effect of Board Age

Designated as a "Best Paper" for ONE

Author: **Frederik Dahlmann**; U. of Warwick

Author: **Stephen Brammer**; U. of Bath

Author: **Layla Jayne Branicki**; Macquarie U.

Do firms conceive of imperatives to improve their environmental performance as threats to their current activities or as opportunities to do things in better and more sustainable ways? What role does the age of firms' boards play in how environmental issues are interpreted and responded to? In this study, we address these questions by drawing on theories of managerial cognition and issue interpretation. Specifically, we theorize the role of threat and opportunity framings on corporate environmental performance and examine the role of board age as a critical moderator. We find that significant environmental performance improvements of firms with older boards are more likely to arise when they perceive of material physical and regulatory climate risks. Improvements in the environmental performance of younger boards, in contrast, is more likely to be provoked by a recognition of significant opportunities associated with the climate crisis. Thus, we show that board age plays a critical role in how environmental risks and opportunities are responded to. Given the ageing of working populations in many societies, these findings are of potentially significant importance to the achievement of a transition to a low carbon economy.

Innovations in Research on Pay (session 94)

How Employers and Employees React to Rising Pay Transparency Expectations: An Exploratory Study

Designated as a "Best Paper" for HR

Author: **Lena Göbel**; LMU Munich

Author: **Ingo Weller**; LMU Munich

Author: **Anthony J. Nyberg**; U. of South Carolina

Pay transparency regulations aim at reducing economic inequalities such as pay discrimination and the gender pay gap. However, such regulations do not necessarily lead to more transparency and less discrimination. We add to pay transparency scholarship by studying the employer—employee interactions that unfold in the course of the implementation of a new pay transparency law. More specifically, we explore the quasi-causal effects of the "Transparency in Wage Structures Act" (TWSA) in Germany through a comprehensive survey data analysis. We show that – in spite of the law – plants remain passive, and hardly contribute to more pay transparency. We also show that employees in TWSA plants communicate more about their pay, such that the TWSA increases pay transparency through a bottom-up, informal process rather than through mandated plant-based transparency. At the same time, employees report a decrease in pay satisfaction and organizational citizenship behaviors. We discuss these results, and outline theoretical and practical implications.

Horizontal Pay Dispersion and Collective Performance

Winner of HR Division Best Conference Paper Award

Designated as a "Best Paper" for HR

Author: **Zhengtang Zhang**; Nanjing U.

Author: **Wei He**; Nanjing U.

Author: **Zhijie Xing**; Nanjing U.

The effect of horizontal pay dispersion on employee justice perception has long been a theoretical debate and garnered inconclusive empirical findings in the pay dispersion literature. In this paper, we offer a more nuanced examination on the effect of horizontal pay dispersion by differentiating between within-group pay dispersion and between-group pay dispersion. Drawing on referent cognitions theory, we propose a within-group and between-group pay dispersion consistency on employee distributive justice perception. Integrating the individual-level justice mechanism with the collective-level sorting mechanism, we further propose a dual-stage, indirect relationship between horizontal pay dispersion and collective performance via employee justice perception and organizational sorting. We test these arguments through a field study with both objective pay data and multi-source survey data collected on 4,234 bottom-line employees, 1,899 group leaders, and 303 senior managers from 205 branches of a large Chinese company. Our data show that overall horizontal pay dispersion has an indirect, positive relationship with branch performance via employees' distributive justice perceptions and good-performer retention (a subjective measure of organizational sorting) when between-group pay dispersion is high rather than when it is low. This paper contributes to the pay dispersion literature by providing an integrative framework that unravels when and how horizontal pay dispersion benefits collective performance.

The Award Goes To... Someone Else: Impact of Performance Award on the Nominees' Work Collaboration

Designated as a "Best Paper" for HR

Author: **Hui Liao**; U. of Maryland

Author: **Qiang Feng**; UIBE

Author: **Chunhua Chen**; National School of Development at Peking U.

Author: **Zhishuang Guan**; U. of Maryland, College Park

Author: **Li Zhu**; Peking U.

Employee award programs are prevalent in organizations. This paper studies a group of employees who have received relatively less attention in the employee award literature – those who were nominated for but did not win the awards (i.e., the nominees). Integrating social comparison with relative deprivation theory and self-evaluation maintenance theory, we identify the nominees' two distinct behavioral tendencies in collaborative performance after the recipients for the awards were announced: (1) promoting collaborations with others in general, but (2) undermining collaborations with award winners in particular. In addition, we examine the temporal dynamics of these effects. Further, we propose that proximity in terms of organizational structure moderates the effects of upward comparison. An empirical investigation using archival data of 61,270 collaborative records among 492 employees over 10 months provided general support for our hypotheses. We found that upward comparison had a long-lasting positive effect on the nominees' general collaborations with colleagues (i.e., lasted longer than 6 months after the announcement of the award winners), whereas a short-lived negative effects on the collaborations between the nominees and the winners (i.e., disappeared after two months). We also found that the effects were stronger if the nominees worked in the same office as the winners and when the work units were smaller. Our theoretical arguments and empirical findings advance the understanding of employee award programs and social comparison at the workplace.

[view paper \(if available\)](#)

Pay Differentials, Work Effort, and Social Undermining: Role of Envy

Designated as a "Best Paper" for HR

Author: **Eunhee Kim**; Cornell U.

Author: **Li-Kuo Sung**; Shanghai U. of Finance and Economics

Author: **Tae-Youn Park**; Cornell U.

This study presents an emotion-based explanation regarding the pay differential effects. Importantly, the authors suggest that pay differential is a "double-edged sword" which can lead to both desirable (i.e., employees' work effort) and undesirable (i.e., employees' social undermining behavior) outcomes. Moreover, the authors propose that emotions, especially envy, play important roles in the effects of pay differentials. It is suggested that a pay differential increase social undermining and work effort behaviors when mediated by envy. Moreover, the authors also suggest that this mediated effect is contingent upon employee's fairness perception about pay and self-esteem. The theoretical model is tested in two settings: a field study of Taiwanese employees with 614 dyads of 186 employees on 46 teams, and an experimental study of 351 employees. The results of two studies show supportive evidence.

MOC

The Cognition in the Rough Workshop (session 533)

Are you working on cognition-related research? Would you like to discuss your work with major scholars in the field? The 23rd Annual Cognition in the Rough workshop (CIR) provides an excellent opportunity to discuss your research in an informal, collegial roundtable setting. Each roundtable will have 2 facilitators to give feedback on 3-4 early-stage research papers, allowing plenty of time for discussion. Regardless of whether you are a senior or a more junior researcher, this workshop offers you an invaluable opportunity to receive detailed feedback from scholars who are often editors or on the editorial board of top journals.

Pre-registration is required for this PDW. Interested participants should submit a proposal to cirpdw@gmail.com prior to the submission deadline of June 15, 2020. Submission requirements and instructions are available at <https://moc.aom.org/intherough/cir>. Submissions will be evaluated to ensure fit with the session, and priority will be given to early submissions and first-time attendees. Acceptance notices will be sent in early July. Given space constraints, the expectation for this PDW is that, even for co-authored papers with multiple authors, only one author will attend the PDW to represent the paper. This PDW is intended to help authors develop work in progress and, as a result, we will not accept papers that have already been accepted for presentation elsewhere at the AOM 2020 Annual Meeting. Prospective participants are asked to review and follow submission guidelines carefully. Please contact the session organizer to obtain the approval code.

Building a Research Agenda and Community for the Anthropocene Epoch (session 102)

This workshop-based PDW brings together scholars in organizations and the natural environment (ONE) interested in understanding and advancing the transition to an Anthropocene Society. The PDW supports the research community emerging around solving the organizational, environmental, social, political, and economic challenges of the Anthropocene, a new global epoch defined by human domination of planet-scale systems (Hoffman & Jennings, 2018). The Anthropocene presents novel, systemic challenges to management and organization practice and research (Crutzen, 2002; Crutzen & Stoermer, 2000; Hoffman & Jennings, 2015; Jennings & Hoffman, 2019). Transitioning to an Anthropocene Society capable of managing planet-scale systems requires re-organizing human activity to operate within the boundaries of systems producing climate regulation, biodiversity, water, food, and other processes essential to human well-being (Steffen et al., 2015; Whiteman, Walker, & Perego, 2013). Many organization theories assume such boundaries do not exist. This PDW contributes to reconsidering those theories and developing new theories needed to transition to an Anthropocene Society.

Improv: Act, to Know the Self and Others, to Humanize Organizing (session 106)

How we act reveals us as who we are. Our bodies do not know how to lie. In this workshop we will be using experiential improv theater exercises that engage the body, mind, and spirit to co-create mindful presence and group dynamics in order to learn about organizing. With collective observations and reflections, we will connect at the human level, going beyond our assigned roles and titles, beyond our race, religion, or ethnicity, or any categories that divide us. Theater improv exercises are a highly structured way to engage the whole human being and connect everyone with verbal, physical, emotional and social actions, and interactions. Humor from improv situations is a powerful way to bring down barriers and tackle sensitive and subtle issues enacted in social settings. Shared observations and reflections help bring out how we experience and live out the dichotomies that trap us, and what barriers, internal or external, exist to prevent us from broadening our sight. In respectful interactions, we uphold our own and others' dignity (Hicks, 2011), or negotiate inevitable and difficult conflicts. Embodied experience takes us beyond the dry language of theories, or even words, towards humanizing management. This is participatory workshop, with no prior improv experience required.

Overcoming Dichotomies in Healthcare Management Research: Broadening Research on Coordination (session 105)

The need for coordination of services within and across boundaries has resulted in new forms of organizing healthcare (e.g. ACOs or health systems) and constitutes a core theme in healthcare management research. This coordination imperative has ignited various research streams that have largely developed separately with different epistemologies and methodologies. One stream has focused on macro structures in the form of inter-organizational alliances and networks (e.g. D'Aunno, Alexander, & Jiang, 2017) and has, for example, studied structures of patient referrals or human resource networks and their impact on healthcare outcomes (e.g. Brewster, Yuan, Tan, Tangoren, & Curry, 2019; Westra, Angeli, Carree, & Ruwaard, 2017). Another stream focuses on processes at the micro level. Borrowing from social symbolic work and organizational behavior theories, this stream of research studies interaction and efforts of individuals or teams related to coordination (e.g. Lawrence and Phillips 2019; Tietschert et al., 2019). While each perspective has developed valuable insights, a singular focus on micro-level processes may neglect larger interaction structures and vice-versa. A recent editorial in Health Care Management Review describes this tension as a key issue that is 'ripe for theorizing and studying' (Issel, 2019). In this PDW we aim to explore potential synergies between macro- and micro-level research on coordination in health care. We will critically examine the tensions between both perspectives, its causes, and discuss opportunities for future research. In doing so we aim to advance our understanding of the structures and process of coordination in modern ways of organizing health care.

Mindset and Skills for the 2020s: The Multifaceted Role of Entrepreneurship Education (session 103)

This professional development workshop (PDW) aims at advancing research on entrepreneurship education (EE) and its role in developing entrepreneurial skills and mindsets for a broad range of contexts. The PDW thereby addresses an important re-orientation of the outcomes aimed for by EE study programs around the world, and the diffusion of EE into a variety of educational disciplines. Further, we address the increasing tendency to see the ecosystem for students' entrepreneurial activities as part of the learning environment. These changes are so far sparsely covered by relevant research (Wright et al., 2019). The PDW will engage participants in discussing initiatives to advance EE research by presenting different perspectives to the topic and by facilitating roundtable discussions around these perspectives and beyond. We expect to attract scholars doing research on EE, and AOM members involved in EE at the practical level. Moreover, we invite scholars interested in management education more broadly to join the discussion of how these changes will influence other education programs. We aim for a dialogue between junior and senior scholars, between theoretically- and teaching-oriented members, and between entrepreneurship and the broader management community, with the aim of 'broadening our sights' in EE research. Such dialogues are important for advancing EE research theoretically and methodologically, and for strengthening the link between scholarly inquiry and educational practice.

HR Division New Faculty Consortium PDW (Part 1) (session 109)

This consortium brings together new faculty - usually those in their first one to four years of employment. The event includes panel discussions featuring experienced mid-career and senior colleagues to lead discussions. The discussions are around key issues to which new faculty are often exposed, and intended to share knowledge on surviving and thriving in these challenging early years. There are also opportunities for network building, socializing, and sympathizing (!) with others in the same career stage. We include panelists with international perspectives and not solely a North American focus so that this can be relevant to both US and international members. Dinner the evening before and breakfast on the day of the consortium will be provided.

Registrants should provide the following information to Kathleen Keeler (keeler.79@osu.edu) before July 15th to secure a spot at the consortium and networking dinner: -Name, affiliation, & current e-mail address -Years post PhD -Current CV -Up to 5 keywords detailing research interests. Registration is required to attend both the consortium and the included networking dinner on Friday, August 7th. Details for the dinner will be shared with registrants prior to the start of the conference. Once the cap for this consortium has been reached, registrants will be added to a waitlist and will be contacted as space opens up.

Crowdfunding: Broadening our Sight Through Theory-Building (session 536)

This PDW builds on the premise that, as with any emerging field, some of the earliest research on crowdfunding has been mostly phenomenon- driven, and given the exponential growth in the interest in the subject, the challenge of systematic theory building confronts everyone interested in contributing to the field. The purpose of this PDW is, first, to create a collegial, developmental forum, where people can discuss and seek advice, both on their already advanced ideas, as well as on emerging projects. Second, this workshop makes accessible experts' experiences in publishing in the field across diverse theoretical perspectives. Crowdfunding research is a multi- disciplinary, highly international endeavour that interests early-, mid-, and late-career scholars; our aim is to draw scholars from across the Academy. Our planned activities emphasize manuscript development. Our slate of participants, numbering four full-rank professors, four associate professors, and one assistant professor includes editors of Strategic Entrepreneurship Journal, Small Business Economics, Journal of Corporate Finance, and Family Business Review as well as editorial board members of several leading journals including Academy of Management Journal, Journal of Business Venturing, Entrepreneurship Theory and Practice, and Academy of Management Review. This group of nine panelists will host a discussion for all conference attendees on the topic of broadening our sight in crowdfunding research through theory development. Following this, we will provide paper development focusing on making a theoretical contribution and navigating peer review for the participants submitting pre-conference proposals.

Please submit crowdfunding papers to crowdfundingPDW2020@gmail.com.

Navigating the Changing Digital Landscapes: Infusing Technology into the Case Teaching Experience (session 537)

This PDW focuses on the integration of case teaching, technology, and experiential learning for student engagement. The session is designed for those with experience in teaching as well as those who are new to case teaching. It is organized to actively involve participants in exploring critical aspects of case teaching and how to incorporate technology to promote in-depth discussion to this pedagogical approach. Experienced and award-winning case teacher-scholars from four continents who are involved in prominent national and international case research organizations organize and facilitate the workshop. The workshop provides an interactive example of case teaching with technology and applications and concludes with a discussion of challenges and best practices that will assist participants in learning case teaching skills.

New Doctoral Student Consortium (NDSC): Day 2 (session 113)

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. This year's virtual NDSC will allow participants to connect with fellow doctoral students and to learn from experienced scholars on topics such as succeeding in a doctoral program, publishing research, and managing an academic career. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large. This year, the NDSC will run across three days/sessions: •Friday, August 7th: 10:00am-12:00 (noon) EST Session ID# 19680 •Saturday, August 8th: 10:00am-12:00 (noon) EST Session ID# 23347 •Sunday, August 9th :10:00am-12:00 (noon) EST Session ID# 23348

Pre-registration is required for this workshop as space is limited to 110 participants. The deadline to register online is July 30th, 2020. Participants only need to register once but must commit to participate on all 3 days. To register online, please visit:

https://docs.google.com/forms/d/e/1FAIpQLScdKVoj2gO1f73M7TZ3kkXqvFSrjEw/viewform?usp=sf_link

Teaching in the Rough (session 112)

Cognition is a central concern in organizations, and courses in management (e.g., entrepreneurship, strategy, and organizational behavior) repeatedly deal with topics that involve understanding the cognition of individuals and groups. A challenge for instructors is to find exercises, activities, and methods for teaching in ways that students can better appreciate the challenges of cognition "in the rough" (i.e., situated, in real-time, influenced by organizational politics and time constraints, and emotions among other contextual influences). The purpose of this PDW is to bring together expert instructors to share classroom-tested experiential exercises, activities, and lesson plans for teaching about cognition in the rough. The PDW will proceed in a "round-robin" workshop format, whereby participants will have the opportunity to attend three different stations in which expert instructors provide interactive, 20-minute explanations/demonstrations of their exercise/activity/lesson. Thus, participants will have the opportunity to take home three unique activities or instructional ideas that they can use in their own classes.

This session is available to anyone interested in specific, classroom- tested ideas for experiential exercises in the classroom. No pre- registration required. Please join us - and bring a friend/colleague!

GDO

2020 Gender and Diversity in Organizations (GDO) Doctoral Consortium (session 88)

Doctoral students are often faced with multiple unfamiliar challenges. The PhD process can be demanding and overwhelming and very often students are expected to navigate these challenging issues themselves. Building a support network and effective strategies to manage this process can be critical to these students' future academic and career success. This year's "CAR Doctoral Consortium" will provide a forum for early to mid-stage doctoral students to meet, connect, and learn from each other informally, from guest speakers, and from a panel of distinguished career scholars on several useful and relevant topics. Our aim is to bring together scholars from a broad range of cultures and institutions that mirror the diversity of the CAR membership. Our speakers are a group of distinguished senior as well as junior international faculty. They will share insights on the following seven topics: (1) Low hanging fruit: Making the most of AOM Annual Meetings; (2) Surviving: Accessing and leveraging formal and informal resources during your doctoral program; (3) Thriving: Recruiting mentors and collaborators for your network; (4) Make it happen: Effectively navigating the dissertation process; (5) Head of the class: Preparing for your first course assignment and teaching role; (6) Balancing act: How to juggle demands of academic life during your doctoral program and beyond; (7) Abiding: The AOM Code of Ethics and you. Moreover, the PDW will conclude with a 1-hour panel discussion with highly published career scholars along this year's AOM theme of "Broadening our Sight".

Real-time Open

The 2020 doctoral consortium will include a diverse mix of speaker panels and activities designed to provide doctoral students with a realistic, open, and honest understanding of scholarly life, including: realistic academic job previews across varying types of academic institutions; different tips and takes on how to publish one's dissertation or tweaking the dissertation to eventually get it published; and well-being and mental health discussion related to resiliency during the PhD to junior faculty transition and afterwards. Students will also have the opportunity for more personalized connections and feedback through a mentor-match coffee to be held after the consortium (or at another mutually agreed upon time), in which students are paired with a more senior scholar based on the students' research interests.

Technology and the Changing Nature of Work: What, if Anything, is Actually Changing? (session 114)

The unprecedented development and use of "AI" and "algorithms" in organizations has drawn attention from seemingly every corner. Past scholarship has developed several useful theoretical lenses to understand how technologies, from computers and the Internet to robotics and automation, have impacted the ways in which we organize, communicate, and work. This begs the question: What, if anything, is actually changing with emerging technologies that are entering modern-day workplaces? And how do these changes impact our theoretical understanding of the relationship between technology, work, and organizations? This professional development

workshop seeks to answer these questions and explore new avenues towards understanding the dynamics and implications of the changing nature of work. We seek to do this by bringing together leading scholars and participants in an interactive format to share their perspectives and insights on this growing area of organizational and management research. The goals of this workshop are four-fold: (1) bringing together historical and contemporary perspectives on the role of technology in shaping work; (2) advancing empirical research at the intersection of emerging technologies and work; (3) discussing implications of the changing nature of work for organizations, managers, and workers; and (4) building a community of scholars who conduct research on technology and the changing nature of work. Through presentations from five scholars, combined with an interactive panel discussion, and research roundtables where (junior) scholars can receive feedback on ongoing research projects on technology and work, we seek to advance scholarship in this important area while simultaneously building a community.

How Do Different Concepts of Time Further Our Understanding of Managing and Organizing Innovations? (session 386)

The symposium establishes a discussion that unfolds the role of temporality in managing and organizing for innovations. Innovations cannot be defined by a clear beginning or an end but are rather processual, nor are they linearly developing due to their temporal complexity shaped by the multiple temporal rhythms, paces, and experiences, building on both past, present, and future. By adopting an inter-temporal lens on innovations, exploring and interweaving a variety of temporal perspectives, recent studies of innovations analyze the iterative processes by which actors interpret, negotiate, and enact different combinations of past knowledge and future projections in the present in order to manage future trajectories. Each panelist will elaborate on various aspects of the emerging inter-temporal approach to innovations. Whereas, the discussion aims to bring together these perspectives reflecting on the implications that an inter-temporal view adds to the managing and organizing for innovations in different empirical fields.

Recent Trends in the Development of an Integral Sociotechnical Perspective (session 541)

As an applied approach, the sociotechnical perspective needs to prove its value in the real world – not just in academic circles – and is urgently confronted with trends in the world of everyday organizations and with questions about what these developments imply for its frameworks. In other words, the sociotechnical perspective needs to develop as contemporary developments in organization challenge existing concepts. In this PDW, we aim to address recent trends in the discussions in the global sociotechnical network. What such discussions share is that they apply a sociotechnical perspective to recent challenges in organizations and reflect on what they mean for the contemporary relevance of the sociotechnical perspective in general and conceptual development in particular are meant to challenge the audience to join us in these discussions. Furthermore, we aim to relate the most recent developments in organizations and societies to sociotechnical concepts on organization design, development and methodology. To discuss these topics, a combination of lightning talks and deliberations will be used.

How to Use and Publish with Theory in Health Care Research (session 115)

The importance of using and publishing with theory in health care management research should not be understated. Theory provides a framework or conceptual lens (Reeves et al., 2008) for examining complex phenomena by placing the study “within a world view” (Issel, 2018, p. 91). It guides researchers to identify appropriate study questions; to identify potential relationships between variables; and in the selection of methods and measures (Alderson, 1998; Brazil et al., 2005; Issel, 2018). Overall, the appropriate “use of theory leads to stronger and more interesting research” (Issel, 2018, p. 91). When considering practical implications, on the other hand, theory is vital to the development of interventions, programs, and evaluations (Green, 2000). In touting the importance of theory in the application of research findings, Green (2000) also stated, “the accumulation of empirical evidence... is of limited value to the practitioner unless accompanied by general principles which might inform wider application” (p. 125). However, while the value of theory is evident, researchers often struggle to adequately apply, only rudimentarily use, or – in some cases – to overtly reverse engineer theory into a paper when submitting to different types of health care journals. This PDW invites participants to engage in discussion around three panels: 1) Using and Publishing with Theory in Health Management and Policy Journals, 2) Using and Publishing with Theory in Clinical and Health Services Research Journals, and 3) Using and Publishing with Theory in Management journals. Participants will hear from three expert panelists who have experience publishing theory in different types of journals as well as editing for these journals. The panelists will explain best practices for using and publishing with theory in each type of journal (e.g. Health Management and Policy, Clinical or Health Services Research, and Management). In doing so, they will hope to demystify somewhat the expectations associated with publishing theory in each type of journal and PDW participants will be able to compare and contrast the different approaches.

Disentangling the Effects of Business Groups in the Innovation-Export Relationship

IM Division CEIBS Best Paper Award Finalist

Author: **Lichao Wu**; Xiamen U.

Author: **Yingqi Wei**; U. of Leeds

Author: **Chengang Wang**; U. of Bradford

This paper examines the role of business groups (BGs) in the relationship between innovation and exports. In light of the divergent theoretical predictions on the role of BGs being paragons or parasites and the arguments that characteristics of BGs differ across countries, we develop hypotheses that are explicitly based on China's institutional context. By analyzing the institutional pressures under which BGs shape their strategy and operations, we formulate hypotheses on the effects of business group affiliation (BGA) on firm exports. Empirical results, based on a large sample of Chinese manufacturing firms during 1998-2007, show that both innovation and BGA have positive effects on exports, but BGA impairs the positive value of innovation to exports. These findings are robust in different specifications. This paper provides support for both the positive and negative narratives surrounding the role of BGs and highlights the complex role played by BGs which needs to be understood in the context of institutions.

Navigating Complex Frontiers: International Business Travellers as Global Boundary Spanners in MNEs

IM Division CEIBS Best Paper Award Finalist

Designated as a "Best Paper" for IM

Author: **Kieran Michael Conroy**; Queen's U. Belfast

Author: **Anthony McDonnell**; U. College Cork

Author: **Stefan Jooss**; U. College Cork

This paper explores how international business travellers (IBTs) enact global boundary spanning roles within multinational enterprises (MNEs). Incorporating a boundary spanning lens, and drawing on recent insights on the evolving nature of global mobility, we argue that IBTs represent distinctive yet valuable forms of hyper-mobility that current studies in international management have largely overlooked. We undertake a qualitative case study design and our findings demonstrate how, in acting as global boundary spanners, IBTs are confronted with unique challenges to other more traditional forms of global mobility. Specifically, we develop a framework that details how IBTs manage complexity across three interrelated boundaries – relational, knowledge and cultural. We find that in effectively navigating across these complex frontiers, IBTs are proactive in continuously developing and weaving new connections, tapping into and sharing diverse knowledge, and as well as confronting and overcoming recurrent cultural challenges. Our study addresses recent calls for greater cross-fertilisation of ideas between global strategy and global mobility and in doing so we argue that MNEs need to recognise and leverage IBTs as strategically valuable boundary spanners.

Understanding Why Knowledge is not (Always) Evenly Shared in Multinational Enterprises

IM Division CEIBS Best Paper Award Finalist

Author: **Danni Ma**; U. of Technology Sydney

Author: **Anthony Fee**; U. of Technology Sydney

Author: **Simone Faulkner**; U. of Technology Sydney

Author: **Moira Scerri**; U. of Technology Sydney

Uneven knowledge sharing can result in the isolation of subsidiaries and further influence their existence in MNEs. This conceptual paper seeks to explain why knowledge is not always shared evenly and indiscriminately throughout an organization's global operations or among individuals. Focusing on interpersonal knowledge sharing between cross-border subsidiaries within a multinational enterprise (MNE), we propose that it takes place in a complex social context composed of high levels of uncertainty and inefficiency, and low levels of psychological safety. We argue that these conditions may impair the balance of knowledge sharing within MNEs by influencing the types of knowledge that are most readily shared. Moreover, we use social identity theory to propose that individuals' perceived social identities can both contribute to and redress this imbalance by influencing whether, how, and what knowledge is shared, and with whom.

Qualitative Comparative Analysis (QCA) - A Set-Theoretic Approach to Configurational Research (session 543)

During the past decade, interest in set-analytic methods such as Qualitative Comparative Analysis (QCA) and configurational thinking in management research has grown significantly. This interest is driven both by the scholarly interest in moving beyond linear thinking as well as the improvements of QCA in its application, interpretation, and legitimation. By now, QCA has become an established approach in management researchers' toolbox. We have accompanied this process during the past decade with multiple editions of highly successful AOM PDWs. Given the developments over the past years and the feedback from last year's PDW, we have re-designed this year's proposed PDW to serve the needs of two different audiences. Part 1 serves management researchers with no or only little knowledge of, and experience with, QCA. Part 2 targets researchers with interest in either advanced methodological topics in QCA or in discussing their ongoing QCA research with other participants and the experienced PDW organizers. Participation in this PDW is open to all conference attendees and requires no registration. Participants who wish to receive a list of recommended pre-readings may contact Johannes Meuer (jmeuer@ethz.ch) before the meeting.

Participation in this PDW is open to all conference attendees and requires no registration. If you wish to receive a list of recommended pre-readings please contact Johannes (jmeuer@ethz.ch) before the meeting. To participate in the Roundtable Discussions (Part 2), please submit an extended abstract of 1,500-2,000 words to jmeuer@ethz.ch by July 13, 2020.

TIM Junior Faculty Consortium - Saturday (session 123)

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights into how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead four interactive discussions about how to balance the competing pressures of teaching, research and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals, and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their "research trajectory" from their peers and senior faculty. The consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation.

Lean Startups and Innovation Strategy (session 545)

Over the past ten years, there has been a quiet revolution in how entrepreneurial managers think about strategy and innovation: the 'Lean Startup' method has been widely adopted by entrepreneurs, and the principles it embodies have guided many new venture launches and product innovations. Established corporations have attempted to adopt these practices for their in-house innovation efforts with varying levels of success. This has prompted a surge in academic interest in the Lean Startup and associated methodology. While many underlying principles of the Lean Startup method are already present in the academic literature, emerging work suggests there is a research- reality gap between extant theory and practice inspired by the Lean Startup method. What new research questions does the Lean Startup movement open up? In our fifth iteration of this highly popular workshop, we will continue our discussion of these issues, and others. A panel of leading scholars will share their perspectives on interesting directions for future research, and roundtable discussion will allow participants to exchange ideas and get feedback on the viability of possible research topics.

Teaching with Technology: Seeing Past the Constraints of Technology (session 119)

Stefan Jooss

Teaching with technology can be seen as a threat or opportunity for management educators. Broadening our view as educators means avoiding the dichotomy of seeing technology as a blessing or curse, but rather appreciating how technology is what educators are able to make of it within their unique context, with both coinciding opportunities and threats. Technology is playing a greater role in higher education teaching, and while some management educators have been teaching online for 20 or more years, others are still making the transition to teaching online. In this PDW (now in its 23rd year at AOM) we will visit some of the newest technologies and teaching techniques for using technology to support management education. This professional development workshop emphasizes the practical use of technology resources and teaching techniques through demonstration, using presenters' hands-on teaching experience, and is presented in an interactive format. In a remodeled approach for 2020, we will include a larger number of presenters this year, with a shorter time per presenter, allowing the opportunity to explore a broader number of exciting opportunities to use technology in teaching. This PDW will appeal to novices and experienced educators, as well as technophobes and technophiles.

AMLE PDW: The Scholarship of Teaching, Learning, and Education (session 121)

The Scholarship of Teaching, Learning, and Education (SOTLE) has gained increased prominence within the Academy as external stakeholders demand evidence of student learning and accreditors require institutions to show evidence of impact. In this session, a panel of current and past Editors and Associate Editors from the four major SOTLE publications in management (i.e., Academy of Management Learning and Education, Decision Sciences Journal of Innovative Education, Journal of Management Education, and Management Learning) will discuss and provide advice on how to design and conduct novel, impactful, and meaningful teaching and learning research in management. The goals are to obtain a better understanding of core characteristics and quality criteria of great management teaching and learning research, an increased awareness of the benefits and issues associated with scholarship in teaching, learning, and education, and knowledge of opportunities for developing publications. More specifically, we want to provide current and prospective authors with a supportive, encouraging and interactive platform where they might share their ideas for designing and conducting SOTLE research projects and gain initial feedback and direction from SOTLE editors. All are welcome to attend.

Speaking Science (session 547)

There is a growing acknowledgement that the relationship between science and the public is at a precarious stage (Public Face of Science Initiative, 2018). The PDW focuses on building the necessary science communications skills for researchers in our field to actively and successfully share our research with a broader non-academic audience. In line with the All-Academy Theme, this workshop focuses on "broadening our sight" on how to talk about research in an accessible and provocative way, breaking down the dichotomy between experts and non-experts to allow for greater influence of our scholarship. The workshop will cover several key skills in effective science communication including how to craft a story, how to eliminate jargon and hone in on the focal story, identifying and tailoring the story to your audience, and gaining insights from communication professionals outside of the academy. The session will couple best practices in media communications with relevant theater improvisation skills to provide participants with the opportunity to learn and practice the importance of science communication and experience the value of communicating their research to non-expert audiences.

We ask participants to be prepared to be brave, energized, and open to a unique experience. The workshop will involve participating in improv exercises, sharing ideas with new faces, and being vulnerable in interacting with others as we hone our research communication skills. We also ask participants to come prepared with a specific research idea in mind to reference as they practice how to "speak science" in the workshop. Pre-Registration is required for this session.

HRM, Algorithms, and Gig Work: Exploring Differences Across Online Labor Platforms (session 546)

Online labor platforms like Uber, Upwork and Deliveroo, drive a transition towards 'gig work' where consumers and organizations outsource fixed-term activities performed by an independent contractor, with the involvement of the platform as an intermediary. A growing number of human resource management (HRM) studies have examined the role of HRM for managing so-called "gig workers" and the use of algorithmic management by online labor platforms. Although current studies treat online labor platforms as homogeneous, we argue that they differ on important dimensions such as task complexity, social interaction, and the use of algorithmic management technologies. The current workshop therefore explores the differences in HRM activities and algorithms across online labor platforms. The aim is twofold: (1) to develop an agenda for future research that uncovers the implications for HRM theory and practice of different online labor platforms, and (2) to share best practices for addressing the challenges of empirical research into gig work and algorithms. Participants of this workshop will discuss the conceptual implications of recent empirical results on HRM and gig work, translate these into avenues for future research and learn about collecting data in cases where gig workers are dispersed and online platform firms are hesitant to share their (big) data. After setting the stage with four 'pitch' presentations, we organize a multi-disciplinary panel discussion with representatives of four research teams that currently study HRM and gig work to discuss the opportunities and challenges they encountered. The panel will also involve a plenary group discussion and Q&A that involves all workshop participants. This workshop provides three deliverables to its participants: (1) findings and implications from some of the latest research projects on HRM, algorithms, and gig work, (2) a set of research questions for future HRM and gig work research, and (3) techniques for accessing intermediary platform firms and studying (algorithm-enabled) HRM activities of gig workers.

How to Enhance the Effectiveness of IM Practices: Providing Value to Stakeholders of IB Education (session 548)

International management (IM) is a discipline focused on managing organizations and people engaged in conducting business across borders as well as cultures. Thus, a comprehensive understanding of the content and context of international business is critical in order to effectively meet various challenges of international business management in implementing global competitive strategies and human resource management practices. An identification of the role and educational goals of our field is essential in delivering value in IB education. While those directly involved with IM clearly see the value in international education, it is less clear whether that value is apparent to other constituents of today's business schools. In line with a perceived need to better understand and communicate why IB education is valuable, the Consortium for Undergraduate International Business Education (CUIBE) commenced a project in 2017 to systematically study the value of an IB education. The main research goal is to understand what aspects of an international business education are most valuable to specific constituent groups and why by examining the perspectives of four important stakeholders: Deans, Recruiters, Students, and Alumni. The panel will discuss key results from this ongoing research project in terms of major sources of perceived value from IB education.

Halfway There, But Now What? Advice for Pre-Dissertation Doctoral Students (11th Annual) (session 135)

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. For example, the New Doctoral Student Consortium helps new doctoral students begin to feel more comfortable in our field. In addition, the Organizational Behavior (OB) division sponsors a Senior Student Doctoral Consortium to help prepare more advanced doctoral students for the job market. The purpose of the "Halfway There" PDW is to bridge the gap between these consortia by providing information and advice relevant to doctoral students starting the 3rd or 4th year of their programs. "Halfway There" is designed to help these students begin establishing themselves as independent scholars. We have conducted this PDW at AOM each year since 2009 and it has been very favorably received on each occasion. Despite increasing the attendance cap to 120, we have still had several potential attendees waitlisted each year. Due to positive feedback from prior attendees, we have decided to conduct the PDW again in 2020 with minor, but important, modifications to the format we have used in prior years; these modifications focus on providing a more holistic experience for the participants, as well as providing a more inclusive conceptualization of the various avenues towards career success. A number of prominent OB division members have agreed to participate in the 2020 PDW and provide students with their insights on topics such as (1) launching one's dissertation (2) crafting a research project, (3) understanding the "job market" process, and (4) accomplishing your career goals.

In Search of Inclusive Innovation: Emerging Research and Intervention (session 552)

A 2016 study entitled “The Demographics of Innovation in the United States” by The Information Technology and Innovation Foundation (ITIF) found that only 12% of “U.S. innovators” are women, and only 8% are members of U.S. minority groups (including Asians, African Americans, Hispanics, Native Americans, and other ethnicities) (Nager, Hart, Ezell, & Atkinson, 2016). As demographic characteristics of the U.S. population change, a key question is “How can the U.S. (or any nation) remain competitive without engaging the talents and abilities of all of its citizens?” In this AOM PDW, we explore the idea of inclusive innovation and seek to build a community of scholars and practitioners who are interested in diversity issues in technology entrepreneurship and innovation. We will use 5 short presentations as conversation starters for our discussion. Then we will learn about research-based interventions and initiatives to address the lack of diversity in STEM entrepreneurship. Ultimately, we want to begin a rigorous conversation about how to conduct meaningful research and make practical impact on this important topic.

Diamonds in the Rough (DIR) (session 134)

Stephanie Creary

Are you a junior faculty member or a senior doctoral student interested in organizations and cognition? Are you actively crafting your research identity and/or home within the Academy? If so, the MOC division has a consortium with you in mind! Now in its 9th year, Diamonds in the Rough (DIR) offers early-stage career-based content for emerging scholars across methodologies. Through presentations, panel discussions, and break-out tables broken into three modules (Crafting a Research Identity, Getting Plugged In, and Job Market Realities), you will have the opportunity to receive personalized feedback on managing the multiple obligations of your career, be treated to stories about how influential scholars forged their paths and the obstacles they faced, and establish professional networks with colleagues who share similar research interests. MOC prides itself in being a 'bridging division' and we consider DIR the ultimately 'bridging PDW', an opportunity to build intra- and inter- divisional mentoring networks in a warm, welcoming, and inclusive environment. Pre-registration is required for the first two modules as space is limited, while the third is open to all Academy members. To register, please submit: (1) your CV; (2) an overview of your research identity - tell us about who you are, what you study, and where you hope to go in one page or less. You may also include one figure depicting your interests (e.g. Venn diagram); (3) two questions related to this year's module topics; (4) your choice of top four facilitators to provide personalized feedback in rank order.

Resilience of Women of Color in Academe: Mitigating the Double Bind (session 129)

Women faculty of color face a double bind as they endure both racism and sexism, creating dual oppression. These multiple disadvantages result in women of color being exposed to higher rates of career-limiting setbacks than their counterparts (i.e., white women), including devaluation of their scholarly work, increased service responsibilities, exclusion from career development opportunities, and constantly having their competency questioned. Their low representation and discouragement to continue in the professoriate due to harmful work environments also results in a “leaky pipeline”. Thus, women faculty of color have to utilize specific resilience strategies to mitigate these biases. However, many of the coping techniques used to generate resilience often result in injurious consequences. For instance, to demonstrate high competence, women of color often take on risky assignments (i.e., glass cliff) that results in them becoming hypervisible (i.e., judged more harshly than white women in similar positions). Other coping behaviors, such as the Strong Black Woman race-gender schema, often results in anxiety and depression, while code-switching, to feel accepted by the white dominant workspace, leads to a diminished sense of identity. Though these multiple identities result in stacked disadvantages in the workplace, there remains a gap in management literature on the intersectionality between race and gender. This void, consequently, silences the voice of women faculty of color and the unique challenges they face. Furthermore, it hinders the opportunity to make changes on a systemic level. In this symposium, we explore women faculty of colors' resilience-building tactics, the added double-bind they create, and individual and organizational practices that can help alleviate this paradox in order to promote their career development and well-being.

Advancing Qualitative Research: Perspectives on Data Generation and Analysis (session 136)

Drawing on the experience of five internationally renowned scholars, as well as on the active participation of the audience, this Professional Development Workshop (PDW) seeks to problematize some of the conventional ways of conducting qualitative research and to explore the process of data generation and analysis more holistically. This PDW also aims to open a space for dialogue on how we may increase transparency on the interactive, situated, and complex nature of qualitative research, while encouraging awareness of how the positions that we as researchers adopt shape the knowledge and reality representations that we produce. Because this workshop is developmental in nature, it will focus on trading ideas and practical tips for how to develop more impactful theories, depending on the contemporary organizational sites and phenomena under study. The intention will be to illustrate how different approaches may bolster qualitative research to provide richer and more interesting analyses that lead to more impactful theoretical contributions. This workshop may benefit researchers who, regardless of career stage, wish to explore and engage with the complexities of qualitative research. This PDW contributes to the Organization and Management Theory (OMT) division by providing a platform for active reflection for scholars interested in conducting more integrative and innovative research, cultivating more inclusive and contemporary research practices, and exploring uncharted territory around organizations and organizing.

Everyone is welcome! Registration is not required.

What's New About Digital Transformation? Exploring Interdisciplinary, Multi-Level Research Ideas (session 138)

In particular, management consultancies and companies in the information and communication technologies (ICT) sector pinpoint the need for a digital transformation in the light of the dramatic impact of advanced ICT on national economies, business models, companies of all kinds, and work in general. However, there are surprisingly few scientific studies in the field of economics and management sciences. Building upon the positive experience of a PDW entitled "Leadership Qualities for Digital Transformation – In Search of a Digital Mindset" which generated a lot of interest at the AOM 2019, we propose to expand the focus this year. The primary goal is to discuss the phenomenon more broadly and systematically, as well as highlight and discuss its many facets and consequences for different economic actors. Although the level of organization is at the center of the discussion with participants and specifically addresses questions of appropriate digitization strategy, organizational readiness, strategic change, and organizational structural adjustment, other levels of analysis are also addressed. On the group level, for example, digital transformation may be related to the increasing use of virtual teams or to re-engineered workflow systems. At the individual level, among others 'digital' skills and the associated education and learning play a major role. The connecting link is the question of what adaptation and what changes are required by the ongoing digitalization and how these adaptation processes can be efficiently designed. From this, concrete ideas for future research can be derived, which are developed and discussed with the participants.

Testing Moderation in Organizational Studies with Latent Moderated Structural Equations (session 555)

Most organizational researchers understand the detrimental effects of measurement errors in testing relationships among latent variables, and hence adopt structural equation modeling (SEM) to control for measurement errors. Nonetheless, many of them revert to regression-based approaches, such as moderated multiple regression (MMR), when testing for moderating and other nonlinear effects. Previous simulation studies have shown the superiority of latent interaction approaches over regression-based approaches. In this workshop, we will first briefly explain in nontechnical terms the latent moderated structural equations (LMS) approach, which estimates latent interaction effects while controlling for measurement errors. Next, we will explain the problems of the product-indicator approach to examine latent interaction effects implemented with R. Then we will show how LMS can be easily implemented with Mplus, providing an example-based tutorial, complete with Mplus syntax, to demonstrate a 4-step procedure for testing a range of latent interactions, as well as the decisions at each step. Finally, we will demonstrate procedures for testing models with more complicated latent interactions and the reliability corrected LMS (RCLMS) approach to testing latent interactions with summated scales and corrected measurement errors that approximates the LMS results.

Please bring your notebook computer with either Mplus full version (7.4 or later) or Mplus demo version (free download from Mplus website) installed. We will also use Excel.

International Management Division Junior Faculty Consortium (session 140)

The International Management Junior Faculty Consortium is designed for junior colleagues who have defended their dissertation in the last 1-5 years and are facing the challenges of building successful academic careers in the field of International Management (IM). It will provide a unique opportunity for junior faculty to engage in a conversation around the key issues of careers, research, publishing, teaching, and service with leaders in our field from around the world. The senior faculty panel includes a diverse and international group of scholars with a variety of academic, leadership, and editorial experience. Through a combination of structured panels, roundtable discussions, and informal interactions, we will tackle the questions of risks and opportunities of choosing a career in IM, getting tenure, building a scholarly reputation, developing a research/publishing strategy for greater impact on the field, and maintaining a healthy balance between research, teaching, and service. The Consortium will conclude with a "Meet-the-Editors" session where together with the Doctoral Student Consortium, participants will hear directly from the editors of the leading journals in the field of International Management.

“Hermidadad”: a Latinx Career Development Workshop (session 141)

According to data from the Pew Research Center, the US Hispanic population reached 60 million individuals in 2018, making Latinx the largest minority group in the country. However, while Latinx individuals have increased as a proportion of the population, business schools have been slow at addressing the needs of its Latinx students and faculty. This professional development workshop is an effort to provide Latinx faculty and doctoral students with a venue to share insights, lived experiences, and knowledge. Our objective is for participants to develop strategies for professional development and survival that will allow the professional success of this marginalized and under-represented group within business schools and the Academy of Management.

MC

Improving Our Doctoral Studies: Awareness of Management Consulting Principles (session 142)

Elaborating on past MC Division consortia, the objectives for this year’s consortium provides an opportunity for doctoral students in the midst of their doctoral research to share their research processes and progress and receive support and feedback from peers and faculty. Concurrently, the participants will explore management- consulting principles and how these can generally be mapped to a doctoral student’s dissertation research and connect with possible post-doctoral futures. With this in mind, we draw upon the commonalities between management consulting and research, where both seek to address problems. The phases utilized in both often include problem identification, clarification of the purpose of the endeavor, data collection, diagnosis, actions, conclusions, and recommendations. Scholars pursue knowledge to contribute to the body of knowledge, while consultants work to support their clients’ needs. As consultants, scholars, and practitioners search for ways in a theory-into-practice perspective that aids both student researchers and practicing consultants. By drawing on this connection, we intend to highlight the options MC division doctoral students have as they recognize the relevance of the elements of management consulting that can be used to translate theory into practical application. Thus, this PDW will incorporate methods of both enhancing doctoral student participants’ grasp of research side by side with highlighting management consulting theory-into-practice considerations utilizing an interactive approach that gives voice to the researcher as they share their work, retains researcher agency and power, while inviting and utilizing the wisdom of colleagues.

RM

Mentoring to Develop Proposals into High Quality Publications (session 556)

This inclusive PDW will provide students and junior faculty from diverse backgrounds the opportunity to discuss their leadership research in a collegial roundtable setting with prominent leadership scholars. The junior scholars are required to submit brief research proposals prior to the conference, and will be matched with a more senior scholar with similar research interests (not from their home university). At the workshop, the senior scholars will then discuss these proposals with the 1-3 junior scholars they are matched with, providing insights and suggestions for future research directions. A panel discussion will follow, whereby current and former editors of top leadership journals will discuss how to transform the proposals into publishable journal articles. The focus will be on developing theoretical foundations and designing high quality empirical studies. This is a great opportunity for the junior scholars to develop their ideas, and it may even lead to future academic collaborations and foster ongoing mentoring relationships.

Contact the session organizer to obtain the approval code. Potential participants must email a brief research proposal to Dr. Marie Dasborough by June 12, 2020 (Email: m.dasborough@miami.edu). In the email submission, participants should indicate if they are a doctoral student or faculty member. They should also indicate in the email (not on the proposal document) their top 4 preferences for who they would like to work with from the list of senior leadership scholars. Participants will then be notified by email if their proposal was accepted for discussion at the PDW.

OMT Dissertation Proposal Workshop (session 143)

The Dissertation Proposal Workshop is a chance for students at the pre-proposal stage to draw on the

Navigating Qualitative Dissertations: Advice from the Experts (session 145)

The dissertation stage is a critical time in the development of a scholar's research capabilities and their scholarly identity. Receiving advice, personalized guidance and feedback, and the opportunity to network with more senior scholars during this time provides a vital entry point into a community devoted to the advancement of high-quality research. Given that there is no "boilerplate" (Pratt, 2009) for qualitative research, doctoral students who have chosen to use or incorporate qualitative methods for their dissertation research especially require tailored attention. In this PDW, students at all phases of the dissertation process — proposal, data collection, analysis, and defense — will be invited to receive personalized feedback from faculty facilitators on their study, as well as career advice as they approach the next step in their professional journey. Facilitators include scholars who have published qualitative research in top-tier journals and who have experience managing careers as qualitative researchers. Students will be matched with facilitators based on qualitative methodology, research interest, and/or level of analysis. In addition to practical guidance on research methods, students will also have the opportunity to meet with qualitative scholars to expand their networks.

Pre-registration is required for this session and closed July 27th. The session will take place asynchronously.

The workshop consists of small roundtable discussions between faculty panelists and doctoral students working on dissertation

As the concept of circular economy (CE) increasingly gains popularity among practice and policy communities, its insubstantial theoretical underpinnings become more noticeable. Academic research on CE primarily deals with its practical and technical aspects, with marginal attention to theories that can explain the motivations, actions, and impacts of business and provide solutions. A lack of theory in this area has resulted in disperse definitions, different assumptions, and unclear boundaries that hinder practice. Two alternatives may fill this gap: extending some existing management and organization theories to bridge CE and business, or to develop a universal or meta CE theory. Aiming to shed light on this path and building on our past experiences, in this two-hour PDW we will propose five broad existing phenomena at different organizational levels that will include considerations on topics such as resilience, governance for innovation, circular supply chains, firm boundaries, and polycentric perspective in CE. All these topics constitute critical emerging challenges for practitioners that may not be addressed by the existing management theory. The organizers and experts involved in this PDW will present these topics to be interactively discussed by all participants in five parallel roundtables based on design thinking approach. The five groups will develop and share their perspectives on how theory can respond to the focal challenges to increase circulation of different types of resources. The PDW aims to broaden our sight to the role of business in society and ecology by exploring new frontiers to expand relevant management theory.

Attendees are recommended to, if possible, read the five contexts/phenomena described in the Appendix of the workshop proposal before the meeting. During the PDW, we will form five parallel discussion groups to explore how theoretical gaps in each context/phenomenon can be addressed by organization theory. Therefore, choosing the table to join in advance can enhance the contributions.

Are You Concerned About the Climate Crisis? A Climate Literacy PDW Focused on Experiential Learning Curriculum for Climate Science, Justice, and Taking Action (session 559)

Sustainability issues, especially the climate crisis, are fundamentally issues about the ethical choices of managers and leaders—ones that are dominating the news with the youth climate strike, climate emergency declarations, and Australia's devastating fires. This climate literacy workshop profiles a cutting-edge experiential learning curriculum that provides participants (students, community members, and employees) with the knowledge to tackle environmental and social issues and ways to cope with future challenges they will face as employees, managers, and citizens. The workshop, developed by Nottingham Business School (Nottingham Trent University) in collaboration with the UN PRME Champions, Oikos International, Manchester Metropolitan University and the Carbon Literacy Project, uses an experiential learning approach that highlights six dimensions: 1) The science behind the climate crisis; 2) The impact different sectors such as food have on our climate and vice versa; 3) Climate change mitigation tools for different disciplines/functions, 4) Solutions with the highest impact; 5) Strategies and skills for communicating and/or teaching climate actions; and 6) Personal possibilities to take action privately and in future roles (Molthan-Hill & Welton, 2019). We highlight two dimensions from the conference theme. First, the PDW directly aims to “inspire and enable a better world through our scholarship and teaching about management and organizations” which in our case is enhancing members' content knowledge of climate literacy. Second, the curriculum directly relates to the call's question: “How can firms embrace sustainability and financial performance?” by providing current and future leaders timely knowledge.

Research at the Intersection of Work and Volunteering: A Research Development Workshop (session 562)

This proposed PDW is the continuation of a joint effort to develop and grow a community of scholars with the common research interest of intersection of work and volunteering. This research goes beyond the traditional employee relationship to include additional stakeholder relationships such as the community, volunteer beneficiaries, and the third sector. Building on the successes of multiple past caucuses and symposia organized by the same group, this workshop will bring together scholars interested in developing research projects in an interactive, supportive, and interdisciplinary environment. The PDW is aimed at attracting scholars from various contributing disciplines, including Organizational Behavior, Human Resources, Public and Nonprofit Management, and Social Issues in Management. Research topics include, among others, corporate volunteering programs, volunteer management, and individual strategies for managing the intersection of work and volunteering. Our objectives are: (1) bringing together the inter-divisional research community focusing on work and volunteering; (2) supporting and developing ideas and manuscripts through feedback and discussions; (3) discussing ways forward and visions for the research community and the literature to which we contribute. Sections of the workshop will include an overview of the field of research, roundtable discussions of pre-submitted papers and research ideas, as well as a plenary discussion.

We encourage submissions from all levels – PhD, junior and senior faculty. Pre-registration is required for this session. To register online, please visit <https://secure.aom.org/PDWRreg>. OB Research Incubator (session 564)

While it is easy to come up with a rough or vague idea about a research topic, it is not easy to refine, implement, and publish the idea. Every one of us needs help from others, particularly those who have successful publishing experience. However, many of us lack access to colleagues with relevant expertise or hesitate to ask for feedback from experts in relevant domains. Sometimes we are not even sure what kinds of expertise we would need to move the idea forward. In the OB Research Incubator, participants are paired with renowned scholars who have successful publishing experience and can help participants move their ideas forward. Participants also have an opportunity to connect with other OB scholars who share similar research interests. This PDW is open for any member of the OB Division who would like to seek and exchange advice or feedback on research projects in any stage prior to publishing. Prior to participation in this PDW, participants must submit a brief summary of their research idea by June 1, 2020 (5-6 pages, double spaced). These briefs will be reviewed by the session organizers. Those whose briefs receive favorable evaluation will receive a registration code for the session. Complete details regarding the research brief will be made available via AOM listservs on April 1, 2020.

Current Research in Organization Design: Topics, Tools, and Triumphs (session 149)

This PDW seeks to address the growing calls for more research on organization design. Organization design is concerned with the problem of organizing collective action, i.e., how to get multiple individuals with different interests and knowledge to achieve goals collectively. As such, it draws on different theoretical foundations to address problems that have practical relevance, and new theory, phenomena, tools, and data provide great potential for future research. This PDW is designed especially for Ph.D. students and junior faculty interested in the subject, and will highlight the topics, tools, and triumphs of current and emerging scholars who have made organization design a part of their research agenda. The program will feature senior faculty who will offer their perspective on new directions for design research and critical unanswered questions. The program will also include a snap-shot of recently published design-related research as well as a primer on up-to-date tools. Finally, we include numerous opportunities for interaction between panelists and participants throughout the PDW; in particular, we want to request abstract submission for participants to enter in-depth roundtable discussions with the organizers and panelists. Our goal is to provide both a platform to explore the area of organization design and a means to help develop the next generation of organization design researchers.

Entrepreneur-Led Economic Development: Entrepreneurial Communities Through the Right Eyes (session 566)

We talk a good game about engaging diverse stakeholders in growing entrepreneurial ecosystems, but too often we do not. Too often we do not hear what they are saying; too often we do not even really ask. As scholars, we are often even guiltier. The Academy's theme asks us to confront the dichotomies that we have built between research and practice (and policy). Why not do more to answer questions that entrepreneurs and their champions need answered? Why not broaden our sight and invite those with great questions to meet with a critical mass of great scholars who can answer them? Can you imagine what new ideas we will see by bringing the top ecosystem scholars together with leaders of the Vancouver entrepreneurial community AND global ecosystem builders AND policymakers? In this PDW, we offer a chance for in-depth conversation where attendees can share ideas with our best research minds on ecosystems, people deeply engaged in entrepreneurship policy, and leading experts on growing entrepreneurial communities. To this end, we have added a wide array of experts with experience at bridging "town and gown". Most important, we are inviting a remarkable, diverse array of practitioners and champions, including members of the World Business Angel Forum and goal champions from the Kauffman ESHIP initiative. On the 30th anniversary of the Global Entrepreneurship Monitor, isn't it time to bring all the experts on entrepreneur-led economic development together to broaden and enrich our vision of how entrepreneurs and their stakeholders make a huge difference? Justification: Value Propositions for Sponsoring Divisions ENT: Few topics are more salient in entrepreneurship practice than representing entrepreneurial communities as ecosystems, complex and dynamic interconnected networks. VC Brad Feld's powerful book, *Startup Communities*, showed that successful ecosystems accentuate activities. These emerge and grow bottom-up, led by the community (not the institutions). Yet our research seems hopelessly dominated by top-down, institutions-focused models. This has led to a significant disconnect with practitioners, whether ecosystem builders or the entrepreneurs themselves, and with policy experts. In 2019, we attracted over 80 participants, including a few skeptics (over 20 countries represented from 6 continents). At least four new research collaborations have already surfaced. This PDW takes a large, needed step forward by embracing key ecosystem stakeholders. Make no mistake: the entrepreneurial community is watching, including the major ecosystem initiatives sponsored by the Ewing Marion Kauffman Foundation and by the Federal Reserve Bank and now joined by the OECD, UN, and EU. TIM: If there is one Division besides ENT that truly gets entrepreneurship and how to grow entrepreneurship and innovation, it is TIM. Their scholars have done as much or more in growing our understanding of entrepreneurial ecosystems and they share our passion to learn more and to connect with. We would welcome TIM as a full partner in this effort! AAT: The Academy's 2020 theme about "Broadening our Sight" by reaching across the artificial dichotomies we have created. If scholars are to bridge the divides with practitioners and policymakers, we need to see through their eyes (and they through ours.) Their most important questions should open our eyes to the most fruitful avenues for us to study and lower barriers to doing so. This PDW bridges at least two dichotomies (scholars versus practitioners and policymakers). We might even help bridge the divides between practice and policy.

Please RSVP to norris.krueger@gmail.com and c.theodoraki@tbs-education.fr - those who do get priority on tables!. The original proposal is here: www.bit.ly/2020ecosysPDW (and if interested in Kaufman's ESHIP effort, check out : <https://www.kauffman.org/ecosystem-playbook-draft-3/eship-goals/>)

The Organization of Science: A Paper Development Workshop (session 567)

What are the costs and benefits of pursuing research projects on the organization of science? A focus on science and the production of knowledge has spurred the development of managerial and innovation topics ranging from status differentials to regional spillovers to the core capabilities of firms in the knowledge economy. And yet, in an age when science is increasingly important, it is our belief that a significant amount of research on the Organization of Science, the examination of science as conducted by individuals embedded in organizations, has fallen dormant. Why is this so? And what can be done about it? In this Professional Development Workshop (PDW), we take a fresh look at a long-standing topic from a developmental perspective. This proposed PDW unfolds in two acts. In a first segment, we present short presentations by top management scholars that focus on an array of topic including a) theoretical and empirical perspectives on the topic, b) grant-funding, c) international scholarship, and d) data analytic perspectives. Second, and more importantly, we provide an interactive venue for audience participants to receive direct feedback on their working papers and projects. The goal of this PDW is to promote a better understanding of the of the rewards and pitfalls of research in the Organization of Science, as well as to foster a burgeoning community on this important topic.

Pre-registration for this PDW is not required. However, to have your paper workshopped with one or more of the PDW presenters (on a first-come, first-serve basis), email at least an extended abstract (a full paper if you have it) to Chris Liu (chrisliu@uoregon.edu) with Organization of Science PDW Submission in the subject line. The more information I have about your interests the better I will be able to match you to a workshop participant.

Practicing Data Governance to Increase Benefits and Reduce Harms of Big Data (session 151)

Organizations that use data for algorithmic management and analytics are under increasing scrutiny to consider possible impacts on employees, clients, customers, and on society at large. Yet managers, trained primarily to exploit data for economic benefit, approach data governance as a general means to protect data assets to limit the organization's liabilities. We situate data governance as a broader concern that encompasses multiple stakeholder values, interests, and ethics as well as consideration of potential social and economic benefits and harms. In response to the Broadening our Sight Academy Theme, we invite scholars to integrate research and practice on this broader perspective of data governance to address this pressing challenge of the 21st century. This PDW addresses data governance practices within and between organizations, particularly when data are applied in algorithmic management and analytics-driven decision-making. The PDW will highlight approaches in commercial, public sector, health care, urban planning, and technology design contexts. Together we will discuss and engage on multiple forms of data governance including through technology tools (including data analytics and machine learning), organization structures, and regulatory and policy frameworks. Our interactive workshop format is designed to engage academics and practitioners in addressing trade-offs and synergies of data governance practices to realize governance goals.

Addressing Validity Challenges in Entrepreneurship Research Experiments (session 152)

This three-part 2.5 hour PDW focuses on addressing the validity challenges that entrepreneurship researchers (and their colleagues across the managerial sciences) most typically need to overcome when mobilizing experimental research methods. In Part I (40 minutes), three experts will present common strategies for tackling validity issues associated with a study's i) sampling frame, ii) research procedures, and iii) manipulations. In Part II (90 minutes), PDW panelists will engage participants in a series of roundtables focused on the concrete validity issues participants face in their current projects. In Part III (20 minutes), panelists will summarize their roundtables' discussions, drawing attention to the validation strategies used by participants. To foster more meaningful developments (in Part II), we ask that interested PDW participants submit a short research proposal ahead of the Conference. At the same time, we will welcome anyone to attend the roundtable discussions, even if we won't be able to discuss their specific project. We also plan to have an open roundtable to accommodate scholars interested in mobilizing experimental methods in future works.

Though it is NOT an obligation for those who simply want to attend the PDW, participants who want to obtain expert feedback on one of their research projects must submit a short research overview detailing their experimental research design, complete with the actual manipulations (5 pages MAXIMUM). Please email the material to denis.gregoire@hec.ca before July 17, 2020 (please indicate AOM 2020 ENT-PDW in the message header).

An Integrative View on Refugee Research: New Research Insights and Lessons Learned for Academics (session 572)

Refugees face numerous challenges trying to find their way in the labor markets of receiving countries. They are confronted with legal and administrative hurdles, language barriers, a lack of recognition for degrees or work experience obtained abroad, cultural misunderstanding, or even outright discrimination (EEPO, 2016). These obstacles systematically put refugees in inferior positions resulting in persistent employment gaps and a high risk of being overqualified in case of employment (European Union, 2016). In the light of increasing refugee flows worldwide (UNHCR, 2019), improving the status of refugees on local labor markets is high on the agenda of national governments and international institutions. Also, organizations, challenged by the scarcity of talent on the labor market or the need to include corporate social responsibility, are starting to become more aware of the necessity and potential benefits of including this new available talent pool in their workforce. This evolution challenges existing teams, line management, and HR practitioners to flexibly adapt to a diversifying internal workforce. In order to ameliorate refugees' status on the labor market and within organizations, effective collaboration between stakeholders is key. Broadening our sight, this PDW takes a holistic perspective highlighting the needs, challenges and untouched potential at all interacting levels of the ecosystem. Furthermore, we will elaborate on the learnings for researchers and academics working with this research population.

Researching Ambivalence: Broadening our Sight by Accounting for Complexity in Human Experience (session 573)

The managerial study of ambivalence, defined as the simultaneous experience of opposing emotions and cognitions (Rothman, Pratt, Rees, & Vogus, 2017), is rich and complex; crossing numerous domains of scholarship, levels of analysis, and both qualitative and quantitative methodologies. Such complexity opens up exciting opportunities to comprehensively answer questions about human behavior in organizations, but also poses challenges such as its potential to create a fragmented literature. The study of ambivalence is at an exciting crossroads, with integration having begun (e.g., Rothman et al., 2017, Ashforth, Rogers, Pratt & Pradies, 2014) and momentum around exciting new empirical research. There is now a need to bring the different factions together, including micro and macro scholars, field and experimental scholars, qualitative and quantitative scholars, psychologists and organizational behavior/organizational theory scholars. We are at the precipice of building a more coherent literature, and 2020 AOM is the perfect time and place to bring these diverse scholars together to "break down dichotomies and broaden the way we 'see'" (Academy of Management, n.d.) research on ambivalence. This interactive PDW uses three distinct activities to bring together leading ambivalence scholars with researchers at all levels to discuss the opportunities and challenges of studying ambivalence in organizations – specifically, it includes a community building exercise, a panel presentation, and facilitated small group discussions. Now is the time to begin integrating these different factions in order to create synergies, build community, and increase the value of our insights.

This PDW is open to anyone who studies or is interested in studying ambivalence or a related concept (e.g., mixed emotions, contradictory thoughts or attitudes, tensions) or whose research

involves methodological approaches implicated in the study of such topics (e.g., non-binary measurement techniques). To register, please complete the registration form (<https://tinyurl.com/AOM2020AmbivalencePDW>) by 11:59pm on Sunday, June 28th. Applications will be accepted on a first-come, first-served basis. Notice of acceptance and AOM registration codes will be sent in mid-July. If you have any questions about the session, please email Hak-Yoon Kim at Hak-Yoon.Kim@nottingham.edu.cn. Contact the session organizer to obtain the approval code.

Bayesian Statistics: How to Conduct and Publish High-Quality Bayesian Studies (session 575)

This workshop introduces management researchers to the opportunities of Bayesian statistics for empirical management research and provides guidance on how to execute high-quality Bayesian studies. A secondary objective is to develop a platform for knowledge transfer between researchers engaged in Bayesian research. The workshop will cover the following topics: (1) Fundamental conceptual nature and potential advantages of Bayesian approaches compared to statistical significance tests; (2) Step-by-step execution of a Bayesian study and comparison to a regression analysis; (3) How to develop meaningful prior distributions; (4) Execution of Bayesian analyses: Markov-Chain Monte Carlo Simulations and available software solutions; (5) How to communicate Bayesian analyses and results in research manuscripts, and (6) How management scholars can support the more extensive use of Bayesian statistics in the field of management research. This workshop also intends to support community-building efforts among Bayesian researchers. For this purpose, we have already created an internet platform to distribute presentation material, provide links to additional helpful publications and other sources (<https://sites.google.com/site/bayesianresearch/>). In the end, this workshop will enable and inform participants on how to better incorporate advanced Bayesian statistics in their future research.

Participation in this workshop does not require any pre-registration.

Towards a Better Model for Advancing Research: Using Intersectionality as a Research Methodology (session 571)

What is intersectionality and how best can it be employed as a methodological tool to improve studies of diversity and inclusion in organizations? A diverse panel of intersectionality experts will help PDW participants learn how to center intersectionality as a methodological tool to rigorously and practically study the complexities of their research participants' multiple identities that are both embodied and embedded within multiple systems of oppression and privilege in our increasingly globalized world and global workplaces. Through a panel discussion, roundtable breakouts, and interactive presentations, participants will gain an understanding of how to utilize intersectionality as a methodological tool to rigorously and practically study diversity & inclusion, better communicate their findings to various audiences, and increase self-awareness about their own positionality and the implications of its role in research and practice.

We look forward to having you join our PDW! To help us make it a meaningful experience for you, we would encourage (but we do not require) you to visit <http://bit.ly/AoM2020> and fill out the form. The questions are optional and your answers will be shared with our panelists/table facilitators.

Transforming Business Education Through Sustainable Development Goals and Curriculum Innovation (session 576)

This virtual PDW will examine multiple pathways to changing and broadening our curriculum to address the most pressing global challenges (Sustainable Development Goals - SDGs). After a panel of thought and action leaders from the business school arena, we will conduct a very interactive and participative PDW using breakout groups based on a World Café/Open Space Technology approach. Three complementary approaches to transforming business education and research will be shared, very rapidly, to involve speakers and audience in the transformation of business education, to be aligned with the need for a sustainable world. Each uses the UN Sustainable Development Goals (SDG's) and social innovation, as inspired and guided by ASHOKA, to transform curricula and to move away from the Business As Usual (BAU) bias of much business education. One approach offers three different practical tools for developing leadership for a sustainable world. Another is grounded in a humanistic based alternative to the dominant BAU narrative and emphasizes developing faculty members as change agents. The third approach starts by going down to "bare metal" to align all required intro courses in each business discipline with the need for a sustainable world. Audience members will work directly with presenters from all three approaches, and will be free to move from topic area to topic area via the breakout groups. All three approaches will be rich in takeaways emailed to interested participants after the workshop.

Build Real-World projects into Your Curriculum to Help Students Develop their 21st Century Skills (session 153)

The 4th industrial revolution presents complex challenges for education institutions charged with preparing students for success. Recent studies suggest that the core competencies students need to be successful in this era are different to those needed until now, and that students are not yet being effectively equipped with these skills prior to entering the workforce. The industry is calling for a shift in what is being taught and how it is being taught, suggesting a transition towards pedagogies that immerse students in active and effortful work. In 2015, the World Economic Forum developed a 21st Century Skills framework identifying foundational literacies, competencies, and character qualities required for success as we transition into the 4th industrial revolution. In parallel, literature has emerged analyzing how different pedagogical practices like service-learning, work-integrated learning, and project-based learning support the development of these 21st Century Skills. These practices are immersive in nature, and often use the experiential learning cycle at the heart of the design. This professional development workshop aims to develop attendees' ability to build real-world and immersive learning experiences into their course design. The workshop will provide an overview of experiential learning theory and its underlying mechanics using an immersive simulation. The simulation will be followed by a practical workshop where participants will work in small teams to re-work their existing course design to include a real-world project or immersive experience. This workshop will include a showcase of example designs from various disciplines including strategy/innovation, project management, organizational behavior, accounting, and marketing.

The Future of Organization Design: Conversations Between Micro and Macro Views on Hierarchy (session 577)

A major opportunity for current research on hierarchy is better integration of macro and micro perspectives. As scholars and practitioners increasingly consider organizational forms that diverge from traditional hierarchy, the need for interdisciplinary scholarship on hierarchy, bridging research lines in psychology, organizational behavior, management, and sociology, is as great as ever. In this PDW, we will hear about leading contemporary macro and micro research on hierarchy, discuss points of engagement between micro and macro perspectives, and consider how these two perspectives, when integrated, could inform optimal organizational design and novel organizational forms. To this end, the PDW will consist of two parts. First, the PDW will begin with a panel of leading scholars to discuss the frontier of research on hierarchy and opportunities for greater engagement between micro and macro perspectives. Second, the PDW will organize attendees in roundtables, facilitated by our panelists, to brainstorm research ideas in different subareas of interest. The table participants will be assigned in ways to encourage interdisciplinary dialogue. By collaborating and getting inspired by one another, we believe we can facilitate the creation of new ground-breaking and more integrative research ideas.

Exploring Responsible Innovation Using Philosophical Methods (session 578)

The purpose of this workshop is to explore how philosophical methods can broaden the sight of management research into the topic area of responsible innovation. Today, technological and societal innovations such as nanotechnology, genetic engineering, social media, artificial intelligence, or algorithms, have the potential to not only improve living conditions, but also to cause harm for people and planet. Therefore, broadening our vision about managing innovation challenges becomes a priority. In an ideal world, innovations do not create negative externalities such as environmental degradation, social inequality, or restriction of private liberties and political rights. Instead, innovations help people to better manage their private affairs and to collectively address and resolve public issues such as grand societal challenges. The workshop is designed to encourage participants to imagine potential, alternative futures for responsible innovations by inviting them to brainstorm ways in which specific philosophical methods (e.g. thought experiments, axiological analysis, critical theory, discourse ethics, and hermeneutic circles) can inform responsible innovation and help meet social and environmental challenges. The organizers invite colleagues to examine questions such as: How can philosophical methods enhance the capacities of the discipline of management to evaluate the requirements of responsible innovation and its impact on organizations and society? How can philosophical reflection illuminate innovation-based solutions to systemic organizational and social problems? How can empirical research broaden our perspectives about innovation in a way that is consistent with moral principles? How can philosophical methods inform the normative-ethical assessment of irresponsible innovation and its implications for organizations and society?

New Data and Funding for Research on Innovation and Science (session 581)

New datasets are emerging that allow researchers from across disciplinary areas to examine a wide range of fundamental questions involving the research enterprise. In this boundary-spanning Professional Development Workshop (PDW), the Executive Director of the Institute for Research on Innovation & Science (IRIS) will provide an overview of the growing sets of data being curated by IRIS as well as new funding programs that are supporting original empirical projects while concurrently building a new interdisciplinary "science of science" research community. The PDW will also feature a panel of researchers who are working with the IRIS datasets in order to help illustrate the gamut of questions that can be explored. The PDW will actively engage attendees to identify questions they consider to be most valuable in order to support both the broadening of a research community interested in the science of science, as well as to inform future research data components being considered by IRIS.

Transgenerational Entrepreneurship in Family Firms 4.0: Broadening our Sight for the Next Decade (session 579)

The "Transgenerational Entrepreneurship in Family Firms (TE in FFs): Broadening our Sight for the Next Decade" Professional Development Workshop is designed for researchers in the Family Business and Entrepreneurship research fields, and more broadly for researchers coming from other academic disciplines as far as they are concerned with the family business phenomenon. The topic of the PDW is very much in line with the AOM 2020 Annual Theme. Transgenerational Entrepreneurship, a concept created by the Successful Transgenerational Entrepreneurship Practices (STEP) project, refers to the processes through which a family uses and develops entrepreneurial mindsets and family-influenced capabilities to create new streams of entrepreneurial, financial, and social value across generations. The PDW aims at: a) nurturing and developing a community of scholars

interested in advancing the understanding of TE in FFs; b) bridging academic and practice perspectives to find new research avenues; c) providing participants with the opportunity to triangulate academic, consultancy, and in-first-person family business knowledge (through a family business live case) to get inspiration for their own research; d) being a platform to promote research exchange between senior and emerging/young scholars through feedback on research outputs and direct mentoring; e) becoming a platform to define assumptions and develop hypotheses around TE in FFs which can push forward its development and promote joint collaboration and initiatives after the PDW.

Six to twelve papers investigating the topic of Transgenerational Entrepreneurship in Family Firms (TE in FFs) will be presented in roundtables. Highly experienced scholars, many with editorial experience, will lead discussions at the roundtable and mentor and provide feedback to more junior scholars on those papers close to journal submission. Consideration will be given to a wide range of topics in the area of TE in FFs. A short call for papers will be available with a deadline of June 15, 2020. The organizer and some of the scholars participating to the PDW will select from 6 to 12 papers which can be presented in Vancouver (decision will be notified by June 20, 2020). Those papers will be distributed to the PDW participants 2 weeks in advance to provide them with enough time to become familiar with them and prepare feedback. Participation in the PDW requires an approval code from the session organizer. For more info contact: a.calabro@ipag.fr

Sustainability Education for Organizational Transformation: Ideological and Pedagogical Challenges (session 155)

Finding effective pedagogies for teaching sustainability for organizational transformation has always been a challenge; therefore, it is important for management & technology consultants and educators to find new pedagogies that help managers and students develop skills and attitudes for designing organizations and business strategies that promote economic development without sacrificing future generations' ability to meet their needs. In this PDW, we explore the practical, theoretical and philosophical challenges of teaching sustainability and sustainable business strategies to managers and professionals in general and the use of reframing as a pedagogical tool to teach sustainability in particular. There are six major pedagogical challenges involved in teaching sustainability for organizational transformation: 1. Epistemological challenges with the definition and understanding of the idea of sustainability; 2. Sustainable development is a wicked problem; 3. Ideological nature of sustainability debate; 4. Highly interdisciplinary nature of the subject; 5. Cultural diversity in the business classroom; and 6. Conflicting views of the need for sustainability across the business curriculum. In this PDW, we discuss approaches to deal with these pedagogical challenges. We follow a trans-disciplinary approach based on a new pedagogical framework incorporating reframing, transformational thinking, business design thinking, and physical science thinking.

Entrepreneurial Cognition in the Rough (session 156)

The cognitive process that leads to the development of new ventures has been a central topic of ongoing concern to scholars of entrepreneurship. Are you a doctoral student or faculty member who studies cognition within the context of entrepreneurship and are looking for ways to connect with other similar researchers? The purpose of this PDW is consistent with this year's AOM theme, broadening our sight by bringing together a group of scholars from different divisions who are interested in learning about the future of research on entrepreneurial cognition. The PDW will be conducted in three parts — a series of presentations, a moderated panel discussion, and a reception with award ceremony. A call for papers will be announced in early 2020, whereby 8 papers will be selected for presentation at the PDW. An established group of scholars in the field of entrepreneurial cognition will then offer their insight about the past and future development of this topic. Finally, a reception and award ceremony will allow participants and attendees to connect. Toward that end, the Kauffman Foundation has graciously funded 2 best paper awards of \$1000 for the best student-led and faculty-led papers on the topic of entrepreneurial cognition. We plan for this to be an exciting PDW with a lively, interactive, and developmental atmosphere.

Researching National Innovation Ecosystems: Institutions, Infrastructure, and Firms (session 582)

As global economic competition becomes increasingly innovation- driven, policymakers in both government and business are actively searching for ways to increase innovation at all levels of society. Past research on innovation policy tended to take a piecemeal investigative approach with focus on a single or narrow-set of explanatory variables, resulting in limiting or ineffective policy recommendations. The proposed PDW seeks to develop a programmatic, cross-national research agenda to investigate the respective roles of a nation's institutions, infrastructure, and firms in affecting innovative performance at multiple levels of analysis and examine policy implications for governments, businesses, entrepreneurs, and other stakeholder groups. It will feature keynote presentations by Dr. Andrea Belz, Director of the Industrial Innovation and Partnerships Division at the National Science Foundation and Dr. William Maloney, Chief Economist for Equitable Growth, Finance and Institutions in the World Bank Group. The PDW, consisting of two consecutive 60-minute roundtable sessions, will be highly interactive, with participants engaging in small group discussions to develop a preliminary research agenda that combines individual members' research interests with the aim of forming a global research network for follow-on collaboration.

Broadening our Sight: Seeing Change Differently Through Psychoanalysis (session 585)

This interactive workshop is designed to explore the use of psychoanalysis in studying and facilitating organizational change. This year's theme "20/20: Broadening our Sight" invites us to look beyond the longstanding dichotomies (e.g., manifest/latent, conscious/unconscious, negative/positive) embedded in the theory and practice of organizational change. Psychoanalysis offers scholars and practitioners one way to transcend the dichotomies and paradoxes of studying and facilitating organizational change. Some scholars view psychoanalysis as a means for interpreting workplace subjectivity and exposing exploitative uses of power (Fotaki et al., 2012; Arnaud, 2012); vigilance is needed, however, as the rich, liberating resources of psychoanalysis can "potentially be appropriated in ways that are dangerous" (Eda Ulus, personal communication; Frosh & Baraitser, 2008). These tensions raise a number of important questions for psychoanalytically informed organizational change practitioners and scholars: Can psychoanalysis illuminate resistance to change by helping us "see" it differently? Can a psychoanalytically informed approach create more ethical and equitable change processes? Or does a psychoanalytic approach reinforce the power differentials it purports to surface? To probe these questions, we will guide participants in a discussion and application of psychoanalytic frameworks. This workshop will benefit researchers and practitioners who, regardless of career stage, wish to engage with the complexities of psychoanalysis. Participants will leave the workshop with a better understanding of a range of psychoanalytic perspectives and how psychoanalysis may contribute to "broadening our sight" in ways that foster more equitable, healthy, and enriching human relations in organizational change efforts.

How Theories and Measurement of Social Impact Matter in Research - Year 2 (session 587)

This PDW builds on a similarly-named 2019 AOM PDW with over 60 attendees in a continued effort to improve social impact research and build a community of social impact researchers. The PDW aims to further the sophistication of how social impact is conceptualized and measured, which affects several research streams. Session participants (almost all were not participants in last year's PDW) will briefly share about their research projects that involve conceptualizing and/or measuring social impact. Then, in roundtable discussions, session attendees will share their current research projects and future research ideas dealing with social impact. Presentations and discussions will pay special attention to the definition of social impact used, theoretical foundations, type of data used (primary/secondary), and measurement type (single/multiple dimensions) measured. The product of the PDW will be a table (shared electronically) describing the research and contact information identified in the roundtables in order to grow this community of social impact researchers.

If you plan on attending this PDW and have a research project that deals in some way with social impact, please email organizer Hans Rawhouser (hans.rawhouser@unlv.edu) to share details of your project so that you can be more efficiently included in the networking aspect of the PDW.

Responsible and Ethical Innovation (session 590)

The purpose of this PDW is to discuss new approaches to studying the recent ethical challenges that new technologies - Artificial Intelligence (AI) in particular - present for technology firms. Although in the past few years, after prioritized technology investment on AI and growing public concerns on the consequences of it, responsible innovation has also started to interest scholars, academic studies have been sparse so far. However, an emerging stream of research has started to discuss how technology firms navigate this emerging dynamic, and we aim to showcase this research and encourage research by other scholars in this PDW. For example, scholars have recently begun to discuss the potential links between corporate social responsibility efforts and AI accountability. In addition, research on ethical product design, leveraging on what we know about environmental sustainability as well as new business models which support a responsible capitalism have been emerging. In this PDW we will discuss the current state of corporate AI accountability and the exciting variety of new avenues for fruitful inquiry in this realm. The PDW will begin with a panel discussion of senior scholars and an industry practitioner followed by a moderated discussion and open Q&A to discuss current research interests by other interested scholars and industry leaders.

Metrics & Beyond: Broadening the Scope and Impact of Sustainability Research (session 596)

Evaluation metrics such as certifications, standards, rankings, ratings, indices, and voluntary and mandatory disclosure programs that evaluate the social and environmental performance of corporations have proliferated in recent years. Although these evaluation devices have been implemented with the intention of encouraging sustainable outcomes, the accumulating research on this topic illustrates the complexity of this issue and highlights important new questions and concerns. Looking beyond metrics, the ever-increasing concern surrounding society's "grand challenges" such as climate change and poverty elimination have led some scholars to argue that the scope of social and environmental sustainability research needs to be broadened to include institutions and interconnected systems that will enable us to achieve a more sustainable future. We seek to address these critiques by bringing together scholars engaged in firm-level social evaluations and systems-level research within the field of sustainability through an interactive session consisting of panel discussions led by experts in this field, followed by smaller breakout table discussions.

Careers in the Rough: A Paper Development Workshop (session 597)

Careers in the Rough is a workshop consisting of accomplished scholars mentoring PhD students and/or junior scholars who submit careers papers that are in the formative stages. Research in the careers domain includes topics such as: people's lifelong succession of work experiences, the structure of opportunity to work, the relationship between careers and other aspects of life, individual career development, career management strategies, relationships between human resource systems and careers, career outcomes (e.g., success, plateauing, discouragement, derailment), life cycle interactions with work, race, culture, and gender effects on careers, labor force diversity, internal labor market structures and functions, cross-cultural careers, and effects of demographic and social changes on work. Participants are asked to provide a manuscript that is close to submission for a refereed journal. They can also write up to 250 words on a challenge they want help addressing. Each participant will receive detailed feedback regarding the positive aspects of their work, as well as helpful input regarding how it can be improved from two accomplished scholars. This PDW will thus foster the design and development of good careers research into valuable careers publications.

If you would like to participate in this year's Careers in the Rough, please email your manuscript (in pdf) to Marijke Verbruggen (Marijke.Verbruggen@kuleuven.be) with the subject "CAR Careers in the Rough" by August 1st 2020. Please also include your time zone in the e-mail. We will take this into account when matching you with our mentors. Manuscript submissions should be in one PDF of no more than 40 pages, including references, tables, and/or figures and a title page that includes your author affiliation(s), brief abstract, 5-7 key words, target journal (if known) and a 250 word max dilemma/question/concern for your reviewers to consider.

Integrating Service Learning into Management Courses: Challenges, Opportunities, and Success Stories (session 600)

Following its successful reception at AOM 2019, this interdisciplinary PDW is being offered to the Academy of Management members for a second time (with updated material and presenters) with the objective of continuing a dialog surrounding integration of service-learning pedagogy in the context of business schools. Our PDW is also aligned with Academy's 2020 theme of challenging the self-imposed dichotomies in the way we view organizations, student learning outcomes, and our overall role as instructors. Our presenters from the US, Canada, and Russia aim to achieve these goals through the presentation and exchange of innovative, and provocative ideas and approaches that would focus on the successful integration of service-learning pedagogy into management courses (both as standalone courses and as integrated into core courses). Our presenters (who all have first-hand experience of designing, delivering, and/or administering service-learning courses) will use an interactive roundtable format to facilitate these exchanges. Besides sharing their journey (successes and road blocks), our facilitators will also encourage the attendees to reflect on and share their own experiences. We are confident that our attendees will leave the workshop with some models of integrating service learning into their existing courses, and/or developing new service-learning courses from scratch. Beyond this, we hope to create a supportive learning community of those passionate about integrating service pedagogy into their course design.

Broadening our Views of Corporate Social Impact (session 161)

The notion of social impact has been the subject of considerable interest in multiple literatures. Researchers studying strategy, organization theory, organizational behavior, human resource management, and social issues have long discussed the importance of corporate social responsibility (CSR) as a means by which organizations can have a positive impact on their diverse stakeholders, communities, and societies (Adler, 2019; Jones et al., 2016; Mackey, Mackey & Barney, 2007; Marglis & Walsh, 2003; Waddock & Graves, 1997). IB researchers have also acknowledged the role of multinational companies in promoting CSR and achieving social impact (Surroca & Tribo & Zahra, 2013). Similarly, entrepreneurship, technology and operations management and innovation scholars have discussed ways to enhance organizational social impact and improve social welfare (Short, Moss & Lumpkin, 2009; Zahra & Wright, 2016). Thus, to many, organizations (large and small) can be an important force for good that promotes social wealth by addressing grand societal challenges, thereby having a positive social impact. To this end, scholars have highlighted the importance of collaboration between private and public organizations along with non-governmental organizations (NGOs) in promoting social welfare (Klein, Mahoney, McGahan & Pitelis, 2013; Luo & Kaul, 2019; Mahoney, McGahan & Pitelis, 2009).

Thinking of a Position Outside the US? “Dos and Don’ts” of International Business Schools (session 164)

Many management scholars are interested in taking their career to a new culture and context. Although the opportunities around the globe to teach and conduct organizational research have significantly increased, first-hand information on non-US business schools can be hard to come by. This PDW is designed for both junior and senior OB scholars who would like more information regarding academic careers at reputable non-US business schools. It will bring together panelists currently working at schools in Australia, New Zealand, and Europe, who are not originally from there or trained there. The panel will provide information, highlight challenges, and share distinctive features for academic careers in each country, including tacit knowledge and unspoken rules that the panelists have learned during their own adaptation process. Topics for discussion include: What does the job application process look like? How are job candidates and faculty evaluated? What are key challenges in adapting to the national culture and university system? What are norms of professional conduct (i.e., dos and don’ts in presenting oneself and one’s work)? The PDW includes individual presentations by panelists, country-specific roundtable discussions, and a closing Q&A.

Understanding the Contemporary World: Going Inside to Broaden our Sight (session 163)

In this PDW, an international group of dedicated educators from Argentina, Australia, Austria, Brazil, France, Hong Kong, India, Indonesia, Morocco, Philippines, and the USA – all members of the PRME Working Group on the Sustainability Mindset – will lead participants through carefully selected experiential exercises that they have developed and applied vastly in their distinct cultural and institutional contexts. All contributions share a common theme: they aim to encourage students to 'go inside' to broaden their sight. Going inside here is defined through the Sustainability-Mindset framework: developing ecoliteracy, systems, and emotional as well as spiritual intelligence. In addition to engaging in a dialogue about best-teaching practices that enable a more holistic approach toward management education in the light of 'societal grand challenges' and sustainable development, participants will be provided with vast networking opportunities.

CSR Metrics and Compensation Peer Groups: Separating Selection from Influence

Designated as a "Best Paper" for HR

Author: **Steffen Burkert**; LMU Munich

Author: **Robert Kase**; U. of Ljubljana, SEB

Author: **Marco Tonellato**; LMU Munich

This study examines the determinants for the integration of CSR related targets in executive compensation. The integration of Corporate Social Responsibility (CSR) metrics in incentive-based pay components is a recent development observed in executives' compensation. Evidence suggests that these incentives positively affect companies' CSR related activities, and firm value in total. However, there is no evidence on the underlying drivers. We refer to compensation peer groups, and examine how CSR-orientation of firms is the result of a) selection of compensation peers, and b) influence by the CSR orientation of competitors. Our results show that companies that already integrate CSR metrics select compensation peers which are similar in their CSR profiles, and that the dominant effect for integration is influence, implying that companies' decision to integrate CSR is primarily the influential effect of competitors.

Understanding the Impact of Family-to-Work Conflict/Enrichment on Entrepreneurial Firms' Performance

Best Paper Award for Human Resources-Entrepreneurship Research

Designated as a "Best Paper" for HR

Author: **Ying Lu**; Macquarie Business School, Macquarie U.

Author: **Yun Han**; School of Management, Xiamen U.

Author: **Yue Wang**; Macquarie Business School, Macquarie U.

Author: **Yanzhao Tang**; School of Management, Xiamen U.

Drawing upon conservation of resources (COR) theory and family-work literature, the paper develops a model to examine how family-to-work conflict (FWC) and family-to-work enrichment (FWE) shape the performance of entrepreneurial firms directly and, indirectly, through the mediation of entrepreneurial commitments. The model also explores the potential role of entrepreneurs' internal dispositions, in the form of their key personal resources, in moderating the relationships between FWC/FWE and entrepreneurial commitments (and, hence, business performance). Empirical results from a study of 261 entrepreneurial firms in China provide support for our conceptual model. The paper has important implications for both entrepreneurship research and practices.

Testing the Efficacy and Mechanisms of an Authentic Self-expression Orientation Program

Designated as a "Best Paper" for HR

Author: **Teng Zhao**; Auburn U.

Author: **Lei Lai**; California State U., Dominguez Hills

Author: **Jinyan Fan**; Auburn U.

Author: **Hairong Li**; Auburn U.

Author: **Xiang Yao**; Peking U.

Building on prior research (Cable, Gino, & Staats, 2013) showing that an orientation program that emphasizes authentic self-expression (ASE) may facilitate newcomer adjustment, the present longitudinal field experiment further tests the ASE program, with a focus on dynamic treatment effects on both proximal outcomes (i.e., perceived stress and popularity) and distal outcome (i.e., job performance). Participants were two cohorts of newly-hired nurses entering into a large hospital in China, with the first cohort receiving a traditional orientation program and the second cohort receiving an ASE program. The final sample consists of two groups of 38 new nurses, matched on various demographic variables. Participants were followed up four times (Months 3, 6, 9, and 12) post-entry. Results showed that compared with those in the traditional orientation condition, new nurses in the ASE condition (a) reported lower levels of perceived stress at Month 3, and this effect was maintained over 12 months, (b) were rated by their peers as more popular and had better job performance ratings by their mentors at Month 12, with the treatment effect emerging over time. Further, perceived stress and slope of popularity change trajectory were found to mediate the ASE effect on job performance at Month 12.

Is there a Role for Professional Doctoral Research in Broadening the Impact of Management Research? (session 169)

AOM communities have observed a growing need for impactful research in a context of increased complexity. One could also observe in the past few years the lively interest in the DBA and Professional Doctorate PDWs, which attracted newcomers to the AOM, and contributed to include them in the divisions once they had attended the DBA event. In response to this need, DBA programs have gained traction in a variety of countries and business schools. While there are no official figures, we assume that there are more than two hundred DBA and executive Ph.D. programs around the world. The objective of this PDW session is to explore how the AOM might better meet the needs of DBA faculty and candidates, in particular through enhancing reflexivity and teamwork as an academic-practitioner community. Probably more than ever, DBA students can nowadays make a difference to their organizations by helping them to address complex issues through appropriate research methods. They may also want to gain academic visibility through co-authoring papers in high profile journals drawing on high quality data, which is accessible through their practice work. All AOM divisions might benefit from cross-fertilization between academics and practitioners; the “traditional” members could provide DBA candidates with inductions on literature, publication experience, and opportunities to teamwork - for example through AOM Connect.

Measuring the Unmeasurable? Reconceptualising Measurement Process in Organizations and Supply Chains (session 171)

This PDW has three main objectives. First, we want to draw researchers' attention to the concept and practice of measurement in organizations and in wider society. Despite its increasing relevance and pervasiveness, measurement is often treated as a black box in management research and practice. Indeed, measurement instruments and frameworks, such as KPIs and scorecards, are now being deployed in virtually every organization (private, public, and non-profit) to gather, analyse, and report data, not only on financial but also on environmental and social aspects. Such growing use, however, has not been accompanied by an improved understanding of what measurement is and what it can – and cannot – do. Second, we will discuss measurement's role particularly in organisational environments characterized by ambiguous objectives and complex causal chains. As organizations and supply chains are increasingly aiming to understand and demonstrate their contributions to wider aims, such as environmental sustainability and social outcomes, measurement is often seen as a crucial mechanism that ensures certainty and insight. However, are these simply futile attempts to measure the unmeasurable? If not, how can we ensure quality of data and better-informed decisions in such situations? Third, we will explore the implications of an alternative conceptualization of measurement, intended as a subject-dependent process, rather than an objective set of tools. In doing so, we will consider different contexts – both intra- and inter-organizational – as well as implications for research, teaching, and practice. These aims will be achieved through short presentations, facilitated discussions in small groups, and a final plenary discussion.

Broadening our Sight to System Transformation: Doing Research that Matters in the Anthropocene (session 173)

This workshop focuses on how management scholars, particularly in business in society-related arenas, can better research, understand, and tackle of the massive grand challenges, including climate change, species extinction, inequality, and political divisiveness, that now face businesses, as they struggle to adapt, and, more generally the world. The challenge, as articulated by scientists, is to sustain a business system that works for all while greatly mitigating negative ecological and societal impacts. Today's businesses are struggling to adapt to the immediacy of these new market realities with their concomitant responsibility imperatives. Toward that end, Sandra Waddock (Boston College) will discuss how new narratives and memes are needed shift understanding — and mindsets — to bring about transformation. David Wasieleski (Duquesne University) will explore how a transcultural dialogue can help address and reduce a variety of tensions that have led to a disconnect between humans and nature. David Korten (The Great Turning) will argue for a living systems approach that enhances capabilities for businesses better serving their communities. Martina Linnenluecke (Macquarie) will discuss grand challenges in the context of the Asia-Pacific region, emphasizing achievable sub-challenges. Steve Brammer (Macquarie) will reflect on how scholars can contend with challenges associated with impact-oriented scholarship. Laura Albareda (LUT) will emphasize the need for both collective action and polycentric management approaches as approaches to grand challenges. Finally, Erica Steckler (UMass Lowell) will highlight the role of authenticity, in particular of organizations, in meaningfully addressing and advancing the well-being of stakeholders, including humanity and the natural environment.

When Does a Daily Dose of Nature Matter? Linking Extra-Work Contact with Nature to Employee Behavior

Designated as a "Best Paper" for ONE

Author: **Anthony Klotz**; Texas A&M U.

Author: **Shawn T. McClean**; U. of Wyoming

Author: **Junhyok Yim**; Texas A&M U.

A growing body of research indicates that contact with nature at work has beneficial effects on employees. However, many employees spend most of their workdays indoors, largely separate from natural elements. For these employees, the bulk of their contact with nature occurs outside of work, before and after the workday. The extent to which contact with nature outside of work crosses over and affects employee feelings and behaviors on-the-job, if at all, is not clear, leaving an incomplete picture of the potential for employees to access the work-related benefits of nature while outside of the workplace. In this paper, we draw from Affective Events Theory and examine the effects of daily contact with nature in the evening after work, and in the morning before work, on beginning of day employee affect and work effort later in the day. Our results indicate that exposure to nature in the morning, before work, positively affects employees' beginning of day moods and subsequent job performance. In addition, we found that prior evening contact with nature also positively related to beginning of workday affect and subsequent work effort, but only for employees with high levels of nature connectedness—an individual difference that relates to the extent to which individuals feel an innate connection to the natural world. Taken together, our findings shed light on the temporal effects of contact with nature outside of work on employee behavior at work, indicating these positive effects degrade overnight, except for those most connected to nature.

The Social Contract Between CSR and Social License: A Sentiment and Emotion Analysis

Designated as a "Best Paper" for ONE

Author: **Shu Ham Ho**; Simon Fraser U.

Author: **Chang Hoon Oh**; Simon Fraser U.

While prior literature has assumed that companies engaging in corporate social responsibility (CSR) can always gain social license (SL) from local communities, this study examines the boundary conditions of this assumption. Using justice-based and consent-based social contract theory, we theorize that CSR at the global and local levels improves the degree to which a local community grants a SL to a multinational company (MNC), but this degree is negatively moderated by the diversity among stakeholder groups within the community. we build a unique dataset from 3,190 news articles describing the SL of 43 mining MNCs operating in 456 local communities between 2005 and 2019. Considering SL as a continuum grounded on such emotions as trust and anger, we use natural language processing and big data techniques to measure SL through a sentiment and emotion analysis. Findings of this study show that CSR at the local level is more significant in increasing the degree of SL than at the global level, and that community diversity negatively moderates the relationship between CSR at the local level and the degree of SL. This study thus reveals that local communities tend to have a consent-based approach towards the social contract between CSR and SL.

Goal-Driven and Stimulus-Driven Attention in Sustainable Investing: An Eye-Tracking Experiment

Designated as a "Best Paper" for ONE

Author: **Josua Oll**; U. of Oldenburg

Author: **Martin Meißner**; Zeppelin U.

Author: **Alexander Bassen**; U. of Hamburg

Although the distinction between top-down and bottom-up attention is well-established in the literature, organizational research on the interaction

of both processes is still fragmented. Drawing on the attention-based view of the firm (ABV), we investigate how organizations can employ attention structures to influence individual decision-makers' attention and choices bottom-up. Extending the ABV's structural view of attention, we additionally explore how individual decision-makers' top-down processes shape their attention and choices, independently and in concert with an organization's structural determinants. Our analysis is grounded on an eye-tracking based choice experiment in the realm of sustainable investing, in which we manipulate the salience of sustainability information that is channeled to decision-makers and measure individuals' priorities for self-transcendence values. Our results provide strong support for top-down processing as self-transcendence increases attention to and importance of sustainability information in choice. We additionally find that the centrality of information, as opposed to its visual contrast, moderates the relationship between values and early attention, and subsequent downstream effects on relative attention and choice. Overall, our findings suggest that organizational structures can be harnessed to increase the importance of sustainability information at the individual level. Yet, respective measures may be more effective when implemented in an unobtrusive manner.

Broadening our Sight Through Immersive Educational Experiences: Lessons from the UN PRME Champions (session 604)

This PDW aims to demonstrate the power of taking higher education practitioners out of their comfort zones and exposing them to real life experiences that enable them to gain first person perspectives on responsibility, ethics, and sustainability issues alongside the stakeholders who are living through them. It highlights the importance of business and management educators partnering with actors from a range of sectors in recognizing the urgency of addressing social and environmental challenges. Academics from United Nations Principles of Responsible Management Education (UNPRME) Champion Schools were exposed to a range of 'immersion' experiences which placed them at the center of responsible business challenges. These immersions often had a transformative impact on individual educators, enabling them to take their learning and experience back into the classroom better equipped to contextualise sustainability issues to their students, colleagues, and other university stakeholders. This PDW will report on the experiences of UN PRME Champion School representatives and demonstrate the value of immersions for faculty in order to develop teaching, research and enterprise partnerships related to the sustainable development goals. It will provide practical guidance to participants on how to organize and design immersive experiences for students and faculty and present rich visual and audio data collected during the immersions to help bring the workshop to life.

Foregrounding Context in Researching Organisations and Grand Challenges (session 606)

Grand challenges have a global reach, but they instantiate in local and national contexts – yet, in our quest to generate universal, theoretical knowledge, we may overlook the role of such social- ecological and institutional factors. Without a deep appreciation and knowledge of context, we may also impose our own assumptions that are based on not only our scholarly training, but also our embeddedness in our own contexts. The aim of this PDW is to give greater explicit attention to context to improve the validity of our arguments and to challenge taken-for-granted assumptions. Our guiding questions: How do we ensure that context is appropriately addressed in theorizing organizational responses to grand challenges, especially in problematizing our assumptions and theories? How can dialogue and collaboration between researchers across contexts help further such contextual reflexivity?

From Sustainable Global Value Chains to Circular Economy – Broadening our Sight

for North/South (session 605)

Sustainability in global value chains (GVC) has become an established research field in many management-related disciplines. The growing interest in the circular economy concept pushes these conversations beyond established boundaries. The realization of interconnectedness urges researchers to broaden their sight by establishing multidisciplinary collaborations. In today's literature, the conventional linear economy model (i.e., take, make, dispose) still prevails, leaving many questions unanswered. Circular economy models, with their reorganized production and consumption processes, offer new sources of value based on new forms of production and use of products (i.e., waste as supply, cradle-to-cradle) through different innovation, manufacturing, and consumption activities (i.e., reuse, reduce, recycle) and new remuneration approaches (e.g., performance-based pricing). While the concept of better connections between output and input flows at all production or consumption levels is receiving increased acceptance, it remains unclear how to make this change happen on both corporate and public policy levels, and without furthering the north/south divide. Various scientific communities developing circular economy models contribute different perspectives to this conversation, with promising opportunities for research. This PDW takes up the discussions facilitated by various academic (e.g., Academy of Management, Society for the Advancement of Socio-Economics) and governmental organizations (World Bank Group, 2020) on advancing research on the circular economy to a new level. Participants will work with prominent scholars from different disciplines in open workshops to develop ways to address these challenges. The PDW ends with a future research-oriented discussion with all participants, based on results generated in three parallel workshops.

Broadening our Sight: Embodiment, Allyship & Posthuman Organizing for Disabilities (session 175)

This All Academy Symposium endeavors to broaden the sight of management research by highlighting the central nature of embodiment and embodied experience to understanding human interactions. We use disability as a means to showcase the role of bodies and embodiment at work. Disability is an often-overlooked research topic within management and entrepreneurship research. This symposium uniquely combines first-person experiences of academics with and without disabilities and their collective embodied autoethnography. Taking these embodied experiences as a starting point, panelists joined by Andreas Heinecke, founder of the award-winning Dialogue Social Enterprises, will discuss the role of posthuman organizing for disabilities. Here, we will focus on discussions around embodied individual versus collective experiences, the idea of allyship within methodological and theory-building approaches, as well as the impact of a posthuman and embodied perspective on a diversity management and entrepreneurship research fields. Our aim is to push theoretical and methodological boundaries of management research through the lens of embodiment.

A Hands-On Introduction of Two Pedagogical Tools to Improve Students' Use of the Value Chain (session 609)

Porter's (1985) value chain, a tool used to understand and analyze the firm's internal situation, is widely taught by academics and applied by practitioners. As evidenced by its inclusion in many management texts and syllabi, the value chain is one of the most widely taught tools in business schools (e.g., Wright, Paroutis and Blettner, 2013). And according to a survey of practitioners, the value chain is a management tool in "high use" (Jarzabkowski and Giuliatti, 2007). While the value chain is a management tool that students should master to meet employers' needs, in my experience, many students fail to master it. To help students become proficient using the value chain, I initially followed the practice that many other academics use to help students master management tools: I taught the value chain using the traditional lecture and case method. I assigned a learning resource (value chain reading and/or YouTube video) and then reviewed the value chain in class with a worked example. To ensure students understood and could reasonably use the value chain in a business context, I then assigned a case that required them to apply the value chain. Unfortunately, while students excelled in the other areas of the case, I consistently found that student performance using the value chain was underwhelming. Given the students' poor performance using the value chain, I began to look for other pedagogical methods to supplement the traditional case and lecture method. In the past ten years, I have been supplementing the traditional lecture and case method with two different pedagogical methods alternatively used with different audiences (undergrads, MBAs, executives) to improve their understanding and application of the value chain. The first method, JetFighter, is based on an exercise published in the Journal of Management Education (Sheehan and Gamble, 2010). This hands-on exercise simulates a factory where students are placed in groups and asked to plan and then produce a special order of paper planes. The second pedagogical method I

Empathy as Catalyst for Analysis: A Skill-Sharing Workshop for Experiential Learning (session 610)

What are the best practices for facilitating empathy as a critical part of learning business analysis, given constraints such as classroom settings and timing, program design and requirements, faculty skills and incentives, and the university's standing in the community? The goal of this highly-participatory workshop is to share techniques and inspiration for using empathy to enhance analysis across the business curriculum. Participants should leave with concrete ideas for classroom use as well as a framework for class and program design. More specifically, the session will: 1) Engage participants in highly-interactive discussions of the usefulness (or not) of empathy in informing and enlivening analysis. 2) Collect and share with all participants best practices both for developing empathy and for using empathy to enhance analysis. 3) Present and invite critique of the empathy-informed analysis framework that we have been developing for both classroom and program-wide use.

Five Activities to Get Students Hooked for OB and HR Classrooms (session 608)

Experiential in-class activities may provide extra value if used as a hook to get students interested in the subject matter at the beginning of the class, as attention and interest are the key predecessors to gaining and retaining knowledge. Therefore, starting classes with a thought-provoking activity before diving into a classroom lecture or reviewing content could foster better learning outcomes. In this session, we will review the research behind this teaching approach and then present five activities we use to initiate classroom sessions on key OB and HR topics to get students “hooked” on these topics.

Objects (session 614)

How else can we train in innovation? How else can we teach innovation - and notably innovation management? Our pedagogical innovation is based on a direct relationship to innovative technical objects from the past. We follow the Conservatoire National des Arts et Métiers' "pedagogy of demonstration" established at the end of the 18th century. While this pedagogy gradually disappeared during the twentieth century with more academic pedagogical formats, the objects, and support of the pedagogy remained. Our wager is to return to the original vocation of objects-based pedagogy and to make it a training tool today. At the crossroads of innovation management and history, we develop a digital dimension with a Mooc entirely realized at the Art and Craft museum (which gathers one of the most beautiful collections in the world of technical objects) and a face-to-face pedagogy with the reception of small groups in the collections of the museum.

Publishing Inductive Qualitative Research in Prominent Academic Journals (session 179)

This PDW is aimed at fostering information exchange among practitioner scholars interested in publishing inductive qualitative research in prominent academic journals. Practitioner scholars are individuals who pursue rigor in their research process and output as well as produce knowledge that is useful for improved managerial practice. The workshop will feature scholars with a track record of publishing qualitative research in premier journals. The goal will be to help practitioner scholars to disseminate their ideas through prominent journals, while still encouraging these scholars' focus on managerial relevance. The conference presenters will lead exchanges around topics such as understanding the expectations of premier journals; conducting a literature review; designing data collection and analysis processes; selecting and working with co-authors; writing a first research draft; refining a manuscript before journal submission; and dealing with the editor and reviewers during the review process.

A Da Vinci Effect? Can Management Education Benefit from Teaching Methods in Other Disciplines? (session 617)

This session explores how different academic disciplines can learn from, as well teach, each other. The presentation asks whether there is scope to incorporate teaching methods from other disciplines into management education, and similarly can methods routed in management inform teaching in other disciplines? The session will exemplify an activity inspired by mock trials used in law schools, which can be a dynamic method for students to think critically about management theories. Similarly, there are pedagogies routed in management that could be used in other disciplines. Teaching activities inspired by TV shows such as "The Apprentice" which promote entrepreneurial capabilities are often used in the classroom, and could be used as teaching activities for example in the Sciences. The session seeks to spark discussion and highlight new ways of teaching management, whilst providing some practical examples of how it could be done.

Teaching Uncomfortable Topics: Using Technology to Facilitate the Journey of Discomfort (session 623)

"I need to learn to be comfortable with my discomfort" was a comment made by an executive during one of our Leadership programs when asked to reflect on and share their leadership practice.

Confronting one's own weaknesses produces emotions which are not always easily shared and discussed, especially among work colleagues. Yet identifying emotions and acknowledging discomfort is central to reflective practice (Fook, 2010), which is also central to leadership development. The experience of these executives on the program prompted an immediate question for us: How can we help participants on executive leadership programs to move beyond their comfort zones and enhance their reflective practice? In this presentation we plan to describe and discuss how we addressed this question through the design, development, and delivery of an executive leadership program. We will provide an example of

how the use of technology in the form of Audience Response Systems (ARS) or 'clickers' created a safe environment, which enabled participants to discuss what initially would have been perceived as leadership vulnerabilities.

Visual Course Mapping for the Generation Z Student (session 622)

In this interactive session, participants will learn about and gain practical experience with “visual course mapping”. Visual course mapping is an innovative element of course design that entails the process of thematically organizing, linking topics, and presenting a course’s master plan to students in the form of a dynamic and interactive visual map. Visual course mapping provides instructors with a powerful tool that can help students understand the organizational logic and interconnections among course topics and materials as they progress through a term. In addition to helping organize and synthesize course materials around a unifying theme, the dynamic and interactive nature of visual course mapping appeals to the increasingly visual and interactive learning style preferences of the rising cohort of Generation Z students who are now filling many college classrooms (McCrinkle and Wolfinger, 2009; Khan and Bansal, 2018). Participants will leave with an understanding of the process of visual course mapping, as well as practical experience developing their own course maps.

New Doctoral Student Consortium (NDSC): Day 3 (session 183)

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. This year's virtual NDSC will allow participants to connect with fellow doctoral students and to learn from experienced scholars on topics such as succeeding in a doctoral program, publishing research, and managing an academic career. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large. This year, the NDSC will run across three days/sessions: •Friday, August 7th: 10:00am-12:00 (noon) EST Session ID# 19680 •Saturday, August 8th: 10:00am-12:00 (noon) EST Session ID# 23347 •Sunday, August 9th :10:00am-12:00 (noon) EST Session ID# 23348

Pre-registration is required for this workshop as space is limited to 110 participants. The deadline to register online is July 30th, 2020. Participants only need to register once but must commit to participate on all 3 days. To register online, please visit:

https://docs.google.com/forms/d/e/1FAIpQLScdKVoj2gO1f73M7TZ3kkXqvFSrjEw/viewform?usp=sf_link
Registered participants will receive a confirmation e-mail with further information on the virtual sessions. In case of any questions, please reach out to us on aom.ndsc2020@gmail.com.

Organizational Innovation: TIM Conversations - Cognition and Innovation (session 186)

Paradoxical Framing and Coping Process on Sustainability Innovation

Author: **Ei Shu**; ESLSA Business School Paris

Despite all the attention around paradox lens on sustainability in recent years, research regarding the ways how paradoxical framing may influence a firm's innovation activities remains limited. To address this gap, this study juxtaposed paradox theory and cognitive framing perspective to examine how the two sides of paradoxes - namely, the positive framing and negative framing-may either stifle or enhance a firm's innovative efforts toward a sustainability new product development. The findings add to the extant research by providing a more fine-grained understanding on how paradoxes are manifested in the organizational setting, and its underlying reframing process to cope with tensions on sustainability innovation.

Successful Corporate Entrepreneurship: A Process of Acculturation into Corporate Logics

Designated as a "Best Paper" for TIM

Author: **Ann-Kathrin Leiting**; Eidgenössische Technische Hochschule Zürich

Author: **Bart Clarysse**; ETH Zürich

Author: **Jana Thiel**; ETH Zurich

Incumbent firms increasingly employ practices derived from the global entrepreneurial community to develop new innovative projects geared toward strategic renewal. Typically, the imported practices and logics differ substantially from traditional corporate logics. While prior literature has described how organizations can effectively blend different institutional logics and proactively use them, we know rather little about how a new professional logic with its own processes and practices can be introduced into a dominant organizational logic with its strong corset of how to create new market opportunities. We study this complicated process within the context of a large engineering and electronics company that has invested in endorsing corporate entrepreneurship to deal with the opportunities and threats of technological change in its industry sector. We find that a successful re-integration of corporate ventures into a business unit depends on the capability for organizational acculturation. Our study makes two central contributions: first, we contribute to the literature on institutional logics by identifying detail mechanisms of such organizational acculturation process, and second, we add to the corporate venturing literature by offering theoretical insights into the question why practices and forms adopted from the entrepreneurial community do not easily result in new business.

[view paper \(if available\)](#)

Managing Digital Transformation: Comprehending Digitalization Tensions for Driving Disruptive Change

Designated as a "Best Paper" for TIM

Author: **Lukas Moschko**; Institute for Technology and Innovation Management at RWTH Aachen U.

Author: **Vera Blazevic**; Radboud U. Nijmegen

Author: **Frank T. Piller**; RWTH Aachen U.

Recent studies have shown the significance of disruptive innovation activities in the context of digital transformation for incumbent organizations. These companies strive to move towards data-driven business models through applying digital technologies which were attested a disruptive nature. However, it is unclear why many of those innovation projects cannot seize the full potential of digital technologies and rather result in an incremental adaptation of existing products or processes. Applying paradox as a meta-theory in this context, we seek to examine the mechanisms of digital innovation management projects in established, industrial companies. By conducting a qualitative study based on a collaborative research project and additional interviews with experts from industrial companies we were able to identify and categorize emerging tensions in digital innovation projects. Based on those results, we derived underlying paradoxes, notably regarding the openness in collaborations, the determination of the digital innovation process and integration of the innovation outcome in the existing business. Based on paradox theory, we discuss that those subliminal paradoxes may become salient in form of tensions in digitalization projects. An awareness for existing paradoxes can reduce the impact of tensions in digital innovation management in order to create disruptive innovations through digital transformation.

Achieving Personal Ambidexterity in Practice

Author: **Alexander Paul**; RWTH Aachen U.

Author: **David Antons**; RWTH Aachen U.

In times where technological change develops exponentially, companies are under pressure to constantly reinvent themselves. However, it is still an open question how companies can explore new opportunities for innovation while at the same time exploiting their existing knowledge. Much research has focused on structural and sequential ambidexterity, meaning that exploration and exploitation are separated through structures or time. Little research, however, has been put on personal ambidexterity and how paradoxical demands can be handled by employees within their daily work environment. Therefore, we analyze how employees of a large European car manufacturer with distinct roles execute a highly explorative task – evaluating tournament-based crowdsourcing solutions. For this, we make use of participant observation, archival data, and qualitative interviews. The results indicate that certain cultural elements as well as leader behaviors form role perceptions of employees. If role perceptions are exploitative, employees feel negative emotions due to cognitive dissonance which decrease exploration quality. Nevertheless, we identified some individuals that were able to cope with cognitive dissonance through certain personality traits, competencies, support, and an adaptation of the task scope. This provides several implications for the implementation of personal ambidexterity within companies.

Internationalization of State-Owned Firms: Do Governments Help or Hinder? (session 188)

The internationalization of state-owned firms has gained increasing scholarly attention, as well as promoting a key theoretical debate — whether the state enables or limits these firms' internationalization. This question is vital to the international management literature because the extant theories have been severely challenged by the shifting landscape of the international business field. Reflecting this, the panel will focus on clarifying various, sometimes conflicting, findings generated in the current literature. In doing so, we will make explicit theoretical assumptions in conjunction with the evolving political and economic reality. Specifically, there is a lively debate on the role of the state in firm internationalization. On the one hand, because of potential government appropriation and tension between owners and managers, some scholars predict a negative relationship between state-ownership and firm internationalization. On the other hand, given preferable treatment from the state, others argue that the internationalization of state-owned firms benefits from state ownership. To better understand the literature, our discussion is grounded in three relationships: within the firm, between the firm and home government, and between home and host governments. The ultimate goal of the panel is to inspire new research ideas on internationalization of state-owned firms and advance international management scholarship

A Configurational Analysis of the Effects of EQ and CQ on Performance in Multicultural Teams

IM Division Best Paper in OB/HRM/OT Finalist

Designated as a "Best Paper" for IM

Author: **Franziska Eberz**; Free U. of Bozen-Bolzano

Author: **Marjaana Gunkel**; Free U. of Bozen-Bolzano

Author: **Christopher Schlaegel**; U. of Groningen

Author: **Vas Taras**; U. of North Carolina, Greensboro

Prior research has typically explored the role of cultural intelligence (CQ) and emotional intelligence (EQ) in teams separately. The present study examines the interplay as well as the combined and unique effects of both CQ and EQ on performance in global virtual teams (GVTs). Utilizing a sample of almost 3,000 individuals from over one hundred countries forming 438 multicultural teams, we evaluate the combined effects of CQ and EQ using the regression analysis as well as fuzzy set qualitative comparative analysis (fsQCA). The results show that both individual and team performance are significantly affected only by EQ. However, the configurational analysis shows that various configurations of the two types of intelligence can improve performance. EQ is more important for individual performance and CQ has a stronger effect when team performance is considered. We discuss the implications of our findings and provide directions for future research.

Multicultural and Multilingual Individuals Forming Social Capital

IM Division Best Paper in OB/HRM/OT Finalist

Designated as a "Best Paper" for IM

Author: **Tomke Jerena Augustin**; Eberhard Karls U. Tübingen

Author: **Markus Pudelko**; U. of Tuebingen

This study investigates the social capital formation and outcome of two increasingly important groups of employees: multicultural and multilingual individuals. While internationally operating organizations are increasingly relying on the informal resources of their employees such as social capital to gain a competitive advantage, cultural and language differences among their employees limit the formation and presence of social capital. Since multicultural and multilingual employees could be a solution to this dilemma, we investigate how they form social capital and identify the properties of their network of relationships as relevant to the organization. Based on the analysis of 154 semi-structured interviews with multicultural and multilingual individuals in international workplaces, we develop a model that shows the multifaceted process how multilinguals form language-specific social capital only, whereas multiculturals form culture-specific and culture-general social capital. Our inductive reasoning unpacks the language-related, culture-related and personal attributes that these individuals draw on when forming social capital. Our study contributes to international business research by introducing the micro-processes of forming social capital and expanding knowledge about the resources that multicultural and multilingual employees bring to organizations.

Diversity Types in a Top Management Team and the Process of Strategic Change

Designated as a "Best Paper" for IM

Author: **Mami Taniguchi**; Waseda U.

Author: **Parshotam Dass**; U. of Manitoba

Multinational companies need to deal with diversity in their strategic change processes. Diversity researchers distinguished among diversity as variety, separation, and disparity but did not examine how they may relate to one another. The purpose of this research is to investigate the relationships among these diversity types in a top management team of a global region of a multinational information and communications technology company currently undergoing the process of business model change. We conducted 95 interviews with top executives from 2013 to 2020 from which we derived a multilevel model a) where team diversity as variety, separation, and disparity become salient during the exploration, transformation, and exploitation phases, respectively; b) that shows how variety and separation influence disparity and how these influences are mediated by perceived inclusion at the individual level; and c) that explains how performance at three levels (individual, team, organization) has a critical role to play in the process of globalization. Our longitudinal qualitative study has helped to broaden our view of diversity by bridging the gap between micro and macro approaches, qualitative and quantitative methods, and rigor and relevance.

[view paper \(if available\)](#)

Why Do Platform Multinationals Struggle Abroad? The Role of Informal Institutions

IM Division CEIBS Best Paper Award Finalist

Designated as a "Best Paper" for IM

Author: **Ke Rong**; Tsinghua U.

Author: **Di Zhou**; Tsinghua U.

Author: **Ronaldo C. Parente**; Florida International U.

Firms providing virtual platforms that connect buyers with sellers of goods and services are increasingly venturing abroad, sometimes from or near inception. However, these platform multinational companies (PMNCs) seem to struggle more against local competitors in foreign markets compared to more traditional MNCs when it comes to capturing market share and generating profits. In this study, we explore the underlying causes of these patterns. We first flesh out several stylized facts from a longitudinal case study of the mobile phone industry in China, and then we use these facts as input for formal economic modelling and simulations to derive generalized propositions. We find that informal institution distance (IID) at the business system and product market levels poses challenges to all MNCs. Yet, whereas traditional MNCs can overcome IID by leveraging their product quality advantage, PMNCs are usually unable to do so and are, thus, more likely to underperform. We explicate that this pattern is likely underpinned by network effects that exacerbate the role of IID for the foreign PMNC. We discuss implications of these results for theory of the PMNC, particularly focusing on the need for research examining how this unique form of MNC can overcome internationalization challenges associated with IID.

Beyond Pitch Competition: Rural Community Building Through Youth Entrepreneurship (session 628)

Outmigration of youth and young adults is a serious issue in rural America. Many young people leave their communities right before or at the peak of their economic productivity in search of better educational and economic opportunities elsewhere (Smith, Winkler, & Johnson, 2016). Entrepreneurship is critical as a potential solution to job creation and population retention (Kane, 2010). Although there is growing interest and engagement in entrepreneurship education for youth and young adults, significant gaps exist. First, most existing programs that provide mentoring opportunities towards vocational and entrepreneurial skills have been designed in and for large communities, and are not attuned to the unique rural context. In addition, few programs are designed for retention in (or return to) rural communities. Finally, few programs collect data on pre- and post-source attitudes to refine their programs. To address these challenges, we created youth entrepreneurship education programming based on the Lean Startup Method (Ries, 2011) and Youth-Adult Partnership (Y-AP) approach (Zeldin & Powers, 2013) with an intention to contribute to sustainable rural futures with a focus on promoting youth entrepreneurship, technology skills, and fostering social connections and attachment to local communities. The program has been delivered in various small towns in Nebraska and Wyoming in partnership with community organizations, high schools, community colleges, and universities. This session at the Teaching and Learning Conference has three goals. The first is to introduce new learning innovations for youth entrepreneurship education that are place-based, experiential, and project-based. The second is to share insights and early findings of how the program has influenced youth attitudes about rural America. The third is to propose best practices to connect youth learning and small-town, real-life business challenges.

Curricular Design for Student Employability Development: A Multi-Stakeholder Perspective (session 629)

The higher education (HE) sector plays important roles in equipping graduates with suitable skills for the work place. However, over the years, the ability of the HE sector to achieve this role has been questioned (Hill et al. 2013). The commonly-perceived gap between what graduates can offer and what employers are looking for indicates that university studies do not necessarily provide sufficient opportunities for students to develop employability skills, understandings, and personal attributes which are critical for the global labor market. In our 2019 AOM TLC workshop "Integration of Global Employability and Professional Development into the Student Experience", based on students' and employers' perspectives on critical employability skills and attributes, we proposed a holistic development approach that bridges the curriculum and extra-curricular activities and stressed the importance of university-employer collaboration for student employability development inside curricula. On this basis, in this workshop, we take a further step to investigate how business faculty can involve employers and students as key stakeholders in curricular design and assessment to make them more relevant to real life employer needs and global workplace trends (Meyer & Bushney, 2008; Tamrat, 2019). To start, we will review the current gaps indicated in literature between curricular focus and employer needs, between business teaching and student learning, and between quality of student learning and workplace requirements (see Rhew, Black, & Keels, 2019; Rowe & Zegwaard, 2017). We then share examples and best practices from four countries

(UK, Korea, US and China) on how employers and students (including alumni) can be best involved in curricular design and assessment related to employability. Finally, we present effective methodologies that help teaching faculty to identify how and where employability-related learning is incorporated into curricula. Participants will be invited to review and discuss encountered challenges and difficulties when developing the triangle links among students, teaching faculty, and employers related to employability development in their contexts. They will be asked to reflect on their approaches of evaluating student learning gaps related to employability development and where improvements are needed. Participants are encouraged to share their experience of involving key stakeholders in curricular design and evaluation.

On "Doing" Inclusion: An Inclusive Behavior Training (session 194)

Decades of research on diversity and inclusion have established that inclusive environments are crucial for diversity to thrive. However, to date there is very little insight in how to "do" inclusion. That is, most research focuses on practices and leadership, but very little on specific behaviors underlying experiences of inclusion and exclusion. Based on the principles of experiential learning, in this training we simulate a psychologically safe environment in which participants can display as well as experience inclusive and exclusive behaviors. Participants will reflect on their experiences and how they apply to the workplace in small groups as well as plenary. Participants as well as facilitators will share lessons learned regarding the theoretical understanding of the notions of inclusion and exclusion, as well as actionable suggestions to behave more inclusively and create more inclusive workplaces.

Pre-registration is required. Please email Johannes van Dijk at J.vanDijk1@tilburguniversity.edu with subject line "Doing Inclusion PDW Registration" by 11:59pm EDT August 5th.

Doctoral Student and Early Career Scholar Consortium: Fostering Critical Scholars and Scholarship (session 191)

The Critical Management Studies Division Doctoral Student and Early Career Scholar Consortium is aimed at meeting the needs of both doctoral students and early career scholars interested in critical research, education and engagement. The consortium provides a great opportunity for participants to connect with like-minded individuals at all career stages, from varied nationalities and backgrounds, and explore ideas, share knowledge and contribute to the discussion on a diverse range of topics and issues. Also, the consortium affords participants the opportunity for one-on-one discussion with more experienced critical management scholars. The Division's Professional Development Workshop Program, which starts after the Consortium and runs through to Saturday evening, offers participants further opportunities for development on a variety of related topics.

Why We All Should Be Bayesians: An Introduction to Bayesian Studies (session 195)

The purpose of this symposium is to introduce management researchers to the opportunities of Bayesian statistics for empirical research in the management sciences. We will outline the fundamental features of the Bayesian method without delving into the mathematical details. Instead, we will outline the conceptual differences and potential advantages of a Bayesian approach compared to traditional statistical analyses involving null-hypothesis statistical significance tests. We will then introduce an illustrative example from empirical management research that illustrates opportunities for the useful application of Bayesian data analysis and introduces participants on how to interpret the outcomes of Bayesian analyses for causal inference. Finally, we will discuss why, in spite of strong arguments supporting the use of Bayesian statistics, the field of management research has been very reluctant in considering Bayesian analysis as an alternative and how management scholars can support related methodological change efforts. The purpose of this symposium is to convince participants of the potential opportunities Bayesian methods can provide and to motivate organizational researchers to consider Bayesian statistics as an alternative in future research.

Executive Coaching Explored: Toward a Contingency Approach

Winner of the Management Consulting Division Outstanding Field Report Paper Award
 Author: **Evan Hayden Offstein**; Frostburg State U.
 Author: **Ronald L. Dufresne**; Saint Joseph's U.
 Author: **J.Stephen Childers**; Radford U.

The domain of executive coaching is becoming a crowded one. Despite its meteoric rise and use since the advent of the millennium, academic inquiry seems to lag the progress made in applied and practitioner circles. Even more, academic inquiry remains largely absent in the critique and investigation of commonly used practitioner models. In fact, the dominant logic surrounding the delivery and execution of executive coaching seems to affirm a thoughtful, mutual enterprise that unfolds over time and where trust is necessary. Put simply, the assumptions that underlie and underpin the thinking and execution of executive coaching rests heavily on the consultative, free form type of delivery and interaction. In this conceptual paper, we begin to challenge the veracity of this orthodoxy. In so doing, we plant the seeds of a contingency-based approach to executive coaching. In particular, we advance five contextual considerations that may argue for more of a directive, as opposed to consultative, approach towards the executive coaching experience.

MEETING

ASYNCHRONOUS

This paper is a qualimetrics research to show how the Socio-Economic Approach to Management (SEAM) methodology is the pathway to create a sustainable Non-Governmental Organization (NGO). It describes the framework of an effective organization built on the basis of quality that is utilized as an asset affecting productivity and efficiency in a positive manner. Quality is demonstrated by deep digging into the current internal and external challenges of NGOs and applied in the context of an actual intervention research in an NGO in the Lebanese context. This longitudinal intervention carried out during two years started by diagnosis of dysfunctions and portrayal of initial status of the organization followed by escorting the execution of the different stages of the transformational projects and later performing assessment for realization of key achievements. This intervention research shows that SEAM methodology paves the route towards a sustainable organization characterized by quality of functioning and services with a cross-cutting quality of management. The term quality is presented in a theory-based as well as conceptual perspective.

Can we trust them again? A Framework for Repairing Trust in SMEs in an Economic Crisis Context

Winner of the Benedictine University Award for Outstanding Paper on Ethical Issues in Consulting
Author: **Alexandros Psychogios**; Birmingham City U. Business School

Author: **Rea Prouska**; London South Bank U.

Author: **Leslie Szamosi**; U. of Sheffield International Faculty, CITY College

Author: **Dritjon Gruda**; National U. of Ireland, Maynooth

The economic crisis has undermined the foundations of trust-based relationships, creating a trust gap between organizations and their stakeholders and threatening business practice. The purpose of this study is to explore the breakdown of trust within small and medium-sized enterprises from an intra and inter-organizational perspective, drawing lessons from the fallout of the Greek economic crisis. Based on an in-depth investigation

of four case-studies, this research offers insights on organization-stakeholder trust challenges created by the wider economic context. The paper presents a framework that can help entrepreneurs and managers for repairing trust in stakeholder relationships in times of economic crisis. This framework can also be used from consultants that are involved in small and medium sized companies' development and growth.

Exploratory Research on Management Consulting Needs and Adaptations in Very Small Companies (WITHDRAWN)

Winner of the Thomson South-Western Outstanding Research-Based Paper on Management Consulting

Author: **María Angeles Rastrollo-Horrillo**; U. of Malaga

Author: **Maite Rateau**; ISEOR

Author: **Amandine Savall**; ISEOR

This exploratory research is aimed at identifying the specific needs of very small companies (VSCs) on Management Consulting (MC) and sketching MC services and processes adapted to VSCs. By using SEAM action-research, we have analyzed a sample of 4 management consulting projects conducted in VSCs located in France and in Spain. This paper contributes to enriching the very scarce literature on MC in VSCs. Drawing on these 4 case-based exploratory analysis, the proposed conceptual framework in this study offers a basis for future studies to extend the analysis to broader recognition of the distinctive characteristics, more countries, more MC methods, and to compare VSCs with other larger enterprises. The implications for practitioners are important; by exploring the adaptation of consultation methods, we offer some insights into the roles, skills and strategies available to the consultant in order to be successful in VSCs.

Broadening our Sights: Advancing Interdisciplinary Thinking on Global Migration (session 198)

This panel symposium addresses several topics in the All Academy Theme (AAT), the International Management Division, and other divisions, all through the lens of global migration. The purpose is to engage a group of expert panelists with different interdisciplinary backgrounds in a formal, moderated, interactive discussion of key aspects of migration that are germane to management and international business (IB) but have yet to be integrated within mainstream scholarship in these fields. The main topics tackled will include: 1) migrants as bi-cultural boundary spanners in global organizational contexts, and their impact on firms' approach to strategy and organization; 2) the changing balance of location and firm-specific human capital advantages; and 3) the implications of migration for cross-border activities of firms and ethno-cultural diversity. In addition, we will examine the extent to which management and IB scholarship can be enriched by recognizing and incorporating knowledge on migration generated in allied disciplines with a sharper focus on the topic - namely political science, political economy, sociology, and anthropology. By surfacing, synthesizing, and connecting arguments taken from different disciplinary perspectives, we will show how and why the global movement of migrants has altered the nature of firm competitiveness with implications for the governance choices of multinational enterprises. Our main contribution will lie in breaking self-imposed dichotomies and mindsets that, inadvertently or otherwise, can stand in the way of creating a truly interdisciplinary synthesis of migration as a global phenomenon with real implications for management and IB scholarship at different levels.

New Exercises in Negotiation for Teaching and Research (session 201)

This workshop will introduce participants to new exercises and classroom tools to teach negotiation and conflict management. We bring together three presenters with extensive expertise and knowledge of classroom tools to share their most up-to-date exercises, simulations, and role-plays. Each presenter will provide one deep-dive presentation into a new exercise, followed by brief descriptions and learning goals of other new exercises. Our presenters represent three of the most highly respected practitioners and academics in the field of negotiation and leadership, including Dr. Cynthia Wang (Clinical Professor of Management & Organizations and Executive Director of Kellogg's Dispute Resolution and Research Center Kellogg, Northwestern University), Dr. Holly Schroth (Director of Negotiation and Team Resources, Senior Lecturer Hass School of Business, University of California--Berkeley), and Dr. Joel Cutcher-Gershenfeld (Professor, Heller School for Social Policy and Management in Brandeis University, and Editor, Negotiation Journal).

Psych'ed Up for Business School: Preparing I-O Psychologists for Business School Careers (session 167)

Industrial-organizational (I-O) psychologists are increasingly seeking careers in business schools (Aguinis, Bradley, & Brodersen, 2014). This trend is not surprising given the overlap in research topics between I-O psychology and business, such as organizational behavior, human resource management, research methods, and more. However, I-O psychologists—who are typically trained in traditional psychology departments—may face various challenges in transitioning to business school environments, such as in the areas of research, teaching, and mentorship. In this workshop, we seek to aid I-O psychologists interested in business school careers in identifying and navigating these challenges. We thus convene a diverse panel of business school faculty, representing various ranks (i.e., Assistant, Associate, and Full Professor), roles (e.g., Dean, Chair), and foci (e.g., research, teaching)—most of whom have an I-O psychology educational background. The workshop will include individual panelist presentations, roundtable discussions, and a question-and-answer session with the audience, all focusing on various aspects of working within a business school as an I-O psychologist.

We ask that attendees please complete the following anonymous survey where you can share some basic background information about yourself and, optionally, submit questions for the panel:

Dynamics of Paradox – Exploring the Inherent, Constitutive, and Quantum View for Mutual Inspiration (session 206)

In this PDW, we bring together leading and emerging scholars to explore the dynamics of paradoxes and discuss the possibilities of moving this research stream forward. Together, we seek to review the relationship between three different ontological and epistemological positions on paradox, the so-called “inherent”, “constitutive”, and “quantum” views. Each view offers unique insights into the dynamics of paradoxes and foregrounds certain dynamics over others. The differences and similarities provide a basis to explore in what ways the different approaches can mutually inform each other in order to further advance our insights into the dynamics of paradoxes. As a meta-theory of organizational tensions that embraces different ontological and epistemological positions, the paradox lens also attends to handling contradictory tensions in ways that enable both/and thinking. This fits well with this year’s AOM theme “Broadening our Sight” both conceptually and practically. Reflecting on the different ontological and epistemological positions on paradox theory will help us to better understand how we can examine organizational responses to the grand challenges of the 21st century and the tensions involved.

Tackling Grand Challenges and Broadening our Sight Beyond Neoliberalism (session 199)

This symposium takes on the challenge of broadening our sight beyond the dominance of neoliberalism in management scholarship and thinking as a means of coping with the numerous challenges facing the world today. Despite that some scholars view neoliberalism as a 'zombie doctrine,' its influence and tenets pervade both business research and scholarship and management curricula. To open up a conversation about these and related issues, the symposium proposes to bring together a group of thought leaders who have worked on grand challenges and questioned neoliberal premises in their research. Sandra Waddock, organizer and panelist, will frame and introduce the session, arguing for the importance of understanding and shifting core memes (core units of culture like ideas and phrases). Gerald F. Davis will argue that there has been a pervasive spread of markets to places where their influence had previously been muted. Financialization has problematically turned almost anything with a possible income stream into a tradeable security. Dror Etzion will argue that informal conversations that unabashedly advocate for alternative perspectives on management scholarship are needed. Jennifer Howard-Grenville will discuss the mismatch between the environmental and social thresholds on a finite planet and the current industrial and economic system. James P. Walsh will imagine a future where life is organized around an entirely different meta-narrative.

New Perspectives on Health Care Performance and Improvement (session 645)

Factors Associated with U.S. Hospital Bankruptcies: 2007-2019 (WITHDRAWN)

Author: **Nathan Carroll**; U. of Alabama, Birmingham

Author: **Amy Yarbrough Landry**; U. of Alabama, Birmingham

Author: **Cathleen O. Erwin**; Auburn U.

Author: **Philip Cendoma**; U. of Alabama, Birmingham

Author: **Robert Landry**; Jacksonville State U.

From 2007 through 2019 the hospital industry underwent significant changes including the Great Recession and the passage of the Affordable Care Act. Healthcare organizations faced significant challenges that contributed to a number of alarming trends, including provider burnout and hospital closures. Throughout this period, 48 hospitals and health systems filed for bankruptcy protection. Half of these hospitals eventually ceased operations. This article examines factors associated with hospitals that file bankruptcy. Non-financial factors associated with bankruptcy filings were identified from a literature review of hospital trade publications and other available sources. Organizational characteristics of filing hospitals were identified using the American Hospital Association Annual Survey. Poor financial management, challenges related to payer mix and reimbursement, and poor management are the most common factors that filing hospitals faced. A comparison between these results and similar research examining the period from 2000-2006 reveals that most of the non-financial factors contributing to bankruptcy are relatively stable over time. These findings emphasize that hospital managers and boards must evaluate the financial health of their organizations using a broad framework that includes political and economic factors as well as financial characteristics.

Career Decision Making and Employability (session 638)

Analytics as a Tool in Major Selection: Exploring Student Reactions

Author: **James Edward King**; U. of Alabama, Tuscaloosa

Author: **Yi-ren Wang**; U. of Alabama

Author: **Graham Hughes Lowman**; Kennesaw State U.

As the use of predictive analytics is growing in higher education, research is lagging, with research on student perspectives mostly absent. In light of this we drew on theory and practice to posit antecedents that would influence Belief In Analytics (BIA), a measure we introduce to assess the perceptions about the utility of analytics in career-related decisions. We explored BIA's influence on student desire to have predictive analytic data for college major selection, as well as moderators of that relationship. We found that personality, interests and experience influenced BIA and that BIA influenced the desire to use analytics in major selection. We discuss how Social Cognitive Career Theory, along with research in human resources and technology adoption, and our empirical results support the need to incorporate student perceptions into research on analytics in higher education. Implications for research and practice are discussed.

Broadening our Sight: Considering Patient-Provider Therapeutic Alliances to Improve Health Care

Author: **Cheryl Rathert**; Saint Louis U.

Author: **Jessica N. Mittler**; Virginia Commonwealth U.

Two decades of research on patient experiences and patient-centered care has assumed that positive outcomes result from therapeutic alliances between patients and their professional care providers, yet therapeutic alliance has rarely been defined or measured. As more research reveals problems with patient experiences and reduced well-being among professional care providers, a closer examination of patient-provider relationships is warranted. The purpose of this qualitative study was to identify the attributes of a therapeutic alliance in health care from the patient's perspective, then to identify quantitative measures that capture the full construct. We conducted conceptual analysis studies: (1) survey of therapeutic alliance dimensions by academic content experts (n=24); (2) two patient focus groups (n= 9; n=13); (3) a systematic review of measures of therapeutic alliance and its essential dimensions across three databases using the PRISMA guidelines. Of 2449 articles initially identified, 52 articles were retained for review after applying inclusion and exclusion criteria. Constructs measured were mapped onto the therapeutic alliance dimensions derived from this study's preceding qualitative work. Analysis found no measures that captured all of the therapeutic alliance dimensions. "Shared Mind" was the most frequently measured construct (n=27 unique measures). "Full Presence/Authenticity" was identified by patients and content experts as being key for strong alliances, yet there was little published research on this construct. Broadening our sight for better health care necessitates considering the core patient-provider relationship and how it impacts both patient and care provider outcomes.

view paper (if available)

Developing Health Care Evaluation Frameworks: Learnings from a Comprehensive Literature Review

determination theory and the cognitive dissonance theory, we empirically tested the reciprocal relationship between career values and career goal progress, and the dynamic relations among different dimensions of career values. Data were collected using a time-lagged panel design across one year among a large sample of Chinese college students (N = 2339). Results show that intrinsic fulfillment value (Time 1) positively predicts career goal progress (Time 2); career goal progress (Time 1) is positively related to all three kinds of career values (Time 2). In addition, external compensation value at Time 1 attenuates intrinsic fulfillment value and work-life balance value at Time 2, and work-life balance value at Time 1 is negatively related to intrinsic fulfillment value at Time 2. Theoretical and practical implications of this research are discussed.

view paper (if available)

Relationship Between International Mobility, Employability, and Career Success: A 30 Country Study

Author: **Maïke Andresen**; U. of Bamberg

Author: **Mila Borislavova Lazarova**; Simon Fraser U.

Author: **Eleni Apospori**; Athens U. of Economics and Business

Author: **Richard Cotton**; U. of Victoria

Author: **Michael Dickmann**; Cranfield U.

Our study explored the effects of international work experience (IWE) on employees' success perceptions in a study of 19,421 individuals in 30 countries, including internationally mobile and non-mobile workers in four different occupational groups (managers, professionals, clerical and blue-collar workers). We did not find evidence to support 'dark side of international careers' arguments. Instead, our results show consistent positive returns to IWE for career success (promotions, financial success) and life satisfaction across different contexts. This positive relationship is mediated by individuals' perceived external employability and holds across state, cultural and institutional domains. Despite differences in economic freedom among the 30 countries in our sample, we find that career success and life satisfaction, mediated by perceived employability, consistently rose with human capital gained through IWE. Our findings enhance our

Author: **Sydney Haubrich**; U. of Calgary
Author: **Connie Yang**; U. of Calgary
Author: **Natalie C. Ludlow**; U. of Calgary
Author: **William Ghali**; U. of Calgary
Author: **Deirdre McCaughey**; U. of Calgary

Background: Evidence suggests that shifting from acute, hospital- based health care delivery to preventative, community-based health care (CBHC) makes care more cost-effective, efficient, and equitable. As such, the Government of Alberta, Canada, has recently committed to promoting health and providing health care services to individuals in their own communities. In order to measure their progress, the Alberta's Ministry of Health approached our research team to create an evidence-based evaluation framework to monitor progress on this initiative. To inform our framework development approach, our team undertook a comprehensive literature review. Methods: We comprehensively reviewed peer-reviewed and grey literature to identify evaluation frameworks and indicators applicable to CBHC programs. Searches were conducted in six databases in June 2018. The search was limited to articles published between 2013 and 2018. The reviewers identified additional studies by scanning reference lists of studies found through the database search, hand-searching grey literature, and obtaining recommendations from expert colleagues in the field. Data were extracted and analyzed by two authors. Results: Ten key themes arose from the article data analysis. Using the themes, team members generated a set of ten overarching recommendations for creating health care evaluation frameworks. Conclusion: This research describes the results of examining the community-based health care evaluation literature and provides ten recommendations for creating new health care evaluation frameworks.

Digital Badges and Employer Interest

Author: **Terry McGovern**; U. of Wisconsin Parkside

Digital badges are becoming more prevalent in the credentialing sector yet there is limited understanding of how digital badges influence the hiring process. The researcher conducted a type of field experiment called a résumé audit study. In the late Spring of 2019, the investigator applied to 1,848 unique entry-level jobs using one of three versions of a fictional résumé. One résumé displayed badges in business skills, another résumé showed identical skills but without badges, the third résumé was a control with no added business skills. The results show that a recent college graduate without a business degree significantly increases the likelihood of employer interest if digital badges associated with business skills appear on the applicant's résumé.

Craftsman Spirit: A Contributor to Career and Well-Being

Author: **Huihui Tang**; U. of Macau
Author: **Raymond C.H. Loi**; U. of Macau
Author: **Yan Liu**; Wuhan U.

This study conceptualizes craftsman spirit and proposes it as a contributor to individuals' career and well-being. We define craftsman spirit as a work ethic that denotes striving to be the true self and pursuing perfection at work with the aims to achieve self- actualization from work and contribute to the well-being of others. Seven dimensions (i.e., authenticity, job dedication, positive perfectionism, creativity motive, harmonious work passion, resilience, and citizenship) are identified to elaborately describe the features of craftsman spirit. Specifically, the study proposes the positive influence of craftsman spirit on individuals' career satisfaction, career progression, job performance,

with complex medical and social needs within a Medicaid ACO by healthcare workers assigned to deliver a CCM intervention. Due to the lack of research with community health workers (CHWs), this analysis focuses on work processes employed by CHWs and nurses (RNs) in CCM. The goal of this analysis is to describe and analyze the work processes of healthcare workers within the Medicaid ACO landscape through field observations and coding of qualitative interviews. This analysis draws from the Value Profit Chain (Heskett, Sasser & Schlesinger, 2003) to understand how value-added and non-value-added work processes impact CCM employees and patients. In doing so, this analysis draws theoretical implications to understand value for both internal and external customers of healthcare organizations.

[view paper \(if available\)](#)

Knowledge Management and the Adoption of Culture Change Initiatives by High-Medicaid Census Nursing

Author: **Larry R. Hearld**; U. of Alabama, Birmingham
Author: **Akbar Ghiasi**; Assistant Professor of Health Administration HEB School of Business & Administration
Author: **Jeff Szychowski**; U. of Alabama, Birmingham

There is longstanding interest in identifying ways to support culture change initiatives in nursing homes given their association with a number of desirable outcomes, including fewer health-related deficiency citations and better psychosocial outcomes. However, the adoption and implementation of these initiatives are resource intensive and research has shown that nursing homes with high percentages of Medicaid residents are especially challenged to adopt these initiatives. The purpose of this study was to investigate one potential means of overcoming the obstacles to adopting culture change initiatives by these nursing homes – the use of knowledge management activities. Based on a survey of nursing home administrators, the results of our analysis suggest that nursing homes were more likely to adopt a culture change initiative when they had more robust knowledge management activities. Moreover, knowledge management activities were particularly effective at promoting these initiatives in nursing homes that struggle with

and subjective well-being. The implications and future research directions of this new construct are discussed.

The Conflict Experience: A Multilevel Discussion (session 639)

Conflicts Among Founding Partners: A Case Study of Startups Accelerated by the GVentures Accelerator

Author: **Gilberto Sarfati**; FGV-EAESP

Author: **Thomaz Martins De Aquino**; FGV EAESP

Author: **Gabriel Akel Abrahão**; FGV EAESP

Conflicts have negative impacts on organizational performance and can lead to company mortality. The GVentures Accelerator, from the School of Business Administration of São Paulo (EAESP-FGV), focused on startups in the preseed stage, identified that several startups that failed during and after the acceleration process had conflicts among the founding partners. This work aims to understand why some entrepreneurial teams are able to overcome conflicts while others are not. We conducted a case study of 9 accelerated startups using in-depth interviews with 20 founding partners, and the interviews were followed by the codification and analysis of the cases with support from the manager responsible for the accelerator. The research concludes that operational conflicts that escalate to affective conflicts due to disagreements in the process of giving and receiving feedback and/or mistrust between partners can lead to the dissolution of a company. On the other hand, founding members, even if they experience affective conflicts, are able to overcome the problems using the strategies of taking a step aside, giving in and putting their egos aside. It was also identified that the acceleration process tends to exacerbate the operational conflicts between founding partners.

Leadership Perspectives (session 644)

Becoming a Successor and Leader: Daughters' Identity Construction within Family Business Succession

Author: **Huiping Xian**; U. of Sheffield

Author: **Nan Jiang**; Coventry U. London Campus

Author: **Maura McAdam**; Dublin City U.

This paper explores how daughters comply with and/or resist familial expectations and social gender norms, while negotiating the successor-leader role within family businesses in China. In order to achieve this, a qualitative interpretivist approach was adopted to understand daughters' views on issues relating to gender, family business leadership and succession, as well as the strategies adopted in order to negotiate the role of female successor/leader in the Chinese family business. In so doing, twenty face-to-face semi-structured interviews were conducted with both actual and potential female successors. Three strategies of identity construction emerged based on the degree of conformity to traditional Chinese gender roles and Confucian family values. First - to abide by conventional gender expectations and perceive themselves as a temporary leader. Second - to act as the "second leader" and remain involved in decision-making. Third - to challenge conventional gender roles and strive to be an independent leader. This paper contributes to debates on women in family business and daughters' gendered identity construction in family businesses in an Asian context.

Filling the Institutional Void? Exploring Governance, Conflict, and Cooperation in River Basins

Author: **Amol M. Joshi**; Wake Forest U.

Author: **David Antons**; RWTH Aachen U.

Author: **Erk Peter Piening**; Leibniz U. Hannover

Author: **Torsten Oliver Salge**; RWTH Aachen U.

Growing concerns over water scarcity around the globe suggest that countries need to manage water resources in a more effective and cooperative manner. At the same time, however, water scarcity increases the risk that countries sharing water basins engage in opportunistic behavior and conflict. In this dyadic study, we seek to shed new light on the emergence of water conflict and cooperation between countries by clarifying the role of treaties and specialized river basin organizations as two forms of institutional mechanisms governing their water interactions. Adopting an institutional voids perspective and using a unique longitudinal data set covering all interactions between countries located at the world's 263 major international river basins, we show that contractual voids (i.e., underspecified treaties) and organizational voids (i.e., underdeveloped river basin organizations) are differently related to conflict and cooperation. Moreover, we find that these two voids interact in influencing the emergence of conflicts (but not cooperation). Overall, our study answers recent calls to conduct management research that contributes to a better understanding of how to broaden our sight in order to deal with societal "grand challenges." We discuss implications for scholars, managers, and policymakers.

Becoming an Impactor: How Do Leaders Empower the Poor?

Author: **Yuka Fujimoto**; Sunway U.

Author: **Mohammad Jasim Uddin**; Department of Management, Sunway U. Business School

Prior research has proposed several explanations for inclusive leadership and the inclusion of skilled employees but has neglected research on the unskilled, low income individuals. By studying leaders who employ the poor and marginalized into their social businesses, we develop a novel theoretical framework for understanding how leaders may effectively include the poor in their businesses. Based on Amartya Sen's capability approach, we contribute a granular understanding of how leaders foster inclusion by exploring leaders' mental schema processes. Going beyond the current development of inclusive leadership theory for work group effectiveness, we provide a fresh perspective of inclusive leadership for the poor and marginalized.

Does Diversity Climate Matter to Leaders? A Moderated Mediation Model

Author: **Saima Naseer**; International Islamic U., Islamabad, Pakistan

Author: **Aisha Haider**; International Islamic U., Islamabad, Pakistan

Author: **Fauzia Syed**; Assistant Professor, Chairperson Department of Marketing (FMS)

Utilizing the assumptions of Social Identity Theory (SIT) the current study examines how, why and when inclusive leaders foster positive employee outcomes. Specifically, we hypothesize perceived insider status as an underlying mechanism through which an inclusive leader can help build employee's organizational identification, leader directed helping behaviors and task performance. We also hypothesize that the mediation effects of inclusive leadership on employee outcomes via perceived insider status is contingent upon a synergy diversity climate suggesting a moderated mediation model.

Previous research on workplace conflict focused on disagreements about work tasks, processes, and personal relationships. However, conflicts often involve matters of right and wrong; yet, ethical conflict is notably absent from the literature. We introduce the construct of ethical conflict, create and validate a measure of it, and, drawing from moral convictions theory, explore its unique effects on workplace outcomes. Ultimately, we find that ethical conflict is a double-edged sword: it is associated with negative team dynamics (i.e., decreased satisfaction with group, group viability, group cohesion, group psychological safety; increased negative emotions and perceived goal difficulty) but positively related to moral cognition (i.e., moral awareness, moral identity accessibility) and elaboration of information and perspectives among group members. Overall, our studies provide a theoretical and empirical foundation for future research on ethical conflict.

How Nonnative Speakers Experience Conflict at Work: The Influence of Stereotype Threat

Author: **Regina Kim**; IESEG School of Management

Author: **Jimena Ramirez Marin**; IESEG School of Management (LEM-CNRS 9221)

Author: **Kevin Tasa**; Schulich School of Business

The trend towards globalization increases the likelihood that organizations will employ persons with nonnative accents. Many people with nonnative accents are aware that they sound different, but for the most part, their experiences have been largely ignored in organizational research. Our research begins to rectify this omission by examining how nonnative speakers think, act and perceive the results of, conflict situations. We investigate the experiences of nonnative speakers in three studies, in which we examine 1) whether nonnative speakers experience stereotype threat in workplace conflict situations with native speakers, 2) whether stereotype threat is associated with certain conflict managing behaviors (e.g. yielding and avoiding), and 3) the relationship between stereotype threat, satisfaction with conflict outcomes and processes, and objective conflict outcomes. Findings suggest

We collected temporally segregated data (n=269) from employees and their fellow peers working in the service sector of Pakistan at 3 different time intervals with a gap of at least 2 weeks. The results of our study support the indirect effects of inclusive leadership on employee outcomes through the development of perceived insider status. Our findings also corroborate the moderated mediation hypothesis which indicates that the indirect effects of inclusive leadership on employee outcomes through perceived insider status exist at higher levels of a synergy diversity climate. Our study provides important insights for the diversity and leadership literature by answering why and under what conditions an inclusive leader can be beneficial in generating favorable employee outcomes.

HRM and Performance (session 647)

The Role of HRM Practices in the Workforce Racial Diversity and Firm Performance

Author: Yeejeong Ryou; Yonsei U.

Author: Soohyun Sung; Yonsei U.

Author: Kwonhee Han; Yonsei U.

Author: Hyuntak Roh; Yonsei U.

Embracing racial diversity in the workplace is an important strategic decision for many firms to achieve a competitive advantage. While previous studies report conflicting consequences of workforce racial diversity, this study examined its effects on firm performance in a less researched large corporate law firm context. Furthermore, the study investigated the moderating role of human resource management practices (i.e., lateral hiring, temporary employment, and dual career ladder practice) related to employment and career management aspects. Our hypotheses were tested based on the longitudinal datasets of 232 large U.S.-based corporate law firms for the period 2000-2008. Initially, no significant relationship was found between workforce racial diversity and firm performance. However, further analyses indicated that human resource management practices determined the performance effect of workforce racial diversity. Specifically, workforce racial diversity had a negative impact on performance for firms that

Talent, Potential, and Performance (session 646)

Talent Management Challenges: A Comparison Study between Local and Foreign Firms in South Korea (WITHDRAWN)

Author: Hyunmi Park; Coventry U.

Author: Alison Glaister; U. of York

The different institutional contexts in which business practice talent management (TM) lead scholars to challenge the validity of the standardised global best practices. This paper identified three types of obstacles (internal and external, and strategic talent management) to pursue effective talent management in firms in South Korea using an institutional theory lens. Mixed methods approach was utilised: 55 semi-structured interviews from CEO levels to general employees from South Korean and non-South Korean employees, as well as 161 survey from local and foreign firms. Contrary to expectations, cultural obstacles were weakly related to talent management implementation, whereas less internationalised HRM practices strongly hinder the effective talent management implementation. It reveals that firms in South Korea have been in the process of decoupling its traditional organisational culture. Additionally, this study shows the faced challenges are different according to the firm ownership in the South Korean context, the concept

relied more on temporary employment and actively utilized dual career ladders.

HR Strength and Performance Appraisal Quality: The Impact of Non-Work Domain Influence

Author: **Sumbal Babar**; National U. of Sciences and Technology (NUST)

Author: **Asfia Obaid**; National U. of Sciences & Technology (NUST)

Author: **Hussain Tariq**; National U. of Sciences & Technology

Drawing from Signaling framework and covariation principle of attribution theory, this research aims to understand employee perceptions, understanding and attributions of Human Resource Management (HRM) with factors related to their work and non-work domain. While research has identified several work domain factors that enhance employee performance, to date, the role of HRM process approach in understanding employees non-work domain factors is completely missing. We investigate the three-way interaction effects of perceptions of performance appraisal quality, HRM system strength and faith in religion on employee performance. Using a sample of 391 employees and 55 managers, we examine over a one month change in levels of performance appraisal quality and employee performance. Performance appraisal quality was found to be positively associated with increased employee performance over time, and HRM system strength positively moderated this relationship. Moreover, faith in religion as non-work domain factor pronounced this three-way relationship.

TM-Organizational Performance Relationship: Mediation of Satisfaction & Job Performance

Author: **Monica Zaharie**; Babes-Bolyai U., Romania

Author: **Hugh Scullion**; Nui Galway, Ireland

Author: **Ahmed Mostafa**; Warwick Business School

The TM practices have been premised as a central factor for organizations to achieve competitive advantage through high performing employees. Despite the rich literature, there is little evidence on the mechanisms through which TM practices relate to outcomes at individual employee level and organizational level. Building on the resource-based view and social exchange theory, this study explores the relationship between TM practices and employees' satisfaction, in a sequential step the link to employees' job performance, and further the association with perceived organizational performance. On a sample of 474 employees and 85 supervisors, the findings show the direct relationship between TM practices and the subjective organizational performance and reveal mediating mechanisms. TM practices influence organizational performance through the effect that TM practices have on employees' satisfaction. In return, the satisfied employees are stronger motivated to contribute to achieving higher organizational performance, by displaying better job performance.

HRM in Entrepreneurial Firms: A Systematic Review and Research Agenda

Author: **Evy Van Lancker**; Ghent U.

Author: **Mirjam Knockaert**; Ghent U.

Author: **Mieke Audenaert**; Ghent U.

Author: **Melissa S. Cardon**; U. of Tennessee

This review aims at acknowledging and assessing the literature on the introduction, adoption, and value of human resource management (HRM) in entrepreneurial firms, hereby advancing knowledge at the cross borders of the fields of entrepreneurship and HRM. Such a review is relevant and timely as entrepreneurial firms have a central role in the economy and are important for technological advancement and employment. Furthermore, managing entrepreneurial firms differs significantly from managing established firms. Using a systematic review method, we develop a framework of HRM in entrepreneurial firms, presenting the current state of the literature, involving both HRM practices and systems, and accounting for determinants, outcomes, and the organizational context. Importantly, we offer a compelling research agenda for future work on the determinants and outcomes of HRM in entrepreneurial firms, alongside theoretical and methodological considerations.

[view paper \(if available\)](#)

assessment feedback to effective leader development and performance. This study hopes to contribute towards the above literature gap. Using phenomenological approach, we interviewed 12 high-potential leaders from the sponsoring organization who complete a personality assessment and receive feedback regarding the assessment results. Important study outcomes are: the comprehensive picture of who participants are as a leader, how negative behaviors could derail their careers, and how their motives and values shape who they are as leaders provided the participants with a better understanding about themselves. The participants' positive opinions about the feedback process were reinforced by their perceptions of how accurately the assessment described them. Many leaders had a positive experience and articulated examples emphasizing the value they received from the feedback process. Organizations looking to implement a similar process should consider two aspects. First, the assessment instrument should be seen objectively by the participant. Second, the feedback facilitator must be an unbiased third-party from the participant's perspective. Feedback from the immediate manager is not perceived objectively and would make the experience less positive for the developing leader.

Re-Expatriation Inclinations of Professional Women Returnees in Asia's Rapidly Developing Economies

Author: **Nga Thi Thuy Ho**; Hue U. College of Economics

Author: **Pi-Shen Seet**; Edith Cowan U.

Author: **Janice Jones**; Flinders U.

Author: **Hung Trong Hoang**; Hue U., College of Economics

Highly-skilled expatriation increasingly involves women that are an important source of talent in relatively under-developed, emerging countries that desire to grow quickly by economic transformation. Many of these are returnees with high-quality education and/or work experience in more developed economies but some of them may consider re-expatriating. We combine Tharenou's

(2010) stages of the mobility cycle with Identity theory to understand the re-expatriation inclinations among 248 professional Vietnamese women. We find that career identity, family identity and social identity have a significant influence on returnees' inclination to re-expatriate. We also find that attitude towards re-expatriation fully mediates the influence of family identity and career identity on re-expatriation inclinations. The research furthers our understanding by delineating the extent to which identity-related factors contribute to professional women returnees' inclinations to re-expatriate. By also being in line with the Academy of Management's 2020 conference theme of 2020 theme by break down dichotomies and broadening the way migration and expatriation is seen, we suggest government and organizational policies for retaining this important talent by better supporting them in their community and workplace.

Paradigms in International Human Resource Management (WITHDRAWN)

Author: **Henriett Primecz**; Corvinus U. of Budapest

International Human Resource Management (IHRM) has become a mature discipline in the last 30 years. As a sub-discipline of social sciences, IHRM is characterised by paradigmatic divisions. The aim of this review article is to map the presence of three dominant social science paradigms in the field of IHRM. Four major journals, which publish relevant studies of IHRM, has been analysed in order to give an overview of the paradigmatic state of play in IHRM. After investigating 1649 articles, it is evident that positivist studies prevail, whereas constructivist works represent a minority share. Critical approaches to IHRM are almost fully absent in these journals. This paper presents examples of each type

plays an important part in the interpretation of the subsidiary's roles and continual reinterpretation of these roles. Subsidiary roles were found to be negotiated between the HQ and the subsidiary and that subsidiaries with higher levels of innovativeness also evidenced when there exists what we call reinterpretation capabilities.

The Effect of Subnational Institutions on Foreign Firm Performance: Insights from Emerging Economies

Author: **Yu Jia**; Wuhan U.

Author: **Tao Wang**; Wuhan U.

Author: **Zhuang Ma**; Xi'an Jiaotong-Liverpool U.

Author: **Jiayu Lyu**; Wuhan U.

While prior studies have acknowledged the influence of host country institutions in foreign firm behaviors and performance, few investigations have included the roles of subnational institutions. As a matter of the striking institutional difference between emerging economy countries and developed countries, it is important to fully understand the impact of heterogeneous institutional environments of subnational regions in emerging economies on foreign firm performance, which would help foreign firm make a more suitable secondary choice decision of investment destinations at the subnational regional level. At the subnational regions level of emerging economies, we verify the respective and interactive effects of subnational formal and informal institutions (i.e., legal effectiveness and social trust) on foreign firm performance, and further identify the contingent factor (i.e., foreign firm's institutional experience) that moderates these relationships based on the analysis of multiple secondary databases from China. The results show that, first, both legal effectiveness and social trust at subnational level positively affect foreign firm performance respectively. Second, legal effectiveness and social trust at subnational level have complementary effect in promoting the performance of foreign firms. Third, foreign firm's institutional experience in target region of emerging economies host country strengthens the positive impact of subnational legal effectiveness on performance, but weakens the

of research and explains the decisive characteristics of each paradigm. Lastly, future directions are outlined: (1) more paradigm reflexivity is required; (2) non-mainstream (namely, constructivist and even critical) research is needed; and (3) new paradigmatic directions are recommended. Newly introduced paradigms or multi-paradigm studies should be undertaken.

The Complex Interplay of Firm Innovation, Internationalization, and Learning Capability

Author: **Joan Freixanet**; Graduate School of Management, Saint Petersburg U.

Author: **Ryan Federo**; U. de les Illes Balears

This study presents a holistic perspective on how the complex interplay of different facets of innovation, internationalization, and learning capability is associated to firm performance. Academics have traditionally tested one-way cause-effect of one of these key strategic activities on the other, thus employing traditional multivariate methods which are less appropriate to capture the interconnectedness of factors as complex systems. We use a configurational approach, more specifically a qualitative comparative analysis over a sample of 2,844 manufacturing firms over the period 2008–2014, a suitable method to obtain new insights into complexity issues. The results point to a general complementarity between high process innovation, export breadth, and high organizational learning capability, and a substitutability between R&D and employee training as sources of learning capability. The analyses by firm size suggest that, contrary to SMEs, large firms do not require high export breadth to render their innovations profitable, likely because they enjoy adequate economies of scale and scope through their strong domestic presence and multiple business units. The results bring new insights to the importance of temporal concepts in the internationalization literature, and have relevant implications for scholars, managers, and policymakers.

How Does Government Ownership Affect a Chinese Firm's Long-Term Performance After a CBA?

Author: **Wenjun Tu**; Ningbo U.

Author: **Xiaolan Zheng**; Nottingham U. Business School China

Author: **Lei Li**; U. of Nottingham, China

Author: **Zhiang Lin**; U. of Texas at Dallas

Recent research on cross-border acquisitions (CBAs) has relied heavily on the firm-level resource-based perspective without adequately addressing the role of the institutional context. The rising CBAs by Chinese firms have posed a significant challenge to extant literature due to their relatively unique characteristics and their distinct home country institutional environment, in particular the active role of the government. In this study, we seek to integrate the institution-based view with the resource-based perspective and examine how Chinese firms' post-CBA long-term performance is affected by government ownership in conjunction with key firm-specific and institutional boundary conditions. Our study shows that Chinese firms with more government ownership demonstrate better post-CBA long-term performance. However, the above relationship is moderated by such firm-level boundary conditions as political connection and financial slack, and the country-level institutional boundary conditions (i.e. the host country formal institutions and the home-host country cultural distance).

Learning to Export by Hiring: The Role of Employee Task-Specific Export Knowledge

Author: **Romina Guri**; U. of Groningen

Author: **Florian Noseleit**; U. of Groningen

Author: **Pedro Faria**; U. of Groningen

Exporting is a common strategy used by firms to enter foreign markets. Existing literature has given attention to the importance of export spillovers in explaining firms' decision to export. However, limited attention has been devoted to the understanding of the learning to export process. By drawing on the literature on export spillovers and strategic human capital we aim to analyze the implications that specific types of hiring patterns have for the export performance of firms. More specifically, we hypothesize that the export performance of firms that hire employees with task-specific export knowledge and skills acquired in exporting firms is higher, and lower if firms hire employees with task-specific export knowledge acquired in non-exporting firms. We use data from an employer-employee database and empirically test our predictions for a sample of approximately 30 000 German establishments. Our findings contribute to a deeper understanding of the micro-foundations of the learning to export process.

Antecedents and Consequences of Low-Status Expatriates' Adjustment Experience

Author: **Jane Tong**; Monash U., Malaysia

Author: **Erhan Atay**; Monash U., Malaysia

Author: **Sumeyra Danisman**; Stony Brook U.-State U. of New York

How do low-status expatriates adjust to working and living overseas? What factors are essential to their task performance, psychological well-being, intention to leave and life satisfaction in the host country? The extant expatriate literature disproportionately focuses on high-skilled, high-status professionals and managers who are either company-assigned or self-initiated to relocate and work in a new country. This bias overlooks the fact that the vast majority of international employees relocated in various countries actually fall into the category of low-status who take up low-skill and low-

In the last few decades, as many emerging economies have liberalized, cross-border acquisitions have been an important strategic lever for firms to fill their resource voids. However, there is little research that examines whether being embedded in a closed set-up for an extended period would affect the post-acquisition performance of these cross-border deals. Borrowing the arguments from organizational imprinting and organizational learning, we hypothesized and found the empirical support that the degree of organizational imprinting negatively impacts the post-acquisition performance of the cross-border acquisitions done by firms from emerging markets. Furthermore, we found support for the moderating impact of technological intensity and industry dynamism on this baseline relationship. We tested our predictions on a dataset comprising 312 majority stake cross-border M&A deals done by publicly listed Indian firms from 2003 to 2015.

How Do New Advanced Economies Maintain their Advanced Country Status?

Author: **Angela Garcia Calvo**; London School of Economics and Political Science

The main challenge for New Advanced Economies, the countries that have reached advanced economy status in the past four decades, is resilience, or maintaining their hard-earned position as the competitive environment changes. This paper examines resilience by gauging the capacity of local firms to generate innovation in the face of emerging industry paradigms. Using evidence from Spain's and Korea's automotive industries from the 1960s, this paper argues that firms' innovation capacity is determined by the path-dependent organizational structure of the value chains in which they operate. The paper defines two types of value chains: regionally integrated (RI) and self-sufficient (SS). We argue that although in theory SS provide abundant opportunities for innovation, in practice, the inward-looking nature of SSs may prevent lead firms and captive suppliers from acting on them, threatening the survival of the whole value chain. Contrary to expectations, we also find that RIs provide

paid jobs. Some of them even live and work in precarious conditions. Yet, they form a significant part of the workforce in several developing and developed countries. Based on 45 semi-structured interviews with low-status expatriates, we derive a model that explains the relevant antecedents and consequences of low-status expatriates' adjustment experience. To this end, we analyzed our data by drawing on the extant perspectives on expatriate adjustment and immigrant adaptation.

Changing Cultural Values in the Workplace: Improving Leader Effectiveness

Author: **William R. Hanson**; Anderson U.

Author: **Jeffrey R. Moore**; Anderson U.

Organizational change initiatives are key services which consultants provide to their clients. McKinsey & Company note that nearly 75% of these large scale initiatives fail. This case study identifies and addresses value shortfalls in a manufacturing plant in the southeast. Data collection includes multiple surveys and small group interviews. Analysis uses rigorous coding methods to construct a model of critical organizational values and behaviors essential for leadership effectiveness. We bring “theory to practice” by applying complexity leadership concepts in our intervention strategy. Our findings are categorized into three parts: identifying critical culture value gaps, applying complexity concepts to a scenario-based training intervention, and identifying intervention outcomes. Outcomes include transformed work environment lead by leaders who respect others, share decision-making, and enable employees to be interdependent. This explanatory case study contributes to research by applying complexity leadership theory to a practical consulting intervention. This work provides a template and process for consultants using complexity leadership to inform their client interventions.

Discussions in Management Education 1 (session 651)

Towards a More Holistic Approach to Competence Development: The Case for Student-Centered Management and Business Education

Author: **Thomas F. Hawk**; Frostburg State U.

Author: **Sabine Hoidn**; U. of St. Gallen

The critique of management and business education literature indicates that the design of management and business courses and programs can do a relatively effective job of developing functional analytic competencies but are woefully inadequate at developing the higher-order cognitive, interpersonal and intrapersonal competencies that comprise the vast majority of competencies needed for effective “managing” or “organizing,” given the process-relational nature of organizational phenomena. In this paper, we propose a focus on schools for organizing and on higher-order competencies for organizing. This focus is much wider than one devoted to managing for-profit business organizations for shareholder wealth. Managing and organizing also apply to non-profit, volunteer, cooperative, governmental, and religious organizations, among an even wider range of human organizing patterns to “get things done.” We also point to the holistic nature of all learning and teaching in management and business education and therefore suggest that it must be processual and relational and embodied and contextual. Against this backdrop we explore student-centered

Skills Gap Challenge: How Apprenticeship Programs Address Skill Building and Educational Advancement

Author: **Lesley Page**; Lewis U.

Author: **Rachael Narel**; Benedictine U.

Author: **Elizabeth Belgio**; Lewis U. - College of Business

There are 7.3 million job openings in the United States (U.S. Bureau of Labor Statistics, 2019), however many of today's workers don't have the skills employers need (Accenture, 2019). The current job market reflects a complex set of employability issues when higher education, technical training and job fill rates are considered (Chaitanya, 2018; Moore & Morton, 2017). This has resulted in what many label as a skills gap or job readiness issue (Moore & Morton, 2017). A skills gap refers to the fact that employers seek new hires who are able to productively contribute on the job (Chaitanya, 2018; Decker, 2019) yet once employed hiring managers find that new employees are not adequately able to make those contributions. This disparity can have a detrimental impact on employers and organizations (e.g., lack of productivity, performance, ROI, etc.) as well as employees (e.g., turnover, poor person-job fit, unrealistic job expectations, low morale, etc.). To help fill the void created by this mismatch, organizations are investing in apprenticeship programs. While the benefits of these programs are significant, opportunities exist to maximize overall apprentice performance and success. We propose a cross-sectional quantitative and qualitative study to identify opportunities to increase organizational commitment, job performance and employee engagement for participants in an apprenticeship program at a Fortune 500 financial institution.

Unpacking Course Overlap: Using Digital Tools to Incorporate Students' Voice in Curriculum Design

Author: **Fouad Zablith**; American U. of Beirut

Author: **Bijan Azad**; American U. of Beirut

Research on the use of modeling and mapping tools in curriculum management is thriving often focusing on the perspectives of the faculty and administrators. However, scholarly works on curriculum modeling and mapping tools that take the students' curriculum concerns seriously are less common. A recurring theme in students' curriculum concerns is overlap among courses and it is usually expressed by students at the level of common concepts across courses. This concept level granularity imposes a challenge for administrators and designers who often focus on curriculum management at the course level because they usually lack the tools with concept level (sub-course) granularity. In this paper, we investigate how to model and represent curriculum information to enable us to incorporate the students' view of overlap at the level of concepts within courses that can then facilitate cross-course overlap identification and rectification. We design and develop an integrated digital environment that includes a linked data ontology for modeling curriculum content at the concept level within and across courses. The environment includes a set of course/concept manipulation and visualization tools that build on this ontology offering key functions for course overlap identification and rectification. We then deploy and evaluate this digital environment in the context of a curriculum review process, whereby 25 business faculty employed the visualization tools to tackle a course overlap problem reported by students. Our proposed curriculum modeling approach contributes to the literature on curriculum management by: (a) offering a digital environment that explicitly incorporates granular sub-course level concepts enabling students' views to be

Digitalization currently transforms industries and societies across the globe, bringing firms new opportunities to create and capture value. This paper explores the impact of digitalization on knowledge intensive firms, with a particular focus on the rising opportunities in the legal industry. Digital technologies have enabled new practices among law firms and motivated firms to innovate in regard to their business model. Through a multiple case study of 12 law firms, this paper explores business model innovation in law firms and depicts how digitalization has enabled value to be created and captured in new ways. Based on empirical data, on inventive ways to use digital tools and technology to create and capture value, this paper has identified four digital strategies; Specialize, Standardize, Scale and Save. These can be combined in a model describing four new competitive positions that innovative law firms occupy in the digitalized context. This paper contributes with a new understanding of digital innovation in a traditional field and provides practitioners with valuable advice as how to create and capture value from the rising digital opportunities.

Peer Coaching: A Holistic Experiential Learning Process in Online Leadership Classes

Author: **Mai P. Trinh**; Arizona State U.

This paper offers practical reflection and guiding principles on how to facilitate a holistic experiential learning process for online students with the use of peer coaching, in which two students are paired together to have frequent conversations to help each other understand class work and practice interpersonal skills. Peer coaching is an effective way for students to engage in all learning modes around the Kolb experiential learning cycle and improve their learning experience in online classes. In peer coaching, students learn from the diversity of their peers, better understand and apply class concepts in their own lives, gain specific leadership skills to help with their future personal and professional development, feel more connected and engaged with the class, and build deep relationships with their classmates. This paper describes the activities involved in peer coaching and how technology could be used in both the design and implementation of this practice.

A Framework for Fairer Machine Learning in Organizations

Author: **Mike Horia Teodorescu**; Boston College

Author: **Lily Morse**; West Virginia U.

Author: **Yazeed Awwad**; Massachusetts Institute of Technology

Author: **Jerry Kane**; Boston College

The use of machine learning in organizations presents a double-edged sword: machine learning tools reduce costs on otherwise repetitive, time-consuming tasks, yet run the risks of introducing systematic unfairness in organizational processes. Issues of behavioral ethics in machine learning implementations in organizations have not been thoroughly addressed in prior literature, as many of the necessary concepts are disparate across three literatures – ethics, machine learning, and management. Further, tradeoffs between fairness criteria in machine learning have not been addressed with regards to organizations. We move research forward by introducing an organizing framework for selecting and implementing fair

processes directed the development paths of Soviet heavy industry districts by restricting the scope of regional path renewal and thus contributing to a persistent structural lock-in. The results of the paper demonstrate how the interplay of state-level strategic path inscription and regional-level self-reinforcing mechanisms can produce long-term constraints for regional path renewal.

The Philosophical Foundations of Fundamental Leadership Competencies

Author: **Eric H Kessler**; Pace U.

Leadership is a perennially important activity insofar as leaders exert asymmetrical influence on organizational processes and their outcomes. However despite its burgeoning literature there is an imbalance between theoretical differentiation and integration, as well as critical inconsistencies in terms of how it relates to a) being a leader and b) becoming a leader. Exploring a wisdom-based template for leadership, based on ancient philosophic insights, offers a path to synergistically combine academic theories to model a holistic understanding of its higher-order mega-competencies – foundational, multidimensional and context specific leadership tools – and its subsequent meta-heuristics – capacities for matching appropriate leadership identities, roles, and behaviors to address dominant leadership challenges. As such, and specifically by focusing on ideas seeded from the foundational work of Plato's Republic, this type of perspective represents a potentially useful approach for reconciling seemingly divergent leadership approaches and advance how we might think about the leadership role. Taken together, the resultant framework will then be shown to suggest how wisdom's inclusion might help advance our understanding, teaching, and practice of leadership.

Integrating Data Analytics with Clinical Work: An Affordance Actualization Approach

Author: **Yong Kwang Adrian Yeow**; Singapore U. of Social Sciences

Author: **Christina Soh**; Nanyang Technological U.

Author: **Kim Huat Goh**; Nanyang Technological U.

Author: **Le Wang**; Nanyang Technological U.

While there is great potential in using data analytic applications in clinical work, there is still many challenges in integrating them in an effective manner. Our study draws on the affordance lens to understand the challenges of integrating best practice alerts -- a type of data analytic application -- with existing clinical practices to achieve its intended effects for the healthcare organization. Using a mixed-method study on the use of Best Practice Alerts for Indwelling Catheter ("BPA") in a cardiology department, we found three patterns of BPA affordance actualization and the factors that jointly led to these actualization patterns. These factors included the individual's domain expertise, the physician's role in the ward team (responsibilities and tasks), and temporal order of work. Using these factors and insights, our study provides specific BPA design principles for effective BPA affordance actualization.

The Quest for Legitimacy: Strategies for Tension Management in Organizational Social Media Use

Author: **Sophia Fu**; Rutgers U.

Despite the great utility of social media for improving organizational legitimacy, empirical evidence has revealed that organizations generally do a poor job adopting or using social media. Such seeming irrationality may be explored from a tension perspective, which posits that the dynamic interplay between the social construction of information and communication technologies (ICTs) and organizational tensions drives resistance to the

Author: **Albert J. Mills**; Saint Mary's U., Canada/U. of Eastern Finland

Author: **Kristin Samantha Williams**; Sobey School of Business, Saint Mary's U.

The authors undertake an in-depth review of articles and book reviews to seek out important clues as to the problem of bringing gender and feminism from the periphery to the centre of business history. The review involves a study of articles published between 2006 and 2018 in the pages of 'Business History', 'Management and Organizational History' and the 'Journal of Management History'. Of the 1600 articles and book reviews published in the three journals surveyed, only twenty- nine (<2%) focused on gender, women and/or feminism. This paper serves two objectives: (1) to survey the field and what currently constitutes recent critical work and (2), to offer points of entry in the hopes of inspiring further scholarly development.

[view paper \(if available\)](#)

Asynchronous

adoption and use of ICTs. Drawing on semi-structured interviews with 51 leaders of Chinese social ventures and two field experts, this research seeks to understand the dialectical tensions in social ventures' social media use and how they manage such tensions. The findings highlight that social venture leaders perceive four key tensions: (1) entry vs. maintenance, (2) visibility vs. invisibility, (3) conforming vs. strategic legitimacy, and (4) emancipation vs. control. Moreover, I found two broad strategies Chinese social ventures employed to manage these tensions: (1) strategic hiddenness, and (2) networked, associative mechanism, which involves interorganizational and interpersonal relationship building with key actors. This research makes four theoretical contributions to research on organizational use of social media, organizational legitimacy, organizational tensions, and (social) entrepreneurship. Practical implications for social entrepreneurs and nonprofit leaders are also drawn from the findings.

The Fit Between Social Media Use and Functions of Contracts: A Contingent Perspective

Author: **Chao Feng**; city U. of hongkong

Author: **Yajing Fan**; City U. of Hong Kong

Author: **Xu Zheng**; City U. of Hong Kong

Author: **Hui Chen**; School of Management, Xi'an Jiaotong U.

Recent studies suggest that the multiple dimensions of contract governance and its context moderators deserve more empirical scrutiny. By distinguishing between task and tie related interaction enabled by social media, this study explores the fit between the two distinctive interactions and multifunction of contracts, modeled as an interaction effect. Empirical results based on a sample of 504 Chinese manufacturers show that contract complexity negatively affects opportunism serving as safeguarding mechanisms, and positively affect collaborative activities serving as coordination mechanisms. More importantly, we find that compared with tie related interaction, task related interaction strengthens the positive effect of contract complexity in facilitating collaborative activities, suggesting task related interaction is more

Dynamics and Patterns of Change (session 654)

Organizational Culture Change and Employee Mobilization

Author: **Mathilde Sander**; U. Laval

Author: **Sophie Veilleux**; U. Laval

Despite the coverage organizational culture has received in the literature, the process of how to change it has seen little development. This article contributes to such an analysis through a longitudinal study of a successful change in organizational culture. It develops and tests an organizational culture transformation process structure to promote the acceptance of the cultural changes. This study deals with cultural transformation in terms of managerial practices so as to place the emphasis on the variables that facilitate the success of this process in order to ensure the firm's sustainability. What emerges is the decisive impact of the collective mobilization of all stakeholders, decision makers and employees in order to guarantee the success of the organizational culture change and performance in a broader sense. The results show that the organizational culture change process is to be considered as a constant balance to be struck and reassessed between the initial culture and its organizational routines rooted in the firm's values, and the target culture, which is

effective in promoting the coordination function; compared with task related interaction, tie related interaction increase gains of contract complexity in curbing opportunism, reflecting a salience fit between tie related interaction and the safeguarding function. By showing how social media enabled interaction promotes the relative effectiveness of contracts in inhibiting opportunity versus facilitating the performance, the study enriches the literature on the complex roles of contracts and social media use in governing inter-firm relationships.

The Interplay of Enterprise Social Media and Power Dynamics: A Processual Perspective

Author: **Lorenzo Skade**; European Uni Viadrina,
Frankfurt (Oder)

Author: **Sarah Stanske**; Leuphana U. Lüneburg

Author: **Matthias Wenzel**; Leuphana U. Lüneburg

Author: **Jochen Koch**; European Uni Viadrina,
Frankfurt (Oder)

Enterprise social media (ESM) have become imperative technologies in contemporary organizations, in part, due to promised improvements of efficiency and coordination. Given that past studies have primarily focused on the potential merits of these emerging technologies, less is known about the hidden power dynamics involved in the enactment of ESM. In this paper, we present the findings of an ethnographic study at a startup accelerator in which we examined how and why the enactment of ESM shapes and (re)produces power dynamics. Based on our analysis, we develop a process model that theorizes the emergence of autonomy-control tensions in the enactment of ESM through continual drifts of decision-making between the online and offline worlds. As we show, these drifts are produced through non liquets and the

often destabilizing.

A Cultural Political Economy of System Change

Author: **Cheng Lu**; U. of Edinburgh

Facing the increasingly complex social problems, no single sector can stay aloof or immune from it. In this turbulent era, unprecedented demand for finding a way to think and act on broad societal challenges through revolutionizing the situated systems is spreading across sectors and global policy agenda (Fuller Transformation Collaborative, 2019). The word "system" contains profound connotations and history, and in recent years - especially in the philanthropic and public sector - it has been vested with a new worth. Although different views still occur in this incipient, contested field, a commonly accepted explanation of System Change (SC) among theorists and practitioners is: SC refers to acknowledging and altering the components, players, or relationships in the system that traps the problem in place, and formulating a restructured or new system with the quest for fundamentally solving the entrenched social issues (D. H. Meadows, 2008; Ventresca, Sinha, & Saltmarshe, 2014). With it comes a cascade of SC-driven initiatives and strategic plans, which are led and implemented by cross-industry individuals, groups, and institutions, and gaining fresh upside near-term momentum. In contrast with the feverish excitement of uncovering a way to get to the root of the problem, however, very little research sheds light on the theoretical lens of this SC conception. People take the emergence of SC for granted, and usually - perhaps a bit wishfully - envisage its potential to create more-than-ever impact. Yet the maturity of SC-related campaigns and their evidence base for jumping to a conclusion are still in early days, it is of great value to examine the SC in more depth from a theoretical underpinning. As such, this article argues the imperative to reconsider what SC is ultimately about, how this concept come into being and evolving, and behind the scenes, who are the key actors and why they get motivated. To this end, Cultural Political Economy (CPE), a theoretical approach driven by Bob and Ngai-Ling (2013), is employed and developed in my discussion.

emergence of urgency. Furthermore, we demonstrate the consequentiality of these dynamics, which turn ESM into an irreducible part of organizational processes. Our findings contribute to the burgeoning literature at the intersection of emerging technologies and organizing by surfacing power-related, potentially detrimental side effects inherent to organizing through such technologies.

From Job-Assignment to Job-Hunting: Labor Market Reform and Entrepreneurship in China

Author: **Rui Wu**; Tsinghua U.

Author: **Jiapeng Li**; SEM Tsinghua

Author: **Delin Yang**; School of Economics and Management Tsinghua U.

Although research at the junction of institutional change and entrepreneurship suggests that a new institutional environment encourages entrepreneurship by providing resources and opportunities, it has paid little attention to the role of the individual during the change process. In this study, we propose that institutional change may have a lasting effect on individual decision-making by imprinting a mindset that fits with the new institution, and that subsequent experience may influence the strength this imprinted mindset. We test our model with an alumni survey from a top Chinese university during a period in which the country's labor market reform took place. We find support for our argument that reform, as a formal institutional change, can imprint an individual mindset with autonomy, which positively affects entrepreneurial entry. This study enriches our understanding of the relationship between institutional change and entrepreneurship and highlights the impact of historical conditions on entrepreneurship.

Unfolding Dynamics of Vicious Cycles: Defence Mechanisms and Feedback Loops in a Design Firm

Author: **Sotiris Lalaounis**; U. of Exeter Business School

Author: **Ajit Nayak**; Southampton Business School, U. of Southampton

Paradoxes generate tensions and contradictions in organizations. In this paper, we build on the paradox literature to understand how organizational members experience tensions generated by the strategic intent paradox. Specifically, we focus on the unfolding dynamics of vicious cycles experienced by organizations dealing with paradox. Drawing on a case study of a design firm, we demonstrate how a vicious cycle forms through feedback loops and stabilizes over time. Based on our findings, we develop a micro-level understanding of vicious cycles which incorporates defence mechanisms at staff and senior management levels. Our main contributions are 1) a model of unfolding dynamics of vicious cycle; 2) feedback loops that underpin a vicious cycle; and 3) understanding how vicious cycles can perpetuate over time without leading to organizational collapse.

Organizational Misconduct and Change on Wall Street

Author: **Pooria Assadi**; California State U. Sacramento

Why do some firms learn from their history and change in the aftermath of misconduct while others do not? I argue that, while inertia in the structure of firms might create persistency towards past routines, variation in firms' opportunities to reflect on and reconceive their past misconduct might explain variation in motivation to change and subsequent recidivism. Specifically, I posit that the more frequent use of the organizational routines that led to misconduct in the past might facilitate misconduct in the future, and that the relationship

This paper investigates the role of analogies and theorises the process of collective analogising by different actors in the emergence of new organisational forms in highly regulated environments. Through a granular qualitative analysis of the emergence of the first generation of loan-based crowdfunding platforms in the UK, I demonstrate that a particular combination of non-financial and financial analogies enabled a degree of abstraction to create conditions for experimentation and innovation. Moreover, a collective process of analogising by different actors, with the specific role of the regulators and lawyers enabled this new organisational form to shape the existing legal frameworks and develop a new legal category. These results, while confirming the important role of analogies for the legitimacy of new organisational actors, show that analogies work not only when close similarities exist between the source and target domains but also when certain combinations of analogies from different domains allow a particular degree of ambiguity, enabling innovation. Besides the important implications for theory and practice, the results of the paper are significant for policy-makers and regulators for their understanding of the nature of the relationship that might exist between the policies and frameworks they develop and the emergence and functioning of innovative, platform-based organisations.

A Discursive Model of Institutional Entrepreneurship: The Case of the Kinnar Akhara in India

Author: **Anupama Kondayya**; Indian Institute of Management, Bangalore

In 2019, for the first time in about 1000 years, a group of transgender individuals walked amidst a group of patriarchal all-male monastic orders as part of a ritualistic procession culminating in a royal bath in a holy river in India. This paper uses this context to study institutional entrepreneurship from the perspective of competing discourses emerging in the process, and marginal actors (as opposed to central actors in the institutional field) shaping the dominant discourse. The paper proposes a multi-

between past and future misconduct might depend on the time that has elapsed since last misconduct. To test these hypotheses, I turn to the U.S. Securities Industry and analyze the information on instances of misconduct across 648 brokerage firms over the period of 1990 to 2004. I find that organizational misconduct increases with the number of past misconduct. I also find that the positive relationship between past and future misconduct is weakened the longer it is the time that has elapsed since last misconduct. In doing so, I show that, despite persistency of past organizational routines, longer disengagement of firms from past misconduct routines provides opportunities for firms to lessen their propensity to engage in misconduct in the future as firms might forget routines that facilitate misconduct the longer those routines are unused. By doing so, I show that two models of change –i.e., through ossification of organizational routines and reconstruction of organizational memory– might interact to determine the temporal patterns of organizational change.

Emotions as Responses to Institutional Contradictions

Author: **Anna Dziuba**; Hanken School of Economics
Author: **Johanna K. Moisander**; Aalto U.

In this paper, we advance knowledge of the role of emotions in actors' responses to institutional contradictions in the context of the currently disrupted, Nordic higher education sector. By means of an empirical case study, we explore and examine how moral emotions that arise from identity conflicts associated with the "moral self" shape actors' interpretations and enactments as responses to institutional contradictions. Drawing on the literature on communicative institutionalism, emotions-as-judgements, and institutional contradictions, we theorize actors' emotional responses to institutional contradictions as acts of evaluative meaning-making and empirically elaborate how actors engage in this emotional meaning-making to cope with moral identity conflicts that arise from experiences of institutional contradictions. Based on our qualitative analysis of 36 in-depth interviews, we identify three patterns of emotional meaning-making through which actors account for their experiences of institutional contradictions: 'seeing through the eyes of valued others'; 'struggling to uphold one's moral integrity'; and 'accepting conflict as an opportunity for personal growth.' Overall, the study contributes to the research on responses to institutional contradictions by extending our understanding of the nature of emotions as interpretation-, action-, and response-signaling sources for institutional work.

the same buyer on a global scale, while simultaneously addressing potential local variations. This study develops understanding of the organizational implications of global sourcing for the buyer-supplier interface and its management. The paper is based on a case study with a global construction firm CONS (pseudonym) and the buyer-supplier interfaces with six suppliers. The project-based operations offer a context in which managerial challenges for managing the buyer-supplier interface are particularly high. The empirical analysis indicates that differences in the organizational structures at the buyer's sourcing and supplier's sales organizations especially in terms of geographical scopes and different levels of centralization create challenges for interface management. These issues are partly addressed with the key account role to manage the interface. In addition, the findings indicate that disconnected incentives as well as commitment and early involvement have direct implications for interface management.

Saints and Sinners — It's More than Black and White: Diversity Practices and Religion-Racial Logics

Author: **Jared Mitchell Poole**; U. of Utah, David Eccles School of Business

Race, the “master category” (Omi & Winant, 2014), and religion, engagement with one’s “ultimate concern” (Tillich, 1957) are two of the most meaningful institutions people interact with. Diversity scholars have examined how these institutions manifest in workplaces, but the field seems to assume problematically that these foundational organizing principles of American society are independent of one another. The purpose of this paper is to explore the organizational implications of the profound interconnectedness of race and religion for diversity program effectiveness. To do so, I introduce the concept of religio-racial logics, institutional logics in which racial and religious meanings mutually inform one another. Religio-racial logics influence organizational diversity programs through the religio-racial practices that managers and employees engage in both inside and outside the workplace.

Interpartner Legitimacy Building in the Formation Process of a Multiparty Alliance

Author: **Renate Taubeneder**; U. of Bath

Author: **Brian Squire**; U. of Bath

This paper investigates how a buyer builds interpartner legitimacy during the formation of a supply chain alliance. Prior research on supply chain collaboration has focused almost exclusively on already established collaborations, neglecting the importance of the formation stage for the path-dependent nature of such long-term relationships. Alliance research found that the building of interpartner legitimacy during the formation stage is particularly important to ensure alliance success. However, we know very little about how a buyer can purposefully build interpartner legitimacy with several suppliers in the formation stage. To explore this gap, we used a longitudinal, in-depth case study to dissect the activities and processes through which a buyer forms a multiparty alliance with five suppliers to deliver substantial mechanical and electrical services with a combined value of over \$1 billion for the construction of a new nuclear power station in the UK. We collected a rich dyadic data set derived from over 159 hours of meeting observations, 20 interviews and numerous company reports. Our findings demonstrate a range of actions a buyer undertakes to build interpartner legitimacy over time. We can show that these actions follow a sequence starting with the building of moral interpartner legitimacy before addressing pragmatic concerns. We find that while interpartner legitimacy building is predominantly driven by the buyer during the early phase of the formation process, suppliers drive interpartner legitimacy building during the late phase. Overall, our findings contribute to the emergent research on interpartner legitimacy building and offer insights into the underexplored area of collaboration formation.

Keeping P(l)ace with Thoughts: The Value of Walking Interviews in Organizational Research

Author: **Karen Bilsland**; U. of Aberdeen Business School

Author: **Sabina Siebert**; U. of Glasgow

This article critically appraises walking interviews as a method of collecting data which is largely underutilised in an organizational context. Walking interviews are predominantly used in urban geography and sociology of the cities, and they involve a commentated walk, whereby the researcher accompanies the interviewee, allowing insights into the spatial dimensions of social practices. Evoking the ancient notion of peregrination (i.e. walking and talking), walking interviews are usually interviewee-led, facilitate the co- construction of meaning, and allow insights into the spatial dimension of social practices. Drawing on our two distinct ethnographic studies in two different organizations, we critically evaluate the walking interview and the insights that it offers. To elaborate on the specific characteristics of the walking interview, we juxtapose it with shadowing, pointing out the reversal of the power relationship between the interviewee and the interviewer as the main benefit.

Selection Strategies for Single Case Study Research

Author: **Bareerah Hafeez Hoorani**; U. of Lugano/U. Della Svizzera Italiana

Author: **Michael Gibbert**; U. della Svizzera Italiana

In qualitative case study research, case selection is important, in particular if there is only one case. This paper interrogates the rationales for case selection in 139 papers using single-case designs, which are published in Academy of Management, Organization Studies, Organization Science, Administrative Science Quarterly and Strategic Journal of Management between 1998 and 2016. We find that the most sophisticated research designs distinguish case selection decisions on two levels: the case and within the case (i.e. embedded units). While nearly all papers provide 'inclusionary criteria' for selecting

Counteracting Stigma Through Corporate Social Performance and Emotions

Author: **Stelios C. Zyglidopoulos**; Kedge Business School

Author: **Naomi A. Gardberg**; City U. of New York, Baruch College

Author: **Laura Illia**; U. de Fribourg / U.æet Freiburg

Author: **Maria Fotaki**; Athens U. of Economics and Business

In this paper, we investigate how stigmatized firms try to offset their stigma through their Corporate Social Performance (CSP) activities. We theorize that firms in stigmatized industries attempt to offset their stigma by engaging in higher levels of CSP, a different pattern of technical and institutional CSP activities and use more emotional language in discussing their CSP. Testing our hypotheses on a matched-pair sample of 128 Australian, British and U.S. firms from 2011 to 2016, we find that stigmatized firms are associated with higher levels of CSP compared to their peers in non- stigmatized industries, and that firms in stigmatized industries perform higher levels of institutional CSP activity than non- stigmatized firms. In particular stigmatized firms differ from non- stigmatized ones because they tend to express sincerity of their CSP activities to increase the emotional appeal and thereby temper the negative consequences of their stigma.

A Reflexive Guide to Organizational Visual Research: Key Considerations and Alternative Stance

Author: **Kaiyu Shao**; China U. of Political Science and Law

Author: **Michelle Greenwood**; Monash U.

Author: **Maddy Janssens**; KU Leuven

This article answers to the call for methodological consolidation in the fragmented research field of organizational visual studies by identifying the crucial considerations confronting researchers. Noting the comparability between visual and discourse studies, we draw on the discussion in the more matured field of organizational discourse analysis to inspire our inquiry. First, turning to the common philosophical and methodological considerations confronting both fields, we translate the discussion in organizational discourse analysis to reflect on 1) the philosophical stance and 2) the research focus in organizational visual studies. Second, attending to the particularity of visuality and visual studies, we identify the additional challenges of organizational visual studies regarding 3) the role of the researcher, 4) the analytical object, and 5) the analytical procedure. For each of these considerations, we clarify the alternative stances and elaborate on their potential and challenge.

The Conditional Effect of CEO Organizational Identification on the CSR-CSiR Interrelationship

Author: **Eunyoung Park**; Arizona State U.

Author: **Jonathan Nicholas Bundy**; Arizona State U.

Author: **Donald A. Lange**; Arizona State U.

A growing number of studies have examined corporate social responsibility (CSR) and irresponsibility (CSiR) as distinct constructs that can simultaneously describe a firm's behavior. Yet prior work also suggests they might be interrelated, especially through the mechanisms of moral licensing and moral cleansing. That is, a firm's current engagement in CSR is positively related to its future engagement in CSiR, and vice versa. In this paper, guided by upper echelons theory and social identity theory, we propose that CEO organizational identification has a conditional influence on the interrelationship between CSR and CSiR. Drawing on theories of moral reasoning, we develop a set of competing hypotheses to argue that CEO organizational identification has either an amplifying effect to strengthen their interrelationship, or a diminishing effect to weaken their interrelationship. Using a sample of S&P 500 firms from 2006 to 2016,

This article contributes to underdeveloped research methods for studying innovation processes in real-time by exploring how organizing for disruptive innovation in an incumbent organization can be supported through real-time investigation. Embracing an ethnographic engaged scholarship approach, we worked with participants at Thales UK, a leading multinational technology company, over a period of 3 years to explore how an incumbent organization organizes for disruptive innovation from an organization-creation perspective. We show how our collaborative research practices supported the development of disruptive opportunities in their emergence by stimulating self-reflexivity and imagination among organizational members. Our reflexive analysis illustrates how we accomplished this through a process of simultaneous intervention and observation, action and analysis, and iteratively moving in and out between micro and macro levels of engagement with our study context. We present our findings in the form of a confessional tale highlighting both the impacts and tensions of engaging with our research context in a multidimensional and responsive manner. We seek to bridge theory and practice of innovation processes through our engaged scholarship approach and by sharing our research experience as a toolkit for other researchers to also study and contribute to the emergence of innovation processes in organizations in real-time.

Of Shepherds and Sheep: Who Sets the Agenda for Firms' Attention to Social Issues?

Author: **Jae Hwan Lee**; Hamline U.

Author: **Ronei Da Silva Leonel**; U. of Memphis

Author: **Elise Perrault**; College of Charleston

Corporate social responsibility (CSR) has received a lot of attention in terms of how it can benefit firms and why firms voluntarily address social issues. However, little is known about the issues to which firms choose to pay attention and what influences these decisions. In this paper, we adopt an attention-based view of the firm that builds on media agenda-setting theory to develop a model of situated attention suggesting that firms address social issues that are most prominent in their institutional environment as determined by the media. We analyze the occurrence of 61 social issues in the CSR reports of 253 firms over the ten-year period 2006-2016 for a total sample of 76,860 issue-firm-year observations. We find that issues' salience in traditional media is a significant predictor of the issues that firms address in their CSR reports. We also find evidence that over time, the agenda-setting effect of traditional media on firms' social agenda is losing ground to the power of the public, who increasingly shape the agenda of both corporations and traditional media. The multi-faceted contributions of this study are expounded in the discussion of our findings.

Dared to Care: Mechanisms of Logic Hybridization in Community Ophthalmology Field

Author: **Padmavathi Shenoy**; Indian Institute of Management, Tiruchirappalli

Author: **Smita Prashant Chattopadhyay**; Indian

Institute of Management, Tiruchirappalli

An organization that sets out to address a grand challenge often faces an uphill task of triggering institutional change. In doing so it needs to work under established normative institutional prescriptions that act as institutional barriers and manage under institutional complexity. In this paper, we undertake an in-depth analysis of institutional change process undertaken by a social enterprise from developing country and its partners. Our findings reveal the non-linear and dynamic nature of institutional change process, its triggers and the mechanisms of institutional change. We find that institutional contradictions become salient in the field under conditions of pluralism, external change and resource scarcity. However, the interpretations of the contradictions diverge depending on the actors' cognitive frames which also influences the role they assume in change process- institutional guardians, temporary and persistent change agents. Temporary change agents dropped their efforts too soon despite large supporters' base, while few other change agents persisted to create hybrid organizing templates. The latter group of change agents creatively embraced the institutional contradictions and worked along with the by-standing organizations and institutional guardians in order to diffuse and institutionalize the change they had introduced. We note that such approach was the result of the paradoxical frame which helped them to identify and reconcile contradicting logics, perceived value-conflict and the inherent multiple embeddedness of their roles. These acted as an impetus for the institutional change through a repertoire of mechanisms, namely: re-framing solution, collective reflexivity, collective experimentation and practice authentication.

Broadening our Sight? Evaluating Social Issues in Management Contributions to Grand Challenges

Author: **Layla Jayne Branicki**; Macquarie U.

Author: **Stephen Brammer**; U. of Bath

To what extent is Social Issues in Management (SIM) scholarship achieving its mission to encourage social change through undertaking research regarding the biggest problems facing global society? This year's conference theme - 20/20: Broadening our Sight – calls upon management researchers to examine ways of working together and with other stakeholders to enhance our collective capacity to address the 21st century's most pressing challenges. While social issues in management researchers seem ideally placed to contribute significantly to this agenda, we know very little of the extent and character of contributions by social issues in management scholars to "Grand Challenges". In this paper, we provide the first comprehensive evaluation of grand challenges as they are examined in social issues in management research. To do this, we systematically review research concerned with grand challenges in 5 leading social issues in management journals, subjecting the full text of the articles identified in our search to content analysis using a structured analytical template. In so doing, we provide a comprehensive overview of social issues in management contributions to grand challenges, reflect on the factors that have inhibited greater engagement with grand challenges, and highlight practical approaches that SIM scholarship could adopt in attempts to broaden our sight.

Strategic Leadership and Business Model Innovation: Integrating Micro and Macro Perspectives

Author: **Chandrashekhhar Lakshman**; Florida Atlantic U.

Author: **Ravi Bala**; U. of Texas Rio Grande Valley

Business Model Innovation (BMI) is a real phenomenon, which is very important to understand, yet poorly understood. Despite the importance of strategic leadership to BMI, there is very little attention to it in the literature. Using the theory of dynamic capabilities as an underlying framework, we develop a theoretical, multi-level relationship between strategic leadership, TMT strategic agility and employee flexibility, which are critical organizational competencies necessary for orchestrating BMI. We conceive of firm-level strategic agility as a combination of TMT strategic agility, comprised of collective commitment and strategic sensitivity at the TMT level, and employee flexibility, comprised of skills flexibility and behavioral flexibility at the employee level. We contribute to the literature by addressing the important phenomenon of BMI and by bridging the micro-macro divide. We highlight our contributions, discuss limitations of our theoretical model, and conclude the paper with both academic and practical implications followed by future research directions.

Unveiling the Experimentation Process of Business Model Innovation: A Sociomateriality Perspective

Author: **Xavier Lecocq**; -

Author: **Catherine Archambault**; IESEG School of Management

Innovative business models have been on the radar of strategic management scholars for their ability to lead to better competitiveness. Yet, the trial-and-error process leading firms to create new and innovative business models, referred to as the experimentation process, remains largely unknown in business model innovation (BMI) literature. To further advance BMI's scholarship and to enable

countries. We further examine how this impact is affected by women executives' personal attributes as well as organizational and institutional conditions. Using panel data from 490 firms in three highly polluted emerging countries (China, India and Pakistan) and employing Probit instrumental variable regressions, we find that the proportion of women in TMTs is positively related to the likelihood of ISO 14001 certification and renewal. Additionally, we find that high institutional gender parity, women executives' power and CSR committees strengthen the relationship between TMT gender diversity and ISO 14001 adoption. Our findings, which demonstrate a systematic translation of women's values into environmental strategy, make important contributions to literature and practice.

Serving the Base of the Pyramid Through Innovative Business Models and Stakeholder Relationships

Author: **Andrea Maria Prado**; INCAE Business School

Author: **Jeffrey Robinson**; Rutgers Business School

The base of the pyramid (BoP) refers to the global poor, most of whom live in developing countries and face limited access to health care, education, and public services. Social entrepreneurship can be an effective approach to creating both economic and social value at the BoP, addressing the needs of this market segment through innovative business models and relationships with different local stakeholders. Scholars and practitioners alike have proposed that multinational corporations or philanthropic efforts would be effective in serving the needs of this market segment. However, social entrepreneurs, through their pursuit of social and economic goals that address the community's needs and potentiates its capabilities, constitute a better alternative to these approaches. Thus, based on the study of three social enterprises in Latin America, we develop a set of propositions regarding the characteristics that effective social enterprises serving the rural BoP are likely to exhibit. These features include a) a local founder who understands the community needs and sociopolitical context, b) an innovative business model that fits the local

further theorizing on BMI performance, we suggest researchers should focus their efforts on unveiling the micro- processes and dynamics of the experimentation process over time. As such, we adopt a sociomateriality perspective to reveal how a new business model emerges in an established firm. We offer process-based narratives based on evidence collected at a multinational firm which operated architectural business model changes over the course of ten years. Our contribution to the BMI stream of research is twofold: First, we further expand knowledge on the discovery-driven experimentation process demonstrating the crucial role of agency – both human and material – in shaping a new business model. In doing so, we corroborate the driven by fate nature of the experimentation process as understood in current BMI literature. Second, we demonstrate the counter-intuitive notion that order naturally invites itself in the experimentation process, which we conceptualize as a dynamic conversation between the upper and the middle management levels. Our novel outlook thus invites business model researchers to evaluate established firms BMI's performance through ordered sequences of dynamic conversations.

Policy Uncertainty and Venture Capital Investment: A Real Options Perspective

Author: **Jing Deng**; U. of Colorado at Boulder

Author: **Tony Tong**; U. of Colorado, Boulder

Recent changes in the global geo-political environment have stimulated a growing interest in policy uncertainty, or uncertainty in future government policies. Whereas policy uncertainty has been shown to impact business activities in many other fields, it has received little attention in strategy surprisingly. This study investigates how policy uncertainty affects venture capital (VC) investment, which is often subject to high uncertainties. Taking a real options perspective, we predict that VCs will defer investment in startups under high levels of policy uncertainty, and that the effect will be strengthened by investment irreversibility. Results based on a large sample of VC- backed startups support our predictions. We contribute by applying

context, c) the deployment of or investment in local capabilities, and d) diversified sources of income through multiple market segments or different product lines.

Consociation: How Developing Communities Organize Collective Entrepreneurship for Common Prosperity

Author: **Haiying Lin**; Hainan U.

This paper explores alternative forms of organizing in relation to entrepreneurship and social transformation. Some pioneering communal entrepreneurship studies recognized the limitations of conventional, individual-based entrepreneurship studies with regard to tackling the growing income disparity in developing economies. They suggest that addressing the needs of vulnerable groups can be better organized at the collective rather than at the individual level. However, such a collective organization mechanism has not yet illustrated fully in the literature. This study fills the gap by adopting an abductive method to build theory by tracing the ten-year evolution of a large community-based enterprise in China. Based on the intensive case study, I theorize collective entrepreneurship and identify consociation as the underpinned organization mechanism.

Mechanisms for Business Model Innovation: A Role for Cooperation and Industry Associations

Author: **Jennifer Kuan**; California State U., Monterey Bay

Author: **Kyle J. Mayer**; U. of Southern California

Business models have been shown to be important for a firm's survival and competitiveness. But because business models encompass interfirm relationships, they also have the potential to affect the survival and performance of whole industries or ecosystems. This paper uses an historical case to examine business model innovations—where they come from and how they spread. We study the rise of venture capital, which underwent decades of business model experimentation, starting in the 1950s, before becoming an overnight success in the 1980s. We document a number of surprising and almost forgotten aspects of the experimentation period in California's Silicon Valley, including cooperation among the venture capitalists there, and their formation of an industry association, the Western Association of Venture Capital (WAVC), which helped to rapidly develop and establish the successful model we know today. We argue that these mechanisms of cooperation can be applicable to firms in other industries, especially those that benefit from variety.

Parallel Learning Pathways, Applied Integration Rules, and Performance in Acquisitions

Author: **Yves-Martin Felker**; U. of Lancaster Management School

Author: **Florian Bauer**; U. of Innsbruck

Author: **Martin Friesl**; Otto-Friedrich U. Bamberg

We draw upon theories of organizational learning to examine multiple learning pathways contributing to distinct manifestations that help managers to navigate through acquisition integration by rules. Although research suggests that performance improves through either codification or routines, the combined effects of these sources of learning have rarely been investigated. Thus, we aim to untangle the emergence of parallel learning pathways, their corresponding manifestations in rules, and their joint performance effects. Findings are largely consistent with our theoretical predictions: (1) learning pathways manifest in organizations through rules improving performance (2) routines fosters both, human and functional integration rules, while (3) codification fosters only functional integration rules. Our theoretical framework was tested empirically across a sample of 113 acquirers in the German-speaking part of Central Europe. The result of our study supports the demand for a more integrative perspective on learning pathways in rare strategic events.

Solving the Double Jeopardy of Cross-Border Acquisitions with Corporate Governance Bundles

Author: **Jiachen Yang**; HEC Paris

This study is focused on the associations between corporate governance of firms and value-creation in cross-border acquisitions. Studies suggest that firms prefer high economic growth and low corruption in host countries. Yet the practice of international business shows that neither fast economic growth nor limited corruption are sufficient for value-creation in cross-border acquisitions. Instead of choosing between high economic growth or low corruption, firms must strike a balance between the two. However, corporate governance studies show that top executives regularly struggle with guiding firms to successfully find that balance. We argue

To Pivot or Not to Pivot - That is Not Always the Right Question

Author: **Dirk Martignoni**; U. of Lugano

Author: **Thomas Keil**; U. of Zurich

Existing research has identified two main rationales why organizations might seek to pivot their beliefs. First, organizations should pivot beliefs in response to environmental disruptions. Second, even if the environment is rather stable, organizations should pivot if performance is disappointing. Using a computational model, we examine the validity of these intuitively appealing arguments and identify their boundary conditions. We find, that while it is often advisable to pivot beliefs in response to disruptions, organizations should not seek to match the extent of belief pivots to the extent of environmental disruptions. We also find that it is not poorly performing organizations that benefit most from pivoting their beliefs but instead, organizations that perform very well but not optimally. We discuss the implications of our findings for the theories of disruption.

Bridging Organizational Context and Individual-Level Cognition to Explain Individual Ambidexterity

Author: **Raphael Boemelburg**; HSG U. of St. Gallen

Author: **Maximilian Palmié**; U. of St. Gallen

Research on contextual ambidexterity points to the need for individuals to autonomously integrate exploration and exploitation. To date, research has either focused on antecedents in the social context or on individual-level antecedents. We integrate these two perspectives by using Social Cognitive Theory as a vintage point. We segment contextual antecedents into proximal and distal social context and illustrate how these two interact to influence individual ambidexterity through shaping the individual-level cognitive basis of autonomous agentic behavior. Building on primary, multi-source data of 245 employees from a large Central European Company we find strong support for our model. With our research, we illuminate the syntax of causal mechanisms from the social context and individual-level.

that these two challenges pertaining to host countries and to top executives of firms constitute a 'double jeopardy' that can be resolved through corporate governance bundles consisting of complementary mechanisms. Based on fuzzy-set qualitative comparative analysis of 738 cases, we developed a middle-range theory of how acquirers achieve value-creation in cross-border acquisitions by successfully resolving the 'double jeopardy' through well-designed corporate governance. Our results show that given strong corporate governance of cross-border acquirers, high economic growth is a necessary condition for value-creation while low corruption is not. Ours is a study that joins the dynamic stream of literature focused on the links between corporate governance of firms with performance.

Dividend Policy as a Mechanism to Protect Investors: Evidence from Brazil

Author: **Raquel Sales Costa**; FEA/USP - Faculdade de economia, administração e contabilidade
Author: **Susana Sales Da Silva Campos**; FEA/USP - Faculdade de economia, administração e contabilidade

We investigated the effect of dividend decisions on the earnings management (EM) practice of Brazilian companies. This association is based on agency theory, since free cash flow, if not employed in projects of shareholders' interest, can be expropriated by managers and used for their own benefit. By examining a sample of 2,600 non-financial publicly and privately held companies, from Standard & Poor's Capital IQ database, we found evidence to support the hypothesis that dividend-payers firms show a less aggressive earnings management than non-payers. We also conclude that differences in institutional transparency and investor protection in a country level does not play a significant role in this context.

Earnings Smoothing and Strategic Change

Author: **Ralph Anthony Gibbs**; Robert H. Smith School of Business, U. of Maryland

To understand a firm's strategy we must understand when they will engage in strategic change vs. persist with current activities. A precursor of strategic change that is often studied is performance feedback; it is often found that higher levels of performance (particularly above salient historical, social, or natural aspiration levels) is associated with lower levels of subsequent strategic change. However, studies of performance often use reported accounting earnings as a measure of performance and there is reason to believe that managers actively manage reported earnings through accounting and operational choices (such as to smooth earnings). This study examines the relationship between earnings smoothing and strategic change and presents evidence suggesting that this relationship is not mediated through performance feedback and shortfalls below aspirational benchmarks.

Innovation Actors in Context (session 665)

Benefiting from Previous Solo Inventors

Author: **Dehong Li**; School of Management, Xi'an Jiaotong U.

Author: **Jun Lin**; School of Management, Xi'an Jiaotong U.

Author: **Xiaopeng Wang**; School of Management, Xi'an Jiaotong U.

Most of previous research on solo innovation mainly focus on the question that whether the innovation achievements completed by individual are more likely to be breakthrough innovation. However, this research argued that the significance of solo innovation is not only limited in the innovation achievements per se but can be further sublimated by the effect of systematic combinatory knowledge that learned from solo innovation process. The research found that the systematic combinatory knowledge that learned from previous solo innovation is indeed beneficial for generating breakthrough innovations. Direct ties in collaboration network are more powerful for transferring this knowledge than indirect ties (due to its tacit nature), and there is no significant evidence showing that the benefits from direct ties to holders of the systematic combinatory knowledge can be substituted by brokering more collaborative ties (due to its systematic nature). Moreover, weak structural equivalence between holders and their collaborators is beneficial for the transmission of

has entered the decision-making stage by taking over more and more tasks previously afforded to humans. The delegation of decision-making authority to AI assigns the technology with the agency to cause moral consequences, which raises concerns about responsibility and accountability. This study explores managers' willingness-to-delegate moral decisions in a surrogate decision context to AI and the involved employee's acceptance of such moral decisions made by AI. In a mixed methods approach, we combine quantitative, quasi-experimental results with qualitative insights. Our findings reveal opposing perceptions of the same situation, depending on the individual's perspective: Whereas the willingness- to-delegate a layoff decision in a surrogate decision context to AI is very low (decision-maker perspective), people affected by the decision have no preference regarding humans or AI in making the decision (decision-affected perspective). Further, we identify the underlying rationales of these distinct preferences along three themes: (1) AI's capability for this decision based on the technologies' characteristics and competencies, (2) the particular characteristics of the decision context, and (3) the responsibility for the moral consequences this decision creates.

How Do Users' Reviews Matter for Corporate Innovation?

Author: **Shibo Zhou**; Georgia Institute of Technology

The growing amount of online reviews is an important external information source for both consumers and producers. While the reviews' impact on consumers purchasing behaviors has drawn much attention in the literature, whether it can influence the producers in terms of future product development remains unclear. In this paper, I examine the role of users' reviews on product development. Using data from a video game platform, I evaluate the effect of average and dispersion of review ratings on the game updates and game extension (DLC). The empirical results show that games with lower average ratings and higher dispersion have a higher probability of updates in the following month, and the impact of average rating is stronger for games with higher rating dispersion. The finding shows that producers learn more from the unsatisfied consumers of unique products, and it generates managerial implications for platform design.

Citizen Science (CS) projects involve members of the general public as active participants in research. Different proponents of this approach – including professional scientists, civil society groups, as well as policy makers – hope that it can increase scientific knowledge production but also bridge the gap between science and the broader society. In this paper, we discuss how both aspects can allow Citizen Science to have even more fundamental impacts by supporting sustainability transitions in areas such as renewable energy, public health, or environmental conservation. We first highlight three pathways through which such impacts can occur: (1) Problem identification and agenda setting; (2) Resource mobilization; and (3) Facilitating socio-technical co-evolution. To realize this potential, however, CS needs to address challenges that emerge especially in the context of sustainability transitions: Increasing the diversity, level, and intensity of participation; addressing the social as well as technical nature of sustainability problems; and reducing tensions between CS and the traditional institution of academic science. Grounded in a review of academic literature and policy reports as well as a broad range of case examples, this article contributes to scholarship on science, innovation, and sustainability transitions. We also offer insights for actors involved in initiating or institutionalizing Citizen Science efforts, including project organizers, funding agencies, and policy makers.

Leveraging Reconstruction of Resources in Resource Constrained R&D Settings Through Social Skills

Author: **Niharika Garud**; Faculty of Business and Economics, U. of Melbourne

Author: **Ganesh N Prabhu**; Indian Institute of Management, Bangalore

Innovative outcomes of R&D employees play a crucial role in sustaining competitive advantage for hi-tech firms. These inventors often deal with financial and resource constraints within emerging economies. In this research, we integrate social exchange theory and bricolage theory to explain how activities and R&D project outcomes of inventors in their R&D pursuits within resource constrained environments are shaped by their social skills. This research extends prior research on linkages between bricolage behaviors and R&D project outcomes in the context of R&D divisions operating in resource constrained environments. This study further contributes theoretically by exploring the role of social skills in shaping R&D inventor's bricolage activities and their R&D project outcomes. We tested our hypothesized relationships through quantitative data gathered from 211 R&D inventors operating in hi-tech organizations in India. Our results support our hypotheses and indicate that bricolage behaviors of R&D inventors positively influence their R&D outcomes and efficiency, as well as their social skills are significantly related to their bricolage and R&D outcomes. Our findings contribute to the field of R&D management and bricolage in developing theory on how micro-level influences can impact macro R&D outcomes in high technology firms.

Should I Stay or Should I Go ? The Choice of R&D Localization Near Lead Users

Author: Anne Berthinier-Poncet; CNAM U. Paris
Author: Sandra Dubouloz; U. Savoie Mont Blanc -
IREGE
Author: Catherine Thevenard-Puthod; USMB -
IREGE

The geographical location of R&D teams is a key issue in innovation management. In particular, firms will have to choose between centralization around their headquarter or decentralization of members of their R&D teams near customers or specific knowledge. However, few studies have analyzed in depth the importance of decentralizing innovation teams as close as possible to lead or intensive users, adopting a processual approach. This article investigates the relevance of this choice of localisation during four phases of the innovation process : needs recognition, search for solution, development and diffusion. More precisely, we pursue two objectives: (1) to identify, for each step

performing sentiment analysis on a dataset of 415 final reports from university-business collaborative projects, we find that the collaborators' positive affective evaluation of the project is positively correlated with its perceived benefit, which is a predictor of future collaboration. Moreover, positive affective evaluation moderates the negative effect of perceived challenges of the collaboration on its perceived benefits. These findings highlight the importance of managing perception and affective evaluation to promote successful university-business collaborations. They also showcase sentiment analysis as a helpful foresight tool to identify collaborations that are more likely to sustain in the future.

Nature and Evolution of Trust in Venture Capitalist-Entrepreneur Relationship

Author: Swati Panda; U. of North Texas
Author: Saurabh Srivastava; Texas A&M U.,
Commerce
Author: Satyendra Pandey; Institute of Rural
Management, Anand, India

Investigating trust in inter-organizational relationships is challenging because of its multidimensional and temporal nature. In addition, the nature of trust is also influenced by the stage of the life cycle that the venture is in when the relationship is initiated. Majority research overlooks these complexities and thus fails to explore the progression/deterioration of trust with the evolution of the relationship. Our paper addresses these gaps by focusing on the nature and evolution of trust in Venture Capitalist-Entrepreneur relationships initiated at different stages of a venture's life cycle. The context of our study is an emerging market where entrepreneurship has become the major contributor to the economy. In line with this

of the innovation process, the benefits and drawbacks of this strategic choice ; (2) to identify the different levers, whether cognitive, organizational, social, institutional or electronic, that innovations teams can use to overcome the obstacles due to delocalization. Based on a single emblematic case study, our results show that this choice of location near lead users has a global positive influence on the innovation process, but of varying intensity, depending on the stages of the innovation process. It seems most relevant for 2 phases: the needs recognition and the development phases. In order to overcome the handicaps linked to the geographical fragmentation of the company, teams will use complementary organizational, cognitive, social and electronic levers.

How Formal Institutions Interact with the Organizational Drivers of New Platform Technology Adoption

Author: **Mohammad Taghi Ramezan Zadeh**; Amsterdam Business School, U. of Amsterdam
Author: **Oli Mihalache**; Vrije U. Amsterdam

Although there has been a recent surge in research on the drivers of technology adoption, our understanding is still limited to adoption in a single national context. That is, we still lack an understanding of how the effects of micro-level factors on technological adoption depend on differences in national contexts. Attempting to bridge the gap between international business and strategy research, we propose that technology adoption depends on both micro (organizational absorptive capacity and managerial attention) and macro (i.e., formal institutional environment) factors as well as their interplay. The study tests a moderated mediation model on the responses of Ericsson's clients around the globe (89 telecommunications operators from 79 countries) to the offering of Cloud technology. We find that the influence of organizational absorptive capacity on technology adoption manifests itself partly through managerial attention. We also find that the firm's absorptive capacity compensates for the regulatory system's lack of quality for new technology adoption. Besides, the absorptive capacity is

objective, we employ multiple case studies comprising ten Venture Capitalist-Entrepreneur dyads in India. Our results suggest that relationships developed at the early stage of the venture life cycle exhibit calculus-based trust, which develops into knowledge-based trust, and in few instances into the identity-based trust. Whereas, relationships developed at the late-stage of the venture life cycle stagnate at the calculus-based trust. The late-stage relationships were also marred with a healthy dose of distrust.

The Politics of Angels

Author: **Sekou Bermiss**; U. of Texas at Austin
Author: **Laura Huang**; Harvard Business School
Author: **Min Ju Lee**; U. of Texas at Austin
Author: **Andy Wu**; Harvard Business School

In this paper we examine how an angel investor's political ideology shapes their entrepreneurial investment decisions. Integrating insights from research on entrepreneurial financing and political ideology we suggest that an investors personal perceptions, attributions, and in turn, emotional appraisals are shaped by personal political ideology. We develop and test our hypothesis using survey and archival data on the ideologies and behaviors of angel investors in the United States. Our results suggest that political ideology is a significant predictor of an angel's co-investment relationships, investment criteria, and portfolio performance.

Does VC Ownership Disappear After IPO? The Role of Post-IPO VC Ownership to IPO Firms' Outcomes (WITHDRAWN)

Author: **Heejin Woo**; California State U., Fullerton
Author: **Sukwoong Choi**; U. of Kentucky

This study investigates how venture capital (VC) ownership affects strategy and financial performance of newly public firms after IPOs. We find that a significant proportion of VC firms hold shares after the IPO of their investee company. Given that VC funds typically have a fixed life, we expect there is a conflict of interest between VC

particularly important in directing managerial attention to the new technology in countries with a lower quality of regulatory systems.

MNEs' Technology-Assets Seeking Strategies for Innovation: Empirical Evidences from Brazil

Author: **Eliane Franco**; ESPM, Sao Paulo, Brazil

Author: **Dennys Eduardo Rossetto**; SKEMA Business School, U. Côte d'Azur, GREDEG

Author: **Felipe Mendes Borini**; U. of Sao Paulo (FEA/USP)

Author: **Marcos Amatucci**; ESPM, Sao Paulo, Brazil

This study aims to contribute to the debate on the increasing R&D internationalization towards the emerging world. It explores how this new phenomenon has been evidenced in Brazil, the largest recipient of FDI in Latin America region. Based on multivariate data analysis in 735 foreign companies selected from the Brazilian Innovation Survey (PINTEC-2011), three main patterns of affiliates' technology-asset seeking for innovation were found. Results show that, distinctly from the global open innovation trend, multinationals in Brazil still pursuing more traditional modes of innovation, centered on the acquisition of physical capital (from local and international suppliers), market-oriented strategy and in-house R&D activities. The findings reveal constraints in the interactive process between affiliates' technology-asset seeking strategies and the external institutional environment, in particular for co-innovation with local innovation system.

Innovative Activities and Firm Survival During the Life Cycle of the German Photovoltaics Industry

Author: **Ann Hipp**; U. of Bremen

Author: **Martin Kalthaus**; Friedrich Schiller U. Jena

We estimate the effect of different types of innovative activities on firm survival in the German photovoltaics industry. We collect data on 154 firms along the value chain of the photovoltaics system

shareholders and newly public firms. VC shareholders that want to maximize returns in the short run may hinder newly public firms' managers from investing in projects that are potentially value-creating but time-consuming. Therefore, we argue that post-IPO VC ownership discourages newly public firms' long-term investments such as R&D, workforce, and capital expenditure, and as a result, it affects financial performance negatively. In an analysis of VC-backed newly public firms in U.S. technology-intensive industries where long horizon corporate investment is particularly critical, we find supportive evidence of these arguments while addressing potential endogeneity concerns.

Searching Beyond the Horizon: Opportunity and Motive in CVC Investments

Author: **Joshua Gabriel Eckblad**; Tilburg U.

Author: **Shivaram Devarakonda**; Tilburg U.

Author: **Geert Duysters**; Tilburg U.

We examine how corporate firms deal with the competitive effects of technological change by utilizing corporate venture capital (CVC) investment opportunities to source external knowledge. Whereas previous scholarship has largely focused on the composition of CVC investment portfolios to predict performance outcomes, we examine organizational level drivers of CVC investment behavior. We contend that CVC investment behavior is influenced by the interaction between two fundamental considerations: the supply of investment opportunities made available to the corporate firm because of its position in the environment; and the demand for new technological investments deriving from the need to cope with technological change. We argue that the degree to which CVC programs place bets on external startup ventures with uncertain prospects depends not only on their position in investment syndicate networks but also on how organizational attention is systematically guided by the threats posed by technological change. We analyze investments made by CVC programs of 209 publicly traded firms over 20 years and find that more centrally placed corporate firms in the VC investment syndicate have higher investment rates. We find that greater focus of the corporate firm's technological capabilities

from 1964 to 2016, including several stages of the industry's life cycle. We proxy a firm's innovative activities based on the number of patents, amount of R&D subsidies and number of R&D collaboration partners. Discrete-time hazard models are used to estimate the survival probabilities. Our results confirm a survival-enhancing effect of innovative activities proxied by patents. We do not find survival-enhancing effects of R&D subsidies. The number of collaboration partners in general does not influence survival, but a differentiation between the types of partners reveals opposing effects. While collaborations with universities increase the probability of survival, collaborations with public research organizations show a negative effect. Collaborations with other firms show no effect on survival.

Crowdfunding and Stewardship (session 642)

Can Equity Crowdfunding Mitigate the Gender Gap in Startup Finance? (WITHDRAWN)

Author: Erin McGuire; Georgia Institute of Technology

It is well documented that firms led by females do not obtain capital investment at the same rate as males. Equity crowdfunding offers a solution to this problem by increasing firm access to investors. In this study, I evaluate the effects of the 2012 legalization of equity crowdfunding on startup financing in the United States on the gender difference in funding receipt. Using a novel dataset of startups and financing sources, I find that the entry of equity crowdfunding decreased the difference in average funding to male entrepreneurs compared to female entrepreneurs by 17.9 percent.

Different Perspectives of Entrepreneurship (session 640)

Narrative Founder Identity: Weaving the Past Life Stories Together to Make Sense of Self

Author: Eunki Ro; Rutgers Business School

It is argued that founders' identities provide valuable insights in understanding differences across those founders' behaviors and their enterprises. Until recently, however, entrepreneurship literature has been drawn only on two prominent identity theories – social identity theory (SIDT), role identity theory (IDT), and the combination of both. This study suggests that there is an additional stream of identity research that will be helpful in reconciling the discrepancies between the two prominent identity theories and in providing a more coherent sense of oneself. Narrative identity literature, based on social constructionist perspective, suggests that people construct their current identity by reflecting on their past life stories and narratively weaving them together so it can give answers to the question of 'how I came to be.' In other words, narrative

Agency Theory vs. Stewardship Theory: CEO Duality and Board Behavioural Integration in New Ventures

Author: **Truls Erikson**; U. of Oslo

Author: **Chris Coleridge**; Cambridge Judge Business School

Author: **Ekaterina S. Bjornali**; Norwegian U. of Science and Technology

In this study, we find that management philosophy matters regarding board structure when it comes to maximizing the growth potential of high-tech firms. In particular, we find support for stewardship theory as contrasted to agency theory. Specifically, we not only find that board trust has a mobilizing direct effect on the effectiveness of the venturing management teams, but also that board behavioural integration mediates the relationship between board trust and the effectiveness of the venturing management teams. Furthermore, CEO duality moderates these relationships in two of three possible ways. Implications for theory and practice are discussed.

Costly and Costless Signals and the Role of Innovativeness in Equity Crowdfunding

Author: **Francesca - Di Pietro**; Trinity Business School, Trinity College Dublin - U. of Dublin

Author: **Luca Grilli**; Politecnico di Milano School of Management

Author: **Francesca Masciarelli**; G. D'Annunzio U. of Chieti-Pescara

Uncertainty and information asymmetries in crowdfunding can be reduced through quality signals project proponents offer to their potential supporters. Drawing on the signaling theory, this study analyzes how costly signals –venture's statements on past achievements and results- and costless signals –venture's statements on future plans and goals- influence crowdfunding performance. The results of a multi-method study on 602 UK equity crowdfunding campaigns suggest that only costly signals increase the amount raised through crowdfunding, while the presence of costless signals produces a negative effect. However, for companies introducing radical

identity construction provides people with coherent sense of self that runs through temporal horizon of one's life. SIDT and IDT, respectively, has its advantage in understanding entrepreneurs' identity based on their belongingness to certain social categories and their assumed roles. However, these two theories do not explain well about the changes over one's life course. Narrative founder identity will make the field overcome this shortcoming by looking at entrepreneurs' identity in terms of its temporal integration of discrete social and role identities in certain points in time of their life histories.

A Historical Perspective on Institutions and Entrepreneurship in a Developing Country

Author: **Sebastian Aparicio**; Durham U. Business School

Author: **Juan Carlos Muñoz-Mora**; U. EAFIT

Author: **David Urbano**; U. Autonoma De Barcelona

Recognizing that both institutions and entrepreneurship may be recursively linked, we examine the relationship between these two variables in a developing country (Antioquia, Colombia) from a historical perspective. It is hypothesized that the exploitation and commercialization of gold in the 16th century explains the persistence of the influence of informal institutions (business skills and financial networks) on entrepreneurship. We test this using Probit models with instrumental variables, through 3,557 individuals from Global Entrepreneurship Monitor (2012) and gold mining historical information. Our findings suggest that informal institutions are endured mechanisms explaining entrepreneurship today, which is useful for theoretical and practical discussions.

Narratives can aid entrepreneurs in articulating opportunities during emergencies. This layered account organizational autoethnography explores the restorying of “Operation Santa Claus”, a broad-based appeal to members of a military community to volunteer at the post office during the annual winter holiday mail surge. Contingencies reduced the potentiality of the future, forcing a public service entrepreneur at the military post office to revive elements of the past, present, and future to co-construct a novel narrative that reinterpreted shared values. As a result, an adhocracy was created that superseded interorganizational boundaries and empowered customers of the military post office by temporarily transforming them into co-producers. This article is targeted towards scholars of entrepreneuring, storytelling, adhocracies, and practitioners facing contingencies.

Experiential, Functional, Symbolic, Cost: How Firms Use Value Creation Language to Enhance Firm Value

Author: **Gaylen N Chandler**; Wichita State U.

Author: **Michael S. McLeod**; Wichita State U.

Author: **John Christian Broberg**; Wichita State U.

Value creation is a critical topic for researchers and practitioners of entrepreneurship. This study creates a unique linguistic measurement to examine how firms communicate their value proposition through language to investors and how this translates to higher degrees of firm value. Specifically, we examine four dimensions of value creation – functional, experiential, symbolic, and cost – to ascertain how each specific value increases firm value. Given the emphasis that past scholars have placed on experiential value, we also investigate how and why experiential value moderates functional, symbolic, and cost value. We demonstrate the unique relationship experiential value has with each other value, providing a theoretical framework and new methodological tool for future research.

Social and Sustainable Entrepreneurship (session 643)

Decentralized Institutions for Public Goods: Entrepreneurial Responses to Wildfire Risk

Author: **Devin Stein**; Syracuse U.

Author: **Maria Minniti**; Syracuse U.

We combine insights from theories of environmental and institutional entrepreneurship with the community resilience literature to investigate whether communities can create decentralized institutions to reduce losses from natural hazards that are more effective than relying on state and national government institutions. We argue that decentralized institutions emerging from local communities may be more effective in responding to a community's specific needs because of their incorporation of local knowledge. Using an original longitudinal dataset of wildfire prevention plans in Northern California, we find evidence that institutions combining local and governmental knowledge and resources can improve the provision of this public good. We suggest this has important implications for environmental entrepreneurship and the many ongoing efforts directed at creating more sustainable and responsible living.

Social Support Change and its Impact on New Venture Growth

Author: **Paul Steffens**; U. of Adelaide

Author: **Kim Klyver**; U. of Southern Denmark

In this study, we investigate how changes in instrumental and emotional support impacts new venture growth among nascent entrepreneurs, depending on whether the support is decreasing or increasing over time. Social support is frequently approached as a constant state, suggesting its impact is similar across time. We built on theoretical insights from helping behavior theory and social exchange theory, to theorize how social support changes have consequences for the receiver of changing support, in our context the entrepreneur and their new venture growth. Moreover, we examine the difference between instrumental and emotional support. We test our ideas on a two-wave survey of a representative sample of Danish nascent entrepreneurs, surveyed 12 months apart (n=448).

Risk Taking in Venture Philanthropy: The Influence of Human Capital and Gender

Author: **Luisa Alemany**; London Business School

Author: **Mariarosa Scarlata**; U. of Bergamo

Author: **Andrew Zacharakis**; Babson College

Relying on human capital and gender role congruity theory, this paper seeks to identify the extent to which the top management team's human capital affects the risk-taking orientation of impact-focused investors. We then

look at how gender moderates this relationship. We empirically ground our analysis in the context of venture philanthropy (VP) firms, a subset of the broader impact investing sector which is more hands-on and focused on funding social ventures. Relying on a combination of survey data to measure the VP firm's risk orientation, and biographical data to identify top managers' human capital, we find that neither commercial nor social human capital alone affect the risk orientation of VP investors. However, results show that gender, independently of the human capital, positively affects risk-taking when top managers are women. In the case of men, human capital plays a role. Contrary to expectations, teams with more men who have higher human capital garnered in a commercial endeavor have a lower risk-taking orientation while those with more human capital garnered in the social sector increases take higher risks. This suggests the existence of a gender bind dilemma in the social investment sector both for men and for women.

Do Relation-Specific Investments Pay Off? Comparing NetValue of Cross- & Within-Sector Partnerships

Author: **Christiana Weber**; Leibniz U. Hannover

Author: **Kathrin Lambrich**; Leibniz U. Hannover

Author: **Othmar Manfred Lehner**; Hanken School of Economics

Author: **James Wallace**; U. of Bradford

Interorganizational partnerships are of high strategic importance and consequentially, social enterprises are increasingly engaging in partnerships either within or across societal sectors to address complex social issues and maximize the joint value created. We challenge the dominant, albeit untested, assumption in the literature that cross-sector partnerships are more effective in creating joint value than within-sector partnerships. Based on the relational view and an analysis of data from 186 SEs and 137 partners who participate in such collaborations, our results demonstrate that cross-sector partnerships do not perform more effectively than within-sector partnerships because of the additional costs in cross-sector settings. We thus enhance the literature on cross-sector partnerships through a close examination of the actual outcome in terms of the newly established construct of net value

It Matters Where People Live: Innovative Collaborations and the Proximity of Inventors' Residences

Author: **Keith Pennington**; U. of Minnesota

Author: **J. Myles Shaver**; U. of Minnesota

We examine if geographic proximity of where knowledge workers live affects the likelihood that they collaborate on patents. We argue that the underlying mechanisms for why proximity in the workplace affects collaboration extend beyond the workplace. Therefore, we expect that residential proximity enhances workplace collaboration. We test this prediction by examining patenting outcomes and inventor residential location in the Warsaw Indiana orthopedic device cluster – a setting that provides many research design advantages. We find the likelihood of collaborating decreases 0.3% with each kilometer coworkers live apart. This effect is robust after controlling for other factors that might spuriously lead to this result. Documenting residential proximity as a novel within-firm agglomeration measure has the potential to explain different innovation outcomes between firms and across regions.

Author: **Fabian Gaessler**; Max Planck Institute for Innovation and Competition

Author: **Dietmar Harhoff**; Max Planck Institute for Innovation and Competition

Author: **Karin Hoisl**; Mannheim U.

Author: **Felix Poege**; Max Planck Institute for Innovation and Competition

This paper explores how the premature death of an inventor affects the productivity and career trajectories of co-inventors. To this end, we develop and analyze a dataset covering the careers of 152,350 German inventors. The data combine highly precise employer-employee data from official social security registers with patent office information covering the period from 1980-2014. Departing from 799 registered premature deaths of inventors and the same number of matched inventors, we study how co-inventors were affected by the death of their peers. Using a difference-in-differences and an event study design, we investigate the reaction of the co-inventors' patenting activities, career advancement and job mobility. Using a number of measures and robustness checks, our results show that the premature death of a co-inventor reduces the productivity of the surviving co-inventors. The effect sets in immediately and survivors do not seem to recover from the shock in the five years following. We argue that employers will seek to retain co-inventors under certain conditions in order to continue lines of research and invention. The empirical results confirm our expectations: surviving inventors are significantly less likely to move to a different employer and are more likely to be promoted compared to inventors in the control group. These effects seem to diminish after about two years.

Detrimental Collaborations in Creative Work: Evidence from Economics

Author: **Keyvan Vakili**; London Business School

Author: **Florenta Teodoridis**; California Southern U.

Author: **Michael A. Bikard**; INSEAD

Prior research on collaboration and creativity has mostly assumed that individuals choose to collaborate because collaboration positively contributes to output quality. In this paper, we argue that collaboration conceals individual contributions, and that the presence of a collaboration credit premium—when the sum of fractional credits allocated to each collaborator exceeds 100%—might motivate individuals to collaborate even when their collaboration hurts output quality. We test our argument on a sample of economists in academia. To estimate the causal effect of collaboration, we take advantage of the norm of alphabetical ordering of authors on scientific articles published in economics journals. This norm means that economists whose family name begins with a letter from the beginning of the alphabet receive systematically more credit for collaborative work than economists whose family name begins with a letter from the end of the alphabet. Using this systematic difference as an instrument for collaborative behavior, we show that economists sometimes choose to collaborate even in cases where this choice decreases output quality. Collaboration can therefore create a misalignment between the incentives of creative workers and the prospects of the project.

Does Culture Eat Strategy? The Antecedents of Cooperation Capability in Young ICT Firms

Author: **Tobias Kollmann**; U. of Duisburg-Essen

Author: **Christoph Stöckmann**; Seeburg Castle U.

Author: **Philipp Benedikt Jung**; U. of Duisburg-Essen

Author: **Karl Lucas Kleine-Stegemann**; U. of Duisburg-Essen

Author: **Alexander Michaelis**; U. of Duisburg-Essen

Cooperation enable young firms to access critical resources and skills that lie beyond their internal boundaries. However, to successfully create and capture value from cooperation, firms require the capability to cooperate. While empirical evidence highlights the importance of cooperation capability and its outcomes, research neglected how this dynamic capability emerges in young firms. The present study examines how the individual behavior of decision makers—innovation championing behavior—affects the cooperation capability of young firms. We introduce innovation strategy and innovation culture as the two crucial mechanisms in this relationship transforming the benefits of individual behavior into the organizational capability to cooperate. Drawing on a dataset of 283 young firms in the information and communication technology (ICT) industry, we found that innovation culture is the decisive mediator in the significant positive relationship between innovation championing behavior and firms' cooperation capability. Surprisingly, innovation strategy, does not directly affect the development of cooperation capability, but rather fosters the development of innovation culture, which in turn increases firms' capability to cooperate. We report theoretical and managerial implications emphasizing the value of innovation culture and its interplay with innovation strategy to transfer innovation championing behavior into cooperation capability in young ICT firms.

Theoretical Diversity: Economies of Affection and Their Implications for Management Studies (session 667)

This panel symposium brings together Indigenous and non-Indigenous scholars to address the issues of global and theoretical diversity within the Academy of Management and meaningful trans- and inter-disciplinary collaborations, through a tight focus on Indigenous philosophies of management often described as 'gift exchange' practices and economies. Among the dichotomies this symposium will recognise and address are distinctions between Indigenous and non-Indigenous economic philosophies and their researchers; methods and outputs of management studies compared to other social sciences; and the management of relationships within and beyond the Academy predicated on reciprocal exchange. Our overall premise is that what the academy usually sees as 'the anthropological study of gift economies' is a modern-day reality for Indigenous societies who maintain time-honoured protocols for managing inseparable economies and ecologies.

Is it a Man's World? Senior-Level Executive Women at Work in the 21st Century (session 671)

The last several years have witnessed calls for changes and inclusive processes for women in organizations. Both the #MeToo movement and McDormand's call for an 'inclusive rider' highlight the problem of gender inequality even in senior positions. Indeed, some countries have shown evidence of an ever-growing increase in demands to raise quotas and legislate further regulations encouraging women's inclusion in companies' boards (Huse, 2005; Seierstad, Warner-Søderholm, Torchia & Huse, 2015). However, despite this rising awareness, women still face significant struggles, biases, and difficulties as they move up the ladder into senior positions. Acker (2006) argues that social and economic inequality in the United States and other industrial countries is embedded in organizations, and is evident in the daily activities of working in an organization (2006, p. 441). However, while workers in lower-level, non-management positions are more aware of this inequality, it is less prevalent in management, leadership, and supervisory roles. In the current symposium, we will discuss the difficulties women face as they advance to senior positions. The papers presented in the symposium indicate the multiple barriers and biases concerning women working in male dominated or even neutral-gender occupations. We also deliberate about the connection between women serving as board members and organizational performance, and highlight the differences in the usage of social capital between senior women and their male counterparts. Focusing on the difficulties facing women in senior professional positions, this symposium offers rich insights into the challenges women face as they move up the hierarchical corporate ladder.

Going Live: A How-To Guide for Live Business Cases - Case Study Writing Part 2 (session 214)

This session introduces the "live" business case method. This proposed session during the TLC will introduce case writers to the concept of live cases, clearly describe how they differ from traditional case writing, provide a step by step guide to creating a live case, and suggest how they are most effectively used in a classroom. Our session will cover both live cases based solely on secondary data as well as those based on proprietary data provided by a live case partner company. Writing live cases with companies provides opportunities for live case writers to tailor the case to mimic real world examples, better preparing business students for scenarios they could face upon entering the workforce. Where possible, they also provide an opportunity for individuals from the focal company to join the classroom for a real-time discussion about the current situation which enables students to receive immediate feedback about their proposed solution. Live cases also have the added benefit of providing companies with unique recruitment and selection opportunities, and providing faculty members with outreach opportunities that can enhance the reputations of their school and programs.

East Versus West: Educating Mainland Chinese Learners in Foreign Universities (session 674)

Throughout a long history, China's national culture has changed progressively with its adaptation to evolving social, cultural, and political demands. Mainland Chinese students pursuing a Western-based education are faced with cultural challenges and adaptability issues, notably in a different country with a varying proximity level of issues (Rajaram, K. 2013). In today's international business education, the major challenges are to implement appropriate instructional strategies that facilitate student education (Tan, 2011). This interactive workshop aspires to brainstorm possible solutions for some of the subquestions arising from the two primary questions, namely (1) How can professors re-think and re-design to customize their instructional techniques to effectively engage mainland Chinese learners, especially through, but not limited to technology-enhanced learning? (2) How can these efforts make the mainland Chinese students' learning more effective, comfortable, and readily-transferable, which influences their roles as future leaders and managers? (3) What are the changes from the mainland Chinese students' classroom behaviors and study patterns over the years and their influences on the adoption of appropriate and effective instructional techniques? The workshop is committed in discussing and brainstorming ideas and suggestions to create exemplary learning design and creation approaches. Moreover, the implications for the future competences profile and know-how for teachers dealing with these rising number of mainland Chinese learners would be discussed.

Using Improvisation and "Yes, and" to Impact Teaching and Student Outcomes (session 675)

The purpose of this symposium is to introduce participants to improvisational techniques they can use in the classroom, both in teaching practice and as instructional tools. Improv is a fundamental skill leaders need to communicate, negotiate, and make decisions in a crisis. Additionally, improv can help teachers improve their style of delivery and responsiveness to students in the classroom. Participants will be introduced to improv games in a hands on experiential session, and a discussion will be facilitated on resources available for them to implement, as well as the ways in which improv can help student learning and skills needed to be successful managers and leaders.

Broadening our Sight: Learning and Honoring Indigenous Worldviews (session 217)

This PDW seeks to bring together Indigenous and non-Indigenous scholars who are interested in understanding and advancing research and methods that respect, acknowledge and honor Indigenous Peoples' cultures, values, worldviews and knowledge. According to Hall and Patrinos, there are approximately 300 million Indigenous Peoples worldwide who represent distinct communities whose lives, livelihoods, identities, and cultures are inextricably linked to the land on which they live and the natural resources on which they depend (Hall & Patrinos, 2012). Dispossession from their land and restriction of access to natural resources as a result of colonization have brought not only economic impoverishment, but also a loss of identity which threatens Indigenous Peoples' cultural and spiritual survival. European institutional frameworks, philosophy, historical assumptions, paradigms of scholarship, and ways of knowing have tended to dominate our research and may have blinded us – hence the need to broaden our sight – to Indigenous knowledge, teachings, science and worldviews that can advance scholarship and knowledge. This PDW seeks to explore how this can be done with the mentorship of leading Indigenous scholars.

Broadening our Sight Through Social Media (Data) in Organization and Management Studies (session 215)

The use of social media about and within organizations has exploded and impacted on various organizational processes of interest to scholars across the Academy of Management, including organization theory, innovation management, collective organizing, external evaluations of organizations, and communications and management within organizations. With this PDW we engage leading social media scholars to lead discussions about new theories and new data sources to energize research about social media as a socio-material phenomenon and its implications for organization and management studies. In a first step, two presenters will map out how researchers can explore research questions that challenge current theories in organization and management studies, thereby paying particular attention to the use of social media as a data source to explore these questions. Subsequently, participants are encouraged to engage with expert facilitators to discuss their own research questions, research designs, and their theoretical frameworks. In a final step, two presenters will discuss methodological issues when conducting research with social media data. In sum, the PDW will consist of two sets of input talks by leading scholars in the field and a collaborative workshop setting, where participants discuss their research projects with facilitators in small groups.

Ask the Experts: Qualitative Research (session 216)

In this workshop, we will use the metaphor of cooking to describe the act of qualitative research. The metaphor is apt on several counts. First, like the labor of cooking, qualitative research is often "feminized" in the management academy. Unlike the more valorized research methods that use quantitative data, qualitative methods are often consigned to the periphery of academic research (though this is rapidly changing!). Second, quite like cooking, qualitative research requires a lot of thought, initial preparation, improvisation, and waiting for diverse elements to mix. Also, just like a meal, the acceptance and appreciation of qualitative research often depends on the style in which it is presented. In the proposed session, we will have five participants discussing various types and aspects of qualitative research. The methodologies they will cover include ethnography, grounded theory, process analysis, case studies, and historical inquiry. Moreover, they will provide insights on pre- fieldwork aspects of the qualitative research process including philosophical conundrums associated with inquiry ("Preparing the ingredients"), as well as the actual act of fieldwork ("Lighting the fire"). Time will also be set aside to discuss the act of data analysis, and making sense of qualitative data ("Simmer and stew"), as well as the publication of papers based on qualitative research ("Setting the table"). The workshop also attempts to relate to the theme of the 2020 meetings, by discussing how qualitative research can be employed in broadening our sight.

Real-World Learning/Working Opportunities for Students Through Innovative Community-Based Projects - Real-life Cases/Consultancy Part 1 (session 219)

In this TLC we discuss course projects that can be used to stimulate the academic and professional development of students. These projects are designed to engage students with real-life community outreach initiatives, with both for-profit and non-profit organizations (NPOs). The projects work especially well with courses delivered in Online and Hybrid Course formats. For students unable to perform or obtain Internships, these projects offer exposure to the real-world business community and real-life work experience.

Aesthetics, Dialectical Tensions, and Creativity (session 686)

Organizational Aesthetics and Creative Outputs

Author: Daniela Petrovski; York U., Toronto

Artifacts as part of the organizational aesthetics have been more often studied as a 'communication tool' that elicit emotions, meanings, goals, and values to employees and rarely as an impact on creativity. Although researchers have explored the idea that organizational artifacts can affect employees' creativity, very little is known about how and why it works and the underlying mechanisms of it. Drawing on the frameworks of Rafaeli & Vilnai-Yavetz's, (2004a) description of artifacts characteristics and Shimamura's (2012) I-SKE model, this article has proposed a theoretical model explaining the mechanisms through which visual artifacts at work create an aesthetic experience for employees that in turn influences creative ideas. The model takes into consideration the conditions of creative leadership and creative role identity. In addition, the article adds to the literature of creativity and organizational aesthetics by pointing out the underlying mechanisms that connects these two areas.

Career Trajectories and Mobility (session 678)

Exploring the Universities' Graduates Job Mobility: Waged-Job vs. Self- Employment

Author: Azzurra Meoli; U. of Bologna

Author: Riccardo Fini; U. of Bologna

Author: Maurizio Sobrero; U. of Bologna

In this study, we explore the relation between graduates' mobility and employment choices. We distinguish between two mobility categories, onward migrants who move from the region of study to another region and return migrants, who return to their home region. Then, we analyze to what extent and how the mobility and the employment choices are related. Using a dataset of Italian graduates entering the labor market, we found that graduates with a mobility history are more likely to move, and universities exert an essential role in retaining graduates after graduation. When looking at the relation existing between migration and employment choices, we observe that universities with stable industrial relations and a critical reputation are more able to retain graduates self-employed.

Make it Work: The Importance of Usefulness and Appropriateness for Creativity

Author: **Sarah Harvey**; UCL School of Management

Author: **Matthew A. Cronin**; George Mason U.

Creative products are characterized as novel and useful or appropriate. Of these components, novelty has the most prominent status in creativity research. Novelty tends to be what distinguishes creative ideas from ideas that are non-creative but still valuable (i.e., useful and appropriate), and the capacity to produce novelty is often how the creative process and creative aptitude are conceptualized. In contrast, usefulness and appropriateness are often treated as exogenous or marginal to creativity. As a result, our understanding of how usefulness and appropriateness relate to novelty and overall creativity is under-developed. In this research, we therefore explore how usefulness and appropriateness relate to novelty in experts' judgments of and the practices of creators in two settings where creativity is at a premium—fashion and art. Our qualitative, inductive study reveals that usefulness and appropriateness are central to judgments of creativity even in these high novelty domains, whereas novelty may be over-valued. We further observed that novelty, usefulness, and appropriateness existed in dialectic tension with one another and that in the production of outputs judged to be creative by experts, creators navigated that tension such that one dimension emerged from the other; that is, novelty emerged from usefulness or vice versa. Our study shows that creativity research may have overvalued novelty while ignoring the importance of usefulness and appropriateness and suggests that the concept of creativity should embrace a balance between the dimensions.

Time to Say Goodbye? Factors Affecting Self-Initiated Expatriates' Decision to Remain in China

Author: **Milad Jannesari**; School of Business, Zhejiang U. City College

Author: **Sherry E. Sullivan**; Bowling Green State U.

Self-initiated expatriates (SIEs), who generally lack the same level of support as company assigned expatriates, typically experience high levels of stress while working in host countries. The purpose of this study is to examine how challenge and hindrance stressors may influence SIEs' intent to remain in China as well as the possible influence of emotional resilience and cultural novelty upon these relationships. Data were collected by surveying 249 SIEs working in China. As hypothesized, hindrance stressors were negatively related to the SIEs' intent to remain in China and this relationship was mediated by emotional resilience. Cultural novelty moderated the mediated effects of hindrance stressors on intent to remain as transmitted through emotional resilience. Contrary to expectations, however, challenge stressors were not related to intent to remain. These findings contribute to research on the careers of SIEs as this is the first study to examine how emotional resilience may mediate the relationship between stressors and SIEs' intent to remain. The findings also contribute to research on stressors as most of the prior research has focused on the negative outcomes of work stressors (i.e., hindrance stressors), with relatively few studies testing the possible positive effects of work stressors (i.e.,

Author: **Alaka N. Rao**; San Jose State U.
Author: **Elisa Mattarelli**; San Jose State U.

We examine how employees and teams deal with the conflicting goals of innovation and productivity inherent in the concept of ambidexterity. Despite the fact that much of the innovative work in today's organizations is carried out by employees in teams, very little empirical research has been done on organizational ambidexterity at a more micro-level. Our grounded model, based on a qualitative data collection in an IT multinational organization, reveals how individuals collectively shared an uncomfortable state of cognitive dissonance related to the perceived mismatch between i) the pressure from top managers towards becoming more innovative and ii) their everyday work oriented towards productivity and driven by standard processes. Collective cognitive dissonance was solved by individuals in different ways. Some employees worked to become more innovative, thus contributing to organizational ambidexterity. Others, however, enacted conservative responses, either rationalizing the inconsistency by re-interpreting what they were doing as innovative or changing their attitudes by seeing the company as not innovative. Different responses were contingent on the characteristics of the teams individuals were part of, i.e. managerial support, psychological safety, and boundary permeability. Our findings have implications for the study of microfoundations of ambidexterity and collective cognitive dissonance processes.

Chance Events in Executives' Careers: Positive & Negative Events, Expected & Unexpected Outcomes

Author: **Celine Legrand**; Audencia Nantes School of Management

Author: **Christine Naschberger**; Audencia Nantes School of Management

Author: **Yehuda Baruch**; Southampton Business School, U. of Southampton

Author: **Nikos Bozionelos**; EMLYON Business School

We study chance events and their impact on the careers of executives. Current literature focuses on factors that explain career success, but mostly ignores the role of chance events and the way they are perceived and utilized by individuals. The literature does not distinguish between different combinations of chance events and their outcomes. We employ a mixed method research design with responses from 682 executives. More than 60% had experienced a significant chance event that influenced their career. While the majority (nearly 75%) reported positive events that led to positive career outcomes, substantial numbers reported other scenarios of event-impact cases. Qualitative analysis revealed specific attributes of the four-quadrants framework, whereas quantitative analysis compared the groups regarding career-related constructs and psychological characteristics. Significant and substantial differences across the groups were identified, some of them counterintuitive. In general, those who reported a chance event and those who had experienced the negative event/positive impact scenario scored highest in career-related factors and psychological capital. We discuss implications, such as the need for resilience in both individuals and organizations, to help people overcome negative chance events. Our study makes a unique and original contribution to the literature by uncovering the role of chance events in careers.

view paper (if available)

and non-sharing knowledge during interaction in contexts characterized by multiple boundary spanning, temporariness and absence of pre-existent structures, we conducted an in-depth study about the use of the knower-doer stereotype in a corporate program where academics and practitioners exchanged knowledge about innovation management. Our findings show that stereotypes are used differently across collaboration stages and leading to different knowledge exchange strategies. Anticipatory scripts that include a) inter-occupational stereotypes and b) complementary proposals of knowledge exchange are used to reduce exchange anxiety in the first stages of the collaboration. However, since anticipatory scripts are often self-referential, they trigger the reactive behaviors of those being stereotyped (reactive scripts). Provisional scripts then allow exchange parties to face reactive scripts by switching expertise and circling self and alter stereotypes in search of a mutually acceptable compromise. By showing the flexible and generative role that stereotypes can have in inter-occupational knowledge exchanges, we contribute to the literature on cross-occupational boundary work and to inter-group stereotypes more broadly.

Work-Family Integration and Segmentation in the Gig Economy: Airbnb Hosts' Challenges and Strategies

Author: **Suzanne C. De Janasz**; George Mason U.
Author: **Sowon Kim**; Ecole hôtelière de Lausanne, HES-SO / U. of Applied Science Western Switzerland
Author: **Joy Schneer**; Rider U.
Author: **Nicholas J. Beutell**; Iona College - LaPenta School of Business
Author: **Carol Wong**; George Mason U.

This paper examines the work-family experiences of Airbnb hosts who represent a large and growing number of 'gig' workers (approaching 700,000 Airbnb hosts worldwide). Data were collected from a sample of Airbnb hosts (N = 181) using Qualtrics. We examined the relationships between preference for segmentation/integration in relation to major study variables including work-family interference, satisfaction with Airbnb, intention to stay with Airbnb, and life satisfaction. While Airbnb hosts have autonomy, flexibility, and discretion in their Airbnb roles, maintaining boundaries (physical and psychological), coping with isolation, and social support needs may affect work- family relationships. Findings indicated that overall, higher work- family conflict (both WIF and FIW) was associated with lower job satisfaction, lower life satisfaction, and lower intent to stay. In addition to direct effects we also found indirect effects: both WIF and FIW mediated the relationship between segmentation preference and job satisfaction, life satisfaction, as well as intention to stay with Airbnb. Taken together, the findings suggest that work-family conflict needs to be re-examined in light of the unique demands associated with the gig economy. This study breaks new ground by studying the work-family lives of Airbnb hosts, with important consequences for individuals, families, guests, and communities. Implications of these findings are discussed.

The Ideal-Worker Myth: The Consequences of Self-Disclosure for Newcomers' Onboarding Outcomes

Author: **Aliasghar Bahoo Torodi**; Alma Mater Studiorum U. di Bologna

Author: **Marcello Russo**; Kedge Business School

Author: **Gabriele Morandin**; U. of Bologna

While the prevailing organizational culture continues to rely upon conservative ideologies (e.g. ideal-worker or work devotion scheme), we witness an increasing number of employees who strive to manage personal-professional boundaries in order to fulfill their different roles and aspirations. In this study, we explore the consequences of self-disclosure – i.e. behaviors that signal deviation from the ideal worker norm – for newcomers' onboarding outcomes. Building on the signaling theory and the stereotype content model, we argue that newcomers' behaviors that signal deviation from the ideal worker image negatively influence the supervisors' perception of newcomers' task mastery via stereotype of competence. However, self-disclosure during the socialization process enhances perception of newcomers' warmth and in turn social adjustment. Finally, we argue that newcomers' gender and past employment experiences moderate these relationships such that the consequences of self-disclosure are stronger for males and neophyte workers than the others. We test our hypotheses in three different studies. Our results contribute to the personal-professional boundary and organizational socialization literatures.

Downsizing and Affective Organisational Commitment: A Contextual Proximity Perspective

Author: **Susel Arzuaga**; Lincoln Business School, Lincoln U., Lincoln, UK

This paper investigates the differential effect of various types of downsizing on employee commitment. While the literature on downsizing suggests that workforce reductions have a negative impact on employee commitment, knowledge of downsizing is limited by the undifferentiated ways in which various downsizing activities are usually approached. Moreover, there has been insufficient research looking at the different responses of survivors and victims of downsizing. This empirical study analyses the effects of four downsizing methods - layoffs, closure of units, divestment and voluntary redundancies- on employee commitment and explores differences on commitment outcomes depending on employees' degree of exposure to a downsizing event. Using downsizing announcements between 2007-2010 and questionnaires, two distinct families of downsizing methods were identified. Layoffs and closure of units have a negative effect on commitment while voluntary redundancies and divestment have positive relationships. Employee proximity to the downsizing event accounts for significant differences on commitment outcomes. Studying downsizing in a differentiated way shows that assuming that all downsizing is detrimental to commitment is inadequate. I discuss the theoretical and practical implications of a more nuanced approach to downsizing.

Moral Foundations, Himpathy, and Attitudes Toward Sexual Misconduct Claims

Author: **Samantha Dodson**; U. of Utah, David Eccles School of Business

Author: **Rachael Goodwin**; U. of Utah

Author: **Michelle Katherine Chambers**; U. of Utah, David Eccles School of Business

Author: **Jesse Graham**; U. of Utah, David Eccles School of Business

Author: **Kristina Diekmann**; U. of Utah

Since the #MeToo movement began, women are increasingly coming forward to report experiences of sexual misconduct in a number of organizations and industries, generating renewed attention to the issue of sexual misconduct in the workplace. Despite seemingly positive social and organizational changes taking place, many victims still experience negative repercussions for making allegations of sexual misconduct. We address this issue by investigating the influence of himpathy (Manne, 2017) — moral feelings of sympathy toward alleged male perpetrators and, we argue, anger toward the accusing female victims — on observers' judgments of those victims who report sexual misconduct. Across four studies, employing both real-world contexts and organizational vignettes which depict an accusing female victim's sexual misconduct allegations and an alleged male perpetrator's subsequent denial, higher endorsement of binding moral foundations, or values associated with restraining behavior that weakens groups, predicted increased blame and responsibility attributed to the

Emirati professionals to the turnover literature. Data from interviews with working Emirati professionals in the United Arab Emirates are subjected to qualitative thematic analysis using Lee and Mitchell's unfolding model of voluntary employee turnover as the primary source of themes. The data sample included participants who had left or intended to leave and others who had decided to remain with their employers. In general, the unfolding model provided a useful conceptual lens for showcasing how turnover occurs among Emirati professionals. The study highlights misspecifications of decision paths and provides suggestions for future applications of the unfolding model. This study responds to calls to extend management research to understudied regions of the world. Implications for theory and management practice are discussed.

Employees' Emotional Intelligence, Attitude Toward Change and Service Creative Performance

Author: **Qi Lei**; Shandong U. of Finance and Economics

Author: **Bing Liu**; Shandong U.

Author: **Fengyu Li**; Shandong U.

Purpose – Recently emotional intelligence has been posited a main source of competitive advantages for firms. As there is little research investigating emotional intelligence and its influence on employee innovative performance in service. The purpose of this study aims to investigate how, why, and when emotional intelligence contributes to employees' service creative performance. **Design/methodology/approach** – In this research, 295 customer- contacted employees from 36 star-hotels in China were randomly selected as participants. The proposed relationships were analyzed by regression, bootstrapping methods, and cross-level analysis with Mplus 7.4. **Findings** – The results confirm emotional intelligence positively predicts employees' service creative performance, and this effect is mediated by employees' attitude toward change. Furthermore, firm's service-oriented HRM practices strengthen the positive effects of emotional intelligence on employees' attitudes toward change and service creative performance. **Practical implications** – This study posits that emotional intelligence is a key element allowing

accusing victim. Anger toward the accusing victim of sexual misconduct and sympathy for the alleged perpetrator mediated the relationship between binding moral values and victim judgments (Studies 2-3). Importantly, these emotions were associated with a decreased willingness to hire the accusing victim and increased willingness to hire the alleged perpetrator (Study 3).

The Gender Gap in Bank Credit Access

Author: **Ricardo Gimeno**; Banco de España

Author: **Ruth Mateos De Cabo**; U. CEU San Pablo

Author: **Pablo De Andrés**; U. Autónoma de Madrid

We use a sample of over 80,000 Spanish companies started by a sole entrepreneur between 2004 and 2014, and distinguish between male and female entrepreneurs demand for credit, credit approval ratio, and credit performance. We find that female entrepreneurs who start a business are less likely to ask for a loan. Of the female entrepreneurs requesting a credit, the probability of obtaining one in the founding year is significantly lower than their male peers in the same industry. This lower credit access disappears over the subsequent years, once the company has a track record of profits and losses. We also observe that women-led companies that receive a loan in the founding year are less likely to default as compared to men-led companies. This superior performance disappears for subsequent years, coinciding with the disappearance of the lower credit access. Taking all these results together, we rule out both taste-based discrimination and statistical discrimination in the credit industry, and point to the possible presence of double standards which might be a consequence of implicit (unconscious) discrimination.

Never Change a Running System – What Worked for Personnel Selection Works for Promotion

Author: **Hannah Dekker**; HR Diagnostics

Author: **Stefan Remke**; Saxonian Police

Author: **Maik Spengler**; HR Diagnostics

The economic utility of a diligent use of valid personnel selection methods for hiring and promoting decisions is highly recognized across organizations and industries. Meta-analytical results support the fact that General Mental Ability (GMA) tests and Situational Judgment Tests (SJT) explain unique variance in typical criterion measures of selection and promotion processes (i.e. job performance). In this connection, job analysis often leads to the assessment of similar job requirements for selection and promotion decisions, fostering the idea of using the same tools for selection and promotion. However, little is known about how their repetitive usage affects the predictive validity of proven test concepts. After being selected with similar GMA tests (numeric reasoning, verbal reasoning, logical reasoning) and an SJT several years earlier, the current study examines the

HR & Cross-Cultural Management in an International Context (session 684)

Diversity Management During the Internationalization Process for Early Internationalizing Firms

Author: Angélique Breuillot; U. Savoie Mont Blanc - IREGE

An important body of literature has focused on the antecedents of the internationalization process for early internationalizing firms (EIFs) and few studies unraveled the potential role of human resource diversity. Drawing on diversity management literature and developing its argument with insights of the resource-based view, this study explores the role of human resource diversity management during the EIFs internationalization process. This exploratory qualitative study analyzed the internationalization process of eight French EIFs at different phases of the internationalization process and adopting different diversity management perspectives. Findings show that human resource diversity can become a strategic, ordinary or negative resource depending on the way it is managed. Three perspectives of diversity management and their contrasting effects are therefore discussed. Finally, this study highlights the importance of a transition phase between the entry to the post-entry phase during internationalization process for EIFs, especially when considering human

predictive validity of the given test formats for a leadership promotion program within a police department. 119 police officers and executives participated in the study. Results show incremental validity of the SJT above the three different test dimensions of GMA. These robust validities for the parallel test formats should urge decision makers to invest in specific item pools and proven test concepts to maximize utility in HR processes.

From Flattery to Threats - The Effects of Student Influence Tactics on Faculty Well-Being

Author: Tiffany Maldonado; Sam Houston State U.
Author: Carliss D. Miller; Sam Houston State U.

Professors are all too familiar with the various ways students attempt to influence them in order to obtain favorable academic outcomes. After numerous conversations and first-hand evidence exploring faculty members experiences of stress in academia, we have found that some faculty members experience a higher quantity and/or more aggressive student influence tactics than others. We have found that a potential reason for this is based on the social distance and similarity (or lack of similarity) in the professor-student dyad. Our essay outlines why these influence tactics often adversely affect faculty well-being, moderators to this relationship, and protective strategies against the negative effects of such influence tactics.

Internationalization in the Digital Age: The Role of Cultural Distance and Industry Dynamism

Author: **Camillo Werdich**; U. of St. Gallen

Author: **Winfried Ruigrok**; U. of St. Gallen

Author: **Dimitrios Georgakakis**; U. of St. Gallen

This study examines the impact of information and communication technologies (ICT) on the degree of internationalization by focusing on multinational enterprises (MNEs). We argue that ICT helps MNEs to reduce internally as well as externally transaction costs in an international context, resulting in a higher degree of internationalization. We further argue that the positive impact becomes more pronounced under the condition of high cultural distance and a high level of industry dynamism. Our empirical results are strongly congruent with our hypotheses. We used a panel dataset from four major European countries, consisting of 567 firm year observations from 2011-2017. Overall, our study contributes to the emerging research stream about internationalization in the digital age. It shows that ICT acts as a filter for uncertainty ex-post and ex-ante in the internationalization process.

Not All Returnees Make a Difference: The Impact of Returnees from Target Country on EMNE CBAs

Author: **Zaiyang Xie**; Nankai U.

Author: **Liang Wang**; U. of San Francisco

Author: **Ma Zicheng**; Lingnan U. / Sun Yat-sen U.

The existing literature has posited that returnees, as a scarce resource in the past, can provide an advantage for emerging market multinational enterprises (EMNEs) as they expand internationally by providing the much-needed knowledge of and connections to foreign markets. As returnees increasingly tend to become a commodity in emerging markets (e.g., China), however, their value risks being diminished, as evidenced by the mixed empirical results on the performance implication of

Over the last few decades, reflective practice has flourished throughout various fields of professional practice and education. Business schools have assumed the responsibility of promoting reflective practice among its students and educators. Using stage-based models, reflective practice appears to be applied instrumentally and unproblematically, and in a way that leaves little space to be struck or moved to change ways of talking and acting. In this paper, I present an argument against this structured method of teaching and propose an alternative approach that aims at providing opportunities to co-construct understanding of what a reflective practice is from within classroom experience and in absence of a direct use of theory. This approach employs a learning-by-doing ethos. The paper is also about my experience in becoming a reflective teacher practitioner, breaking away from familiar, structured teaching to unfamiliar, less structured one. I discuss implications to faculty development and transformative learning based on my experience, problematizing the lack of a safe space and emotional support in institution-wide support initiatives that are dominated by performativity and teaching excellence measures.

Making Strategy Valuable to Undergraduate Students

Author: **Duncan Duke**; Ithaca College

This paper examines the most common methods used to teach strategic management to undergraduate business school students. It raises questions about the overly broad scope of strategy textbooks, the limitations of the case method within undergraduate contexts, and the non-optimal use of business simulations. Three principles are presented to guide the development of strategic management courses that provide true value to undergraduate students: (1) prioritize depth over breadth, (2) supervised practice, and (3) tailored cases.

returnees. Our study of cross-border acquisitions (CBAs) by Chinese MNEs (2008-2017) revealed that only returnees from the same country in which a Chinese acquisition is targeted facilitate the completion of such an acquisition, whereas returnees from other countries fail to make any difference. The positive effect of returnees from target country is weaker when the firm has accumulated international capability while it is stronger for the firm investing in a target country with a weak institutional framework. The findings suggest that as returnees become a commodity, their value to EMNEs can no longer be taken for granted. To make the best use of returnees as a key resource, EMNEs should be careful to deploy this resource where it is most needed.

Expatriates in China: Experiential Learning, Cultural Intelligence, and Expatriate Effectiveness

Author: **Ming Li**; U. of Liverpool

Author: **Jinglin Jiang**; jinglin

Cultural intelligence (CQ) is believed to be an important quality for expatriates and international managers. To understand how this quality can be developed from international experience, the present study employs experiential learning theory to discover how cultural distance and learning flexibility contribute to the development of CQ in expatriates in China, and consequently their effectiveness in China. Analyses of data collected from 175 expatriates in China indicated that there is a positive relationship between cultural distance and CQ, and an inverted U-shape relationship between learning flexibility and CQ. CQ positively influence expatriates' job performance via expatriate adjustment. The results advance our knowledge on the role of experiential learning in expatriates' abilities and effectiveness, specifically in a Chinese context. Implications for the selection and development of expatriates are also discussed. Keywords: Cultural Intelligence, Experiential Learning, Learning Flexibility, Cultural Distance, Expatriate Effectiveness

Mingling Rigor and Relevance: The Development of Hybrid Research Systems in Two Business Schools

Author: **Thomaz Wood**; FGV-EAESP

Author: **Renato Souza**; FGV-EAESP

Author: **Edvalter Holz**; Insper Institute of Education and Research

We expand upon previous discussions about knowledge production modes commonly associated with the rigor versus relevance debate and the quest for the social impact of management research. Management scholars have discussed this matter for decades, but the literature lacks accounts of, and reflections upon, practical experiences. We address this gap by reporting on the findings of two inductive, interpretive case studies of the development of hybrid research systems in two business schools that are leaders in their countries. We examine the process by which such systems developed with different configurations, as well as the current challenges. Our contribution is twofold: first, we advance the literature on knowledge production modes by shifting the debate from dichotomization to hybridization; second, we present and discuss two different models that might help business schools aiming to (re)orient their research towards the production of knowledge that is rigorous and relevant to management practice.

Mixed Method Study of International Students' Cross-Cultural Adjustment and Assignment Satisfaction

Author: **Iuliia Muzychenko**; Harbin Institute of Technology

Emotional stability and sense of coherence are both predictors of global quality of life, general life perception, psychological and physiological health. However, previous studies found those two concepts to overlap and called for researchers to find more well-defined borders and study them in different contexts together. The present study addresses this issue using a complex mixed-method approach. The conceptual framework was pretested including relationships between defined variables through the interviews conducted with 21 international students. The variables were then measured via a quantitative survey and 214 data rows obtained constituted the basis for the final statistical analysis. Drawing on the qualitative findings, study participants found emotional stability and sense of coherence as both enhancing cross-cultural adjustment process and influencing assignment satisfaction. Later, the latter two were quantitatively assessed in terms of moderating role of cross-cultural motivation. Complementary qualitative information not only supported the study hypotheses but also brought a certain degree of subjectiveness in the findings. Thus, it has illustrated how important these qualities for the acculturation are and how they can influence the assignment satisfaction, the key HEI performance criterion.

A Buddhist Approach to Paradox

OCIS

Communication, Technology, and Organizing (session 688)

Defining the Term Knowledge Worker: Toward Improved Ontology and Operationalization

Author: José Osvaldo De Sordi; Centro U. Campo

Author: **Hee-Chan Song**; Sasin Graduate Institute of Business Administration, Chulalongkorn U.

Author: **Pratima Bansal**; U. of Western Ontario

Paradox theory generally takes a Daoist approach. It argues that contradicting elements of tensions must be identified and cognitively or structurally separated so as to make the tensions paradoxical. Then, connections between the two sides of the tensions are made. However, there is a different approach to paradox that has been largely overlooked by paradox theorists – specifically a Buddhist approach. Drawing on three-month ethnography of a Korean Buddhist temple, we investigated how Buddhist monks deal with tensions. Living and working closely with monks and drawing on Buddhist literature, we found that through years of meditation practice, Buddhist monks tried not to identify and label tensions by focusing on the boundaries that create them, but rather deconstructed the boundaries. Buddhism seeks to remove the conflicts related to the boundaries that inadvertently and unconsciously create dualities and tensions. In doing so, a Buddhist approach to paradox reframes existing values, meanings, and conceptions people daily use and rely on. We theorize this view and the related cognitive tactics by integrating relevant literature from sociology, psychology, linguistics, and organization theory.

Calling, Job Performance, and Innovation: A Study in the Catholic Church

Author: **Thomas Ismoyo**; Queensland U. of Technology

Author: **Cameron John Newton**; Queensland U. of Technology

Author: **Vicky Browning**; Queensland U. of Technology

While research on job as a calling has increased over the past decades, there is limited empirical evidence regarding the different focus of one's calling, especially related to one's role and job performance. This present research investigates the Catholic priests' perception of the focus of their calling, multi-dimensions of job performance, and innovation. The uniqueness of this study lies in the well-known idea

Limpo Paulista (UniFACCAMP)

Author: **Marcia Azevedo**; U. Federal do Estado de São Paulo (UNIFESP)

Author: **Eliane Maria Pires Giavina Bianchi**; Centro U. Campo Limpo Paulista (UniFACCAMP)

Author: **Thiago Carandina**; Pontifícia U. Católica de Campinas (PUC-CAMPINAS)

Despite the strategic value of organizational knowledge as a source of sustainable competitive advantage, researchers have voiced their concern over the perceived inaccuracy and undue use of the term knowledge worker in scientific articles. In order to ascertain these perceptions and discuss ways of overcoming this difficulty, we analyzed 223 articles from diverse fields of science that address the theme of knowledge worker. Applying the content analysis technique, we analyzed the definitions identified and the professionals considered by researchers as knowledge workers. The analyses identified the difficulties assumed by the researchers. It was observed that the term was used for occupations and professions with different levels of complexity, including those that were mostly operational, as well as the use of the term without a definition in a significant number of the articles (67.7%). The semantic analysis of the set of actions attributed to knowledge workers aided the proposition of additional descriptors to conceptualize the term. The single appearance of the verb exploit in an article in the field of Geography & Transport led us to imagine it being a reference to the exploitation-exploration dyad in accordance with the concepts of the fields of innovation and learning, which was not confirmed. This fact provided insight for a logical proposition: the link between knowledge workers and the mechanism of organizational knowledge exploration and between information workers and the mechanism of exploitation. Inter-text analyses involving concepts from the fields of knowledge management, innovation and learning indicate that these associations are consistent and pertinent.

Understanding Content-Based User Engagement in e-Learning Applications: Randomized Field Experiments

that priests as religious leaders identify their job as a calling. Overall, thirty-seven priests from Indonesia and Australia participated in semi-structured interviews which focused on the relevant themes mentioned. Using a qualitative thematic analysis approach, several interesting themes emerged from each topic, such as: calling as a shepherd and as a servant, value-based performance, and cultural context of innovation. This study enriches the literature of calling, job performance, and innovation; especially in the context of religious organisation which to date is still overlooked.

Development and Validation: Transcendence at Workplace Scale (WITHDRAWN)

Author: **Chitra Khari**; Nirma U., Institute of Management

Author: **Shuchi Sinha**; Indian Institute of Technology Delhi

This paper explores the structural dimensions of employee experience of transcendence at workplace (TAW). The paper follows multiple studies approach to scale development and validation as suggested by Wright et al. (2017). Transcendence at workplace constitutes of three correlated yet distinct dimensions: Work as service, Self-connectedness and Sense of We-ness. Results establish the convergent, discriminant, criterion-related concurrent and nomological validity of TAW. Findings also confirm satisfactory reliability of the measure. This research makes a significant theoretical contribution to the evolving discourse on transcendence (in organizational context) by defining, developing and validating the measure of transcendence at workplace. Practitioners can use the measure in assessing, and raising TAW, which in turn have benefits for employee, organization and the larger community or society.

Author: **Cheul Kang**; U. of Seoul

Author: **Swanand Janardan Deodhar**; Indian Institute of Management, Ahmedabad

Author: **Ayushi Tandon**; Doctoral Scholar

Author: **Abhas Tandon**; Words In Sentences

Author: **Abhinav Tripathi**; Words In Sentences

In this study, we examine the determinants of user engagement in e-learning platforms. Specifically, we model two distinct outcomes related to user engagement: content consumption (e.g., watching a video) and content organization (e.g., adding a video to a playlist). Given the increasing social nature of e-learning applications, we predict these outcomes as a function of observational learning (OL) and expert recommendation (ER) information signals. We employ a series of field experiments on a mobile e-learning application to tease out the causal influence of OL and ER information signals on CC and CO. In information systems literature, these experiments have emerged as a pivotal tool for eliciting the causal effects of digital interventions on user behavior. Our results indicate that the two information signals exert an uneven influence on the user engagement outcomes (i.e., CC and CO). These findings reveal the variations in how users incorporate external and social information signals in deciding their actions. To sum up, the study presents important implications for predicting user engagement, especially in e-learning applications, as well as for the information structures these applications can adopt.

Managing Reputation in the Workplace: How Freelancers Interpret Algorithmic Scores in OLM

Author: **Francesca Bellesia**; Dep. of Sciences and Methods for Engineering, U. of Modena and Reggio Emilia

Author: **Elisa Mattarelli**; San Jose State U.

Author: **Fabiola Bertolotti**; U. of Modena and Reggio Emilia

Although considered independent from the platforms they work from, freelancers in online labor markets need to develop an 'algorithmic competence' to become and stay competitive. To increase the likelihood of being hired, in particular, they need to deal with algorithmically calculated

Author: **Youngshin Kim**; Seoul Theological U.

This paper first critically reviews previous literature on workplace spirituality and proposes a four-dimensional framework of spirituality; then it suggests a new human resource management (HRM) theory, human value theory. For this purpose, we maintain that spirituality is made up of four dimensions: height, depth, width, and length. Each dimension reflects four aspects of spirituality: ultimacy, authenticity, commitment, and historicity, respectively. We explain meaning, function, and features of each aspect. Utilizing this framework, we suggest the human value theory which is sharply contrasted with human capital theory. The fundamental difference between these two theories is about human nature. While human capital theory assumes human being as a rational being, human value theory regards it as a spiritual being. In addition, we compare these two theories in terms of people treatment perspective, people management objective, decision making method, success of members, and value creation approach. Finally, we suggest future HRM research directions.

DISCUSSION PAPER SESSION

reputation, which is a standardized score associated to their quality as workers. By drawing on signaling theory, this research aims to explore how freelancers working on online platforms interpret algorithmic calculated reputation and with what consequence for their work. The grounded model we developed through interviews and documents collected with freelancers from a major platform reveals two phases through which freelancers manage their reputation. First, freelancers interpret algorithmic scores as barriers and strive to build their initial reputation with emotional consequences in terms of feelings of hardship and loneliness. In a second phase, freelancers develop three different strategies to manage reputation, that we labelled as instrumental, relational, and indifferent. The interpretations and behaviors associated to the different strategies lead to different, although mainly negative, emotional responses, i.e. emotion regulation, anxiety, and frustration. We believe our model offers implications for theories on imposed reputation signals, gig work, and emotions in new work contexts.

Organizational Assimilation Dynamics in a Global Organization Over Time

Author: **Emma S. Nordbäck**; Hanken School of Economics

Author: **Maggie Boyraz**; California State U. San Bernardino

The process of integrating new hires into their role and organization is crucial for employee performance and retention. While newcomers in co-located organizations can rely on face-to-face interaction to effectively gain tacit knowledge from co-workers, newcomers of global organizations may have to assimilate over distance and may face severe challenges. Considering that there is little knowledge on employee assimilation in a global work context, we conduct an inductive longitudinal case study of newcomer assimilation processes in a global organization over a two-year period. We observed and interviewed 48 newcomers and insiders (in total 92 interviews), to gain a nuanced understanding of the challenges faced by newcomers. Our results show how small

Leadership and Organizational Adaptability (session 689)

Towards a Dualistic View on Organizational Adaptability: Bridging the Preemptive-Reactive Divide

Author: **Bart De Keyser**; U. of Antwerp

Author: **Alain B. Guette**; U. of Antwerp

Author: **Koen Vandembemt**; U. of Antwerp

While the literature on organizational adaptability has brought forth a rich plethora of both preemptive and reactive constructs, the isolation in which both orientations have developed is remarkable. This detachment seems to rest on the implicit assumption that preemptive and reactive adaptability are temporally separated capabilities. Yet, conceding to their division as processual rather than event-based, it becomes questionable whether we should at all be advancing either of these adaptability modes independently: may organizations hope to be preemptively adaptable without simultaneously tapping from reactive adaptability; and can organizations be reactively adaptable without ramping up a preemptive counterpart as well? This paper re-establishes preemptive and reactive adaptability as representing a duality, or interrelated counterparts that are contrasting yet mutually enabling at the

expectation gaps at the entry point, may quickly escalate in a virtual assimilation environment where visibility of actions is low. More specifically, newcomers' and insiders' different perceptions on 1) the expected rate of assimilation (i.e. temporality dimension) and 2) the expected ways of working (i.e. reality dimension) created this assimilation expectation gap. Given the scarcity of face-to-face interaction among newcomers and insiders, this assimilation expectation gap grew larger over time, resulting in a negative spiral of dissatisfaction, conflicts and turnover, among a large proportion of newcomers.

Activism and Agency (session 691)

Too Legit to Quit? How Shareholder Activism Differentially Affects Outside Directors

Author: **Seok-Hyun (Stephen) Hwang**; INSEAD

Author: **Edward J. Zajac**; Northwestern U.

The present study theoretically and empirically analyzes how shareholder activism, as a reputation-damaging event for outside directors on those firms' boards, subsequently affects the attractiveness of those directors in the market for directors. We devote particular attention to predicting specific heterogeneity in the labor market's response by considering the differential value of some directors as legitimacy conferrers. Specifically, we suggest that both elite-status and minority (i.e., female and/or ethnic minority) outside directors are particularly valued for their contributions to organizational legitimacy and will experience a degree of reputational immunity following a reputation-damaging event. We test and find support for our hypotheses using a sample of shareholder activism that occurred in the U.S. between 2012 and 2016, and employing propensity score matching combined with the difference-in-differences approach. We discuss the implications of our findings as they relate to the research on corporate directors, organizational legitimacy, and labor markets.

same time. Marking distinct adaptability tracks as fundamentally interrelated, this article advances new ground for scholarly integration, consolidating insights developed for enhanced practical application.

First-Year Experience: An Action Method for Surviving the Transition to Higher Education

Author: **Benedicte Astor Onarheim**; Norwegian Psychodrama Academy

Author: **Eric Arne Lofquist**; BI Norwegian Business School

The transition to higher education can be experienced as both stressful and difficult, and in the worst case, lead to emotional and psychological problems, and premature dropout. Recent studies have shown that more than 30% of students at colleges and universities around the world abandon their studies before completion, and are particularly vulnerable during the first year of studies. The social and economic consequences for society have increased dramatically and this has placed increased focus on the 'first-year experience.' This action research pilot study followed first-year students at a large business school in Norway in an attempt to reduce student dropout rates. Self-identified students, were offered an opportunity to work with their individual challenges using action methods from the field of psychodrama. Psychodrama was developed by Jacob Levi Moreno (1889- 1974) as a creative method for treating groups and individuals as an alternative to classical psychotherapeutic methods. The study found that psychodrama methods, used in a group setting, reduced the psychological and emotional stress experienced by the participants, and more importantly, opened new social network opportunities that enabled them to survive the first year of higher education. Implications for practice are discussed.

The Ambiguity of Novelty and Strategic Agenda Setting: Evidence from the Emergence of FinTech

Author: **Andrew Sarta**; Ivey Business School

Where organizational decision-makers focus their attention is a central premise in the behavioural theory of the firm and is particularly important as organizations adapt to technological changes in dynamic environments. Structuring attention toward specific aspects of the environment is a key means through which organizations shift their strategic agendas. However, research has often overlooked the fact that new technologies, at their onset, are often ambiguous, making it difficult for organizations to determine appropriate structures. Adaptation, in this way, is partly dependent on cues from environment to draw organizational attention. Novelty, as a characteristic of an issue, is theorized as a critical but complicated factor in reshaping the strategic agendas of organizations. Novel issues are more likely to draw the attention of decision-makers and shift strategic agendas yet also lack legitimacy due to their novelty, which may impede a strategic shift. In examining 15 years of data for 36 incumbent financial services organizations, I find that organizations respond to the ambiguity of FinTech differently. Louder voices for novel issues draws in the attention of organizations to shift agendas; however, the technological experience of top managers dampens this effect when FinTech is considered as a technology. When FinTech is considered as a market-oriented issue targeting a business unit, it is the legitimation of FinTech that matters most in shifting strategic agendas. Topic modeling and mixed-effects models are empirically used to both identify the ambiguity of FinTech and support these findings.

"After All, I am a Doctor": The Role of Values in the Construction of Agency of Fertility Doctors

Author: **Laure Lelasseux**; HEC Paris

Author: **Roxana Barbulescu**; HEC Paris

Author: **Louise Martin-Chew**; U. of Queensland

Leadership in Australia is in crisis, as evidenced by the catastrophic bushfire season during the summer of 2019-2020. It is widely accepted that the intensity of these fires is driven by the changes in climate predicted some twelve years ago (Garnaut, 2008). Yet despite knowledge of this impending disaster, attempts to mitigate the impact of climate change with developments in alternative economic and energy models have been stymied by political leaders. The resulting environmental damage suggests that the way in which we identify and promote our leaders has failed the ultimate challenge of our age. In the search for hope and a way forward, alternative leadership models capable of implementing positive change are needed. Under these circumstances, it is imperative to seek models that harmonise culture and the environment. Such innovative models of leadership characteristics and identities have been identified in the creative disciplines, particularly within Indigenous societies. As an art critic and writer over thirty years, my research has noted the leadership roles and respect that Australian Aboriginal artists frequently hold within their communities. I propose a starting point for potential disruption and insights to alternative leadership approaches. It is through the examination and reflection of ways in which narrative and culture connects communities to create hope through identifying positive futures and “relatedness” that impactful, progressive, leadership may be realised. Relatedness is required to remedy the failing leadership model in Australia. Indigenous methodologies such as Please Knock before You Enter (Martin, 2009) developed a research paradigm “founded on the principles of cultural respect and cultural safety and embedded in Aboriginal ontology, epistemology and axiology”. In Aboriginal communities, art provides a touchstone to the past and innovation toward the future. This paper examines characteristics that may serve mainstream society from the creative models available, particularly focussing on Aboriginal artists who are leaders in their community and cultural contributors at the same time. While there are conflicts visible between these divergent roles, their connectivity to the narratives of their place and people offer significant points of difference to the way in which we select and promote our current political leaders. There is little discussion of leadership models

In this article, we offer an analysis of the role of professional values in the agency of professional actors, which are recognized as key agents of institutional change. We explore this question by looking specifically at the role of French fertility doctors in relation to the debates around the reform of assisted medical procreation in France which is up for revision since 2018. Relying on an inductive study of forty-seven interviews, complemented by analysis of treatises written and published by doctors, public interviews in the press, and observations of meetings and conferences of practitioners publicly committed to promoting a change, we explore how the confrontation between their professional values and the realities of their practices created specific agentic capabilities and normative beliefs that can explain the strong implication of these doctors in institutional change. In doing so, we show how these agentic capabilities lay at the core of their professional identity and interact with professional interests such as competition and business. Our contributions demonstrate that an institutionalist perspective on professional agency offers the opportunity to re-establish the importance of normative elements in the agency of professional actors beyond the focus on jurisdictional conflict and competition.

Toward a Mid-Range Theory of the Corporate Opportunity Structure for Social Activism

Author: **Francois Neville**; McMaster U.

Prior research on the corporate opportunity structure for social activism—that is, features of firms that make them more (or less) attractive to activists—has substantially advanced our understanding of how isolated features affect the likelihood that firms will be targeted by social activists. However, cognitive theories suggest that social activists are likely to perceive and evaluate the attractiveness of firms as viable targets holistically—that is, as complex configurations (i.e., prototypes) of characteristics, rather than as lists of independent factors. As such, extant research on the corporate opportunity structure has not addressed why and how configurations of firm characteristics cause

modelled by Aboriginal arts and culture in existing literature to date. In this paper I acknowledge the novel nature of the material under discussion. However its potential ability to transform the way in which we manage both leadership and crucial environmental decisions at this juncture toward new leadership paradigms is the subject of the explorations below.

Colleagueship in the Making: Exploring Tensions of Social Ordering in Collegial Relations

Author: **Arto Ryömä**; U. of Turku, School of Economics

Author: **Maarit Laiho**; U. of Turku, Finland

Author: **Satu Päivi Teerikangas**; U. of Turku, School of Economics

Leadership is traditionally predominantly defined as a leader-centered and individual activity, which precedes organizational development, change or success. Role of colleagueship, the phenomenon of leadership among colleagues, who might hold relatively equal positions in an organizational hierarchy, remains underexplored in organization research. This paper redirects an attention from prevailing leader-driven approaches to the role of each colleague at the workplace as an active change agent. The research question guiding our paper is: how do tensions of social ordering are constructed in collegial relations. Our paper offers the findings from the empirical fieldwork in one case organization from banking industry. By drawing on interviews and ethnographic observations, we identify that colleagueship is constructed and maintained in and through three overarching tensions of identifying, coopeting and legitimizing. The paper concludes by discussing the importance of noticing the phenomenon of colleagueship which may substitute and supplement leadership in contemporary organizations to share power and responsibility in organizing joint achievements.

some firms to be more highly targeted than others; limiting our understanding of the broader process of corporate social change through activist pressure. Relying on fuzzy set methodology this study provides novel evidence that social activist evaluations of firms as potential targets for activism are not only holistic and configurational in nature, but also characterized by equifinality (the presence of multiple paths to targeting) and asymmetric causality (i.e., configurations that represent “unattractive” targets are not simply the mirror image of those that represent “attractive” targets). In outlining a typology of “attractive” and “unattractive” targets for activism, this study develops a mid-range theory of the corporate opportunity structure for social activism and offers novel theoretical and empirical contributions to scholars and practitioners.

Boundary Spanning and Network Connections: Theory and Evidence (session 690)

Organization-Based vs. Network-Based Project Work

Author: **Lisa Basten**; WZB Berlin Social Science Center

This article examines how projects shape work biographies. It suggests two distinct concepts of project work in order to explain the variety of challenges to traditional work arrangements. In organization-based projectwork (OPW), a permanent structure acts as a reference point in the work relationship beyond the duration of the project. In network-based projectwork (NPW) the worker will continuously move between permanent structures. This distinction is explored as crucial in order to unfold the potential of 'project work' in theorizing changing work practices and challenged work institutions.

The Art of Swinging: How Boundary-Spanning Units Change Boundary Positions

Author: **Laurens Vandeweghe**; Imperial College Business School

Author: **Dmitry Sharapov**; Imperial College Business School

Author: **Llewellyn D W Thomas**; LaSalle U. Ramon Llull

In this study, we explore how boundary-spanning units positioned at the interface of different social domains change boundary positions over time in response to changing stakeholder demands. To do so, we draw on a longitudinal, inductive single case study of AppCampus, a boundary organization mediating collaboration between the corporate, university, and startup worlds. In examining how an initial boundary position evolves beyond the founding phase, we focus particularly on the actions and interactions of the organizational members of the boundary-spanning unit and its stakeholders.

Sense- and Decision-Making for Sustainability (session 692)

Entrepreneurial Orientation and Green Management in an Emerging Economy

Author: **Xi Li**; U. of Jinan

Author: **Jing Yang**; South China Institute of Environmental Sciences

Author: **Heng Liu**; Lingnan U. / Sun Yat-sen U.

This study examines entrepreneurial orientation as a potential driver of firms' green management in an emerging market context. Combining entrepreneurship literature and the institutional theory, we investigate the relationship between entrepreneurial orientation and green management, and the moderating effects of social legitimacy and ownership type. Using survey data from 239 firms in China, it was found that entrepreneurial orientation is positively associated with emerging market firms' green management. In addition, this positive relationship is strengthened by social legitimacy and stronger for state-owned enterprises than for non-state-owned enterprises. Furthermore, our empirical results partly support that the configuration of high entrepreneurial orientation, high social legitimacy and being state-owned is more effective to facilitate emerging market firms' green management than other configurations. This study suggests entrepreneurial orientation as a promising antecedent of green management in the context of emerging markets, going beyond the well-documented isomorphic framework and the resource/capability base. Also, the two-way interaction and three-way configuration effects we propose not only extends the bridging of entrepreneurship and institutional theory to the domain of green management research, but also depict a more complete picture to deeply understand why emerging market firms being green.

The Classification and Management of Peripheral Organizational Members (POMs)

Author: **Sarah Wittman**; George Mason U.

In an age of the networked organization, individuals and groups such as employees' family members, interactive crowds, ex-employees, and non-firm members of public-private partnerships increasingly impact firm functioning. These and other second-tier stakeholders—the stakeholders of firms' stakeholders—represent potentially valuable firm resources but also potential threats. Our current research, conceptualizing organizational influencers as internal ('primary') versus external ('secondary') stakeholders, however, has difficulty predicting firm responses to these insider-outsider individuals and groups. In this paper, I distinguish what I call these peripheral organizational members (POMs) from primary and secondary stakeholders based on their direct access to the firm (physical, virtual/remote-based premises), power over firm stakeholders, and perceived legitimate firm representation as viewed by organizational outsiders and/or insiders. I develop a conceptual model that predicts how firms will manage their peripheral organizational members through gatekeeping, relational facilitation, (dis)association, ignoring, absorption, or exclusion tactics. Finally, I discuss how integrating POMs into management research and practice enables scholars and practitioners to better understand firm relationships with their diverse second-tier stakeholders, and these stakeholders' role in inter-organizational networks.

Opportunities or Constraints: The Role of Network Closure in Interorganizational Reciprocity

Author: **Daniel Geoffrey Tisch**; U. of Auckland

Author: **Gail Whiteman**; U. of Exeter Business School

We extend the ecological sensemaking construct to outline the conceptual linkage between the Karl Weick's sensemaking concept and William Ocasio's Attention-Based View. We illustrate this linkage within the empirical domain of farms. Collecting interview data from 38 farmers, we present a thematic analysis to show that actors embedded in their local environment accurately make sense of ecological processes at the local level but may not have the attentional extent to make sense of planetary processes. This study synthesizes concepts in physical materiality, sociomateriality, technology, ecological sensemaking, geographical scale, attentional grain and attentional extent to explain the ontological and epistemological position of ecological sensemaking. We provide a method to unpack the enactment, selection and retention sensemaking micro-processes from which may be deployed in future studies of ecological sensemaking in natural resource-based industries. We discuss implications for actors working in any environment for which ecological material is ubiquitous and a key business input. We call for more research to bring forward ecological sensemaking as a process of organising.

Symbiotic Relationship in its Conceptual and Theoretical Challenges to Management Studies

Author: **Toyoko Sato**; Copenhagen Business School

This paper attempts to answer two questions: how can we undo the entangled conceptual threads in the semantic jungle of management, and how can we advance our understanding and broaden our sight within that jungle? In order to answer these questions, we study the theoretical concept of symbiotic relationships and its related terms: mutualism, parasitism, and commensalism. Because this relational theory is not uniformly agreed upon by management scholars, we revisit archival texts back to the concept's nineteenth-century origins in both biology and botany. Two historical moves are underinvested and pivotal for management study:

Author: **Lisha Liu**; Cornell U.

This paper examines the effects of network closure on interorganizational reciprocity. It investigates two levels of network closure, local-level common third parties and group-level network density, which in the network governance literature are both expected to boost cooperation and yet have opposite effects on dyadic reciprocity. I suggest that the key to understand the divergent effects is whether organizations view their network surroundings as opportunities or constraints. More specifically, common third parties who interacted with both actors in a dyad provide opportunities to switch partners, while dense groups put constraints to safeguard cooperation. Analysis from a study of intercorporate loan guarantees between Chinese publicly listed firms in the period 2008-2016 provides support for the divergent effects of network closure: firms are less likely to reciprocate their partners when there are common third parties but more likely to reciprocate when they are a denser group. The weakening effect of common third parties on reciprocity can be attributed to the choice of the relatively more powerful actor in the dyad – it reciprocates less when there are common third parties – because it is easier for the relatively more powerful actor to switch partners. I also found evidence on the constraints imposed in denser groups. Firms that don't reciprocate their partners are sanctioned and sanctions are stronger in denser groups. I concluded that organizations' decisions on cooperation with exchange partners are influenced by their interpretations of the surrounding interorganizational network.

Middle Manager Integrative Complexity and Environmental Performance: The Case of Climate Change

Author: **Amir Hossein Nosrat**; McGill U.

When responding to an ambiguous sustainability issue such as climate change, organizational scholars have overlooked the role that middle manager cognition can have in influencing strategic outcomes. In this paper, I examine one way in which middle manager can influence environmental performance in the context of responding to climate change, namely integrative complexity, or the ability to evaluatively differentiate and conceptually integrate different viewpoints. I argue that integrative complexity of middle managers is positively related to environmental performance because it enhances trade-off reasoning and nuanced decision-making that enable firms to address tensions embedded in competing environmental and economic objectives. Empirically, I use a novel computer-based methodology to examine the free-form responses of 712 publicly traded corporations to the Carbon Disclosure Project (CDP) between 2012 and 2017. Preliminary results indicate that middle manager integrative complexity is related to better environmental performance, even after accounting for TMT integrative complexity.

Unraveling the Role of Corporate Responsibility Coalitions in Sustainability Issues Management

Author: **Natalia Vidal**; U. of New Mexico

Author: **Harry J. Van Buren**; U. of St. Thomas

Business collective action is often necessary to address sustainability issues. However, issues management is commonly considered to be an internal function of firms that uses their own resources. In this conceptual paper, we argue that Business-to-Business Corporate Responsibility Coalitions (B2B CRCs) help member firms to manage sustainability issues by carrying out the exploratory aspects of issues management—i.e., scanning, identifying and evaluating issues, and proposing responses to issues. We rely on the literature on sensemaking and social issues management to explore how participation in B2B CRCs improves firms' capabilities for sustainability issues management by improving their sensemaking competencies, their abilities to choose and adapt issue responses, and their efficiency in implementing issue responses through better issue response mechanisms. We contribute to the business collective action and issues management literatures by bringing forth the importance of collective management of sustainability issues and the ways in which this process may improve firms' capabilities for sustainability issues management.

Author: **Sébastien Mena**; City, U. of London

Author: **Szilvia Mosonyi**; Queen Mary U. of London

Low-paradigm interdisciplinary research fields such

of Management, Erasmus U.

Rapid global economic development is heavily dependent on the over-consumption of natural resources, while the world generates a large amount of waste that can still be used as feedstock. This inefficiency is often caused by a lack of coordination within and between companies, as optimal policies for the society as a whole might be misaligned with optimal policies for individual companies. In a lab negotiation-experiment, we investigate how environmental externalities interact with economic objectives in influencing supply chain coordination outcomes. We find that emphasizing environmental impact can increase supply chain coordination, especially through a reduction of parties not entering negotiations. This result appears robust in different conditions of information completeness, framing of environmental outcomes, and framing of economic outcomes.

Building Sustainable NGO-Business Relationships

Author: **Mohammad Moshtari**; Tampere U.

Author: **Evelyne Vanpoucke**; ULB - Solvay Brussels School of Economics and Management

Although NGO-business relationships can bring many advantages for both the NGO and the commercial organization, research has shown that these relationships are still limited. While NGO-business relationships can easily be compared with buyer-supplier relationships in business supply chains, the literature specifically indicates several additional challenges in achieving effective and efficient NGO-business relationships compared to a commercial context. Our research seeks to understand how social capital can help overcome these additional challenges by creating sustainable NGO-business relationships. From a practitioner's viewpoint, we not only strive to acknowledge the complementarity of NGOs and businesses for implementing sustainable relationship practices, but also seek to understand how these understudied cross-sector relationships can be successfully built. We use a multiple-case study design to investigate nine NGO-business relationships in a humanitarian context. This study contributes to the supply chain

as corporate social responsibility (CSR) are characterized by a lack of consensus about their boundaries and content, which makes the capture of their evolution challenging. Building on social studies of science, this paper conceptualizes literature reviews as re-presentations—i.e. deliberate attempts at defining research priorities, building relevant categorizations to organize fields, and shaping their development—that can help tracking long-time shifts in fields. To study the evolution of CSR re-presentations, we conduct a systematic review of 48 CSR literature reviews from 1975 until 2019. Our results show that: (a) the CSR field purposes have shifted from ambitious searches for paradigmatic integration with broad constructs to the specification of CSR subfields; (b) a few recurrent field categorizations imposed themselves as taken-for-granted ways of classifying CSR studies, but also created blind-spots in light of the fast-paced epistemological diversification of CSR studies; and (c) most early field calls for new orientations (e.g. search for a unique paradigm) have failed to shape the field, whereas a few recent ones have quickly delivered (e.g. micro-CSR shift).

Saying More than Necessary: When and Why Corporates Disclose More than Required

Author: **Jayaram Suryanarayana Uparna**; Indian Institute of Management, Bangalore

Author: **BIBEK BHATTACHARYA**; Indian Institute of Management, Bangalore

Firms located in mandatory disclosure regimes face a choice of disclosing only what is mandated or voluntarily disclose additional information. In this paper, we investigate why companies choose to disclose information voluntarily, over and above what is mandated by regulatory authorities and whether this dual approach to disclosure actually translates to better disclosure quality. Our findings from analysing data from Bombay Stock Exchange's Top 100 firms suggest that firms pursue a portfolio approach with respect to voluntary disclosure. That is, firms who voluntarily commit to multinational agreements on sustainable business practices like the UNGC are also more likely to pursue local voluntary sustainable standards above legal requirements. Moreover, we also find that

literature by demonstrating how social capital mitigates tensions within NGO-business relationships, enabling us to present a more generic process framework of enablers for creating sustainable NGO-business relationships.

Managing the Triple Bottom-Line: Creating Sustainable Supply Chain Structures

Author: **Ozlem Ayaz Arda**; Lecturer at Brunel Business School, Brunel U. London

Author: **Frank Montabon**; Iowa State U.

Author: **Ekrem Tatoglu**; Ibn Haldun U.

Author: **Erkan Bayraktar**; American U. of the Middle East

Research on sustainability in supply chain management is well established, yet there is still something missing. While the “triple bottom line” (Elkington 1998), that is, the idea that sustainability consists of three aspects, environmental, social, and economic, is not seen as much in the supply chain literature. Rather, research tends not to investigate all three aspects. Drawing on a dataset of 208 firms operating in a wide range of manufacturing industries in Turkey, this paper considers all three aspects of sustainability to better understand the relationships among them. We also extend this practice-performance model by considering how both environmental and social performance mediates the relationship between environmental management practices and performance. Our findings support that greater attention should be given to the idea that sustainability does, in fact, involve all three aspects and that they may have a mutually supporting relationship. The mediation results also relate to the idea of the resource-based view as they are an indication that building up capabilities and resources, as evidenced by the payoff in performance, in all three areas of the triple bottom line can be a winning strategy.

Corporate Social Performance, Corporate Reputation, and the Prism of the Culture

Author: **Clara Pérez-Cornejo**; U. de Burgos, Spain

Author: **Esther De Quevedo-Puente**; U. de Burgos

Author: **Juan Bautista Delgado-Garcia**; U. de Burgos

Studies have shown that corporate social performance (CSP) is an antecedent of corporate reputation, since it is a signal that affects stakeholders’ perceptions and expectations about the firm’s future behavior. Drawing on institutional theory and on Hofstede’s cultural dimensions, we analyze how national cultural differences moderate the relation between CSP and corporate reputation, since culture may also affect stakeholders’ perceptions, expectations, and interests. Results based on an international sample for the period 2010 to 2016 show that short power distance, collectivism, femininity and low uncertainty avoidance intensify the relation between CSP and corporate reputation.

Markets

Author: **Enrico Fontana**; Sasin Graduate Institute of Business Administration, Chulalongkorn U.

Author: **Christina Öberg**; Orebro U.

Author: **León Poblete**; Chalmers U. of Technology

Little is known in the Sustainable Supply Chain Management (SSCM) literature about whether and to what extent international customers (ICs) are able to control sustainability compliance (compliance) upstream in their supply chain. By drawing on the notion of direct and indirect control in business networks and qualitative fieldwork in the Sri Lankan apparel supply chain, this paper examines how ICs control nominated and second-tier sub-suppliers (nominated sub-suppliers) to manage compliance, as well as the implications for their first-tier (direct) suppliers. By unveiling the way ICs exert direct coercive control and indirect normative control on nominated sub-suppliers, our paper provides theorizing of nominated procurement and its effects expected to create valid or validatable insights for emerging markets. Crucially, our paper provides a tangible example of how the indirect control may be stronger than the direct one, yet have consequences for both direct suppliers, sub-suppliers but also raw material suppliers. Reactive patterns as expected in any network would be hampered by this indirect control, while creating ingredients of distrust with suppliers.

Narratives and Numbers of Multiple-Value Reporting: Value Pluralism, Accounting, and Accountability (WITHDRAWN)

Author: **BASTIAAN VAN DER LINDEN**; EDHEC Business School

Author: **Andrew C Wicks**; U. of Virginia Darden School of Business

Author: **Robert Edward Freeman**; U. of Virginia

Multiple-value accounting narratives, such as those required by the Integrated Reporting framework, are often met with suspicion. This paper offers a more constructive approach. It starts from the idea that reporting is a step in the wider process of accountability: the giving and demanding of reasons for conduct. Participants in these conversations use the thick evaluative concepts of ordinary language to make sense of the kinds of value in the situation of the corporation, and of the numbers that report how the company engages with these values. In order to facilitate the simultaneous consideration of different kinds of value in accountability, multiple-value reports should propose narratives and numbers that 1) identify the types of value in the situation of the corporation, 2) state the appropriate behavioral responses to these values in the situation as a whole, 3) articulate quantitative indicators regarding these behaviors, and 4) set targets for these indicators and report scores on them.

About Whom to Care? Political Ideology and Corporate Social Responsibility Disclosure in China

Author: Changhong Ni; Anhui U.

Author: Pengcheng Du; Anhui U.

Using a nine-year sample of 3084 firm-year observations from Chinese listed firms, we are the first to theorize the ideological atmosphere, institutional contexts and their interactions on corporate social responsibility disclosure (CSR disclosure). We find that the corporate socialist atmosphere is significantly positively associated with CSR disclosure, implying that ideological influences in China are efficient in regulating organizational behavior in a scant of efficient market rules. The provincial marketization strengthens the positive association between the corporate socialist atmosphere and CSR disclosure, which implies that socialist ideology and marketization converge in driving CSR disclosure. These findings also lend insight into the compatibility of socialism and the market economy. Implications from this study provide a better understanding of the role of the Communist Party of China (the CPC) in economy transitioning, and a new understanding of CSR disclosure in ideology- dominated societies.

Faster but More Fragile? The Myopia of Organizational Learning in the Presence of Machine Learning

Author: Natarajan Balasubramanian; Syracuse U.

Author: Yang Ye; Southwestern U. of Finance and Economics

Author: Mingtao Xu; Purdue U., West Lafayette

As the primary source of knowledge creation in an organization, humans have long been the locus of organizational learning. However, this is changing with the wide adoption of machine-learning algorithms and their power to replace many intellectual tasks that were previously performed by humans. In this study, we focus on organizational learning in decision-making routines and theorize about the implications of adopting machine learning on organizational learning. We propose that though machine learning can accelerate organizational learning, due to its ability to process vast amounts of data and perform complex computations, it may potentially increase the myopia of learning in two ways, via a selection effect that excessively decreases the within-organizational diversity in routines, and a nescience effect that shrinks causal and background knowledge associated with such routines. We suggest that these effects may be especially consequential in the presence of interdependencies across routines and unforeseen environmental changes.

Flying Under the Radar: Internal and External Corporate Social Responsibility and Firm Visibility.

Author: **Marwan Ahmad Alshammari**; U. of Texas at Tyler

Author: **Yasar Mahmut**; U. of Texas At Arlington

Author: **Wendy J. Casper**; U. of Texas At Arlington

Author: **Richard L. Priem**; Texas Christian U.

In the current study we distinguish between CSR (corporate social responsibility) activities targeted at internal stakeholders and CSR activities targeted at external stakeholders, reexamining the relationship between CSR and firm market performance with data on 1289 firms from 2005-2013. We examine whether a gap between the firm's internal and external CSR moderates the CSR-firm market performance relationship. We found that both internal CSR and external CSR were positively related to firm market performance, but that the relationship was stronger for firms with equal emphasis on external and internal CSR activities. Further, the negative moderating effect of the CSR gap was mediated by the firm visibility.

Corporate Environmental Responses and R&D Productivity

Author: **Hang Minh Dang**; Australian National U.

Author: **Hanyang Li**; Ohio State U.

Strategic repositioning is core for firms to gain and maintain competitive advantage in changing competitive environments. Adopting an adjustment costs and benefits framework, we propose that firms can strategically reposition in the knowledge space through knowledge search to address the threat of imitation-driven competition, extending the repositioning literature in the product and geographical markets. Using a quasi-natural experiment design based on the jailbreak of iOS 7 and app developers' knowledge search activities on Stack Overflow, we find causal evidence that iOS app developers engage in specialized knowledge search in response to the threat of imitation introduced by pirated applications. In addition, iOS app developers with high knowledge complexity and unique knowledge will further increase their knowledge specialization after the jailbreak.

The Effects of Institutional Environments on Start-Ups' Exploratory Innovation

Author: **Aqi Liu**; The Chinese U. of Hong Kon

Author: **Siva Ramakrishna Devarakonda**; Chinese U. of Hong Kong

This paper investigates the institutional determinants of start-ups' exploratory innovation. In particular, we focus on the roles of IPR protection. Anchored in innovative search and institutional theory, we argue that strong IPR enforcement may inhibit start-ups' exploratory innovation because it imposes potential litigation and invalidation risks on start-ups' novel inventions. Such risks will increase the costs and uncertainty of start-ups' exploratory activities. We further argue that the presence of certain institutional features can offset the negative impact of strong IPR enforcement. Specifically, we explored the moderating effects of financial munificence, access to legal advice, and regulatory burden. Our empirical analyses of the patenting activities in the Chinese pharmaceutical and biotechnology start-ups furnish evidence for our theory.

[view paper \(if available\)](#)

Author: **Alexander Eapen**; Australian National U.

Research on the relationship between corporate environmental performance and financial performance has extensively focused on the influences of external stakeholders' demand on firm environmental strategies while the mechanisms under which different environmental responses impact internal processes received limited attention. The Porter Hypothesis provides some insights into the induced innovation effects of environmental improvement efforts; however, it is not yet clear if firms that do not reduce environmental externalities also experience innovation outcomes. In this research, we examine the relationship between two environmental responses – the abatement and non-abatement approaches – on corporate R&D productivity. We propose that both responses might induce firm innovations as a result of regulatory cost burden and external pressures. We find empirical support for the effects of non-abatement on R&D productivity which suggests that firms who do not improve their environmental performance are forced to innovate on their existing knowledge stock. We find no evidence for the induced innovation effects of pollution abatement and further provide implications for effective environmental policies.

External Evaluators Learning? Exploration and Exploitation in Innovation and Regulator Routines

Author: **Francisco Polidoro**; U. of Texas at Austin

Author: **Kinde M. Wubneh**; U. of Texas at Austin

Existing literature has established the importance of organizational learning for successful innovation and organizational adaptation. Yet, given the importance of external actor in evaluating innovations, research has not fully examined if they experience learning in interactions with focal organization and its innovation activities; i.e. do external evaluators learn themselves? We argue that evaluative routines of regulators are differentially affected by focal organization exploratory product innovations, as compared with exploitation-based ones. Specifically, due to changes in routine adaptation necessary for the regulator, the focal innovation will take longer to be reviewed. This study also proposes that experience with serious errors in the focal product domain exacerbates the challenge in forming appropriate evaluation criteria resulting in even longer review times for the regulator. We test our arguments empirically on FDA medical device data between 2001 and 2017.

Intellectual Property and Competitive Advantage (session 698)

What Explains the Economic Value of the Industrial Designs?

Author: **Maryam Zehtabchi**; World Intellectual Property Organization (WIPO)

Firms are increasingly utilizing Industrial Designs (ID) in order to build their competitive advantage. However, few insights are available on how IDs contribute to design innovation, business growth and economic development. Building upon the

While a major research stream in strategy has generated a well-developed understanding of the link between resource allocation and firm performance, we are yet struggling to understand why certain firms allocate their resources more dynamically – i.e., they adjust their allocations very strongly over time – while other firms keep their allocations quite persistent. Drawing on the concept of private information, we develop and test theory in order to address this puzzle in the literature. Results from our study indicate that those firms that are less diversified act more dynamically in terms of adjusting their resource allocation. In addition, our findings suggest that several critical factors related to the main stages of the process of utilizing private information moderate the diversification level–resource adjustment relationship, allowing highly diversified firms to reduce their agility disadvantages.

How Do Firms' Dynamic Capabilities Impact their Activities in Strategic Factor Markets?

Author: **Ipek Koparan**; Bentley U. - College of Business - Management Department

Author: **Ilgaz Tahir Arikan**; Kent State U.

Author: **Asli Musaoglu Arikan**; Kent State U.

Dynamic capabilities view underlines the necessity of systematic organizational change through effective upgrade and update on resource bundles. Dynamic capabilities cannot be readily acquired from the market but resources that define the composition and orchestration of such capabilities have been or are to be acquired from strategic factor markets. Organizational decisions pertaining to resource investments in SFMs, hence, inherently imprint dynamic capability development and deployment activities. In this paper, we strive to conceptually understand the coupling between strategic factor markets activities and dynamic capabilities. We argue that strategic factor market and dynamic capabilities function as complements and are inseparable in processes of addressing opportunities and threats. We further discuss that strategic factor market and reconfiguring capabilities interactively function to implement change and create economic value from ubiquitous

extensive literature on technological innovation covered by patents this study seeks to expand our knowledge on design innovation protected by IDs. The study uses a novel survey data of ID applicants to capture the determinant of economic value of IDs. The results show a positive correlation between value of IDs and their firm- and product-level intellectual properties. What is more, ID infringement and its speed are indicators are higher valued IDs.

Necessity is the Mother of Inventing Around: Edison's Lamp Patent

Author: **John Howells**; Aarhus U., Department of Management

Author: **Ron D Katznelson**; Bi-Level Technologies, Encinitas, California, USA

While some surveys and court cases refer to the practice of “invention around” or “design around,” it is an often-overlooked as a means by which patents promote economic development through competition. We provide the first detailed empirical study of inventing around patent claims in a study of how the enforcement of Edison's incandescent lamp patent in 1891-1894 stimulated a surge of patenting. Most of these patents disclosed inventions around to that circumvented the Edison patent claims by creating substitute technologies to enable participation in the market. Some of these patents introduced important new technology that became prior art for new fields. This indicates that invention around patents contributes to dynamic efficiency and that it is not necessarily duplicative research. Contrary to widespread understanding, the Edison lamp patent did not suppress technological advance in electric lighting. The market position of General Electric (“GE”), the Edison patent- owner, weakened through the period of this patent's enforcement.

Hands-Off or Hands-On? The Role of TMT Structural Attributes in Coordinating Knowledge Diversity (WITHDRAWN)

Author: **Nino Van De Wal**; U. of Antwerp

Author: **Bob Walrave**; Eindhoven U. of Technology

Author: **Victor Gilsing**; Free U. Amsterdam & U. of Antwerp

While knowledge diversity among a firm's inventors fosters potential for innovation, it also implies the attendant need for its coordination by a firm's Top Management Team (TMT). To address this issue, the purpose of this study is to investigate how three TMT structural attributes, namely its administrative intensity, hierarchical structure, and functional structure, shape such a coordination ability and how this moderates the relationship between a firm's knowledge diversity and innovation. Based on a unique microlevel and longitudinal dataset that includes 118 pharmaceutical firms, 2,720 top managers, and their 33,293 inventors and that covers the 2000–2014 period, we argue and show that the positive relation between knowledge diversity and innovation weakens with administrative intensity yet strengthens with a functional structure. This provides evidence in favor of a dual role for a TMT when coordinating knowledge diversity—one that entails a “hands-off” approach in the first phase of opportunity identification and a more “hands-on” approach in the second phase of opportunity execution. Implications for different bodies of literature and managers are discussed.

[view paper \(if available\)](#)

Author: **Kenta Ikeuchi**; Research Institute of Economy, Trade and Industry (RIETI)

In addition to technological superiority (functional value), attention to design superiority (semantic value) is increasing as a source of competitiveness in product market. In this research, we have created linked data set of utility patent and design patent information of Japan Patent Office to evaluate the design patent data as a source of understanding design innovation. First, machine learning was performed on a classification model for disambiguating the same person of the inventor / creator using data of patent right and design right applied to the Japanese Patent Office. By interconnecting the inventor's and creator's identifiers estimated by the learned classification model, we identified the design creator who also made the patent invention. Next, an empirical analysis is conducted to characterize the design created by an inventor of utility patent. As a result, about half of design patents are found to be created by the same person who is involved by utility patent. However, the division of labor of designer (a creator of design patent) and engineer (inventor of utility patent) is in progress, particularly for a large firm.

On the Planned and Emergent Use of Intellectual Property in the New Venture Creation Process

Author: **Sarah Gerlinde Van Santen**; Chalmers U. of Technology

Author: **Marcus Holgersson**; Chalmers U. of Technology

Research on both entrepreneurship and intellectual property (IP) has implicitly reflected the assumption that decisions around IP are part of a planned process in which IP is used to achieve certain goals, typically to prevent imitation. In light of the increasing prevalence of research advocating a different, strategic function for IP, this assumption is due a revision from a functional as well as a process perspective. This study attempts to tackle this issue through a multiple case study of new venture creation. The decision events and associated decision logics in the venture development process of seven digital technology-based startups were

Firm Performance After California's Refusal to Enforce Out-of-State Employee Non-Compete Agreements

Author: **Lauren E. Aydinliyim**; City U. of New York, Baruch College

Author: **Petra Christmann**; Rutgers U.

We empirically exploit a quasi-natural experiment of the California Supreme Court's decision to stop enforcing out-of-state employee non- compete agreements. Applying resource-based theory, we conceptualize this legal change as allowing unique access to a strategic factor market for human capital (i.e., out of state employees subject to non-compete agreements). This access results in California firms experiencing a mean cumulative abnormal returns of 2.53% in the three days immediately following the court decision. Moreover, this increase is strongly influenced by both labor market and firm-level factors. Specifically, firms currently facing high in-state labor market competition particularly benefit from this newly available labor pool. Firms already employing large numbers of knowledge workers and those with high research and development intensity also experience increased stock market returns.

Leading for Innovation: A Science Mapping Perspective

Author: **Katharina Hoelzle**; U. of Potsdam

Author: **Robert Rose**; Hasso Plattner Institute

Author: **Valeska Joya Maul**; Hasso Plattner Institute

In this study, we map the landscape of research on the relationship of leadership and innovation using bibliometric and text-mining analyses based on a selection of 404 published records. Although the influence of leadership behaviors on creativity and innovation outcomes in organizations has received a great deal of research attention, the published body of knowledge is considered to be fragmented, drawing from various colleges of knowledge across multiple disciplines. Whereas recent integrative endeavors substantially progressed the field, no attention so far has been directed to characteristics of the knowledge base itself. Therefore, we aim to identify which journals, articles, research strategies, authors, and topics characterize research on the relationship of leadership and innovation through analyses of (co-)citations and topical foci (1999–2019). By providing a systematic science mapping assessment of the intellectual and conceptual structure of this interdisciplinary research field, we hope to inform future consolidating efforts.

researchers have studied the undergoing mechanisms that facilitate the creation of these ecosystems in different societies. However, not all ecosystems behave the same way, due to differing environmental conditions for development. This study tries to explain the main characteristics, actors, and ecosystem relationships observed in a nascent entrepreneurial ecosystem present in a hostile environment provided by socio-political crisis. The research is based on 11 real- life cases of entrepreneurs who have survived a crisis period in Nicaragua and, at the time of this research, are struggling with the unusual behavior of the ecosystem. The conducted interviews provide enough data to suggest a mechanism which will help future scholars or entrepreneurs to understand the number of developmental stages an ecosystem needs, and the processes developed in each one of those stages under circumstances of socio-political crisis.

‘In Courts We Don’t Trust’: Institutional Framework in the Context of Developing Economy

Author: **Kingsley O. Omeihe**; Edinburgh Napier U.

Author: **Veronica Gustavsson**; U. of the West of Scotland

Author: **Ibiyemi Omeihe**; U. of the West of Scotland

Author: **Isaac Oduro Amoako**; Liverpool John Moores U.

Author: **Mohammad Saud Khan**; Victoria U. of Wellington

In this paper, we examine with particular interest the mechanism of trust in Nigeria’s unique socio-economic landscape. This becomes pertinent as formalised institutional arrangements such as courts and legal structures appear to be underdeveloped. We theorise by drawing on the concept of institutional rivalry as it presupposes an understanding of alternative institutional forms operating in parallel to deficient formal institutions. Guided by the investigation of 36 exporting Nigerian SMEs, we reveal how entrepreneurs were found to rely on cultural specific relationships to address the limitations of weak and deficient state backed institutions. At its centre, we describe how entrepreneurs relied on indigenous institutions such

An Integrative Model of Expertise when Introducing Advanced Digital Systems at Work

Author: **Anna-Sophie Ulfert**; Goethe-U. Frankfurt
Author: **Sonja Scherer**; Goethe-U. Frankfurt

Based on research from human factors, human computer interaction, and educational psychology we developed a framework of the role of expertise when introducing advanced digital systems at work. The framework differentiates, on the basis of technical and domain expertise and further distinguishes between objective expertise and subjective expertise perceptions (e.g., self-efficacy). A review of literature on humans interacting with digital systems reveals the strong influence of expertise (technical/domain as well as objective/subjective) on user reactions (technology acceptance, trust in technology, and technostress). Based on this review, we suggest propositions that explain the interrelationships of expertise as well as its effects on system interaction in the workplace. Finally, we conducted expert interviews with practitioners (N = 10) to further examine the framework. We identified that especially in the introduction phase of advanced digital systems, technical expertise, and particularly subjective expertise, is most important. In later stages, this relationship shifts with domain expertise becoming increasingly important. However, the effect of expertise on user reactions highly depends on environmental factors such as the level of specialization of the employee's role as well as task characteristics.

Preceding Reputation: A Stakeholder Perspective on Pre-Reputation Signals of Nascent Ventures

Author: **Carolin Johanna Waldner**; Heinrich-Heine U. of Dusseldorf

Author: **Jurgen Willems**; U. of Hamburg

Even though the emergence of reputation is a long and cumulative process, each stakeholder immediately has impressions of an organization. To understand how early impressions of nascent sustainable ventures are formed, we apply an abductive reasoning strategy and identify two cognitive frames that influence stakeholder perceptions: (a) the individual's prioritization of the character or capability perspective of reputation (prioritization of perspective), and (b) the individual's ability and willingness to compare their impression (ability to compare). Further, we find three types of pre-reputation signals that stakeholders receive and interpret based on their individual cognitive frames, i.e., character signals, sustainability signals, and performance signals. By discussing these signals and the cognitive frames of stakeholders in a framework of pre-reputation signals, we fill an important gap in research on reputation emergence, advancing the understanding of how early impressions of individual stakeholders can shape organizational reputation.

Structuring Flexibility in Entrepreneurial Teams

Author: **Eva Weissenboeck**; TUM School of Management, Technische U. München

Author: **Nicola Breugst**; TUM School of Management, Technical U. of Munich

Author: **Anna Brattstrom**; Lund U.

In an inductive multiple case study of six early stage

governance are particularly salient in the age of platform ecosystems and flatter hierarchies enabled by IT's affordances (Turco, 2016). Public attention algorithmic management often focuses on concerns of programmers and designers "encoding their biases and assumptions" into the design of social-technical systems. This research seeks to uncover how designers' assumptions and ideologies impact the design of algorithmic governance systems. Prior research predicts that top-down "managerial" logics would be encoded into the design, resulting in feuding or "loose coupling" by end-users who refuse to be controlled (Berente & Yoo, 2012). However, in my empirical setting, I identify the emergence of a "bottom-up" governance design that was heavily influenced by multiple logics and points of view. While prior research has tended to black-box the impact of "ideological work" on the design and implementation of information systems, my data speaks strongly to this being a central element of the design process. Drawing on a six-month ethnographic study of a community of blockchain developers, I ask: what roles do ideology and worldview play in the design and implementation of algorithmic governance systems?

THEME RESEARCH DISCUSSION PAPER SESSION ASYNCHRONOUS

entrepreneurial teams, we explore why some entrepreneurial teams persevere with their venture ideas, while other teams engage in a pivot. Comparisons of the cases reveal that the variation is due to how entrepreneurial teams organize their teamwork in spaces as well as the ability to modularize the venture ideas. Teams that enact idea inflexibility are not able to modularize their venture ideas, as they solely meet within purposeful spaces, in which they have conversations about pre-defined topics. In contrast, entrepreneurial teams that enact idea flexibility and are thus able to adapt their ideas enable discussions in open spaces in addition to meeting in purposeful spaces. Within these open spaces, the teams achieve idea modularization. Overall, the notion of idea (in)flexibility has consequences for how entrepreneurial teams cope with setbacks. We propose an emergent model explaining how entrepreneurial teams work together to develop their venture ideas and how this has an impact on the team.

How Nascent Projects Acquire Resources to Launch (WITHDRAWN)

Author: **Celina Smith**; EMLYON Business School

Prior research has tended to focus attention on temporary projects once they have already been established. This is a problem since it misses the challenge of resource attainment during the critical pre- project phase that leads to temporary project establishment in the first place. While networks are viewed as a key mechanism leading to resources it remains unclear how these can be attained when those seeking to launch new temporary projects are themselves new to project business and face

Female Entrepreneurship, Female Employment, and Productivity

Author: **Bach Nguyen**; Aston Business School

Female underperformance hypothesis, which states that female-run businesses are smaller, earn humbler profits and revenues, and make indistinct contributions to the economy may not be completely correct. In this study, we argue that while female-run businesses may be smaller and perform worse in terms of economic outcomes, their productivity levels may be higher. Also, drawing on the productivity literature, management literature,

constraints in building key ties as a result. Drawing on 123 nascent projects developed by six newly-formed independent television production companies in the UK our qualitative study finds that they can enhance their prospects of establishing new temporary projects by engaging in one of four behavioural strategies labelled as counter-fate behavioural strategies. This study contributes to research by focusing attention on the neglected pre-project stage of temporary project development. We show how by exaggerating the interest of key ties, paying attention to the sequence in which they are formed, and manipulating the opportunism of potential resource holders they can help to counter some of the inertial constraints that they face. Our work further draws attention to how a coordination role is used as a source of change; and highlights the conditions under which each behavioural strategy may become salient.

The Effectuation Dynamics: The Identification-Cognition-Empowerment Perspective

Author: **William Lin**; WISKEY CAPITAL/ National Taiwan U.

This paper investigates effectuation dynamics, the key different decision-making logics, under the uncertainty on starting new ventures are hybrid by both of causal and effectual reasoning. Many entrepreneurial teams adjust their cognitive styles based on the different challenges they face during the new venture life cycle. Due to the high uncertainty (short life cycle and high competition) of app economy, we choose the new venture firms are in app business and also adopted for a given app affects app performance as measured by the database of apps. Using data from 71 in-depth interviews with 28 executive members, we recorded 179 key decisions chronologically and examined the pattern of decision-making processes. Drawing on the identity-cognition-empowerment perspective, our examination supported the effectuation dynamics, as constructed from entrepreneurs' and industry social exchange mechanisms with effectuation principles and explored how the transitions between the two decision-making processes impact start-up teams. We show how new venture firms empower structurally embedding

and liberal feminist theory, we explore the productivity of firms of different combinations of entrepreneurs' gender and employee's gender. Results reveal that females work best when they work together (i.e., when female entrepreneurs run firms with a higher rate of female employees). This study thus supports the female superior productivity hypothesis.

Women's Entrepreneurship and Political Engagement: The Impact of the Arab Spring (WITHDRAWN)

Author: **Sophie Alkhaled**; Lancaster U. Management School

With the Arab Spring sweeping across the Middle East and North Africa, combined with a global renewal of the women's movement, feminist organising and activism is as timely now as it has ever been. This paper conceptualises feminist affective solidarity in the Middle Eastern context of Saudi Arabia. The research is a longitudinal study, which includes interviews with 16 Saudi women between 2010-2019 exploring their infrapolitical activism and feminist affective solidarity as entrepreneurs. Based on the situated and contextualised understanding of feminist affective solidarity in Saudi Arabia- where women's activism has been morphed into a form of "Western" neoliberal transgression against the Islamic country and patriarchal traditions- the research investigates how feminist solidarity takes place, with a specific focus on uncovering the legitimate infrapolitical practices that Saudi women employ in order to engage in feminist solidarity and political activism through entrepreneurship. The findings highlight the essential role of the situated historical, social, political and economic context that impacts women's opportunities for activism and feminist solidarity in the movement, while appreciating the paradoxical roles they are meant to uphold, as the "ideal Islamic woman", maintaining legitimacy for the monarchy and the state, and the symbol of "modernity".

Effectuation or Causation? Configurational Causes of Entrepreneurial Logic

Author: **Jie Wang**; Nanjing U. School of business

Author: **Qin Wu**; School of Business, Nanjing U.

Author: **Zhuohui Wu**; Nanjing U. School of business

More entrepreneurs are increasingly interested in such a way of “crossing the river by feeling the stones” to realize rapid iteration of enterprises. In this study, we explored simultaneously impacts of entrepreneurial experience, environmental uncertainty, organizational slack and centralization of decision making on entrepreneurial logic. To do so, we then use clear-set approach to qualitative comparative analysis (csQCA) to compare the different configurations affecting effectuation and causation under an integrated perspective. Our findings suggest that entrepreneurs preferred to use causation logic for decision-making while the level of environmental uncertainty is low. Whereas, when the environmental uncertainty is higher, entrepreneurial experience, organizational slack and decision concentration become the decisive factors for entrepreneurial logic. As such, this study offers novel theoretical and empirical insights to scholars as well as implications for practitioners.

DISCUSSION PAPER SESSION

Outsiders' Eyes: How Do Immigrant Entrepreneurs Uniquely Recognize Entrepreneurial Opportunities?

Author: **Sadi Koray Demircan**; Discussion Paper Sessions

This study contributes to the literatures on opportunity recognition and immigrant entrepreneurship through an inductive content analysis of entrepreneurial journeys of immigrant entrepreneurs in the Boston area. The abduction between literatures on both opportunity recognition and immigrant entrepreneurship and the categories stemming from the data inform the provided theoretical model that explicates the opportunity recognition process of immigrant entrepreneurs. The theoretical model accentuates the role of meso context, embedded in a macro institutional environment, as a provider of external motivators, external resources and opportunities and manifests the role of individual level idiosyncratic internal motivators, internal resources and human and social capital within this meso context during the opportunity recognition process. The categories stemming from the data highlight that cognitive comparisons that immigrant entrepreneurs engage with due to their exposures to multiple contexts can serve as internal motivators. The increased variability infused to opportunity recognition research by studying how immigrant entrepreneurs recognize opportunities contributes to both generic theories on opportunity recognition and immigrant entrepreneurship literature.

Contemporary High-Skilled Mexican Immigrant Entrepreneurs in the U.S. (WITHDRAWN)

Author: **Elizabeth Salamanca**; Department of International Business, UDLAP

Author: **Jorge Alcaraz**; Pontificia U. Javeriana Cali

The number of Mexican entrepreneurs relocating to the United States has significantly increased during the last decade and their profile, as well as that of their businesses, have changed. This study develops

a typology of Mexican migrant entrepreneurs living in the U.S., and of the business ventures that they undertake, and it determines the association between the entrepreneurs' profile and the kind of businesses they create. The research follows both a qualitative approach based on the Gioia methodology and a quantitative method based on correspondence and multinomial analyses. Results show that high skilled Mexican entrepreneurial migration involves a heterogeneous group of people whose resources, motivations and pre-migration conditions are different. Likewise, this study objects to the perception of these migrants as a group of people who integrate seamlessly into the host society, highlighting the limitations imposed on these migrants by the institutional context surrounding them.

Broadening our Sight to a Living Systems Perspective: A New Core Organizing Logic for the Era of the (session 221)

This symposium takes off from David Korten's observation that 'We are living beings born of and nurtured by a living Earth,' and brings together leading thinkers, including Korten, to broaden our academic 'sight' on how developing a living systems approach to organizing might shift the core organizing logics of management and economic theories. Viewing human and socio-ecological systems, and, indeed, reality, as living entities means broadening our sight to taking in what Claus Weber calls an enlivenment (versus enlightenment) perspective that can help shape new cultural understandings as well as new organizing frameworks. David Korten, who will serve as keynote speaker, argues for an ecological civilization that could create better balance, innovation, and creativity, while simultaneously providing sufficiency. He will discuss the need to assure that all businesses are accountable to and serve the well-being of the community in which they do business. Commentator/panelist Andrew Hoffman will examine the institutional frameworks around which a cultural shift as broad and sweeping as the Enlightenment of the 18th century is underway. Chris Laszlo will highlight the power of direct intuitive practices in what he terms quantum leadership to transform consciousness. Michael Pirson will bring the lens of humanistic management to the question of how living systems theory can enhance both management and economic practice. Sandra Waddock will discuss principles of what gives life to systems in the interest of advancing living systems theory.

A New Teaching Format: Video Case Textbook - Video Case Studies Part 1 (session 224)

The session will focus on a newly-developed teaching format, using stand-alone video case studies that are structured similarly to a textbook. Films and videos are thought to enhance learning outcomes as they are aligned with learning and communication patterns of the “digital” student generations Y and Z. Video case studies can therefore enhance Generation Y and Z students’ engagement, while creating a learning space more suitable for their changing learning needs. In this new teaching format, textbook chapters are represented by videos narrated by a company executive. They are complemented by videos that explain the theories and frameworks underpinning the case study.

Failure in Gaining Legitimacy - Preparing for What Entrepreneurs Fear the Most (session 707)

Failure experience in any aspect of life is often dramatic. Thus, people tend to try to minimise or deny their own failures. At the same time, failure cannot be completely avoided - especially in environments associated with high uncertainty. Considering the fact that the most recognised traits of entrepreneurship include notions of high uncertainty and ability to handle risks, failure experience should be seen as an integral part of the entrepreneurial process. Failure is, by definition, a negative experience, but if it is treated properly it can bring positive outcomes such as unique learning experiences. However, not all failures are well suited for learning. Terminal failure such as bankruptcy or insolvency can be emotionally overwhelming and can hinder learning. However, small failures at early stages of company development can be used as learning tools. Failures in the legitimization process often happen early and present good a good opportunity to learn and apply new knowledge at further stages of company formation.

Management Education Across the Borders: Focus on Distributed Learning (session 705)

In this interactive workshop, we go beyond traditional technologies and methods commonly discussed by scholars and practitioners who utilize distributed learning for bringing together geographically-spread learners. Based on our experience delivering distributed learning practices in management courses among students in four transnational campuses of one of Australia's largest universities, we will practically demonstrate to the participants the benefits and challenges of using two-way and multi-way distributed learning in transnational education. As result of participation in this workshop, participants will appreciate challenges and learning opportunities of distributed learning in transnational environments and geographically-spread locations, receive practical lessons on learners engagement in active and deep learning using distributed learning in a cross-cultural environment, and address future implications of using action-based learning and designing assignments to maximize the benefits of distributed learning.

Towards a New Understanding of Design Thinking in Business Education (session 711)

This session is a practical experience for attendees who are interested in promoting an innovative pedagogy that mediates the design thinking learning process. We present a pedagogical activity that attempts to unify two distinctive discourses related to design thinking. On the one hand, the traditional design thinking approach defines the way designers think and work. On the other hand, the management discourse considers design thinking as a method to innovate and create value. We argued that game-based learning could be a mediating pedagogy that attempted to bring balance to these views in teaching and learning practices. We suggest a game-based pedagogy that encompasses both game play and game design activities. We discuss our pedagogical approach and the preliminary findings that demonstrate how a cognitive perspective in design thinking could be combined with an experiential, playful, and authentic learning processes embedded in a business simulation. We suggest that this approach is authentic, experiential, and playful; characteristics distinct from traditional

We Got by with a Little Help: Recent Perspectives on the Academic Job Market (session 228)

The academic job market can be ambiguous, tumultuous, and downright frightening – doubly so for those on the market for the first time. In an increasingly competitive field, job seekers must navigate the market gauntlet from the submission of their first application through the eventual negotiation of a contract. The purpose of this professional development workshop (PDW) is to reduce some of the inherent ambiguity of the job market by providing recent perspectives on a variety of job market topics and to create an interactive and inclusive space for prospective job seekers for the 2020 cycle and beyond. This interactive session will be comprised of two parts. First, five individuals who were on the job market in 2018-19 will give short presentations on key aspects of the job market, such as the application process, selling oneself as an excellent researcher/teacher, and campus visits. Second, attendees will participate in interactive roundtables led by individuals who were on the job market in 2019-20. Round table topics will be more specific than the presentations and will include finishing your dissertation, being an international student on the market, handling mental health, and crafting application materials. At the end of our session, participants will be provided with a Google spreadsheet of contact information (collected through pre-registration) in order to build their networks and foster a more lasting connection with presenters, roundtable leaders, and each other.

This PDW is intended for current students expecting to be on the 2020-21 or 2021-22 academic job market and is limited to 60 attendees. Email organizers Karen Landay (karenmichellelanday@gmail.com) AND David Arena (davefarena@gmail.com) with your name, affiliation, year in program, and expected market year.

Decolonizing Bodies, Subjects, and Epistemologies in Management Studies (session 714)

The session brings together articles and authors that examine knowledge from various angles, but especially bringing places, bodies, and people to interrogate standing theories in management critically.

Stateless People, Organisation & Management of Genocide & Humanitarian Crisis: Rohingya & Rights (WITHDRAWN)

Author: **Fahreen Alamgir**; Monash U.

Focusing on the Rohingya community, this paper interrogates what political, economic, social, and cultural conditions enable state and civil society actors, including the United Nations, to reconfigure the lives of a community, and how interlocked practices of these institutions legitimise genocide – institutionalised killings, dispossession, and death. I argue how a militarisation process and militarism have created a particular state structure that interacts with civil society actors and ruling class factions, produces ethno-nationalism and ethno-religiousism, and simultaneously normalises and legitimises genocide, regardless of the form of political regime – national-populist, military, transition to democracy or democratic state. The article opens up an analytical space by reflecting on regimes and modalities of human rights – investigating what the way rights are facilitated – or not – tells us about the actor and thereby wherein the global management of humanitarian crisis is grounded. Key words: Internally displaced people, stateless people, refugee, violence, militarism, and militarisation

Embeddedness and Retention of Low Status Self-Initiated Expatriates – The Role of an Inclusive Climate

Author: **Sebastian Stoermer**; TU Dresden

Author: **Samuel Davies**; U. of Liverpool Management School

Author: **Jakob Lauring**; Aarhus U.

As the number of self-initiated expatriates increases, the need to integrate them well into the new workplace becomes more pertinent. This directs the attention towards those among them who have often been described as most weakly positioned in labor markets, namely foreign national women and individuals from low status countries. Therefore, drawing from social identity theory and the double jeopardy hypothesis, the present study examines a perceived organizational inclusion climate as a pivotal predictor of self-initiated expatriates' (SIE) organizational embeddedness. Most importantly, we elucidate for whom a perceived organizational inclusion climate might be most critical and examine SIE gender and nationality prestige as indicators of minority status in the workplace. Analyses based on the data of 262 SIEs in Europe show that perceptions of working in an inclusive organizational climate relate positively to organizational embeddedness and subsequently turnover intentions. Supporting our hypothesized model, this mediated effect is conditional and stronger for female SIEs and SIEs with low nationality prestige.

An Intersectional Exploration of Ethnic Identity, Class, and Inequality in a Multiethnic Context

Author: **Chidozie Umeh**; Queen Mary U. of London

Author: **Nelarine Cornelius**; QMUL

Author: **James Wallace**; U. of Bradford

In this article, we examine ethnicity, class/status, (ethnic) identity, and inequality from an intersectional perspective in two organizations in a

In this paper, I provide insights into how the voices and agency of women in the Global South have become silenced and how the discourse about Global South women presents them as the Other, a homogenous group of women characterised by their feminine gender and their being 'Third World'. Within the management and organisation studies (MOS) discipline, the lives and work of those in the Global South are framed by the gaze of the West, imposing a sense of superiority and perpetrating their Otherness. Moreover, the voices and lived experiences of indigenous Global South women are often ignored and the full contribution they can make to MOS is under-theorised and under-researched, thereby under-valued. As a result, little is known about how these women construct their identity as women and their work and organisation/organising experiences in the context of their social, cultural and historical location. In this paper, I challenge this colonial tradition by introducing decolonial feminist theory to address the silenced voices of women from the Global South and provide a space for Global South women to become producers of knowledge and a visible part of the discourse about work and organisation/organising. Decolonial feminist theory recognises Global South women's capacity of for intellectual autonomy and their capability to create and organise. By this means, this theoretical perspective embraces meaningful engagement with women whose voice and agency has been removed and facilitates the production of knowledge from the perspective of Otherness, specifically the gendered colonial difference.

[view paper \(if available\)](#)

Organisation: A Decolonial Interpretation

Author: **Nimruji Jammulamadaka**; Indian Institute of Management, Calcutta

In the pursuit of decolonizing MOS, extant work still operates from a Western frame of what an organization means. As such within decolonial discourse communitarian organizing is contraposed to concepts of efficiency, effectiveness, strategy, etc are implicitly assigned to and associated with Eurocentric meaning of organization/organizing and rejected. This prevents the possibility of decolonizing organization/organizing and developing plural understandings of these and

multi-ethnic developing country. Inequalities and bounded/literal identity categories - such as gender, race/ethnicity, and class/status - and their interlinkages have been widely studied in organizations in the global North. However, how intersecting bounded and symbolic identity categories may (re)produce and legitimise inequalities in organizations in the global South, specifically in multi-ethnic contexts, remain under-researched. From analyzing vignette and interview data through an intersectionalist lens, we introduce a construct, symbolic identity differentiation, and advance two key findings. The suggests that how individuals construct identities in ethnoculturally diverse contexts, ad in effect the ethnocultural landscape, is changing. The second posits that managing diversity and inclusion in organizations in the global South is contingent on how individuals make meaning of inequalities through perceptions of status, and how they experience their identities, symbolically, as well as literally in these settings.

Maori Scientists Experiences of Work: The Cultural Double-Shift and the Drivers and Consequences

Author: **Jarrood Haar**; Auckland U. of Technology

Author: **Willy-John Martin**; Callaghan Innovation

This paper explores Maori, the indigenous people of New Zealand, and the role that cultural factors play on work experiences of Maori Scientists, given their limited number but growing legislated sector demands around cultural engagement. This paper seeks to understand the drivers and consequences of the unique pressures and demands on their work time. In study one, we interviewed 12 Maori scientists around their work experiences which identified cultural factors as a significant job-related pressures and themes around whakawhanaungatanga (relationship management), kawenga (responsibilities), and taumaha (workload). In study two, we used a three-wave study design with a large cohort of Maori Scientists and find commonality with study one themes, but also more detailed themes emerged around aheinga tangata (human capacity), tikanga (correct practice), hauora (wellbeing) and umanga takaware (career disruption). Ultimately, we classify these pressures

cognates concepts such as efficiency and strategy. This paper through the study of two exemplars, one of a strategic planning workshop for NGOs and second a communitarian NGO suggests an alternate meaning for organization as community

enmeshment. A community enmeshment does not treat individual and organization as ontologically prior and distinct from each other. Organisation and community are thus relationally constituted. Organisation as community enmeshment is also functional where function preserves human dignity and freedom.

Theory 'Against' Tyranny: Decolonizing Management Scholarship with Freire (WITHDRAWN)

Author: **Maria Fernanda Rios Cavalcanti**; FGV-EAESP

We explore how the premises of Freirian pedagogy both embody fundamental assumptions of the decolonial project and reframe the general role of theory for management scholarship. We claim that this approach offers a plausible alternative for challenging the tyrannies of our times inside and outside B-schools, as it battles passivity (silencing) both inside classroom and within the legitimating machine of management thought. We argue that this is a necessary venture as epistemic violence has been a constituent part of management thought, and tyranny/oppression is present whenever there are continuous and systematic ways in which multiple voices and alternative forms of knowledge are either constructed as invisible, prevented from entering management literature and practice or are denied legitimacy within this field. We summarize five relevant premises of Freire's theory: (i) The oppressors cannot "free" the oppressed from their subjugated position; (ii) Only the oppressed can free themselves from this position; (iii) However, the oppressed may be so deeply immersed in this oppressive reality that they perceive it in a fatalist rather than a critical way (i.e. as an injustice that may be acted upon); (iv) Education (acquiring the right to one's own voice) plays a major role in both maintaining this immersion or in developing this so called critical view; (v) The educational process must be emotionally engaging through the mobilization of ambiguous feelings of indignation, outrage,

as mahi-rua (cultural double-shift) whereby Maori Scientists feel they must work two roles (work and culture) to do their job properly. The consequences are detrimental towards wellbeing and career. Finally, using study two data and a third study examining job descriptions/contracts, we find limited employer support for adequate engagement in cultural roles. We discuss the implications for employers and the sector.

Solidarity at Work During an Economic Crisis (WITHDRAWN)

Author: **Alexandros Psychogios**; Birmingham City U. Business School

Author: **Margarita Nyfoudi**; U. of Birmingham

Author: **Rea Prouska**; London South Bank U.

Author: **Leslie Szamosi**; U. of Sheffield International Faculty, CITY College

Author: **Adrian John Wilkinson**; Griffith U.

Solidarity behavior among employees is important to the effective functioning of organizations, particularly within the context of a crisis where adverse working conditions prevail. There is, however, a scarcity of knowledge in relation to the process by which solidarity behavior emerges in organizations. Using the lens of social exchange theory, this study examines how top-down employee communications and employee voice, as high-performance work practices, relate to horizontal (employee to employee) solidarity behavior. Based on two studies conducted within a year at the heart of the Greek crisis we found that the relationship between employee communications and horizontal solidarity behavior is mediated by employee voice. This paper advances our theoretical understanding of the construct of horizontal solidarity behavior, highlights the role of employee communications as an effective HR practice, and delineates the role of perceived employee voice in fostering support among co-workers and building

Performance, Innovation, and Technology (session 719)

Finding Common Ground: HR Manager and Line Manager Alignment on Climate and Innovation Performance

Author: **Pingshu Li**; U. of Texas Rio Grande Valley

Author: **Zheng Zhao**; U. of Kansas

Author: **Jake Messersmith**; U. of Nebraska, Lincoln

Both HR managers and line managers play a significant role in implementing espoused organizational HR practices, yet these two entities often hold different views of both the intended and implemented practices within the organization. To date, the research literature is not clear about how either alignment or misalignment of the perceptions of these important groups affects HR practice implementation or downstream performance outcomes. Using HR system strength theory as a theoretical guide, this study leverages the concept of consensus amongst HR managers and line managers to determine if alignment affects the innovation performance of new product development (NPD) teams in the Chinese automotive industry. Specifically, the paper examines the effects of alignment on innovation performance through important mediating variables: climate for cooperation and climate for innovation. Drawing upon a sample of NPD units in 73 firms, we find that both innovative climate and cooperative climate are significantly higher when HR managers' and NPD managers' perceptions of HR practices are aligned rather than when they are misaligned. Under the condition of perceptual

workplace camaraderie.

Tensions as a Frame for Managing Work in Collaborative Workplaces: A Literature Review

Author: **Claudia Manca**; KTH Royal Institute of Technology, Dept of Industrial Economics and Management

Companies are increasingly implementing Collaborative Workplaces (CWs) to promote office collaboration and flexibility. Despite the rapid diffusion of CWs across industries and organizations, research findings suggest that their benefits often fail to materialize, due to the existence of tensions and contradictions that develop through the daily actions and interactions of workplace users. This literature review sheds some light on the development of tensions and contradictions in CWs by focusing on their implications for social relations at work. This review identifies the oppositional tensions that surface in CW research findings: flexibility vs. structure, fluidity vs. stability, and accessibility vs. privacy. In disclosing the underlying mechanisms, this study tied these tensions and their management to the autonomy-control paradox that emerges in CWs. It concludes by suggesting some approaches that are available to managers to deal with tensions and avoid inconsistencies.

Is it "You" or "Your Workplace" that Predicts Whether You Receive Training at Work?

Author: **Rafael Gomez**; U. of Toronto
Author: **Tingting Zhang**; Merrimack College

Using data from a unique 2016 cross-national survey of four English-speaking countries (US, UK, Australia, and Canada) where employees as well as employers were surveyed, we looked at the determinants of training within firms, including the presence of voice systems, both formal and perceived, in the workplace. The paper contrasts two classic theoretical formulations: the

misalignment, higher levels of innovative and cooperative climates are observed when NPD managers report higher implementation of HR practices than when HR managers report higher levels. Moreover, we find that innovative climate significantly mediates the relationship between HR practice perception alignment and NPD performance. A similar result was not found for cooperative climate. The findings further advance HR system strength theory and demonstrate the importance of managerial alignment in practice implementation.

HPWS and Entrepreneurial Performance: Revisiting "Revisiting Burns and Stalker"

Author: **Joonyoung Kim**; Cornell U.

Although a few published, firm-level, empirical studies have linked HR systems, or a set of systematic HR practices such as high-performance work systems (HPWS) to superior entrepreneurial performance, our understanding of this association is rather limited, and not many entrepreneurial firms are adopting such HR systems in reality. In this study, I use a longitudinal sample of private-sector South Korean entrepreneurial firms that are less than 10 years old to examine the impact of HPWS on entrepreneurial performance. Findings indicate significant relationships between HPWS and the sales revenue of entrepreneurial firms. These effects are moderated by environmental dynamism and organizational complexity, such that the positive effects of HPWS on entrepreneurial performance are stronger in dynamic and complex environments than in static and simple ones. Results contribute to ongoing efforts to understand how entrepreneurial firms might optimize their workforce and achieve superior performance. In particular, this investigation provides empirical insights into how formalized and routinized management practices such as HPWS may help entrepreneurial firms overcome the liability of newness that they must contend.

[view paper \(if available\)](#)

neoclassical/market approach predicts individual characteristics will have a larger determining effect on the allocation of training and the development of voice than institutions (at the firm or industry level); the traditional institutional economic/industrial relations approach favors the structural characteristics present at the industry and firm level, plus the nature of the job itself, as the major predictors of training. As we predicted, firm characteristics explained more variations in training and voice than individual characteristics. Interestingly, however, voice turned out to be the main determinant of on-the-job training.

Mapping the Science on Learning as it Relates to Work: A Cross- Disciplinary Bibliometric Synthesis

Author: **Maud Van Den Oetelaar**; U. of Amsterdam

Author: **Ramon Wenzel**; Curtin U.

Author: **Colin Idzert Sarkies Lee**; Amsterdam Business School, U. of Amsterdam

Learning as it relates to work is one of the most central and enduring topics in management research and practice. Few concepts have enjoyed as wide acceptance or provided as much leverage. The science on learning for, at and from work has expanded greatly and embraces a vast plurality of theories, units of analysis, and methodological and practical means. As a result, relevant research is embodied in a variety of academic disciplines and fragmented literatures. This paper thus identifies and visualizes the topic content and intellectual structure of work-related learning scholarship. We employ a supervised learning algorithm to derive a holistic corpus of 66,955 relevant articles, published between 1994 and 2019, and apply bibliometric techniques to derive a broader substantive picture. Our systematic synthesis distills 5 central themes about work-related learning: medical education, teaching and teacher education, organizational learning, employee learning, and professional education, counselling and mentoring. We also reveal trending topics in each cluster, using burst detection. We describe and review each topic cluster and illustrate examples of cross- fertilization for theory and research. Our discussion advances understanding about where we are today, and

Examining the Synergetic Impact of Ability- Motivation- Opportunity- Enhancing HPWPs

Author: **Sadia Nadeem**; National U. of Computer and Emerging Sciences, Islamabad, Pakistan
Author: **Hamnah Rahat**; National U. of Computer and Emerging Science, Islamabad, Pakistan

This study examines the impact of ability-enhancing, motivation- enhancing and opportunity-enhancing high-performance work practices (AMO HPWP) bundles and the interactions among them on employee outcomes and perceived organizational performance (POP), using signaling theory. It also examines the mediating role of employee outcomes in the relationship between AMO HPWP and POP, and whether employees' perceptions of trust and work autonomy moderate the relationship between AMO bundles and outcomes. Based on data from human resource managers of 222 organizations and a survey of 3,460 employee from within these organisations, the study presents a 2-1-2 multi-level moderated mediation model. Results indicate that the motivation-enhancing bundle had a negative association with job satisfaction, but a positive association with POP. Opportunity- enhancing bundle was positively associated with job satisfaction, and the interaction of opportunity with both ability and motivation had a positive impact on job satisfaction, thus highlighting the dominant positive role of this bundle. Both moderators – work autonomy and trust – had a positive relationship with job satisfaction and organisational commitment. However, both strengthened the positive or negative relationships between the AMO bundles, their interactions and the outcomes.

Drivers of Corporate Reporting on Sustainable Development Goals (WITHDRAWN)

Author: **Gaia Melloni**; Faculty of Business and Economics (HEC Lausanne), U. of Lausanne
Author: **Efthymia Symitsi**; Leeds U. Business School
Author: **Konstantinos Chalvatzis**; Norwich Business School, U. of East Anglia

This study explores country-level traits, firm and report variables as key drivers of Sustainable Development Goals (SDGs) disclosure practices. Our analysis is motivated by the more fundamental role of businesses in the new United Nations SDG's framework. Using advanced textual methods, we build a dataset of 4,200 reports from 2,524 firms in 59 countries for the period 2015-2017 to measure both SDGs awareness and disclosure quality. Drawing on institutional theory, we find that size, leverage, firm age, analyst coverage and the presence of CSR committees are important determinants for the early adoption of SDGs. Our empirical findings also unveil country-specific cultural effects on SDGs disclosure: masculinity, individualism and long term orientation are dominant characteristics in explaining variations of SDGs disclosure. Interestingly, when it comes to the 17 individual goals and cluster of goals according to "planet, people and prosperity", we find diversified cultural effects on firms SDG reporting strategy.

OB

Why and How to Replace Statistical Significance Tests with Better Methods to Evaluate Hypotheses (session 227)

This symposium will introduce and discuss how scholars can improve upon statistical significance tests, which continue to constrain the production of knowledge in management science. The extensive use of these tests in quantitative research has led to the accumulation of "statistically significant" results that are both too small to be practically relevant and so small that they are unlikely to replicate. A field that aspires to provide useful advice to managers needs to focus on practically important and robust effects. The proposed symposium introduces and discusses alternative approaches to overcome the limitations of statistical significance tests - such as, effect size measures, confidence intervals, graphs, meta-analyses, baseline modeling and the implications of these approaches for the accumulation of scientific knowledge. A final "Question and Answer" session will offer additional opportunities for further discussions, advice and recommendations.

Tax Havens and Small Island Economies: The Impact of the Panama Papers on the Economy of Panama

Author: **Chris Michael Jones**; Aston U.

Author: **Zheng Chris Cao**; Aston U.

Author: **Yama Temouri**; Khalifa U., Abu Dhabi, UAE

The Panama Papers leak has created widespread media attention on global tax evasion and money laundering. This paper is the first to investigate the impact of the Panama Papers on the aggregate economy of Panama, the epicentre of the scandal. Based on a cross-country data set for the time period 1999 to 2018, we adopt a recently developed method called the synthetic control method (SCM) to measure the changes of Panama's portfolio investment flows, foreign direct investment flows and tourism exports since the scandal. The results reveal three unique stories: 1) both inward and outward portfolio investment of Panama have experienced a considerable decline; 2) foreign direct investment in to and out of Panama are almost unaffected; and 3) tourism exports initially outperformed the level that Panama could have otherwise achieved but subsequently saw a slight drop two years after the scandal. We argue that the negative media coverage of the Panama Papers has raised concerns about the institutional quality of Panama and the perceived risk of investing in the country, though in the short run there may have been the "blessing in disguise" effect on inbound tourism. This study points to future research directions with regard to the role of the media and institutions in cross-border investment activities and the sustainability of tax havens as a model of economic development.

First Mile of the Global Value Chain: Bringing Gender into GVC Governance (WITHDRAWN)

Author: **Anthony Goerzen**; Queen's U.

Author: **Shengwen LI**; Smith School of Business, Queen's U.

Gender inequality has become a major challenge that has been reflected in the United Nations

Sustainable Development Goals. This issue is becoming increasingly important to multinational corporation (MNC) managers responsible for the performance of their global value chains (GVC) as well as government policymakers and non-governmental organizations (NGO). One of the key ways to address gender inequality has been through various types of interventions, including public regulations, private standards, and certifications. However, it remains a theoretical and empirical question as to the conditions under which various interventions alleviate gender inequality through the empowerment of women. To address this gap, we build on institutional and social identity theories to establish a theoretical framework that allows us to understand the specific attributes of interventions intended to improve women's empowerment. Our empirical study examines the effect of an intervention launched among artisanal mining

communities—in the furthest reaches of a GVC when local institutions are weak and social relationships are fragile—using a longitudinal dataset collected from 1,777 individuals in six communities within Democratic Republic of Congo during the period 2017-2018. We find that the specific intervention (i.e., village saving and loan association) has significantly positive impact on workplace-related women's empowerment (i.e., perception of equal payment and capabilities), but there is no significant impact on household-related women's empowerment (i.e., equal access to household decision-making and attitudes towards domestic violence). Our analysis offers novel insights into the outcomes of interventions intended to lead to social upgrading of women within the first mile of the GVC.

Breaking the Spell – A Cosmopolitan Perspective on Starbucks' Fair Trade Commitment in China

Author: Dirk C. Moosmayer; Kedge Business School

Their global, cosmopolitan flair is a driver of many firms' business success. However, global brands are increasingly expected to take on social responsibilities and to show that they act sustainably along their global supply chains. This comes with the challenge to coordinate aesthetic and moral characteristics effectively, particularly

when serving local markets with potentially different perceptions of aesthetic and moral qualities. We develop a cosmopolitan theoretical framework that distinguishes the aesthetic from the moral cosmopolitan dimensions of foreign branded products. We explore the tension between these two using the case of Starbucks in China, a context in which coffee consumption is primarily a sign of aesthetic cosmopolitanism. An experimental study with 198 Chinese Starbucks consumers shows that those who were provided with Starbucks' information about the brand's fair trade commitments showed reduced attitudes towards the product they had just purchased. The moral cosmopolitan commitment thus broke the spell of aesthetic cosmopolitan enjoyment. However, providing additional, more detailed third-party information about fair trade can mitigate this negative effect. This is particularly important when consumers are skeptical of fair trade per se. For aesthetic cosmopolitan brands in China, our results suggest working with trusted third parties in communicating moral cosmopolitan commitments.

Organizational Structure: Radical Change and Transformation (session 724)

Intimacy as Structure in Dissonant Change

Author: **Mikaela Krohn**; Hanken School of Economics

Author: **Mikko Jalmari Vesa**; Aalto U.

Author: **Janne Tienari**; Hanken School of Economics

In this paper, we explore a retail company struggling with a radical change in its business environment known as the retail apocalypse. In order to survive, the company has shifted towards management practices used for modernizing and leaning operations. We study the sociomateriality and affordances of these practices and argue that they increase intimacy in the company in different ways

collective identities and develop coherent organizational identity narratives through label work. Our findings reveal that managers responded to the social contestation of the field by using the label as a malleable moral marker. The process of embracing, fixing, un-fixing, and re-fixing the label's principles helped managers to, on the one hand, provide coherence to their identity narrative while, on the other hand, working on the consolidation of their preferred principles of the field label. By exploring the identity formation through label work in socially contested fields, we offer a new perspective on the importance of label work for identity formation and its malleability potential.

Navigating Hybrid Identities: Towards a Theory of Discursive Action by Hybrid Organization Members

Author: **Ashley Hockensmith**; U. of Massachusetts Amherst

Author: **Matthew C. Lyle**; U. of Colorado, Colorado Springs

Hybrid organizations are organizations characterized by competing institutional logics from which a hybrid organizational identity is derived. In this paper, we draw on the theory of discourse as text-agent to develop a dynamic, processual theory of how organization members differentially experience hybridity in their day-to-day exposure to the competing institutional logics that underscore a hybrid organizational identity. We specifically attend to how differences in two, individual-level constructs – paradoxical schemas and adaptive posturing – influence members' roles, identification, and enactment of a hybrid organizational identity.

Being, Doing, Feeling: The Constitutive Role of Emotions in Professional Identity

Author: **Micah Rajunov**; Boston U. Questrom School of Business

Author: **Miyoung Chang**; Boston U. Questrom School of Business

Author: **Stine Grodal**; Boston U.

increase intimacy in the company in different ways. We identify the types of intimacy that emerge from the practices as proximal, symbolic, emotional, and virtual, and that they emerge in top-down, horizontal, new media, and empowering practices. These findings help us understand in three ways the consequences of implementing hierarchy-discarding management practices under conditions of dissonant change. First, we show these practices create intimacy in the organization through their affordances. Second, we discuss the implications of increasing intimacy for organizing, as it requires a commitment from the management side but no similar commitment from the employees. Third, we highlight the consequences of intimacy for organizations struggling with fast and uncertain changes in the business environment: a lack of clear leadership, strong silos between teams and departments, and a continuous need to update the company's internal new media in order to demonstrate commitment.

Interdependencies, Inertia, and the Collapse of Formal and Informal Structure

Author: **Deborah Anderson**; U. of Oxford

Drawing on an inductive, ethnographic field study of a multinational accounting firm, this paper aims to bridge theories of formal and informal organization by analyzing how a mature, complex firm implemented transformative change across the vertical hierarchy, disrupting interdependent activities. Specifically, I observe a shift in audit practice from technology-driven to people-driven decision-making. The change was facilitated in part by the implementation of new rules, procedures, and tools. In doing so, I find that (a) junior staff members, while less embedded than partners and senior managers, were a locus of inertia and (b) a novel, albeit temporary collapse of structure through the de-delegation of work as new templates form and routines emerge. While prior work has explored organizational change, this paper extends theory by considering change as it permeates across the whole vertical hierarchy and disrupts interdependent activities.

[view paper \(if available\)](#)

Scholars have shown that professionals construct their identity around specialized knowledge. When this knowledge is replaced, changed, or threatened by an outside group, their identity can be challenged. However, how professionals react when they experience a sudden void of specialized knowledge—that is, when there is no specialized knowledge available to help them carry out their professional duties—remains unexplored. We address this gap by asking how professionals reconstruct their identity in the absence of specialized knowledge. We carried out an inductive study by drawing on the oral histories of 80 physicians at the front lines of the HIV/AIDS epidemic in the U.S. As the epidemic progressed, physicians questioned and later reframed the role of both specialized knowledge and emotions in their professional work. Most notably, we found that emotions were constitutive of the professionals' identity, in that physicians integrated emotions into the very definition of what it meant to be a doctor. Professionals identify themselves by “who they are” and “what they do;” our study shows that “how they feel” is also integral to professional identity.

What's in a Hybrid? Framing, Meaning, and Symbols in Hybrid Organizing

Author: **Alice M. Barbosa**; IESE Business School

As traditional boundaries between sectors are gradually blurred (Battilana and Lee, 2014), several studies have evidenced the ubiquity of multiple sets of logics in fields or industries (Greenwood et al. 2011; Lee and Lounsbury 2015). Recently, scholarly interest has paid close attention to organizations subject to institutional complexity, multiple sets of prescriptions from conflicting logics (Greenwood et al, 2011). Hybrid organizations combine multiple institutional logics, that refer to the patterned goals and means considered legitimate within a sector of activity (Lee and Battilana, 2013). Although great progress has been made towards understanding how these organizations are able to maintain their 'hybridity', we still have insufficient knowledge on what sorts of rhetoric and symbolism are effective in carrying out multiple demands and appealing to

Building Shared Purpose without Managers: How Can Holacracy Work?

Author: **Eleunthia Wong Ellinger**; La Salle, U. Ramon Llull

Author: **Robert Wayne Gregory**; U. of Virginia

Author: **Juan Almandoz**; IESE Business School

In a three-year in-depth field study, we examine how a mid-size bureaucratic organization can function effectively without formal managers. We follow how managers in a U.S. stage government agency ceded their traditional authority and titles to implement a radical self-management organizational system called Holacracy in a bid to become a more attractive workplace. Instead of the chaos that might be expected from giving employees the power to define their own work and roles at a larger organization, an orderly bureaucracy emerged from new post-hierarchical foundations. By making sense of how this happened, we develop theory about the processes enabling Holacracy and other similar models of distributed management. We highlight the role of normalizing disagreement as a key component of the enabling process.

Temporal Anchoring as a Tool for Initial Organizational Structuring

Author: **David K. Reetz**; Technical U. of Munich

I inductively examine organizational search for initially indeterminate outcomes (i.e., based on novel ideas). Here, how actors search is central to establish organizational structures—instead of being determined by them. I build theory from longitudinal case data that I collected by closely following the emergence of 35 new entrepreneurial ventures over a core period of 2.5 years. I find two contrasting modes of how founders search and development of distinct organizational structures. Both modes originate from how founders mentally anchor to either, future or the past reference points: when anchoring to future reference points, founders searching backwardly to identify related strategies, and create less hierarchical

multiple constituents (Kraatz and Block, 2008). How do organizations symbolically manage their hybridity and why? I address the research question proposed by leveraging a 22-month ethnographic incursion in a hybrid organization acting as a social impact accelerator and investor.

SAP Discussion Paper Session (session 726)

Strategy-as-Practice Activities Through the Lens of Microfoundations of Dynamic Capabilities

Author: **Fernando Eduardo Cardoso**; U. do Vale do Itajaí (UNIVALI)
Author: **Carlos Ricardo Rossetto**; U. do Vale do Itajaí (UNIVALI)
Author: **Joaquim Ramos Silva**; ISEG (Lisbon School of Economics & Management), U. de Lisboa
Author: **Rosalia Aldraci B. Lavarda**; UFSC

The main purpose of this study is to analyze the daily activities of organizational actors, from the perspective of strategy-as-practice, through the lens of microfoundations of dynamic capabilities. Unlike some other approaches, such as strategy-as-practice that investigates social practice at the micro level, microfoundations encompasses organizational micro level – practices, routines, daily activities – and also the macro context, searching in the micro level answers to solve problems and conflicts in the macro organizational level. The study of strategy-as-practice via microfoundations of dynamic capabilities indicates a promising path to identify

particularly communities, governments, and NGOs, becomes more strategic for the company. The results of the study provide evidence that firms use their alliance portfolios as a space for negotiation between different frames, and these portfolios allow firms the cognitive flexibility to address multiple sustainability issues and bottom lines simultaneously. Therefore, the study contributes to the literature on corporate sustainability by developing a richer account of the emergence of sustainable alliance portfolios.

Corporate Environmental Sustainability: Motivations, Contexts, and Magnitude

Author: **Cubie Lau**; U. College Dublin

Author: **Donna Marshall**; U. College Dublin

With massive environmental problems across China, understanding what drives companies to 'go green' in this context is of fundamental importance. Literature on environmental management, strategy

and managerial cognition show that governments, internal and external company stakeholders, ethical leaders, culture and economic incentives are key drivers of the process of "going green." However, given different contexts and value systems, a one-or-all concept of environmental sustainability responses is not realistic. This study takes an analytical induction approach using 33 case studies of companies in China to explore the links between different motivations and the kind of corporate environmental activities. We find four interesting clusters of environmental sustainability: compliance, competitiveness, ecological citizenship and ecological changer (4C) demonstrating different configurations of stakeholder orientation, organizational capabilities and green practices adoption.

Strategic Planning as a Conflict-Mediating Routine: A Multilevel Study

Author: **Thomaz Wood**; FGV-EAESP

Author: **Marco Augusto Boldrim Pasturino**; EAESP - FGV

Author: **Miguel Caldas**; U. of Texas at Tyler

This paper aims to contribute to strategy as practice studies by showing how strategic planning may function as a conflict-mediating routine. We conducted a five-year case study in a large financial services firm jointly owned by a Brazilian state bank and a European multinational financial company. These companies have different business objectives: the former prioritizes short-term financial results, while the latter prioritizes long-term consolidation of the business. We present the case in the form of a narrative of findings, which shows how we pursue and uncover different levels of organizational reality and, more specifically, the different roles played by strategic planning. The paper makes three contributions: first, to multilevel empirical studies of

The purpose of this study is to explore the discourse regarding corporate social responsibility adopted by a single Chinese-invested firm in the Australian mining industry. The focus is to examine the content and rhetoric of this firm's sustainability reporting, and to understand how the reporting responds to various isomorphic pressures and contributes to the firm's legitimacy. This research adopts a qualitative paradigm, and employs a single case study approach to analyze the firm's sustainability reports. Five sustainability reports over the years 2014-2018 are analyzed, using content and discourse analysis. The Global Reporting Initiative (GRI) guidelines are used to analyse the content of the reports, while rhetoric of logos, ethos, and pathos is drawn upon to study the rhetoric of the reported content. By extending prior research based on Suchman (1995) legitimacy perspectives, findings reveal that the sustainability reports issued by this Chinese-invested company are a corporate strategy that allows it to respond to mimetic, cognitive and normative pressures in the host country, and maintain three types of legitimacy: pragmatic, cognitive, and moral. An implication is that the

changes in reporting patterns and discourses are part of corporate strategies, which enhance the positive role of business ideologies at the local level. This study offers new insights into the use of rhetoric, and how it varies across different offshore sites. This contributes to an understanding a Chinese-invested mining company's sustainability reporting practices in Australia.

The Business Model of "Enough"

Author: **Maren Kropfeld**; Carl von Ossietzky U. Oldenburg

Author: **André Reichel**; ISM International School of Management

As green consumption and eco-modernism so far have failed to significantly reduce the ecological impact of consumption, new approaches are needed to meet sustainability criteria. Next to technology-focused efficiency (relative reduction of energy and material use) and consistency (cradle-to-cradle design) approaches, sufficiency is a specific kind of behavior-based sustainability strategy that

strategy as practice, dealing with macrostructures, intermediate structures and micropractices; second, to studies of routines as praxis capable of supporting the solution of conflicts that arise from the presence of different business logics; and third, to business practice, as it provides guidance on considering additional roles taken by strategic planning.

The Effects of Strategic Openness on Short- Versus Long-term Firm Performance

Author: **Chao Wang**; Renmin U. of China

Recent work points out that strategic openness is an important instrument of impression management to shape legitimacy while also with significant competitive pressure for losing control of resources. How are these effects of strategic openness reflected in firm performance? Answers to this question, we pointed a comprehensive framework examining the dynamic and contingent effects of strategic openness on firm performance. We show how nearly identical mechanisms driving the openness-performance relationship can yield both inverted U- and U-shaped effects due to differences in relative strength between legitimacy and competition. Consistent with our theoretical framework, results combining a text analysis of 29120 annual reports with the financial data from 3366 listed companies in China show an inverted U-shaped effect in the short run, flipping to U-shaped as the time window gets longer, and these relationships are moderated by firms' strategy deviation and securities reports attention. This study offers new insights into optimal strategic open boundary conditions, supporting a more general yet more precise theory of open paradox.

Transferring Knowledge Within and Among Projects: A Public Sector Project-Based Organization

Author: **Anna Mahura**; FSA ULaval (Laval U.)

Author: **Gustavo Birollo**; FSA ULaval (Laval U.)

addresses how to make do with less. In this contribution, we explore a novel business model framework in order to address sufficiency-based consumer practices. Applying social practice theory reveals levers in terms of materials, competences, and meanings to support sufficiency-based lifestyles. Key challenges are including consumers in the value creation process and adapting value capture processes accordingly. By reconstructing the classical business model – value proposition, creation, and capture – from such a social practice theory perspective, this contribution shows that a sufficiency orientation critically changes our understanding of business models. In developing sufficiency-based alternatives to consumer practices, businesses become extensions of their customers' practices. Value co-creation means not only that consumers increasingly act as prosumers but that businesses participate in consumer practices. Such an extended value creation implies an increasing inclusion of environmental and societal aspects beyond the boundaries of a business and may hint at a new understanding of a firm's boundaries as a fluid network of collaborative practices.

Stakeholder Pressure for the Adoption of Sustainable Supply Chain Practices

Author: **Natalia Vidal**; U. of New Mexico

Author: **Wellington Spetic**; U. of New Mexico

Author: **Simon Croom**; U. of San Diego

Author: **Donna Marshall**; U. College Dublin

Author: **Lucy McCarthy**; Queens U. Belfast

While the drivers for the adoption of sustainable supply chain management practices have been widely studied, most studies focus on the isolated effect of individual drivers. In this study, we examine the relationship between stakeholder pressure and the adoption of social and environmental sustainability supply chain practices given the simultaneous conditional effects of both entrepreneurial orientation and sustainability orientation. A survey of U.S. firms shows that both entrepreneurial orientation and sustainability orientation simultaneously function as moderators of the effect of stakeholder pressure on the

Research on project-based organizations (PBOs) addresses the numerous practices that may contribute to the dissemination of knowledge between individuals, projects and the organization. Notwithstanding, project team members have difficulty applying these practices in a way that effectively promotes the knowledge transfer. Through an inductive approach and the exploration of a division managed as a PBO in a provincial government agency in Canada, this article explores the organizational practices that may hinder or boost the knowledge transfer within and among projects. Data was collected via the observation of internal follow-up meetings, eleven semi-structured interviews with project managers, and the analysis of internal documents. We found that even if organizational practices that promote the use of formal practices of knowledge transfer do exist, there are disabling organizational practices that prevent the use of these formal practices pushing project team members to the use of more informal practices of knowledge transfer. Even if we found that informal practices could drive the knowledge transfer inside the PBO, we argue that organizations should achieve a delicate equilibrium between formal and informal knowledge transfer practices for the success of the organization.

adoption of social and environmental sustainability supply chain practices. That is, as stakeholder pressure increases, adoption will be higher for firms with higher entrepreneurial orientation. However, as sustainability orientation increases, adoption of practices will be higher, but the effect of the stakeholder pressure-entrepreneurial orientation interaction diminishes. The main theoretical contribution of this study lies in showing the concurrent effect of two different organizational level drivers on the adoption of social and environmental sustainability supply chain practices. Entrepreneurial orientation will only get firms so far in the adoption of sustainable supply chain practices. Once a strong sustainability orientation takes effect, higher practice adoption ensues independently of stakeholder pressure and entrepreneurial orientation. Therefore, this study indicates that efforts in developing a strong sustainability orientation are more likely to better prepare firms for the adoption of sustainable supply chain management practices.

Alliance Performance and Knowledge Sharing (session 728)

A Network Embeddedness Model of Interpartner Competition and Alliance Failure

Author: **Han Jiang**; Tulane U.

Author: **Zhao Zheng**; Independent Consultant and Researcher

This study highlights a theoretical dilemma about the paradoxical implications of interpartner competition for alliance failure. That is, indicating both the potential value of an alliance and the conflict of interests between partners, interpartner competition may both encourage the partners to stabilize their alliance and jeopardize this alliance. We draw on the network embeddedness

organization. we further propose that this positive relationship between organizational embeddedness and UPB, mediated through status perceptions, is stronger for employees working under managers who display low levels of ethical leadership. The results based on data gathered in a two-wave survey from 224 working adults lend support for the proposed relationships. These findings remained significant even after controlling for affective commitment. The study advances our understanding of what contributes to motivating employees to engage in UPB and the boundary conditions under which UPB can be increased or decreased.

Corporate Corruption in Megaprojects: The Case of an Institutionalization of a Construction Cartel

Author: **Armando Castro**; UCL

Although managers might deal with or be aware of corrupt practices in their professional settings, how corruption is maintained is still an under-researched in management. In this paper, I analyze the corrupt side of management enacted by a group of construction companies' suppliers of the oil and gas company Petrobras involved in a portfolio of megaprojects from 2002 to 2014 in Brazil. I use a non-traditional dataset, verifiable court decisions, and plea agreements, and analyze the set of rules created by a corrupt cartel. I find that for a cartel to enact corruption in a portfolio of megaprojects for several years, a set of institutionalized rules of engagement must exist among once "rival" firms. However, these governance practices are based on trust since contractual agreements can't be drafted or enforced. Then, I develop a model that explains the maintenance of long-term corrupt relationships. Finally, I contribute to the theory development of institutional work by explaining the institutionalization of corruption and identifying how institutional work is used for the maintenance of corrupt cartels practices.

view paper (if available)

Is Corruption Imprinted? A Study on Preconditions

perspective to resolve this dilemma. By highlighting the relational embeddedness implications of high interpartner competition, we find that interpartner competition has a curvilinear (inverted U-shaped) effect on alliance failure. This effect of interpartner competition will be further contingent upon the positional, structural and social embeddedness forces in the industrial network. Evidence from equity-based alliances between Chinese public firms largely supports our predictions.

Managing the Dilemma of Knowledge Sharing in Strategic Alliances

Author: **Wenyu GUO**; Xi'an Jiaotong U.

Author: **Jianjun Yang**; Xi'an Jiaotong U.

Author: **Dan Li**; Xi'an Polytechnic U., School of Management

Despite the widespread recognition of the need to apply knowledge sharing and knowledge protection simultaneously in strategic alliances, there is a scarcity of empirical research on the issue. This paper examines the effect of applying knowledge sharing and knowledge protection simultaneously (the ambidexterity dimension) on new product development. The paper explores the impacts of two fundamental control mechanisms (i.e., trust and formal contracts) on the ambidexterity dimension in strategic alliances. A survey of 302 Chinese firms indicates that ambidexterity of knowledge sharing and knowledge protection enhances the new product development. Moreover, trust has an inverted U-shaped relationship with the ambidexterity of knowledge sharing and knowledge protection, formal contracts hurt the ambidexterity dimension, and the interaction of two controls also adversely affect the ambidexterity dimension, thus highlighting the positive role of moderate social control in maintaining the ambidexterity dimension.

IUR Alliance Portfolio Concentration and Firm Innovation Performance in Emerging Economies

Author: **Shuman Zhang**; School of Management,

of Corruption in Post-Communist Countries

Author: **Karin Knorr**; Chair of Organizational Behavior, U. of Paderborn

Author: **Thorsten Auer**; Chair of Organizational Behavior, U. of Paderborn

Author: **Kirsten Thommes**; Chair of Organizational Behavior, U. of Paderborn

Corruption in Central and Eastern European countries is still prevalent, but varies between countries. One possible explanation for this variation is imprinting. Imprinting theory suggests that organizational structures, reflecting the organizational environment at the time of founding, are persistent and may become even more sclerotic due to second-hand imprinting. Only severe shocks may change imprinted features. In our paper, we first analyze whether environmental founding conditions affect imprinted attitudes toward and perceptions of corruption in organizations. Moreover, we investigate whether crises (shock-imprinting) and intergenerational exchange (second-hand imprinting) are decisive aspects on the initial effect of imprinting. Using ordinal probit regression models, we show that the time span during which an organization is exposed to an institutional environment has an impact on the present strength of imprinted attitudes toward and perceptions of corruption. Additionally, our investigation on sensitive shocks reveal an adaptation of attitudes and perceptions to new institutional norms comparing organizations founded in another institutional environment. Further, our conducted

regression-discontinuity designs suggest that the strength of an immediate change in upheaval times depends on the unexpectedness of the event. This way, we enhance existing literature on imprinting by looking at the topic of corruption in Central and Eastern European countries.

Towards Agent-Based Corporate Ethics Programs

Author: **Miguel Angel Alzola**; Fordham U.

Corporate ethics programs can be designed with different orientations. The literature distinguishes rules-based (or compliance-based) and values-based (or integrity-based) programs. Compliance-based

Xi'an Jiaotong U.

Author: **Changhong Yuan**; School of Management, Xi'an Jiaotong U.

Collaborations between a focal firm and multiple universities or research institutes from diverse geographic regions have been a pervasive phenomenon in emerging economies. Drawing on the unbalanced panel data of 186 Chinese manufacturing firms listed on the main board, we examine whether and under what conditions industry-university-research (IUR) alliance portfolio concentration, the geographical concentration of IUR alliance partners, influence a focal firm's innovation performance in emerging economies. The results suggest that IUR alliance portfolio concentration has a negative effect on firm innovation performance. Moreover, the negative effect of IUR alliance portfolio concentration on firm innovation performance is stronger for state-owned enterprises (SOEs) than that for non-SOEs. Besides, results also reveal that the negative effect of IUR alliance portfolio concentration on firm innovation performance is stronger for politically connected firms than that for non-politically connected firms. We discuss the implications of our findings for existing research on alliance portfolios and university-industry collaborations.

Value Creation, Nonprofits, and Scale (session 729)

[A Demand-Side Perspective on Value Creation for the BoP: A Study of Consumption and Well-Being](#)

Author: **Ted London**; U. of Michigan

Author: **Lisa Mali Jones Christensen**; Brigham Young U.

Author: **Tyson Brighton Mackey**; Clarkson U.

Author: **Heather Esper**; The William Davidson Institute at the U. of Michigan

Author: **Andy Grogan-Kaylor**; School of Social Work- U. of Michigan

We use a demand-side logic to analyze firm engagements with Base of the Pyramid (BoP) consumers. We ask: what kind of value do firms create with such engagements? How do BoP consumers experience this value? We use longitudinal surveys from consumers in rural India to explore economic and non-economic well-being returns from purchasing corrective eyeglasses. We discover gains across multiple dimensions of well-being (economic, capability, relationship)—even when income benefits do not offset acquisition costs. Second, we test for the Matthew Effect. Surprisingly, we find the more resourced do not always fare better—demonstrating the importance of attending to BoP heterogeneity. Findings unpack how firms capture value with BoP engagements, by illuminating how such engagements create value and how value creation varies by segment.

Dynamics of Innovation (session 731)

[The Rise of CFD: Analysing System Builders' Role in the Creation of Technological Innovation Systems](#)

Author: **Abby Ghobadian**; U. of Reading

Author: **Irene Talavera**; Henley Business School, U. of Reading

The starting juncture of technological innovation system (TIS), an extension of the system of innovation (SI) lens, is where a system of interacting actors is established. TIS is arguably one of the most commonly used lenses in the study of development and diffusion of breakthrough innovation (BTI). The current scholarship has ignored the vital first step namely the establishment of the system starting from a juncture where a functioning TIS is in existence. The literature also alludes to the important role of system builder without unfolding the concept fully. In this paper, using a comparative case study on the emergence of Computational Fluid Dynamics (CFD), we examine system builder's role, attributes and actions in pursuit of establishing a TIS for a BTI. We also examine how the proximal formal and informal institution affect system builders' capacity to establish a TIS. As a result of the analysis, the paper extends knowledge by developing a descriptive theory on the orchestrated establishment of TIS.

Value for Whom? Value Appropriation by Stakeholders Through Contractual Governance Mechanisms

Author: **Emily Salmon**; U. of Victoria (PhD Student)

A firm's shareholders are not the only stakeholders to appropriate value from a firm's actions; however, the mechanisms through which non-equity stakeholders appropriate value remain unexplored within the strategic management literature. In this paper, I examine how a specific stakeholder governance mechanism – community benefit agreements (CBAs) can either further create or destroy value for local stakeholders – specifically indigenous communities. I conduct this study using a matched pair sample of 68 indigenous communities, and examine the factors that lead to value appropriation in four key areas, specifically in housing, employment, income, and education. The study shows that communities that possess contractual agreements are able to better appropriate value in both employment and education; however, contrary to prior theorizing, they face value destruction in housing. These findings illustrate that value does not uniformly accrue along economic and social dimensions, and that while contractual mechanisms facilitate the appropriation of value along certain dimensions, they also destroy value along other dimensions. This study contributes to both the stakeholder theory and strategic management literature through the operationalization and exploration of stakeholder value appropriation mechanisms.

Exploring Sustainability-Oriented Innovation Capabilities in the Indonesian Manufacturing Firms

Author: **Budi Harsanto**; U. of Liverpool Management School

Author: **Niraj Kumar**; U. of Liverpool Management School

Author: **Yuanzhu Zhan**; U. of Liverpool Management School

Author: **Roula Michaelides**; Manchester Metropolitan U.

Although the studies on sustainability-oriented innovation (SOI) have grown significantly in the last decades, to date research on specific SOI capabilities required by the firm to be a more sustainable

innovator is still under-explored. Capability-based perspective is revisited to become a foundation for this empirical study. Specifically, capability theories linked to innovation and sustainability fields involved, including innovation management capabilities (IMC), natural resource-based view (NRBV), and social RBV (SRBV) with dynamic capabilities as overarching theory. As the nature of this research is exploratory, a qualitative approach is employed uses semi-structured interviews to 33 owner and manager of manufacturing firms in Indonesia, supplemented by site visit and archival documentation for triangulation. The findings suggested that around half of the firms studied adopting SOI with an operational optimisation approach. It is found from the data that transition exists between SOI approaches. Firms operating at a higher level of SOI approach have specific dynamics capabilities above baseline ordinary SOI capabilities (production, marketing, environmental and social) that help them become a more sustainable innovator. These SOI dynamics capabilities include capture SOI idea, proactivity to SOI opportunity, mechanism to implement SOI, stakeholder management for SOI, SOI governance, and SOI continual learning.

Winner-Take-All Dynamics Revisited: Markets Can Redress Lock-In to Inferior Technologies

influential in helping digital platforms like Google and Facebook monetize their popular free services. However, this theory can apply to any firm that serves multiple sets of customers who are inter-related in a particular way, namely at least one type of customer prefers that there be greater numbers of the other type. Thus, in its most abstract form, MSP theory can be applied to nonprofit organizations, a setting of growing interest among management scholars. Moreover, this theory can offer nonprofit managers guidance on certain questions that for-profit managers typically do not face, such as whether to charge money for nonprofit services. We therefore focus on how MSP theory can provide practical guidance on nonprofit pricing, highlighting three findings. First, donors and recipients of nonprofit services can be regarded as two sides of an MSP. Second, the price of the nonprofit's services will be discounted because of donor-side demand. Third, nonprofit services might be discounted to zero, resulting in free services. This paper thus extends the domain of MSPs by applying it to nonprofits, and also contributes to the growing literature on nonprofit management and strategy.

Scaling Hybrid Organizations Along Twin Dimensions: The Impact of Product Diversification Strategy

Author: **Nachiket Bhawe**; U. of North Carolina Pembroke

Author: **Srivardhini K. Jha**; Indian Institute of Management, Bangalore

Scale has remained elusive for hybrid organizations. Recently, product diversification has been proposed as a strategy to scale up hybrid organizations while preserving their hybridity. We build on this work to investigate if and how product diversification strategy impacts the social and financial dimensions of scale, in an environment rife with institutional voids. Drawing on literature on product diversification and institutional voids, and using a longitudinal database of Microfinance institutions (MFI), we theorize and find that product diversification strategy leads to greater scaling both in terms of financial profits and social impact. Upon unpacking the products into transactional and

Author: **Sanghyun Park**; INSEAD

Author: **Jeho Lee**; Seoul National U.

The literature on network effects has a longstanding controversy regarding the possibility that markets may lock into an inferior technology. This controversy and confusion were triggered by Arthur's (1989) model of winner-take-all dynamics driven by positive feedback (success begets more success) in markets with competition between incompatible technologies. In reality, however, even when positive feedback is rather apparent, incompatible technologies sometimes persist with no clear-cut winner-take-all outcome. We believe the confusion stems from an implicit assumption in Arthur's model — the influence of adopters persists indefinitely. We shed new light on this controversy by examining the implications of influence that

decays over time. Our model exhibits what physicists call a "critical slowing down." In the vicinity of a critical influence decay level, our model displays a protracted period of technology competition even in the presence of positive feedback. This protracted process provides the opportunity for the market to redress premature lock-in to an inferior technology.

Broaden our Sight Beyond Producer and User Innovation - Product Innovation Initiated by the Helper

Author: **Mu-Yen Hsu**; National Chengchi U.

ABSTRACT Stemming from Schumpeter (1934), most literature of innovation management implicitly assumes producer as innovator of product. It is until Von Hippel (1976) that user was identified as another source of innovations. However, from an innovation case of Assistive Technology (AT) industry, we found that helper, neither producer nor user, of the AT product might be the innovator. Helpers are the service providers, who help their clients to use the product, and may initiate new product innovations based on their experiences of helping users. Therefore, besides producer innovation and user innovation, we have broadened our sight and identify a new kind of innovation— helper innovation. During the process of providing services, these helpers can reach many users who

developmental products, we find that transactional products positively impact financial profits on the back of strategic resource relatedness, while developmental products have a positive effect on social impact by plugging voids in the ecosystem but have no impact on financial growth. The fit (or lack of it) between hybrids' business orientation and the type of product diversification enhances (undermines) financial profits, but surprisingly, fit has no effect on social impact. These findings imply that an exclusive focus on either type of diversification can compromise hybridity, highlighting the need for a balanced product strategy in hybrid organizations. The substantial investments required to bridge voids can offset synergies that stem from strategic resource relatedness and prevent hybrid organizations from enhancing financial profits and social impact.

DISCUSSION PAPER SESSION

ASYNCHRONOUS

use various kinds of products with similar functions. Therefore, they have deeper understanding of the unmet demands of users than the producer, and have wider knowledge of the market and alternative technologies of products than the user. These two advantages make the helper innovation unique and important source of product innovations for improving lives. According to the complementarity rates between the newly innovated product, the helper's service and the original product, we differentiate helper innovation into nine types. Then, we propose 13 propositions for these types of helper innovations and discuss their managerial implications. It is important to expand the innovation typology from producer and user innovation to include helper innovation. For firms need to watch over their potential competitors beyond their supply chain in today's transient age,

and firms also need to identify the key players in their open innovation partners, especially the platform builders (e.g. Google) -- the key helpers for all firms in the internet era.

Innovation in the “Forgotten Businesses”: For Adequate Assumptions

Author: Glessia Silva; U. Federal de Sergipe
Author: Luiz Carlos Di Serio; Fundacao Getulio Vargas

Even though the small enterprises constitute the majority of businesses in our society, they are largely underresearched in the innovation literature. In order to make our case for more adequate and inclusive approaches on innovation and small businesses, we discuss the field’s concepts, typologies, units of analysis and the general basic assumptions pertaining to the operationalization of innovation research in small businesses. A conceptual approach for the operationalization of the innovation research in small businesses is proposed and discussed. Our model consists of a five-step logical approach to researching innovation in small businesses, starting from the researcher’s own perception of the topic as something important, and then evolving to discussing how one has to try and see the small business as an object of study. We found that most of the innovation literature has ignored the small – “forgotten” – businesses, so that its core concepts and basic assumptions should be reviewed in an inclusive approach that considers the small businesses and their socioeconomic relevance. The small businesses possess a whole set of characteristics that maybe cannot be properly covered by the classic and

following the lead of the community’s influencers increased the sales by 300% in a year redefining the meaning of vinyl records and generating word-of-mouth and online and offline mentions about vinyl records. This caused the increase in demand for vinyl records which are considered to have an alternative value rather than functionality.

How to Facilitate Different Types of Innovation Activities in Organizations?

Author: **Burcu Kor**; Hogeschool van Amsterdam

In dynamic and competitive environment, the importance of innovation is accepted as a necessary ingredients for firms to create value and sustain competitive advantage. However, very little empirical research has specifically addressed to what extent different kinds of innovation rely on specific knowledge management processes and entrepreneurial orientation. The objective of this study is to identify the different types of innovation that are predominant in companies, and how to facilitate different types of innovation activities. A questionnaire survey was conducted and 169 valid replies were received. This research analyzes the relationship among knowledge management processes, as well as entrepreneurial orientation and different types of innovation. The results from an empirical survey study reveal that organizations facilitate different types of innovation (i.e., administrative versus technical innovation, and product versus process innovation) through entrepreneurial orientation and knowledge management process (i.e., knowledge acquisition, knowledge sharing and knowledge application). The results also show that the partial mediating role of knowledge management processes in the relationship between entrepreneurial orientation and different types of innovation.

SMEs' Survival Apprehension from the University Students' Perspectives in China

Author: **Tariq H. Malik**; Liaoning U.

China registered more than 34 million SMEs (small and medium enterprises) in 2018; unfortunately, a great proportion of them (50%) vanishes in 3 years. We explored perceived causes and contours of SMEs insolvency from the Chinese students' perspectives. Using multiple institutional logic, we aimed to identify internal and external primers of students' judgement about Chinese SMEs insolvency. After interviewing 680 participants over several years, we coded the textual data in three steps: axial coding of the meaning-making unit, thematic coding to integrate sub-unities into 29 categories, and theoretical coding in the extant literature on the SMEs' insolvency. Our findings divide the responses into two streams: internal versus external factors, and technical versus normative logic. Our study contributes to the literature in three ways. First, we identified primers of attention to the insolvency of SMEs in China. Second, we introduced sixteen potential variables for survey research. Third, the perceived causes of insolvency of SMEs in China highlights the students' apprehension about entrepreneurship and career development in SMEs. We discuss implications for research and practice in the broader world.

Students' Entrepreneurial Intention: An Empirical Analysis in Vietnam

Author: **Vu Thi Le Thuy**; U. of Calabria

Author: **Mariacarmela Passarelli**; Management Department

Author: **Alfio Cariola**; U. of Calabria

Entrepreneurship plays an important role in the economy of each country, it helps create jobs, enhance innovation in national, regional and local economies. Therefore, the demand for entrepreneurship graduates is increasing. In Vietnam, the wave of the startup is always encouraged and growing, expanding. The objective of this paper is to identify the factors that influence student entrepreneurial intentions in Vietnam. The research data was collected from 181 students in Vietnam. By using SPSS software version 22.0 the

ecosystems is critical for social and economic development and has been a major trend in recent research. The Knowledge Spillover Theory of Entrepreneurship (KSTE) has enabled new definitions and approaches to emerge for assessing the effects of entrepreneurial ecosystems on start-ups, exploring their impact on e.g., productivity, income, patent creation, and technology development. As a result, this paper seeks to extend current understanding by using individual entrepreneurs as the level of analysis, expanding current regional investigations. We present a review of high-tech startups that have attended incubator and accelerator programs in London, UK. Data were collected from 32 Chief Executive Officers (CEOs) and new venture founders. The study finds evidence that contradicts existing viewpoints that the successful capture of knowledge spillovers relies on close geographical proximity to other actors in value chains. With the use of Information and Communication Technologies (ICT), start-ups can extend their access beyond central locations and effectively utilize remote teams. Thus, we present a conceptual model that represents the relationship between entrepreneurial ecosystems and knowledge spillover absorption when ICT implementation occurs.

The Role of Information Technology in Fintech Innovation: Insights from the New York City Ecosystem

Author: **Stanislav Mamonov**; Montclair State U.

Fintech is an active area of innovation and a rapidly growing sector of the economy, yet relatively little is known about how information technology contributes to innovation in fintech. We draw on the business model canvas framework and we examine the role of information technology in the business models of leading fintech startups in the New York City fintech ecosystem. We find that information technology plays a key role across nearly all components of the business models, orchestrating resources and processes to efficiently deliver personalized financial services to customers. Focusing on the IT-enabled value propositions across the fintech startups in our sample, we find

Vietnam. By using SPSS software version 22.0, the author find that there are five factors effect on entrepreneurial intention of students in Vietnam including: Personal Attitudes, Subjective Norm, Perceived Behavioral Control, Education Support, Access to Finance, in which "Subjective Norm" and "Education Support" had the highest and second level of influence on the EI of students in Viet Nam. Besides that, the researcher finds that there is a difference in EI among different groups of students with work experience. This study brings management proposals to educational managers in developing programs to stimulate and develop entrepreneurial potential in students.

Economic and Societal Impact of Academic Spin-Offs: An Emerging Taxonomy with Illustrative Cases

Author: **Einar Rasmussen**; Nord U. Business School

Author: **Anders Billstrom**; Nord U. Business School

Author: **Tommy Clausen**; Nord U. Business School

Author: **Raj Krishnan Shankar**; Nord U. Business School

This paper explores the economic and societal impact generated by academic spin-offs (ASOs) - new ventures set up to commercialize scientific research. Despite strong beliefs in the ability of ASOs to spur economic and social progress, the literature on academic entrepreneurship has mainly looked at the direct financial performance of ASOs. Less is known about the extent of and types of impacts ASOs generate outside the firm itself. We analyze a dataset containing more than 4 200 newspaper and media articles covering 316 Norwegian ASOs. Using an inductive grounded theory approach to analyze the above data, we found that the majority of ASOs complemented their commercial sales with some form of impact beyond the firm itself. Based on extant literature and inductive coding, we develop a taxonomy of ASOs by categorizing them on the high or low dimension of the economic and the societal impact they produce. The taxonomy shows four types of firms named: achievers, societals, profiteers and prospectors. This paper focuses on the achievers, societals and profiteers to illustrate the economic and societal impact they generate while the prospectors only

that the startups tend to emphasize low-cost offerings that may pose a threat to incumbent business models in financial services.

Family Business (session 715)

Passing the Baton to the Next Generation: Examining Intergenerational Knowledge Transfer

Author: **Byron Y. Lee**; China Europe International Business School (CEIBS)

Author: **Thomas A. Birtch**; U. of Exeter

Author: **Flora Chiang**; China Europe International Business School

Author: **Jean SK Lee**; China Europe International Business School (CEIBS)

The capability of one generation to transfer knowledge to the next is strategically important to the survival and competitiveness of family firms. This study proposes a resource-based theory framework for intergenerational knowledge transfer that is tested using multi-source time-lagged data collected from a sample of 164 founders and their successors. Supporting our predictions, results indicate that both the individual and combined effects of succession planning and family reciprocal altruism channeled through founder's disseminative capacity influence knowledge transfer to the next generation successor. Moreover, our examination of knowledge compatibility as a moderator enable us to provide additional accounts of the circumstance under which such a process may be strengthened or weakened. The conceptualization we introduce provides a more nuanced understanding of the facilitators and barriers to intergenerational knowledge transfer and prompts future research to take an encouraging new direction. Implications to theory and practice are discussed.

Well-Being, Rebels, and Failure (session 717)

Cross-Cultural Rebels: How and When Skillsets for Seizing Innovative Opportunities Emerge

Author: **Robert J. Pidduck**; Old Dominion U.

Innovative breakthroughs are often linked with rebel entrepreneurs who think at the boundaries of convention and disrupt the rules of the game. Despite this enduring archetype, a core question remains unanswered: why are some individuals more likely to start game-changing ventures than others? In taking a cognitive perspective, this paper argues that in the context of initiating new ventures, the ability to mentally contemplate and challenge the boundaries of the status quo may be advantageous in getting unorthodox ventures off the ground. Integrating recent research from cross-cultural psychology, I argue that experiencing other cultures can be influential in developing action-oriented capabilities central to nascent entrepreneurship—the capacity for developing innovative opportunities. Specifically, cross-cultural experience is associated with two key seizing capabilities in particular; rule-breaking and risk-taking. Drawing from attribution theory, I posit that moral relativism plays a key mediating role, such that those who view formal rules and moral codes as culturally fluid and fundamentally subjective become more comfortable in thinking and acting at the edge of business norms. This paper advances theoretical understanding on the notion of entrepreneurs as “rebels with a cause” by delineating how and when capabilities important for seizing new venture opportunities emerge.

"Soft" Family Influence Following a Loss of "Hard" Shareholding Control

Author: **Wilson Ng**; Regent's U. London

Author: **Natalia A. Vershinina**; Audencia Business School

Author: **Matthew Cadbury**; U. of Hertfordshire, UK

While much of family business scholarship has focused on ownership and control, little is known about how formerly family-owned firms that transition into public entities may thrive under family influence. We argue that the "soft" influence of family managers who have sold out of the firm offers insights into how family firms may continue to grow despite the loss of family ownership. "Soft" influence concerns the ways in which family members continue to shape the firm's practices by cultural (namely, customs and values related to the founding family) and cognitive (personality and behavioral) means. Yet soft influence is rarely publicly acknowledged. Soft influence contrasts with "hard" influence based on the family's aggregate shareholding that determines the firm's strategic direction and control. In what way(s) may family members continue to influence the firm that they no longer control? We address this question in an interpretive case study of a formerly family-owned firm in the UK, Cadbury, a 200-year old confectionary manufacturer that continued to be led by family managers for 31 years after selling out of the firm. We observed the critical importance of the soft influence of family managers, who sustained the character and personality of the founding family in the business. Soft influence challenges the dominant conception of family owned and controlled businesses where influence is derived from shareholding control by family members. We suggest how implications of soft influence potentially change prevalent, hard views of the family firm because Cadbury grew under the stewardship of family members who no longer owned the firm.

The Well-Being Trajectories of Entrepreneurs

Author: **Marcus W. Y. Ho**; Auckland U. of Technology

Author: **Smita Singh**; Auckland U. of Technology

Scholars and entrepreneurs alike lament the lack of understanding of entrepreneurial well-being despite mounting evidence that their well-being can have a profound effect on entrepreneurs and their ventures. This study explores how patterns of entrepreneurial well-being determine the trajectories of entrepreneurial well-being and entrepreneurship outcomes through a multiple case study design of entrepreneurs. Utilizing a well-being and job crafting theoretical framework, our findings reveal that there are two different trajectories as entrepreneurs move through the process of balancing their entrepreneurial journeys with their well-being. First, the integrating well-being, which describes entrepreneurial well-being trajectories emphasizing consistency and stability in well-being; and secondly, the delaying well-being trajectory which describes entrepreneurial well-being trajectories that move through rises and falls in well-being in relation to entrepreneurial activities. Our findings reveal several overarching dimensions that lead to these divergent trajectories: well-being mindsets, social resources, crafting work, and well-being outcomes. In the paper, we discuss the theoretical and practical significance of the results concerning entrepreneurial well-being trajectories.

Embracing Failure: A Socio-Computational Analysis of Entrepreneurial Failure Narratives

Author: **Jessica J. Santana**; UC Santa Barbara

Public peer-to-peer entrepreneurial failure narratives (PPEFNs) attempt to make sense of the unexpected and re-position the fallen. Yet, these narratives are paradoxical in that they expose the author to stigmatization. This study investigates how authors of PPEFNs navigate the tension between sensemaking and stigma to persist in

FC and LTO

Author: **Ying Fu**; Nanchang U.

Corporate entrepreneurship (CE) is designed to revitalize a firm's business by changing its competitive profile. Using agency cost perspective, we suggest that the initiation of CE in family firms is largely depended on the reduction of agency cost due to (1) conflicts between dominant and minority family shareholders; (2) the separation of family ownership and nonfamily management. We theorize that both of family commitment and a firm's long-term orientation (LTO) can initiate CE as a result of

the reduction of agency cost among family shareholders and between family shareholders and nonfamily managers. This study further extends the literature by hypothesizing that the firm's long-term orientation partially mediates the relationship between family commitment and CE. We test these hypotheses in a sample of 956 family firms, verifying a complete picture of the family and business antecedents on corporate entrepreneurship.

The Heir is Dead, Long Live the Heir: Succession Turnaround in Family Business

Author: **Shihui Chen**; Ningbo U.

Author: **Hanqing Chevy Fang**; U. of Missouri / Rolla

Author: **Zhenyu Wu**; -

Author: **Ling Chen**; Zhejiang U.

Author: **Esra Memili**; U. of North Carolina, Greensboro

This study focuses on a unique phenomenon of succession turnaround in family business, defined as a situation where a family business succession cannot continue as planned, and the afterward process where a new family "heir" emerges and becomes legitimately accepted by other family and non-family members. Built upon the institutional change literature, we explore primary actors, their roles, and the driving mechanisms behind their activities in each stage in the process of succession turnaround. We also discuss key factors that might contribute to the success of succession turnaround and its implications for the family business literature and beyond.

[view paper \(if available\)](#)

entrepreneurship. I test the argument that entrepreneurs avoid peer stigma through rhetoric that externalizes failure, which should destigmatize their failure experience and help them to recover their social capital. I apply inductive computational text analysis and correspondence analysis to data from PPEFNs published on blogging platform Medium.com to analyze how entrepreneurs talk about failure and how peers react to these rhetorics. I combine this with LinkedIn data to identify whether narrators continue in entrepreneurship. I find evidence to support the initial argument that externalizing rhetoric results in destigmatization. But I also find evidence that entrepreneurs turn to internalizing rhetoric to claim the entrepreneur identity, which may be even more important for persistence in entrepreneurship. These findings suggest that positive peer response may play a role in entrepreneurial persistence, by providing an empathetic support network that connects failed entrepreneurs to social capital.

Classroom Gamification - Gamification & Simulation Part 1 (session 232)

This session will be a simulation of the Jeopardy! classroom game. The game will be played using a web-based platform called Factile and will involve multiple teams of four to five members. Factile is a learning platform that enables the instructors to create Jeopardy games which can be integrated within their lesson plan. This topic fulfills the theme 'Introduction of new teaching formats or learning innovations' because it focuses on gaming pedagogy as opposed to traditional lecture to cover a topic or review the topic that has already been completed in a course. In addition, this session will be helpful for introducing game-based pedagogy as a viable complement to the other methods instructors already use.

Teaching Teamwork Skills and Knowledge to First-Year Undergraduate Management Students - World Cafe & Teamworking Part 1 (session 234)

Management educators assume first-year students arrive prepared for the higher education learning environment; one such assumption being the expectation that these students can work in teams to complete assessment tasks. Students have mixed views about teamwork; some view teamwork positively in providing better outputs, increased ideas, improved learning experience, and reduced workloads. The negative impressions of teamwork involve lack of control over grades, social loafing of team members, competing coursework demands, and difficulties associated with scheduling meetings. Intentionally teaching skills in managing teams and teamwork fills the gap between educators' assumed level of student skill and students' actual abilities providing a foundation for both their studies and future careers. The course should, ideally, be a compulsory first-year course, thus preparing students for progression to advanced courses requiring teamwork.

Assessing World Cafe: A Unique Classroom Discussion Tool to Increase Student Engagement - World Cafe & Teamworking Part 2 (session 235)

Borrowed from organizational settings, The World Cafe is a unique discussion tool which enhances student engagement and concept retention. A versatile discussion tool for undergraduates and graduates, traditional and non-traditional, World Cafe encourages small, intimate discussions on course topics and increases insight into multiple perspectives. Questions are posed at each table, and discussed among table participants before rotating to a different question. Notes are taken to encourage the next set of table participants to add greater clarity and depth to the discussion. As a means of demonstrating the World Cafe, T&L attendees will participate in a World Cafe discussion on student engagement, rotating through four different questions. The research team will also share data on student engagement and course concept retention from undergraduate and graduate classrooms following World Cafe discussions. Participants will leave with greater insight into the discussion of student engagement, World Cafe protocol instructions, ideas about how to use, and data to support the use of World Cafe.

Spread and Transformation of Psychological Pain in Organizations (session 237)

This symposium brings together an interdisciplinary group of scholars to discuss the spread and transformation of psychological pain, defined as aversive, unnecessary, and unwanted feelings experienced by individuals. While scholars have investigated various forms of psychological pain for decades, most work is focused on negative effects for the pained individual (e.g., distress, sadness, reduced work performance) and ways to help the focal individual. What is missing is attention to the ways that psychological pain spreads and transforms between individuals and across levels in the organization. This is a critical concern, as pained employees may impose both distress and impairment on coworkers, and these interactions may ultimately have negative effects on the employee's department and organization. Further complicating the problem, spreading psychological pain (e.g., via harassment and aggression) may cause the organization to enact policies to mitigate the problem, but these policies may be ineffective, and at the extreme may have unintended effects that worsen the problem. The symposium will be comprised of a brief introduction to the various forms of psychological pain that panelists investigate in their research, a moderated discussion, and a robust question and answer period to generate discussions and connections that will continue beyond the conference.

MSR

MSR & Friends (session 240)

This session is designed to give people an experience of connectedness. Participants choose from a range of direct-intuitive practices — including meditation, art, nature immersion (weather permitting), and dance — to increase awareness of how their actions impact others and the world around them. The convergence of science and spirituality will help frame the conversation on how such practices transform a person's consciousness. Using this frame, participants will be invited to debrief their practice experience. MSR Executive Committee members will respond with their own contributions. The session is intended to serve as the basis for writing a JMSR-type paper that explores transforming consciousness through direct-intuitive practices as the highest point of leverage for systemic social innovation. Participants will be asked to choose one direct-intuitive practice from the following four categories - Self: mindfulness meditation, body scan/ emotional scan, or participant chosen, Relationships: Loving-kindness meditation, appreciative inquiry interview, or participant chosen, Nature: observing flora or fauna (focused), nature immersion (presencing), or participant chosen, Transcendent: prayer, spiritual reflection, or participant chosen. A science-and-spirituality framing will kick off the session (20 minutes). Participants pair up to do their chosen practice (40 minutes). Participants debrief (30 minutes) and the MSR ExCom members respond and make their contributions (30 minutes). Note: This MSR & Friends session is designed with the AOM 2020 theme in mind. The goal is to broaden our mindsets, create greater synergies, and increase value-add for individuals, organizations, and society, thus enabling the field of management to contribute more effectively to meeting global and local challenges from conflict and discrimination to income inequality and climate change.

Performance Measurement and Management, Digitization (session 241)

Cracking the Conundrum of Understanding Multi-Stakeholder Partnership Impact

Author: Amy Mickel; California State U. Sacramento

Author: Leigh Goldberg; Leigh Goldberg Consulting, LLC

Multi-stakeholder partnerships (MSPs) have been identified as mechanisms with significant potential to trigger systemic change that is needed to tackle society's wicked problems. However, research on the impact of MSPs is scarce. A multi-dimensional research approach was used to study a landscape-scale MSP in its first four years. Findings from this research include a collection of interdependent, scalable impacts presented as 11 Partnership Impacts—highlighting three impact classifications: foundational, operational, and outcome. This research also reveals how adding value is a dynamic, iterative process with an interdependent quality; the dynamic process of generating, scaling up, and sustaining impact over a partnership's lifecycle is presented as Scaling Up Partnership Impact. Lastly, a new definition emerged where Partnership Impact is the collection of qualitative and quantitative changes that is generated incrementally over time related to or directly resulting from the intentional scaling up of foundational, operational, and outcome impacts by an MSP. These collective findings are referred to as the Partnership Impact Model and have implications for research and practice. This work is a substantial step forward in cracking the conundrum of understanding multi-stakeholder partnership impact.

The Disease of Corruption: Missing Funds and Health Conditions in Brazilian Municipalities

Author: Caio César Medeiros-Costa; Univeridade de Brasília - UnB

Local governments play an important role in the provision of many essential public services, such as health. Due to this importance, various researchers have investigated questions that can explain the performance of these governments in rendering such services. To contribute to this literature, here I analyze how local corruption affects health indicators. Using a random sample of Brazilian municipal governments audited by the Office of the Comptroller General between 2004 and 2010, I constructed an objective numerical indicator of corruption and applied it as an explanatory variable of health indices, employing an Input-Output-Outcome (IOO) model. For that purpose, I used an instrumental variable empirical strategy and a series of controls to assure robustness of the results, finding a causal relationship between corruption and health indicators in the three dimensions, confirming the chain reaction reported by previous studies. Besides this, the results reveal how common corruption is at the local level in Brazil, and demonstrate, among other matters, that 65.4% of the municipalities had at least one irregularity classified as corruption in the period analyzed and that most of the corruption problems were associated with procurement processes (63.4%).

Innovation Potentiality: Measuring Organisational Innovation Potential in the Canadian Public Sector

Author: Jo'Anne Langham; U. of Queensland Business School

Author: Neil Paulsen; U. of Queensland

Establishing a design and innovation (D&I) capability within a public sector organisation takes serious commitment and sponsorship from senior management. The leadership must commit to structural, political and cultural changes for the capability to succeed. When effective, design and innovation may cause disruption in current operational practices; become a catalyst for change; and challenge the powerful status quo. Such purposeful disruption can lead to significant progress and advancement for the organisation. However, these capabilities can often flounder due to insufficient preparation and lack of genuine dedication and endurance to overcome the obstacles that are inevitably encountered. This paper proposes a measurement model to evaluate the organisational readiness for D&I in public sector organisations. It is tested using the department of Innovation, Science and Economic Development (ISED) in Canada. The final score of 61.38% as the organisation's innovation potential shows an organisation wanting to innovate but struggling with the appropriate implementation mechanisms and cultural norms. Through understanding the strength of factors contributing to the incorporation, practice and management of D&I, organisations can increase the probability of success and growth of these capabilities. Practical implications for organisational structures and operating models related to D&I are discussed.

Digitization and Urban Governance: City as a Reflection of its Data Infrastructure

Author: **Ali Bayat**; U. of Aberdeen

Author: **Peter Kawalek**; Loughborough U.

Governance is a subject of much debate in the smart city literature. Many of the smart city initiatives around the world have been criticized for their failure to be citizen-centric or multi-stakeholder developments. Yet, amid this debate, the question of why different forms of smart city initiatives promotes different forms of governance is largely unexplored. This is important because the answers to this question can help guiding policy to strategically plan future initiatives so that the intended form of governance can be achieved. To answer this question, this paper directs new attention to the importance of urban data and its assemblage for urban governance. This is done through introducing an integrated framework which stems from synthesizing the existing academic debates and evidence from the already existing smart city initiatives. The framework makes three contributions. Firstly, it addresses a governance focused strategic planning of smart city initiatives by emphasizing the role of factors such as the urban context, smart city and urban vision, big data technologies, and data governance strategies. Secondly, it provides a means for comparing cities that have already taken steps toward planning smart city initiatives and puts forward guidelines for those that are at the initial stage of the process. Thirdly, it guides future empirical research investigating the determinants of urban governance and the outcomes of smart city initiatives.

External Consultants and Innovation

Designated as a "Best Paper" for TIM

Author: **Marek Giebel**; TU Dortmund

This paper analyzes the impact of external consultants on the innovation behavior of firms in emerging markets. Firms in these markets face particular problems which hamper organizational activities like innovation. Making use of business consultants provides firms with access to skills and knowledge to improve firm operations. Thus, the hiring of external consultants serves as a measure for firms in emerging markets to increase their innovation outcomes. Results for a sample of firms from emerging economies shows that utilizing external consultants indeed leads to a higher probability to carry out an innovation. This holds for product and process innovation, but also for innovation in management and marketing. Additional results show that the impact of the number of visits on innovation is found to be inversely-U-shaped. While the probability of performing an innovation is the highest at the turning point of the inverted-U, the first consultant visit provides the largest benefit. Thus, the findings imply that more is not always better. In addition, firms, which seek business skill or project management improvements, benefit particularly from hiring external consultants.

No Face, No Name, No Shame? Overcoming Barriers to Intra-Organizational Public Knowledge-Seeking

Author: **Maren Alana Mickeler**; Ludwig Maximilian U. of Munich (LMU)

Author: **Marco Kleine**; Max Planck Institute for Innovation and Competition

Author: **Pooyan Khashabi**; LMU Munich

Author: **Tobias Kretschmer**; LMU Munich

While organizational platforms are becoming more prevalent for the integration and exchange of organizational knowledge, employee engagement remains a barrier for the success of these platforms. Focusing on individual knowledge seeking in an organizational platform context, we follow a cost-benefit approach and argue that individual knowledge seeking is influenced by (a) economic cost concerns and (b) psychological cost considerations. To test our theoretical arguments, we run a lab experiment altering the costs associated with individuals' decision to openly seek knowledge on the platform. While knowledge seeking is lowest in settings with both economic and psychological costs, we observe significant increases by (a) eliminating economic consequences, and (b) removing social psychological cost considerations by inducing anonymity on the platform. In addition, our results suggest the presence of gender-related differences in knowledge-seeking behavior on organizational platforms: Male participants are chiefly discouraged by economic considerations, while females place more emphasis on social considerations. Our results highlight the facilitating role of platform anonymity on employee engagement and have implications for the efficient design of these platforms.

Open Ties and Deep Success

Designated as a "Best Paper" for TIM

Author: **Balázs Vedres**; U. of Oxford

Author: **Tunde Cserpes**; Aarhus BSS, Aarhus U.

Innovative teams face the paradox of relying on experience to generate novelty. This article proposes that network openness, the lack of closure with strong ties, is conducive for a wide range of success measures. We argue that openness helps to recognize and realize successful novel combinations, more so than weak bridging, brokerage, and closed ties. Prior scholarship has neglected the creative potential of open and strong relationships because it assumed that strong ties are always closed, and only weak ties bridge diverse structural locations crucial to innovative performance. We develop two team network measures of openness: density and depth of strong, open triads. We use the population of jazz musicians' careers as represented by their recording sessions to show that networks rich in strong, open ties are more prevalent than expected under a configuration model. We also show that while network openness is a consistent predictor of success measured on six different dimensions, brokerage is not. Furthermore, we show that openness that contributes to innovative performance is the result of organizing effort as opposed to lucky accidents. We discuss implications for project teams and organizations where innovation is crucial.

Searching for True Novelty by Embracing Uncertainty

Author: **David K. Reetz**; Technical U. of Munich

Author: **Samuel MacAulay**; U. of Technology, Sydney

Theories of search originating in the Behavioral Theory of the Firm explain organizational search as a deductive problem solving process rooted in existing knowledge structures. However, they were not intended to explain the search for new knowledge structures needed to generate truly novel outcomes. Drawing on studies of design, we theorize an organizational search process describing how novelty could be generated effectively in the face of uncertainty. Instead of deductively moving from problem-definitions to solutions, we suggest that, triggered by doubt, organizational actors abductively create contextually plausible causal models by linking potentially relevant problems and solutions. We elaborate the consequences of this conceptual shift, by theorizing the process of abductive searching that explains how actors could pursue an abstract goal by simultaneously searching for problems, solutions, and links between them, to establish a new knowledge structure. We contribute to the literatures on innovation, strategy, and entrepreneurship, by, respectively; introducing a purposive organizational process of exploration that reaches beyond novelty as serendipitous outcome; extending the cognitive perspective in strategy with a creation process that enhances agency; and providing a new way of linking entrepreneurial judgment to the pursuit of extraordinary results.

Advancing Network Dynamics Research: Theorizing and Measuring Network Change (session 248)

Counterbalancing the primarily static view on organizational networks dominating the literature, the explicit inclusion of time and time-related processes for the development and the consequences of networks is an emerging area of research, as shown by recent work on network churn (Burt & Merluzzi, 2016; Kumar & Zaheer, 2018) and network dynamics (e.g., Ahuja, Soda, & Zaheer, 2012; Perry-Smith & Mannucci, 2017). Network dynamics concern the regularities by which networks change and evolve as ties are created, modified, and dissolved over time. Network churn is the extent to which the composition of an individual's or organization's network changes from one period to the next (Burt & Merluzzi, 2016). Building on and extending the successful symposium on network dynamics and churn organized at the AOM 2019, this PDW brings together organizational network scholars across divisions to further accelerate research on the role of time for understanding intra- and inter-organizational networks. From a theoretical angle, we aim to raise and discuss questions pertaining to (1) different conceptualizations of network dynamics and churn, (2) their drivers, and (3) consequences at different organizational levels. Methodologically, we seek to stimulate discussions on research design, measurement, and data required to empirically study networks over time. PDW participants will become familiar with recent quantitative and qualitative research on network dynamics and churn and discuss conceptual ideas, tangible tools, and methods for future research. The PDW will also provide a forum for senior and junior scholars to engage in scholarly conversation and exchange of ideas on the topic.

Empowerment, Autonomy & Identity in Health Care (session 758)

Factors Affecting Community Emergency Physician Treatment of Opioid Use Disorder with Buprenorphine

Author: **Ali Raja**; Massachusetts General Hospital / Harvard Medical School

Author: **Philip A. Cola**; Weatherhead School of Management, Case Western Reserve U.

Author: **Jacqueline M. Stavros**; Lawrence Technological U.

Although Emergency Departments (EDs) are often the only sites of care for patients with opioid use disorder (OUD), a proven medication, buprenorphine, is underutilized by emergency physicians. Potential theoretical explanations include ideas from Diffusion of Innovations, Social Identity, Structuration, and Attribution theories. Prior research also suggests some physicians may consider replacing one opioid with another unethical; others are concerned about patient costs for buprenorphine. However, while some reasons for underutilization of ED buprenorphine have been studied in academic hospitals, no study has explored underutilization by community emergency physicians (CEPs) working in community hospital EDs. This study investigated factors influencing CEP treatment of OUD. We used an inductive grounded theory approach and conducted semi-structured interviews to identify emergent factors from experiential accounts of 30 CEPs practicing in Ohio, a state hard-hit by the opioid epidemic. Four themes emerged: physician professional identity, image of patients with OUD, physician professional development, and resources. The latter two have been previously described but the former two themes are novel and appear to interact. Altering CEPs' professional identities by normalizing OUD and its treatment and addressing the stigma attached to the image of patients with OUD, may result in increased CEP treatment of OUD with buprenorphine.

Author: **John Wright**; U. of Technology, Sydney

Corporatization, the conversion of state-owned enterprises into semi- autonomous, legally independent entities, has gained in popularity internationally since the 1980s. However, this usage of the term has become entangled with other organizational reforms associated with new public management and appears to have lost its distinctiveness in many contemporary studies of corporatization. This scoping review of recent literature on corporatization among health care organizations internationally aimed to assess its impact on processes and outcomes and appraise the usefulness of the concept for future research and policymaking in this field. The review finds that evidence regarding the impact of corporatization on organizational processes and outcomes is mixed and weak; and, that its impact is mediated by processes at the professional, organizational and macro levels. We argue that the term corporatization lacks both sensitivity and specificity in recent public management literature and call for greater clarity concerning how corporatization is defined in future research and how it relates to other types of public management reform.

Who Should See the Patient? On Discretionary Patient-Provider Assignments in Hospitals

Author: **Mariam Krikorian Atkinson**; Harvard U.
Author: **Soroush Saghafian**; Harvard U.

Traditional principles in operations management and organizational theory suggest that standardizing assignments of tasks to individuals can have substantial benefits and boost performance. However, in various organizations including hospitals, individuals are not forced to follow recommended assignments, and thus, deviations from routine task assignments are often observed. This is due to the conventional wisdom that professionals should be given the opportunity to use their discretionary judgement and deviate from routine assignments when they perceive it to be advantageous. It is unclear, however, whether and when this conventional wisdom is true. We use evidence on the assignments of generalist and specialists to patients in a children's hospital, and generate insights into whether and when hospital administrators should allow providers to use their discretion to deviate from routine assignments. To perform our analyses, we identify 73 top medical diagnoses and use detailed patient-level electronic medical record (EMR) data of more than 4,700 hospitalizations. In parallel, we conduct a carefully-designed survey of physicians and utilize it to identify the routine provider type that should have been assigned to each patient. Using these two sources of data, we examine the consequence of discretionary deviations from routine provider assignments on three sets of performance measures: operational efficiency (measured by length of stay), quality of care (measured by 30-day readmission rates and rate of adverse events), and cost (measured by total charges). Taken together, our findings suggest that allowing providers to use their discretion in order to deviate from routine assignments is beneficial for task types (patients' diagnosis in our setting) that are either (a) well-defined (improving operational efficiency and costs), or (b) require high contact (improving costs and adverse events, though at the expense of lower operational efficiency). For other task types (e.g., highly complex or resource-intensive tasks), we find that routines should be enforced: deviations are

paradigms in HCM challenge three fundamental premises underlying the notion of paradigm: incommensurability, superiority, and scientificity. In this paper, we take up that challenge by asking how HCM scholars can evaluate paradigm changes in their discipline. For that purpose, we go back to Kuhn's theory of scientific revolution and we propose a framework for analyzing paradigms in HCM. We then apply that framework to a case of paradigm change in the French health care system. Evaluating the two-year impact of that change through quasi-experimental methods and panel analysis, we find that the assumptions that policy makers had made about HCM paradigms did not hold during that period. Our contribution to the literature on paradigms in HCM is threefold. On the theoretical level, our analytical framework accounts for the commensurability of HCM paradigms. Regarding methodological aspects, we illustrate how evidence-based approaches drawing on that framework may help test assumptions of superiority between those paradigms. On the practical side, we propose new research avenues that leave room for a greater participation of HCM scholars in the paradigmatic changes that are taking place in their field.

The Role of Environmental Munificence on Federally Qualified Health Center's Geographical Expansion

Author: **Seongwon Choi**; Trinity U.
Author: **Ganisher K. Davlyatov**; U. of Alabama, Birmingham

Geographical expansion is a common market development strategy employed by health services organizations. So-called 'geographic expansion race', expansion of facilities to different locations has been widely examined in the context of hospitals. However, rarely has it been examined in the context of safety-net healthcare organizations such as Federally Qualified Health Centers (FQHCs) despite their critical role in addressing health equity. This study expands previous knowledge on FQHCs' geographical expansion strategies with an emphasis on the influence of the area's environmental munificence. The result indicated that there was a

either detrimental or yield no tangible benefits. Our findings also establish a no free lunch theorem: while for some task types deviations are beneficial regarding some performance measures, they simultaneously degrade performance in terms of other dimensions. Finally, by comparing deviations during weekdays and weekends, early shifts and late shifts, and high congestion and low congestion periods, our results shed light on some environmental conditions under which discretionary deviations are invoked more in practice.

Linking Empowering Leadership and Employee Commitment Role of Goal Orientation and Task Significance

Author: **Abhishek Singh**; Indian Institute of Technology Roorkee

Author: **Santosh Rangnekar**; Indian Institute of Technology Roorkee

Drawing from psychological contract, social exchange and self-determination theory, this study proposes a model that examines the role of empowering leadership in influencing the employees' goal orientation, task significance, and employee commitment. Data were collected from 252 employees who were working in NABH accredited hospitals in India. Regression analysis was used to test the hypotheses. Results suggest that employees' commitment is influenced directly by empowering leadership as well as indirectly through employees' goal orientation, and task significance. Therefore, it is important to note that if leaders empower their subordinates, then employees' goal orientation and task significance likely to increase and influence employees' commitment. Theoretical and managerial implications are also discussed.

The Little Engine that Could: Psychological Empowerment in Healthcare

Author: **David Turnipseed**; U. of South Alabama

Author: **Elizabeth VandeWaa**; U. of South Alabama

positive association between area munificence and geographical expansion of FQHC sites. In addition, it was identified that there was a positive association between FQHC penetration in the area and the geographical expansion of FQHC sites. The study contributes to the existing body of literature by highlighting an association between environmental munificence organizational strategies in the context of FQHCs.

[view paper \(if available\)](#)

Antecedents of Geographical Expansion Strategy: A Case of Federally Qualified Health Centers

Author: **Seongwon Choi**; Trinity U.

FQHCs play a pivotal role as a safety-net primary care provider in the US health system. While ample evidence suggests that the overall number of FQHCs and FQHC sites has been on a steady rise, little is known about a vast difference in the number of FQHC sites across FQHCs and communities. Wide variations in the number of sites between FQHCs have important implications such as differential access that may perpetuate disparities in quality of care. Understanding the gap, this study examines the association between an array of organizational and environmental factors and the number of FQHC sites. The result indicated that FQHC patient volume and competition in the area were significantly associated with the extent to which FQHCs operating more sites in different locations. The result also indicated that the variance in the number of FQHC sites is largely due to between-FQHC differences meaning that the overall growth of the FQHC program may not occur just by FQHCs growing over time. Our results imply that managers and policymakers should appropriately address underlying factors in an effort to foster even growth of FQHCs.

The Use of Social Deprivation Index to Examine Nursing Home Quality

Author: **Justin Lord**; Louisiana State U. Shreveport

Author: **Ganisher K. Davlyatov**; U. of Alabama,

Given the steadily increasing and unsustainable rise in healthcare costs, due in large part to its labor component, healthcare administrators are facing pressure to increase productivity and manage labor costs. The purpose of this study was to identify relationships between the dimensions of psychological empowerment (PE) and above-norm performance, or discretionary, pro-organizational behavior measured as organizational citizenship behavior in a sample of healthcare employees. Understanding this linkage will help healthcare managers increase labor productivity and contribute to healthcare expense control. Data were obtained from a general hospital (n = 137). Using hierarchical regressions to elucidate the incremental and total contribution of PE to the variance in OCB, we built models with the PE cognitions (meaning, self-determination, impact, and competence) as independent variables, to test the hypothesized linkages. This is the first known study to provide evidence of the direct relationship between psychological empowerment and OCB. Results indicated that employees whose work roles are consistent with their personal values (psychological empowerment meaning), and who feel able to shape and perform their jobs (psychological empowerment competence) are more likely to be intrinsically motivated, and engage in conscientiousness, altruistic, and obedience OCB. This knowledge can help healthcare managers understand how to increase empowerment and thereby gain productivity without increasing labor cost.

Birmingham

Author: **Robert J Weech-Maldonado**; U. of Alabama, Birmingham

Health and health care access inequities vary along social and economic gradients. The Social Deprivation Index, is a composite measure of socio-economic factors (schooling, living conditions, transportation, home ownership, marital status). Using this index, we can explore how nursing home performance can be influenced by the resources available in the environment. The purpose of this paper is to explore the relationship of social deprivation and quality of care. Secondary data for 2011-2014 from Brown University's Long-Term Care Focus, CASPER (Certification and Survey Provider Enhanced Reporting), and the Census American Community Survey was used. Structural equation modeling with maximum likelihood estimation was used to examine the total, direct, and indirect effects of the variables as conceptualized using Donabedian's structure, process, and outcomes framework. In this study, structure consisted of RN staffing mix and RN, LPN, and CNA staff intensity; process was conceptualized as anti-psychotic medications, and outcomes as re-hospitalizations, falls, and pressure ulcers. Control variables included organizational level (total beds, percentage of Medicare and Medicaid, occupancy, percentage of minorities, multi-facility and for-profit status) and market level (Hirschman Herfindahl Index for competition). We found as the munificence of the environment decreases, organizations will substitute out highly compensated and trained RNs and increase the staffing levels of LPNs and/or CNAs. All nurses, regardless of skill mix, are associated with decreased use of anti-psychotic medications; however, RNs have the greatest impact. Higher uses of anti-psychotic medication is associated with greater prevalence of re-hospitalizations, falls and pressure ulcers. This study illustrated that organizations are responsive to the resources available in their environment. All levels of nurse staffing can have a positive impact on improving processes, like decreasing the use of anti-psychotic medications. Nursing homes located in socially deprived areas may lack the staff mix to reduce the use of anti-psychotic medications, which in turn, has a detrimental effect on resident quality of care outcomes.

MOC

Benefits of Flexibility in Organizations (session 773)

Making Sense of the Psycho-Cognitive Microfoundations of Organizational Routines

Author: Piotr Makowski; U. of Warsaw

Are organizational routines rather automatic and inertial or flexible and adaptive? The goal of this work is to build a psycho-cognitive perspective on habits and flexibility to show the missing link for solving the problem of the automaticity and flexibility of routines. The paper offers a version of the microfoundational approach which is projected as a more systematic research program. Its purpose is not only to draw attention to the role of psychological flexibility, which has been overlooked in routines research, but also to redirect the microfoundational approach to routines to issues explored in cognitive and social psychology. Psycho-cognitive microfoundations may help broaden our sight and unlock further theory development about routines.

The Compassion Spillover Effect: Can Self-Compassion Beget Others' Compassion?

Finalist for MOC Division Best Student-Led Paper Award

Author: Yu Tse Heng; U. of Washington, Seattle

Author: Ryan Fehr; U. of Washington, Seattle

Author: Kira Franziska Schabram; U. of Washington

A decade of research has highlighted the benefits of being compassionate to oneself in times of suffering. Despite this, many remain hesitant to practice it, fearing the interpersonal backlash that stems from beliefs that self-compassion is selfish or even self-indulgent. In this research, we consider the implications of sufferer self-compassion for others' perceptions, feelings, and behaviors toward the sufferer. Drawing on social information processing theory, we propose that sufferer self-compassion facilitates others' felt compassion for the sufferer, in turn encouraging supportive behaviors toward the sufferer. We tested and found support for our predictions in a laboratory experiment of 242 participants participating in 121 dyadic, face-to-face interactions. Contrary to the concern that sufferer self-compassion might trigger punitive evaluations or treatment from surrounding others, our results suggest that sufferers' self-compassion can instead spill over to fuel others' compassionate behaviors.

Dealing with Personal Identity Threats: The Case of Negative Media Coverage

Author: Pierre Nicolas Huneke; Johannes Gutenberg-U. Mainz

threatening and disruptive to one's work identity, but may also represent a source of growth and renewal. However, in order to capitalize on the potential of transitions for identity growth, individuals must find ways to constructively manage their identities in these times of change. In this vein, this paper represents a timely effort aimed at understanding how individuals can foster positive role changes throughout their careers. Specifically I shed light on the identity management tactics that individuals use during macro role transitions, as well as the personal and contextual (organizational/societal) factors that facilitate/hamper these processes. Moreover, I build on these insights to construct the 'career identity sustainability model' which explains how, through processes of identity management, individuals can develop personal resources (psychological capital, experience) and resilient and multi-dimensional work identities, which facilitate positive role transitions and sustainable careers across the lifespan.

The effect of Cognitive Flexibility on Multi-Level Competitive Categorization

Finalist for MOC Division Best Submission with Practical Implications for Organizations

Author: **Tian Wei**; Rennes School of Business

Author: **Fabio Fonti**; Rennes School of Business

Managers' cognitive capabilities – i.e., their abilities to perform activities involving cognition – allow organizations to effectively enact strategic changes that are needed to adapt to environmental dynamics. Research has shown how heterogeneity in managers' cognitive capabilities helps to explain why some firms outperform rivals in competitive situations. An important cognitive capability, cognitive flexibility allows managers to shift between mental modes to match the types of problems they face and the tasks to deploy in order to face them. In doing so, it helps them overcome cognitive inertia and yields their firms strategic flexibility. Cognitive flexibility also affects other cognitive processes, such as managers' perception of their market's competitive landscape and specifically competitive categorization – or the ability to categorize rivals into

Despite its theoretical and practical importance, empirical research on how employees deal with threats to their personal identity is surprisingly scarce. Using negative media coverage as an example, this study seeks to fill this void by shedding light on how employees make sense of and decide how to respond to such threats. To address this question, we conducted an in-depth case study in the context of professional football organizations in Germany. Our key contribution lies in developing a grounded process model and propositions that clarify employees' responses to media-induced identity threats. We identify strategies that employees use for dealing with the media, ranging from disregard to active attempts to influence the coverage. We also show when employees respond with which of these strategies. Our findings have important implications for the growing body of research on personal identity threats and organizational identity research more broadly.

Examining the Threatened Manager: Effects of and Responses to Leader Identity Threat

Author: **Jordan Nielsen**; Purdue U.

Author: **Thomas Ptashnik**; U. of Iowa

Author: **Amy E. Colbert**; U. of Iowa

Author: **John Lynch**; U. of Illinois at Chicago

One of the most challenging features of a managerial role is the exposure individuals have to informal negative feedback from subordinates, peers, and supervisors. Although such feedback is an inevitable component of a manager's job, we suggest that it can interrupt a manager's sense of self, or identity, such that their well-being and behavior is negatively affected. Drawing from identity theory and identity perspectives on leadership and stress, this research introduces the phenomenon of leader identity threats— a situation where claims to leadership are not reciprocated through grants of leadership from others. In a two-wave survey of 158 full-time managers from a variety of industries and organizations, we found that managers who experienced leader identity threats to a greater degree in the last year were more likely to experience psychological strain, form

different groups – which shapes competitive relationships among firms and affects their performance. Yet, research on the contribution of managers' cognitive flexibility to their categorization process is still limited. To address this gap, we built a multi-level simulation to explore how managers' differences in cognitive flexibility affect competitive categorization and, through it, firm performance. Results highlight the link between cognitive capabilities – in particular, cognitive flexibility – and firms' strategic activities. We close by discussing theoretical contributions and managerial implications of our findings.

Organizations in Pursuit of the Seemingly Impossible: A Multi-Method Investigation

Author: **Kelly E. See**; U. of Colorado, Denver

Author: **C. Chet Miller**; U. of Houston

Although the frequency with which organizations pursue seemingly impossible goals remains unknown, it seems clear from available research that such goals are used with some regularity. Because pursuing seemingly impossible goals, popularly known as stretch goals, carries substantial risks in addition to the potential for significant gains, we attempt to address important questions that have been left open in the limited empirical work to date. We first review results from a national survey assessing the incidence of stretch goal pursuit in organizations across multiple industries. We then present the results of two field studies: a multi-informant self-report survey of 182 units in a variety of different organizations, and a comparative case study of eight clinics within one healthcare organization. Both studies suggest that unabsorbed slack and strong performance in the recent past are requisite factors for improvements in learning and performance when pursuing stretch goals. The studies also highlight cognitive, affective, and behavioral mechanisms through which slack and recent performance seem to affect organizational outcomes. Our findings provide actionable insights in an area of study important for both scholarship and practice. Although typically negative for organizations, stretch goals can be positive in some contexts.

intentions to turnover, and self-report negative leader behaviors. Contrary to expectations, support from supervisors did not reduce the negative effects of leader identity threat; indeed, leader identity threat actually negated the positive effects of such support. A third survey employing a critical incidents technique led us to identify four response tactics that managers use to address leader identity threats, including derogating, confessing, teaching, and feedback-seeking. These inductively derived tactics were supplemented by four additional deductively derived responses (withdrawing, shifting, re-framing, and importance change). Finally, through content validation, EFA, and CFA, a scale was developed to measure these eight response tactics. We close by discussing the implications of these findings for organizations, and for future research furthering this line of inquiry.

How the Experience of Growing from Challenges Becomes a Resource for Individuals and Organizations

Author: **Eun Bit Hwang**; U. of Michigan

Based on in-depth interviews and a field survey, this inductive study explores a process of how individuals develop their growth-from-challenge narrative from experiencing a series of personal crises and challenges and how they use this growth narrative in their organizational life. Through in-depth interviews (Study 1) with informants characterized by high-level of growth and formal power in their organization, I find that activation of core values, resulting from growth from challenge, leads individuals to engage in both intra-personal (i.e., commitment to core values and accountability for others) and inter-personal (i.e., living their values and story sharing) resourcing of their growth-from-challenge narratives. With field survey data (Study 2), I investigate the same research question with a broader population characterized by average-level of growth and less or no formal power in the organization. Taken together, the current research highlights how individuals develop a single growth-from-challenge narrative from experiencing multiple difficult events and that they bring this growth narrative into their organizational life. Based on the

Trajectory of the Interplay Between Team Cognitive Processes and Collective Emotions During Crisis

Author: **Marzieh Saghafian**; Stanford U.

Author: **Mary J. Waller**; Texas Christian U.

Organizations commonly use teams to rapidly and appropriately respond to crises. These teams must face a multidimensional challenge because crises not only comprise ill-defined, complex problems, but also exert high emotional demands on the team. As a result, team functioning in crisis events involves handling each dimension of the crisis through distinct, yet concurrent, types of responses, namely team cognitive processes and collective emotions. Focusing on 20 teams of MBA students dealing with a simulated organizational crisis, we tracked the evolution of the co-occurrence (also called coupling) of team cognitive processes and collective emotions over the course of the crisis event. An exploratory visualization tool called GridWare was used to plot the coupling trajectory on a two-dimensional grid and compare the structure and the content of the coupling trajectory in higher-performing teams with lower-performing ones. The structure of the coupling trajectory in higher performers was not found to be any more or less variable than in lower performers. In terms of content, however, the coupling trajectory of higher-performing teams tended to fall into a single, strong coupling, as opposed to the coupling trajectory of lower-performing teams which tended to get drawn toward multiple, weaker couplings. The single, strong, attracting coupling that pulled the trajectory of higher-performers was the coupling of explicit action processing (a cognitive process) and midaroused-neutral collective emotion. In other words, higher performers had more tendency to keep returning to discussing and updating their actions in a midaroused-neutral emotional atmosphere. Implications for future research and crisis management training are discussed.

view paper (if available)

perspective that individuals' personal growth narrative can be served as a resource, the current research also shed lights on how they resource it in various ways depending on their degree of their growth from challenge and formal power in the organization. I conclude by suggesting that different patterns of growth narrative resourcing can have differential impact on various levels within an organization.

To Belong or Not to Belong: Willingness to Contribute Ideas and Belonging Uncertainty

Author: **Daphné Baldassari**; U. of Toronto

Gender status beliefs affect individuals' decisions to contribute ideas to the group. In male-stereotyped domains, women contribute fewer ideas to the group compared to men as they overestimate their peers' abilities. Interventions targeting gender status beliefs have been unsuccessful so far. This paper explores an alternative mechanism, belonging uncertainty, to leverage new interventions aimed at reducing the gender gap in the willingness to contribute ideas to the group. Due to their minority status in the industry, women are more likely to experience uncertainty on whether they belong and process any information as a signal used to update their sense of belonging. I theorize that belonging uncertainty induces women to withdraw their participation in the group. I design a lab experiment with 198 participants and test whether being in a female-majority group will reduce women's belonging uncertainty, and thus positively affect the willingness to contribute to the group. I find that belonging uncertainty, and more specifically how individuals process information on their sense of belonging, is negatively associated with their willingness to contribute ideas. However, counter to my theoretical prediction, men are more sensitive than women are to the effect of belonging uncertainty on their decision to contribute ideas to a group.

Innovative Approaches to Creating Gender Inclusive Academic Environments (session 740)

Across the globe, women continue to be underrepresented in academic institutions and face several inequities. To redress these, many universities are acting to increase female student participation across academic disciplines, supporting the careers of female faculty members, and creating gender inclusive workplaces. Such institutional change efforts are often initiated as well-funded, institution-wide initiatives, such as the National Science Foundations's ADVANCE program in the U.S., Science in Australia Gender Equity, and Athena Swan in the U.K. Organizational level change is important, but structural and cultural change takes time and requires the mobilization of significant resources. In addition to organizational efforts, there is a clear place for more organic, bottom-up, cost-effective, and portable programs that target gender equity change in individuals, both male and female. Such initiatives can lead to much quicker, smaller scale change from the bottom up and can be delivered either within or independently of organizational level programs. Panel members in this symposium have all been involved in the development and delivery of a multitude of individual-level initiatives to help create more gender inclusive academic workplaces. Through presentation and extensive interaction with the audience, the panelists will share their initiatives and experiences in leading bottom-up gender equity change initiatives. Thus, the symposium will inform participants about ongoing gender equity change efforts in academia, hopefully inspiring our audience to create and implement similar interventions in their own institutions.

How Job Dissatisfaction Regresses After Motivating Voluntary Job Mobility, Two Cross-lagged Studies

Author: **Jinyi Zhou**; U. of Science and Technology Beijing

Author: **Yanjun Guan**; Durham U.

Author: **Yawen Li**; Beijing U. of Posts and Telecommunications

Some studies indicate that job dissatisfaction will motivate employees to switch their jobs while others suggest that tendency to feel dissatisfied with the job is an inherent individual difference which cannot be entirely decreased through voluntary job mobility. Current study tries to integrate these two theoretical perspectives. Drawing upon the affective adaptation theory, we propose a dynamic model which describes that although voluntary job mobility facilitated by job dissatisfaction will temporarily decrease job dissatisfaction, this effect will not prolong. This is because the temporary decrease of job dissatisfaction caused by prior voluntary job mobility will inhibit voluntary job mobility in the future, which in turn increase job dissatisfaction to some extents until the influence of prior voluntary job mobility diminishes. Job dissatisfaction and voluntary job mobility serve as mediators that keep eliminating the negative effect of voluntary job mobility on job dissatisfaction until it becomes positive. Moreover, the personal control facilitates this recursive relationship by moderating these mediating effects. Results of two cross-lagged studies with 956 and 5,025 employees in individual-level as well as 6,692 and 35,175 career tracks in year-level from National Longitudinal Study of Youth confirm the hypotheses.

Multiple Foci of Commitment and Employee Silence: A Role Theory Perspective

Author: **Si Qian**; Renmin U. of China
Author: **Bert Schreurs**; Vrije U. Brussel
Author: **I. M. Jawahar**; Illinois State U.

Voice enhances whereas employee silence compromises organizational effectiveness and efficiency. We assert that individuals with different foci of commitment vary in their conceptualization of voice behaviors as integral to their roles, which in turn, influences voice behaviors. Integrating these two literatures under the overarching framework of role theory, we investigated the mediating role of voice role conceptualization in the relationship between multiple foci of commitment and employee silence and whether this mediation was moderated by perceived organizational politics. Data collected from 437 working adults from United States and China were used to test our moderated mediation model. Results indicated support for mediation and moderated mediation for the team-oriented commitment and silence relationship through its impact on voice role conceptualization, controlling for career-oriented commitment and organizational commitment. We discuss implications of results for theory and practice.

A Committed Journey Towards Your Career: the Mediating Effect of Perceived External Employability

Author: **Yi-chun Lin**; National Taiwan Normal U.
Author: **Angela Shin-yih Chen**; National Taipei U.

Career plateau has been a major concern for many seasoned employees because they often stay in the same position longer than expected and lack job challenges over time. This phenomenon is now considered a normal career development stage in life. The purpose of this study is to test the effects of career plateau (hierarchical and job content) on career commitment, along with the mediating effect of perceived external employability. We test the hypotheses with survey data collected from a convenience sample of 472 white-collar employees who had full-time jobs and were enrolled as Executive MBA and continuing education students in five large universities in Taiwan (77% return rate). Based on structural equation modeling analysis, the

results showed that both hierarchical and job content plateau had significant negative effects on career commitment. Also, perceived external employability partially mediated the negative relationship between hierarchical and job-content plateau and career commitment. The findings of this study provide insight for career management scholars and practitioners by promoting a better understanding of suitable career management practices for more 'seasoned' employees who are valued for their knowledge, experience and expertise. Drawing from career motivation theory, we fill the gap of testing the mediating effect of perceived external employability to link hierarchical and job content career plateau to career commitment as career-related outcomes.

Internship Experience and Organizational Attractiveness: Does Realistic Job Fit Matter?

Designated as a "Best Paper" for CAR

Author: **Tomoki Sekiguchi**; Kyoto U.

Author: **Yoshitaka Mitate**; The U. of Kitakyushu

Author: **Yunyue Yang**; Yokohama National U.

While job seekers in many instances rely on indirect and sometimes inaccurate information to assess the attractiveness of potential employers, internship experience will provide more realistic and accurate information about the nature of work performed in sponsoring organizations, which would influence organizational attractiveness. The current study using ex-ante and ex-post (i.e., pre-internship and post-internship) research design with a sample of 155 Japanese undergraduate students in a university-sponsored internship program found that, although organizational attractiveness on average declined after the internship, skill variety and feedback from employees in the internship job positively influenced perceived needs-supplies (NS) fit after controlling for its initial level before the internship. The NS fit in turn influenced organizational attractiveness after controlling for its initial level before the internship. Moreover, some of the above mediating effects were stronger for interns with high social skill and/or high self-esteem. Our findings highlight the importance of work characteristics of internships as a realistic source of

Dynamic Perspectives of Faultlines: Moderating Conditions and Effects Over Time (session 741)

Faultlines are complex and dynamic in nature. Therefore, it is important to investigate faultlines phenomena from a dynamic perspective and investigate under what conditions, and for which type of criteria, faultlines matter the most. In this symposium, we take into account the contexts in which faultlines operate and seek to provide new insights into when and under what conditions faultlines are likely to be effective. Our symposium features four papers that provide a shift from static to dynamic views of faultlines. Through the papers presented in our session, we hope to both refine and advance current understandings of faultlines in organizations.

Consequentialist Motives for Punishment Signal Trustworthiness

Author: **Nathan Dhaliwal**; U. of British Columbia
Author: **Daniel Skarlicki**; U. of British Columbia
Author: **JoAndrea Hoegg**; U. of British Columbia
Author: **Michael Daniels**; U. of British Columbia

Upholding cooperative norms via punishment is of central importance in organizations. But what effect does punishing have on the reputation of the punisher? Previous research shows third parties can garner reputational benefits for punishing transgressors who violate moral norms. However, managers can be motivated to punish a transgressor for at least two reasons: (a) to make the violator pay for committing a transgression (deontological motive) and (b) to deter future transgressions (consequentialist motive). In the present paper we explore whether reputational benefits vary depending on the motive for the punishment. In Study 1, people who endorsed consequentialist (versus deontological) motives for punishing were seen as more trustworthy. In Study 2 we found that when pitted against one another, a person who endorsed a consequentialist motive for punishing was chosen more often as a partner for a Trust Game. In Study 3 we examined whether this preference is a result of differences in perceptions about the underlying traits of consequentialist versus deontological punishers. The results showed that managers who punish employees for consequentialist reasons are seen as having less psychopathic tendencies, and this relates to them being perceived as more trustworthy and superior cooperation partners. Study 4 replicated these

The Effects of Abusive Supervision Climate on Team Mindfulness and Team Conflict

Winner of CM Division Best Paper Award - Conflict in Context

Author: **Yuanmei Qu**; Rowan U.

Author: **Gergana Todorova**; California State U., Fullerton

Author: **Marie Dasborough**; U. of Miami

Author: **Yunxia Shi**; Shandong Technology and Business U.

To examine abusive supervision in teams, scholars have recently proposed the concept of abusive supervision climate. Given the infancy of this line of study, we still know little about how abusive supervision climate functions in teams. We argue that one important, but thus far neglected consequence of abusive supervision climate, is team conflict. Here we examine whether and how abusive supervision climate influences relationship conflict, task conflict, and process conflict and propose team mindfulness as an underlying cognitive mechanism. From a sample of 499 employees in 92 teams, we found that abusive supervision climate aggravated task conflict and process conflict via diminishing levels of team mindfulness. Abusive supervision climate, however, did not exacerbate relationship conflict through this pathway. Our findings thereby advance our current understanding of the consequences of abusive supervision climate from a team mindfulness perspective.

Is LMX Differentiation a Hindrance or a Promotion to Team Functioning? Acyclicity Matters

Designated as a "Best Paper" for CM

Author: **Jieying Xu**; Zhejiang U. of Finance and Economics, China

Author: **Erica Xu**; Hong Kong Baptist U.
Author: **Xu Huang**; Hong Kong Baptist U.

Drawing from the recent theoretical development in social hierarchy, we theorize that whether leader-member exchange (LMX) differentiation breeds status conflict and ultimately undermines team performance hinges on the alignment between LMX differentiation and acyclicity. Based on data collected from 89 work teams in mainland China, we found that only when LMX differentiation was misaligned with acyclicity, LMX differentiation was positively related to status conflicts and, as a result of it, undermined team performance. In contrast, when LMX differentiation was aligned with acyclicity, LMX differentiation was negatively related to status conflicts and consequently promoted team performance.

Perfectionism and Conflict: The Role of Leader Conflict Interventions (WITHDRAWN)

Author: **Yuwen Liu**; National Tsing Hua U.

This study examined how perfectionism asymmetry, such as adaptive and maladaptive perfectionism, influences task and relationship conflicts. We further investigated how leader's conflict interventions moderate the relationship between task and relationship conflict and emotional exhaustion from a multilevel perspective. Data was collected from 495 employees comprising 128 project teams. Results showed that adaptive perfectionism asymmetry is negatively related to task conflict and maladaptive perfectionism asymmetry is positively related to task and relationship conflict. We further examined moderation effects to understand how leader mediational and autocratic conflict interventions can enhance or constrain the effects of perfectionism asymmetry on employees' conflict.

Look on the Bright Side of Task Conflict: Leader Member Exchange Differentiation & Team Performance

Author: **Bret Bradley**; U. of Oklahoma
Author: **Hui-hua Liu**; Shanghai Jiao Tong U.
Author: **Xin-an Zhang**; Shanghai Jiao Tong U.

Leader member exchange differentiation (LMXd) has both positive and negative effects in teams, and we theorize that it will moderate the relationship between task conflict and team performance, and might even allow for the beneficial effects from task conflict to team performance to emerge. However, it may also strengthen the relationship between task conflict and relationship conflict. Results from an empirical study conducted in China with 48 teams from various organizations supported the proposed model. In our study the relationship between task conflict and team performance was curvilinear, in the form of an inverted-U, but only when LMXd was high as theorized. Task conflict had a positive relationship with team performance when task conflict went from low to moderate levels, but a negative relationship when it went from moderate to high. However, we also found that task conflict had a higher association with relationship conflict when LMXd was high, indicating some interpersonal downsides to the performance benefits. Both theoretical importance and practical significance of these findings were discussed.

Gender Diversity on Boards (session 753)

When Tokens Matter: A Critical Perspective on Tokenism and Women on Corporate Boards

Author: **Tanusree Jain**; Trinity College School of Business
Author: **Deirdre Ahern**; Trinity College Dublin

This essay critiques the existing understanding of the concepts of tokens and tokenism within the particular context of women on corporate boards. We argue that existing tokenism scholarship adopts a reductive logic that equates tokens with tokenism

investigated whether these relationships were mediated by perceived organizational authenticity. Using an experimental methodology, Study 1 tested the effects of both an organization's diversity management approach (espoused values) and its demographic representativeness (realized practices) on employee attitudes. The results supported a moderated mediation model such that when an organization was less demographically diverse, participants reported lower identification and commitment when the organization also expressed instrumental diversity management approach values (i.e., diversity was instrumental to the organization's primary business objectives). Further, these relationships were fully explained by the extent to which the participants perceived the organization as (in)authentic. In Studies 2 and 3, an intervention was developed based on previous research involving hypocrisy and two-sided messaging. When either a university (Study 2) or a company (Study 3) included an "honest hypocrite" message acknowledging that they were not yet as diverse as they would like, it negated the negative effects of an espoused values / realized practice mismatch. Finally, Study 4 surveyed working professionals and found support for a serial mediation where the positive relationship between an organization's espoused – practiced discrepancy and employee turnover intentions was explained by perceived organizational authenticity and affective commitment / organizational identification in parallel. These findings' contribution to our understanding of diversity management effectiveness is discussed.

and assumes numerical underrepresentation of women as an implied signal of lack of power, thereby failing to fully reflect the latent power of tokens as potential agents of both personal and inter-group change. Integrating perspectives from socio-psychological theories namely, social categorization, social identity and social integration, we argue that, after appointment, the effectiveness of a woman token's station on a corporate board ought to be qualitatively evaluated in terms of her social categorization and the extent of her social identification with the non-dominant gender group, and her ex post facto social integration into dominant peer group. We propose a layered token theory defining four categories of tokens, (1) the marginalized token; (2) the passive token; (3) the queen bee token; and (4) the changemaker token. These theorized categories capture how women board members differentially navigate group dynamics within the collective, once a board position is taken up consequently affecting tokenism on corporate boards. Our essay has relevance for gender discourse and management research.

Does Making a Business Case for Voluntary Quota-Induced Board Gender Diversity Pay Off?

Author: **Tahir M. Nisar**; U. of Southampton

Author: **Derek Eldridge**; U. of Manchester

Women in top management have attracted global interest, and many governments have implemented the policy of female director quotas on corporate boards. In the context of self-regulatory quotas, policy-makers justify their intervention to improve board gender balance by appealing to the business case rather than gender equity concerns, that gender diversity improves firm performance. Critical mass theory provides theoretical support to such a position; according to this theory, a positive influence on the corporate financial behavior may exist when the number of female directors increases to critical mass level. Using FTSE 350 companies from 2006 to 2016 as the sample, the current paper evaluates female directors' influence on corporate financial outcomes against the background of imposing UK self-regulatory quotas. Our results show a significant positive correlation after the

Author: **Mami Taniguchi**; Waseda U.
Author: **Pamela Suzanne**; U. de San Andrés

Human capital and its use on the labour market are associated with desirable outcomes for individuals, organisations and societies. A variety of social policies, such as paid parental leave and formal childcare, are designed to enhance parents' labour force participation. These policies vary considerably in extent and nature between states, with different influence on men's and women's decision regarding their labour market supply and on organisations' expectations towards labour availability, potentially affecting employers' willingness to invest in their employees. Thus, social policies may indirectly influence individuals' human capital and career development. Using a sample of over 13,500 individuals from 19 countries, we investigate the moderation effect of gender on the relationship between social policies and human resource development practices. Both policies have disabling effects for women, but not for men. We provide explanations for the counterintuitive result regarding the provision of childcare with reference to the statistical discrimination effect.

UK Demographic Diversity in Law Firms: Have Ten Years of Diversity Initiatives had an Impact?

Author: **Peter James Urwin**; Westminster U.
Author: **Matthew Gould**; Brunel U.

Evidence on 'what works' in the promotion and effective management of demographic diversity is lacking. This paper analyses 10 years of data on 51 Law Firms (2006-2015), containing information on the proportion of female and minority ethnic Partners, Associates and Trainees within a Firm's UK operations; together with detail on the Firm's diversity initiatives. Regression-based approaches identify factors driving change in workplace diversity, with a particular focus on the impact of diversity initiatives (captured using a 17-item questionnaire). We find no significant impact for an aggregate measure that captures the extent of a firm's resource commitment to diversity initiatives; but investigation of specific areas that make up this aggregate score, suggest this is not driven by a lack of significance in all underlying components. For

imposition of the quota. Moreover, based on all firm-year observations, we find that the effect of three and more female directors is more pronounced than that of two women, or just one, confirming the predictions of critical mass theory. Finally, we show that female directors serve as a supplementary mechanism for companies with weak governance but can lead to over-monitoring for organizations with strong governance. These findings demonstrate that the introduction of a gender quota not only dramatically increases the number of female directors of FTSE 350 companies but also significantly changes firm outcomes.

What Explains Gender Diversity on Corporate Boards Within the Global Economy?

Author: **Fatemeh Askarzadeh**; Old Dominion U.
Author: **John C. Rajan**; Old Dominion U.

Despite mounting societal demands for board gender diversity, some firms deviate below national and industry norms (i.e., under-conformity). What might explain this non-conforming behavior? Building on insights from the emerging corporate governance deviance theory coupled with the institutional logics perspective, we examine the impact of entrepreneurial orientation of the firm on this deviant behavior. Using panel data on a globally representative set of firms, we show that firms with higher entrepreneurial orientation are more likely to go below the national norms in terms of board gender diversity. Our results also reveal that having more slack resources weakens the relationship between entrepreneurial orientation and under-conformity. This study describes and explains the underlying patterns associated with board gender diversity within a national governance environment by focusing on the entrepreneurial identity of the firm. Overall, we contribute to the comparative gender diversity literature and augment the knowledge of the institutional logics perspective for a global investigation of gender diversity on the board.

[view paper \(if available\)](#)

instance, higher scores in the area of staff development and support are associated with higher levels of gender and ethnic diversity. Considering the pattern of differences across firms according to areas of practice, more 'international' areas of practice have higher levels of ethnic diversity, possibly driven by a global recruitment focus and a higher proportion of overseas non-white staff; whilst the 'international' nature of these areas is also associated with longer, unsociable hours, and fewer female lawyers. Our finding is that diversity initiatives are not sufficient [at least across Law Firms] to overcome deeply entrenched practices associated with different areas of practice, which dominate in our explanation of company diversity profiles.

Is Diversity Still Progress? The Process of Diversity Commodification in Interracial Organizations

Author: **Christopher Munn**; Indiana U., Lilly Family School of Philanthropy

Author: **Oneya Okuwobi**; Ohio State U.

Abstract: America is rapidly diversifying, and organizations are adapting to meet the needs of our changing society. Leaders of diverse organizations are expected to celebrate cultural differences, manage multiple preferences, and facilitate egalitarian relationships. Recent work on organizations reveal that diversity initiatives focus on appearing progressive but, in practice, reproduce internal and external racial inequalities. This study examines the diversity initiatives developed by leaders of multiracial churches. A systematic analysis of in-depth interviews, field notes, and surveys of 121 leaders of multiracial religious organizations reveals why social embeddedness matters for diversity initiatives and how leaders leverage diversity to increase economic resources. We develop a theoretical concept called "diversity commodification" – converting the social value embedded in relations to non-majority groups into material resources – to explore how and why leaders convert the culture of people of color into social and economic resources.

Women on Corporate Boards as Symbolic Management (WITHDRAWN)

Author: **Brian Main**; U. of Edinburgh

Author: **Ian Gregory-Smith**; U. of Sheffield

The paper tests for the presence of symbolic management in the appointment of female board directors. We focus on the length of board service of male versus female directors, and make use of the impact of the Davies Review (Davies, 2011) to facilitate identification. The data are based on FTSE All-Share companies between 1996 and 2017. Following the Davies Review in 2011, there is now sufficient data on male and female director boardroom careers from both the pre- and post-2011 period to conduct a 'difference-in-differences' causal analysis. While the Davies Review has triggered a rise in the number of female non-executive director appointments, these women continue to experience a disproportionate exit rate around nine-years of tenure. The results support a symbolic management interpretation of female non-executive director appointments. The study is limited by right censoring. There are directors appointed post-2011 who have yet to complete their careers or cross the nine-year threshold. Our econometric analysis adjusts for this, but it remains a limitation that must be borne in mind. The discretion afforded by existing corporate governance guidelines can have the unintended consequence of accommodating the continued unequal treatment of female directors in the boardroom. The study exposes gender-based biases that persist in a high profile area (the boardroom). The Davies Review has certainly increased female representation in the boardroom but more remains to be done in terms of securing equal treatment for female directors once in post. The evidence presented here supports the view that female director appointments continue to be made for symbolic rather than substantive motives.

The Virtuous Cycle of Diversity

Author: **Shaun Michael Pichler**; California State U., Fullerton

Author: **Chethan D. Srikant**; California State U., Fullerton

Multilevel Framework of Objective and Perceived Availability of Work- Family Policies (WITHDRAWN)

Author: Yin Lee; U. of Illinois at Urbana-Champaign

Author: Amit Kramer; U. of Illinois at Urbana-Champaign

We provide a multilevel framework of contextual factors that affect the individual-level availability of work-family policies (WFPs). We introduce two concepts to work-family literature, objective and perceived availability, which we define as employees' awareness of such policies and the knowledge of how to use them and as employee's perception that using WFPs, when needed, will not threaten their rewards and career at the organization and will be accepted socially both within and outside the organization. Then, we identify and theorize the effects of contextual factors at multiple levels – national, organizational, and group – on objective and perceived availability. We explore the implications for the multilevel models in work-family studies and suggest avenues for future research about the availability of WFPs.

ASYNCHRONOUS

PAPER SESSION

Author: Asad Shafiq; California State U., Fullerton

Based on propositions from resource dependency theory (RDT), we seek to understand how firms respond to social performance problems through diversity. We consider the impact of negative customer and employee incidents as social performance problems because these incidents represent two critical stakeholders, and because of the potential for such problems to cause a wider impact on the affected firms. Using firm-level longitudinal data across four time points and a cross-lagged panel model (CLPM) to test our hypotheses, we find that social performance problems lead to increases in board diversity. We also find that social performance problems act as a trigger for a virtuous cycle such that increases in board diversity are related to the subsequent adoption of diversity management practices, which are related to subsequently higher levels of board diversity. We contribute to theory on diversity management by demonstrating how firms seek diversity -- both board diversity and diversity management practices -- as a response to social performance problems. Further, we connect board diversity to the adoption of diversity management practices, which are often studied independently, and demonstrate the mutually positive influence they have on each other. We discuss implications for theory and diversity management.

DIVERSITY

SYMPOSIUM

ASYNCHRONOUS

The topic of gender bias is one of the most thought-provoking and controversial issues of our times. Despite rising levels of education, legislative actions, and intense media spotlight, gender inequities persist in the workplace, so that women continue to be under-represented at the top of the organizational hierarchy. When women do attain leadership positions, it seems they are more likely than men to be appointed leader under adverse circumstances as compared to favorable circumstances, an insidious form of bias called the glass cliff. The present study investigates the validity of the glass cliff logic in a different contextual setting than has been the case in much of the prior literature. Based on two independent experimental studies conducted in India, we find that women, compared to men, were seen as having greater leadership ability and considered more suitable for C-level positions. Our results provide no support for the glass cliff logic that women are more likely than men to be appointed to leadership position in crisis situations. Implications and avenues for future research are discussed.

Succeeding Against the Odds: Successful Female Leaders in Kosovo, Where 8 out of 10 Women Stay Home

Designated as a "Best Paper" for GDO

Author: **Endri Shema**; Hult International Business School - London

Author: **Anthony Turner**; Hult International Business School

Causes, consequences, and potential solutions for the gender gap in leadership have received increased research attention in recent years, with much of the corresponding work occurring in contexts such as the USA and UK where social norms are relatively favorable toward workplace equality. Examining phenomena in so called 'extreme contexts' can broaden understanding with valuable insights otherwise obscured (Eisenhardt & Graebner, 2007; Weick, 1993, 2007), however, and with that in mind, we undertook the current study in Kosovo, where social norms and customs are such that over 80% of women forgo work outside the

home entirely (Mehmeti, Dobranja, & Hashani, 2017). This research is comprised of in-depth interviews with 12 notable Kosovar women leaders, including Kosovo's first (and thus far only) female president, senior business, media, and non-profit executives, multiple members of parliament, and an ambassador. Results include a categorization and rich characterizations of impediments these women reported facing in a strongly patriarchal culture, as well as critical resources and key tactics that they leveraged to succeed as leaders across diverse fields, despite those impediments. Some results are consistent with existent research, whereas others offer novel insights, the implications of which for research and practice are discussed.

Back to The Future: Saudi Women Negotiating Gender Inclusion

Author: **Maryam Aldossari**; U. of Edinburgh

Author: **Susan E. Murphy**; U. of Edinburgh

In this article, we develop an understanding of the practice of inclusion based on employees' perceptions of the interplay of institutional and organizational norms. Based on data from 56 in-depth interviews with Saudi Arabian working women, we elaborate on these notions of gender inclusion and identity dynamics in a non-Western setting, where women are part of a first generation to enter the workforce. Our core question is how women make their way in organizations with different levels of inclusion policies and practices. Findings show that women use various approaches to negotiate and navigate inclusion in relation to their employers and majority groups and practices, grounded in specific societal and cultural identities based on religion and tribe. Our study makes two main contributions. First, in applying existing frameworks of inclusion across different organization contexts, we provide additional insights into how policies and practices lead to different organizational inclusion orientations and their effect on women relatively new to a workforce. Second, we highlight that current theories of workplace inclusion need to move beyond organizational efforts and focus on ways in which individuals actively negotiate workplace inclusion in context. We

find that women's work identity works as a means by which women challenge or perpetuate exclusion in the face of societal, organizational, and managerial influences.

Is She Just an Object? Objectification and Commodification in the Brazilian University

Context

Author: **Aline Dos Santos Barbosa**; ESEG - Escola Superior de Engenharia e Gestão

Author: **Marcello Romani-Dias**; Positivo U./Escola Superior de Engenharia e Gestão(ESEG)

The Brazilian university context of parties and sport competitions, where alcoholic drinks are present, is an environment that contributes to the young women's being seen as objects. Starting out with the purpose of understand in what way violent situations against women in this context demonstrate the different facets of objectification and commodification, we undertook 20 in-depth interviews with Brazilian university students. The results emphasize the woman's ample objectification and commodification in the university context and their negative consequences, such as self-objectification in its personal and professional aspects demonstrated by reports of uncertainty regarding their bodies, in exercising the activities of leadership and their choice of profession. Additionally, we identified four ways that women may be commodified in the university context, by: (i) commodification of the body; (ii) commodification of sexuality; (iii) commodification of morality; and finally (iv) commodification of feelings. We contribute theoretically to the understanding of the relation between objectification and commodification. In empirical and managerial terms, we present insights for teaching institutions and other organizations which combat discriminatory and encourage their reflection on the humanization of women, thus also contributing to women's self-perception, and which should also be capable of perceiving abuses resulting from the objectification and commodification.

Leadership Biases: Examining Race, Gender, and Intersectionality Theories (session 755)

Over the past couple of decades, organizational scholars have been particularly active in investigating biases and barriers that prevent women and minorities from entering and remaining in the upper echelons of organizations. Although extant research on leadership biases and barriers associated with gender, race, and intersectionality present group-specific explanations for underrepresentation, there are important commonalities across these streams of research. This symposium will aim to facilitate discussion and further our understanding of whether and when theories related to a particular social group of interest can be applied to other underrepresented social groups in the context of leadership.

Thinking Beyond the Barriers: Disability at Work (session 756)

On average, well over half of the population of people with disabilities (PWD) is unemployed. This is unsustainable, particularly considering the increase in the average age of the global population as well as the rising prevalence of disabilities. This presenter symposium strives to identify variables at the individual-, group-, and organizational-levels that improve work-related outcomes for PWD in order to direct managers and organizations on improving these statistics. It showcases five papers with empirical data that investigate actual employment practices and their efficacy for PWD. The first two papers provide empirical evidence for variables that are influential at helping PWD attain (paper 1) and retain (paper 2) paid employment. The next two papers focus on organizational-level processes that influence the experience of PWD on-the-job, specifically a leader's experience with caregiving for a PWD (paper 3) and the influence of an inclusive organizational climate on disclosure behaviors (paper 4). The final paper focuses on the role of a federal policy acting as a potential social norm and its impact on perceptions about disability during selection (paper 5). Each paper in this symposium directs practical efforts to improve the experiences of PWD in the workplace.

Creativity and Cognitive Ability: Typology Contributions and a Meta-Analytic Review of Moderators

Author: **Andra Serban**; Virginia Commonwealth U.
Author: **Wenhao Wang**; Virginia Commonwealth U.
Author: **Robert Baldwin**; Johns Hopkins U.
Author: **Sven Kepes**; Virginia Commonwealth U.

In today's rapidly changing organizations, the importance of workplace creativity in contributing to organizational performance, growth and competitiveness is indisputable. There is little consensus however on how to define creativity and there are several typologies of it, each with its own limitations. Our meta-analytic review addresses these issues by identifying an appropriate definition, providing a comprehensive typology which builds on and integrates existing ones, and examining the relation between creativity and its oldest and potentially most controversial predictor: cognitive ability. We do so by examining how eight different cognitive ability dimensions from Carroll's (1993) Three-Stratum Theory of Cognitive Ability relate to creativity, as well as how different creativity dimensions relate to cognitive ability. Our meta-analytic sample was derived from 125 primary sources, which included 128 independent samples and 74,626 individual observations. Overall, the effect sizes range from essentially nil to considerable in magnitude. Examining several contextual and methodological moderators, we

sharing as a resource that moderates the negative relationship between adverse working conditions and OCBO. We test our hypotheses by employing a survey research design with 151 employees from 23 small and medium-size enterprises during an acute economic crisis in Cyprus. The findings demonstrate that the negative relationship between adverse working conditions and citizenship behavior is significant for low levels of team information sharing but insignificant for high levels of team information sharing. Our study contributes to the lacuna of research pertinent to employee-centric responses to crisis management.

Professional Ineptitude: The Strategic Role of Human Resource Management in Crisis Prevention

Author: **Elena P. Antonacopoulou**; GNOSIS INSTITUTE

Author: **Fotis Vouzas**; Prince Mohammad Bin Fahd U.

Author: **Marina Mavromati**; U. of Macedonia

Author: **Christina Nizamidou**; U. of Cyprus

This paper highlights the strategic role of the Human Resource Management function in crisis prevention, by drawing attention to a hitherto neglected impact of professional ineptitude. Ineptitude has been recognised as a condition where the knowledge necessary to address a given situation exists but it is not applied correctly. Failure to address professional ineptitude can result as the Germanwings Flight 9525 case aptly demonstrates, the loss of life. We argue that GW9525 could be classified as a loss of knowledge incident and not a loss of control often accounted as the single biggest cause of airline fatalities. We analyze events leading up to and after the crash to show that the HR function can play a strategic role in fostering knowledge integration thus, ensuring that existing knowledge is used instead of misused or not used at all as our analysis will demonstrate. Our analysis contributes to advancing the current debates on HR professionalism by showing the significance of practical judgments that HR professionals make when they have access to knowledge (including confidential information about staff wellbeing – in this case depression) that can be the source of crisis.

found that some had a noticeable influence on the strength of the observed effects. We discuss our contributions and implications for practice, and provide suggestions for future research in this area.

Promotive or Inhibitive? Examining the impact of Paternalistic Leadership on Creative Performance

Author: **Lu Chen**; U. of Electronic Science and Technology of China

Author: **William Ansah Appienti**; U. of Electronic Science and Technology of China (UESTC)

Drawing upon conservation of resource theory and leadership contingency model, this study investigated how and when the three paternalistic leadership dimensions of benevolence, morality, and authoritarianism relates to creativity. The sample included matched survey responses obtained from 82 leaders and 324 subordinates from manufacturing companies in Ghana. Results from structural equation modelling and regression analysis revealed a positive relationship between benevolent leadership and creativity, while authoritarian leadership impacted negatively on creativity. There was no significant relationship between moral leadership and creativity. Promotive voice significantly mediated the relationships between benevolent/authoritarian leadership and creativity, but the mediating role of prohibitive voice was not significant. Power distance orientation not only strengthens benevolent leadership's positive effects on promotive voice, but also strengthens authoritarian leadership's negative effects on both promotive and prohibitive voice. Theoretical and managerial implications are discussed.

Profiling Dark Princes? Validation of a New Measure of Trait Machiavellianism

Author: **Bastian Paul Kückelhaus**; U. of Bonn

Author: **Gerhard Blickle**; U. of Bonn

Author: **Iris Kranefeld**; U. of Bonn

Author: **Theresa Körnig**; U. of Bonn

Author: **Hanna Aileen Genau**; U. of Bonn

Numerous scholars have criticized the traditional assessment of Machiavellianism due to insufficient construct coverage, some going so far as to question its distinctness from measures of psychopathy. Tackling these measurement issues, Collison, Vize, Miller, and Lynam (2018) developed the Five Factor Machiavellianism Inventory (FFMI), comprised of antagonism, agency, and planfulness. We aimed to demonstrate the validity of the FFMI by replicating its relations with the NEO-PI-R found by Collinson et al., provide further evidence for the validity of the FFMI by assessings its relations with the HEXACO facets, and link the FFMI to a broad range of work-related criteria. We found a very high ($r_{ICCS} = .91$) absolute profile similarity between the FFMI's correlations with the NEO-PI-R in our sample ($N = 572$) and the correlation profile for the same variables reported by Collison et al. (2018). Both the NEO-PI-R and HEXACO-PI-R profiles for the FFMI found in the current study supported its distinctiveness from traditional measures of Machiavellianism, which converged greatly with the correlation profiles for the FFMI-antagonism dimension. In addition, the FFMI displayed positive relations with a broad range of criteria for vocational and work-related success and was clearly distinct from psychopathy. Implications and limitations are discussed.

Positive Change or Just "Bouncing Back"? Resilience & Posttraumatic Growth After Military

collectivism on the relationship between pay for performance (PFP) and employee creativity and the underlying mechanisms. Using sample that was composed of 319 supervisor-subordinate dyads from China, we found that the effect of pay for performance on creativity was differentially moderated by vertical collectivism and horizontal collectivism in such a way that PFP was more positively related to creativity for employees with high vertical collectivism than those with low vertical collectivism, whereas PFP was less positively related to creativity for employees with high horizontal collectivism than those with low horizontal collectivism. Furthermore, differential allocation preference, as fostered by vertical collectivism, mediated the moderating effect of vertical collectivism. In comparison, equalitarian allocation preference, as encouraged by horizontal collectivism, mediated the moderating effect of horizontal collectivism. Moreover, moderated path analysis revealed that self-determination mediated these moderated relationships among PFP, collectivism, allocation preferences, and creativity. The theoretical and practical implications are discussed.

Adversity

Author: **Jenna Beltramo**; U. of Central Florida

Author: **Matthew McLarnon**; Mount Royal U.

Recovery in the face of adversity is a crucial process to understand in the context of high-stress occupations such as the military. While resilience has been a central topic of consideration across disciplines, comparatively less work has been done to examine opportunities for positive change after adversity such as posttraumatic growth (PTG). Moreover, the central mechanisms through which individuals can avoid negative outcomes, recover, and experience growth in the aftermath of adversity are important to understand if leaders and practitioners aim to promote the well-being of workers. In this work we draw from theories of resilience and PTG to work toward the development of an integrative model of recovery. We utilize a sample of military personnel who experienced a highly stressful or traumatic event during their time of service in order to examine recovery experiences in the context of military work-related exposures. The results ultimately highlight the direct importance of social support on the experience of PTG, as well as in strengthening the relation between personal characteristics and self-regulatory processes of resilience. Additionally, affective self-regulatory processes were uncovered as a link between personal characteristics of resilience and PTG. Implications for future research and practice are discussed.

Author: **Ishbel McWha-Hermann**; U. of Edinburgh

Relative salary compared with similar others (i.e.

Beijing

Drawing on the conservation of resources theory, we examine the relationship between a high-commitment work system (HCWS) and work well-being by exploring the mediating role of psychological empowerment and the moderating role of leader trust in this relationship. We test the theoretical model using data from 64 companies, involving 64 supervisors and 434 employees. Consistent with our predictions, the results indicate that HCWS is positively related to work well-being and that psychological empowerment partially mediates this relationship. A leader's trust in subordinates moderates the impact of HCWS on psychological empowerment and also the indirect effect of HCWS on work well-being through psychological empowerment. These findings contribute to scholars' understanding of how and when organizational management practices affect employee well-being.

High-Performance Work Systems' Dual Impact on Workplace Well-Being and its Boundary Condition

Author: **David Jinwoo Chung**; ILR at Cornell

For an extended period of time, high-performance work systems (HPWS) were debated by scholars whether they indeed enhance employees' workplace well-being at the individual level. While some scholars proposed that HPWS create a mutually reciprocal relationship between the employees and the firm and thereby enhance employee well-being, other scholars have countered the idea suggesting that HPWS intensify the work expectancy of the employees and, in turn, impair employee well-being. Underpinned by signaling theory, I reconcile the two contradicting perspectives toward HPWS and explore how two distinct organizational climates (i.e., climate of unity and performance) emerge from using HPWS and influence employee workplace well-being. Moreover, I also investigate how union density act as a boundary condition that strengthens the relationship between HPWS and climate of unity, while weakening the relationship between HPWS and climate of performance. Using a South Korean dataset comprised of 422 firms and 9,538

horizontally) has well-established implications for employee attitudes and behaviors at work. Yet, how employees process information on comparisons, such as when internal and external comparison information is incongruent, remains controversial. In this paper we integrate the model of dispositional attribution and equity theory to derive predictions on how congruence and incongruence of internal and external salary comparisons affect perceptions of distributive justice and subsequent employee withdrawal behavior. We hypothesize that the effect of salary comparisons on perceived distributive justice follows a hierarchically restrictive schema where lower salary in comparison is more impactful on justice perceptions than higher salary in comparison. And this effect would further affects employee withdrawal. Two studies were conducted to test our hypotheses: a quasi-experimental study (n = 127) and a time-lagged survey (n = 252). Consistent with our framework, we found that internal and external salary comparisons were positively related to perceived distributive justice, and that when comparison information was incongruent, disadvantaged information more strongly impacted perceived distributive justice than advantaged information. Moreover, this impact on distributive justice negatively related to employee withdrawal. Theoretical and practical implications of these findings are discussed.

Effects of Pay Transparency on Application Intentions through Justice Perceptions and Org Attraction

Author: **Phi Nguyen**; Seattle Pacific U.

Author: **Dana Lynn Kendall**; Seattle Pacific U.

Author: **Heather Maguire**; Seattle Pacific U.

Author: **Tony Mellek**; Seattle Pacific U.

In the current investigation, we test the proposition that applicants make inferences about how an organization treats its employees based on its pay transparency policy. Specifically, we tested a serial mediation model in which pay transparency positively influences applicants' intentions to apply to a job opening through increased fairness perceptions and organizational attractiveness. We randomly assigned participants to a condition in

employees, I found that HPWS elicit the two organizational climates. Further, I also found that climate of unity was more saliently derived from HPWS when union density was high. Overall, this study provides nuanced theoretical and empirical accounts that reconcile the conflicting theories of prior HPWS studies. This study also offers practical implications regarding what factors need to be considered to gain intended employee-level outcomes from HPWS.

Rethinking the Top-Down Approach to HRM Practices Implementation: The Case of Chronic Ill Employees

Author: **Silvia Profili**; European U. of Rome

Author: **Alessia Sammarra**; U. of L'Aquila

Author: **Laura Innocenti**; Luiss Guido Carli U.

Author: **Anna C. Bos-Nehles**; U. of Twente

Although the literature acknowledges the importance of exploring the dynamic and complex nature of HRM practices implementation, our understanding of this process is still limited. Further, research has mainly focused on the “what” of implementation, with a minimal focus on the “how”. Drawing from strategic management theory and focusing on work adjustment practices for chronically ill employees, we examine the implementation of HRM practices as a situated process, looking at the continuous interplay among elements of the context and actors in shaping this process. We use a qualitative case study and adopt multiple perspectives, looking at the perceptions of all the actors directly or indirectly involved in the implementation of HRM practices. The findings demonstrate that there is not a unique way of implementing a practice but a variety of situations which result in different experiences of the same practice. This variation in how HRM practices are implemented and experienced across the organization depends on a process of collective enactment that unfolds at the local level, where multiple stakeholders intentionally and unintentionally contribute to the emergence of a shared meaning of the practice. Additionally, our findings show that diversity prevails when it comes to exactly who is involved in HRM implementation

which they read the profile of a company that implements pay transparency versus a condition in which the company had a policy of pay secrecy. The participants were invited to imagine themselves on the job market and then indicate: (a) the extent to which they felt the company treats its employees fairly, (b) their attraction to the company, and (c) their intent to apply to a position in the company. Results were consistent with the proposed mediation, suggesting that an organization’s pay transparency policy may signal to applicants the extent to which the company values equity and justice. We conclude with some concrete strategies for attracting qualified applicants based on these findings and suggest avenues for future research.

Work–Nonwork Balance: Impact on Subjective Health and Life Satisfaction of People Across 47 Nations

Author: **Atul Mitra**; U. of Northern Iowa

Author: **Michael Harris Bond**; Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic

Author: **Qing Lu**; Hong Kong Polytechnic U.

Using theories of role-balance and conservation of resources (COR), we take a cross-cultural view of an employee's engagement in the work-nonwork domains of living. Employing the World Value Survey (WVS) with a sample of 21,270 married employees from 53 nations, we find cross-cultural variations in the relationship between employees' degree of work-nonwork domain engagement and their subjective health and life satisfaction. To explore the impact of the national focus on motivation for economic productivity and innovation, we used a country's global competitiveness index (GCI), predicting that a nation's GCI would moderate the relationship between the degree of work-nonwork domain engagement and both subjective health and life satisfaction. Overall, the results support our predictions that high work-nonwork domain engagement (or congruence between work and nonwork roles) would enhance individuals' subjective health and life satisfaction more strongly in high GCI nations than in low GCI nations. Theoretical and methodological contributions are discussed, along with implications for future research on national culture concerning work and its impact on employed persons.

Terror Risk and Infrastructure Projects: The Moderating Role of Home Experience and Institutions

Author: **Alfredo Jimenez**; Kedge Business School
 Author: **Nathaniel Lupton**; Dhillon School of Business, U. of Lethbridge

This paper investigates the impact of terror risk on the performance of private participation infrastructure projects. Drawing on internalization theory, we hypothesize that terror risk has a negative relationship with infrastructure project success. Host state accountability, we argue, produces higher indirect costs of managing terror risk, which in turn reduces private participation infrastructure project investor confidence and, as a consequence, reinforces the negative relationship between terror risk and projects' success probability. Conversely, investor's experience with terror risk increases investor confidence and hence partially mitigates the negative consequences of terror risk which hamper projects' success. Hence, the impact of terrorism is weakened for projects led by firms from similarly high terror risk countries. We test our hypotheses using a sample of 5,083 projects in 132 countries from 2002 to 2017. Our study contributes to the growing evidence in the literature about the indirect and direct risks of major disasters on foreign business ventures, complements research on the transferability of country-specific managerial experience, and provides an interesting caveat to the generally accepted role of institutional quality for the performance of non-commercial business investments.

Should I Stay or Should I Go? Moderating Effects of Experience on Divestment and Re-Entry

Douglas Nigh Award Finalist
 Author: **Irina Minodora Surdu**; Warwick Business School
 Author: **Edith Ipsmiller**; WU Vienna

Going back into previously exited markets is a significant management risk. But, how are re-entry risks managed? Drawing on the risk management literature, our study examines re-entry after initial entry and divestment on a sample of 654 MNE re-entrants. We move away from narrow risk management lenses according to which risks happen in isolation and theorize that MNEs simultaneously manage international risk by exploiting the trade-offs among external and internal sources of risk associated with foreign direct investment choices. We suggest that, for re-entrants, exit may become the strategic reference point for evaluating future strategic choices. Our results suggest that re-entrants tend to manage re-entry risk by choosing partner-based modes that enable them to maintain strategic flexibility at re-entry. Surprisingly perhaps, market-specific experience acquired during the initial market foray does not provide strategic flexibility, in that highly experienced firms still experience trade-offs.

Bi-National Tandem Leadership in German-Chinese Joint Ventures - A Context-Embedded Analysis

Douglas Nigh Award Finalist
 Author: **Yuqi Liu**; U. of Passau

Leadership researchers suggest plural leadership as effective mechanism to cope with increasing complexity outside and inside of organizations. This paper examines a special form of plural leadership: tandem leadership (TL) which means two persons

This study investigates whether and how multinational enterprises (MNEs) respond to violent conflicts. We employ institutional theory to argue that the response of MNEs to violent conflicts is a function of the level of involvement of both formal (host country government) and informal institutions (e.g., armed groups) in violent conflicts as well as the magnitude of violent conflicts. The impact of violent conflicts magnitude and the associated actors on MNE responses are explored using 2,494 firms operating in 12 conflict-affected countries from 1991 to 2017. We find that conflict involvement of both formal and informal institutions encourages MNEs to broaden the operational scope to cover a broader range of value-chain activities that could otherwise potentially increase their exposure to threats. This effect, however, may be reversed depending on the magnitude of actual threats posed by the violent conflicts. To be specific, when facing a high level of incompatibility in institutional demands articulated in the form of severe violent conflicts, MNEs may narrow the operational scope of their foreign operations to reduce their chances of unintentional involvement or/and association with informal institutions engaged in conflicts.

How Terrorism Affects Firm R&D Investment: A Real Options View

Author: **Daitian Li**; U. of Electronic Science and Technology of China

Author: **Feida Zhang**; U. of Queensland

Author: **Yangao Xiao**; U. of Electronic Science and Technology of China

Although the number of countries threatened by terrorism has been increasing in the past decades, our understanding of the impact of terrorism is still limited. This study examines the relationship between terrorism and firm R&D investment, and how a country's institutional environments and a firm's resource endowments may shape this relationship. Drawing upon the real options theory, we argue that terrorism dampens firms' R&D investment because terrorism-induced uncertainty increases the value of the embedded deferral option while having little impact on the value of the growth option. However, good institutional environments

formally share the leading function of an organization or an organizational unit. In particular, I study role divisions between tandem partners in the under-researched context of international joint ventures (IJVs) and middle management and integrate context explicitly in the explanatory framework for TL. Based on a qualitative-interpretative multiple case study in three German-Chinese JVs, I found that German-Chinese tandem partners divide their roles in configurations of complementarity and dominance. I also found that national culture and institutional environment at the macro level as well as organizational culture and structure at the meso level serve as important contextual influencing factors on TL. This paper contributes to the understanding of leadership practices by demonstrating both complementary, cooperative and asymmetric, competing relationship dynamics between tandem partners in their negotiation of shared leadership role space. It also contributes to the understanding of contextualizing leadership theory by showing both isolated and interrelated effects of the national and the organizational context on TL. This paper also shows that tandems are not only influenced by the organizational context, but also have an impact on it.

Carriers of Competing Institutional Logics: The Effect of Returnees in Corporate Boards on M&A

Douglas Nigh Award Finalist

Author: **Shenyang Jiang**; School of management, Zhejiang U.

Author: **Zhi Cao**; U. of Nevada, Las Vegas

This study examines how overseas returnees from developed countries impacts the cross-border and domestic M&A of the firms in the emerging economies. While the existing literature on overseas returnees has treated the returnees only as the carriers of knowledge, we argue that the returnees could also be the carriers of competing institutional logics. The competing institutional logics makes the overseas returnees more likely to have conflicts with other employees who are regulated by local institutional logics. The conflicts will weaken or even reverse the benefits of the carried knowledge of the

(e.g., strong IPR protection, low public expropriation hazards) mitigate firms' disincentive to invest in R&D stemming from uncertainty. In addition, large and cash-rich firms are less sensitive to terrorism-induced uncertainty because they face higher organizational inertia and rely less on the external financial market.

Operational Flexibility or Portfolio Investment: Risk Management of US MNEs when Facing Risk of War

Author: **Yun Dong Yeo**; UT Dallas

This paper examines how the risk of war aroused by North Korea's threatening actions trigger strategic responses from U.S. multinational enterprises (MNEs) operating in South Korea. While the operational flexibility perspective predicts that MNEs choose to utilize their global subsidiary network by shifting operations among subsidiaries when facing risks, the portfolio investment literature suggests that MNEs diversify operations to minimize the impact of risk in their global operations. Empirical tests of the two competing perspectives reveal that U.S. MNEs adopt the portfolio investment strategy when threatened by the risk of war. However, as MNEs have larger global operations outside the host country that is at risk of war, MNEs tend to take an operational flexibility approach more seriously and shift their productions to the remaining global operations. The ownership structure of the subsidiary does not appear to have significant effect on U.S. MNEs' strategic risk management.

Foreign Equity Valuations of EMFs: The Effects of Economic Distance and Information Spillovers

Author: **Anish Purkayastha**; U. of Sydney Business School

Author: **Igor Filatotchev**; King's College London

This paper investigates theoretical tension associated with investor valuations of firms from emerging markets that tap into global capital markets. One line of argument expands liability of foreignness perspective into capital market domain where a firm faces legitimacy and unfamiliarity issues while raising capital from foreign markets. In contrast, there is a recognition of the benefits to global investors of the distance between issuing firm's home location and host capital market location due to risk reduction through geographic portfolio diversification. We suggest an integrated theoretical perspective based on the notion of cost-benefit trade-offs associated with economic distance between the firm's home country and host capital market. Our theoretical arguments grounded within information asymmetry framework suggest that information spill-overs from the firm's capital and product markets may be important contingencies that moderate this base effect. Fixed effect panel regression analysis of a manually created panel dataset of 2,553 firm-years spanned over 17 years from 190 Indian firms listed in foreign equity markets supports our hypotheses.

Author: **Omrane Guedhami**; Darla Moore School of Business, U. of South Carolina

Author: **Sadok El Ghouli**; U. of Alberta

Author: **Helen Wang**; West Virginia U.

One of the most fundamental determinants of firm competitiveness is the cost of capital. Existing research has focused on firm- and country-level factors, but largely overlooked a highly salient systemic factor – geopolitical risk. We posit that geopolitical events that elevate investor risk will prompt equity investors to shift their capital away from emerging markets to safer mature markets,

International Expansion and Firm Innovation: Evidence from Emerging- Market Firms

Author: **Xuchang Chen**; Peking U.

Author: **Ting Xiao**; Peking U.

Author: **Jun Xia**; U. of Texas at Dallas

As latecomers, firms in emerging markets are lack of strategic asset and home country advantage to gain global competitiveness. In this paper, we argue that outward foreign direct investment (OFDI) is an effective way to acquire strategic asset. Specifically, we focus on the impact of strategic-asset-seeking (SAS) OFDI on firm innovation performance. Moreover, we explore the boundary conditions under which home country institutional factor (home-country intellectual property rights (IPR) protection) and host country institutional factor (host- country IPR protection) moderate this relation. Using a sample of Chinese listed firms' SAS OFDIs between 2013 and 2017, we find that SAS OFDI indeed enhances firm innovation performance. We further show that the moderating effects of IPR protection at different level can vary greatly. Home provincial IPR protection enhances the positive relationship between OFDI and innovation performance, whereas host- country IPR alleviates the relationship. This paper has important implications for emerging markets firms on how to use OFDI to catch up with global competitors.

Monetary Rewards and Innovation Outcome: Contingencies of Inventor's Characteristics

Author: **Wenlong He**; U. of International Business and Economics

Author: **Nianchen Han**; U. of Colorado, Boulder

This paper leverages the second amendment to China's Patent Law as a natural experiment setting, and investigates the effect of monetary rewards on employee inventor's innovation outcome, as well as the contingencies of inventor's individual characteristics. Based on the literature of motivating innovation and monetary incentives, we argue that monetary rewards motivate inventors to produce more patents; nevertheless, monetary rewards incur a decline in their patent quality. Inventor's tenure in the current company strengthens the negative effect

raising the cost of equity capital for firms located in emerging economies. Based on a sample of 10,916 observations spanning 18 countries from 1990 to 2015, we find that higher geopolitical risk increases the cost of equity capital, on average. These results are robust to alternative measures for the cost of equity, to a variety of robustness tests, and to the inclusion of an extended range of control variables. We also find that this relationship is moderated by constraints on executive power, the strength of legal and regulatory institutions, a common law legal tradition, and cross-listing in the United States.

VC in Emerging Markets: The Value of Patience

Author: **Shyamala Sethuram**; Rutgers Business School

Author: **Markus David Taussig**; Rutgers Business School

Author: **Ajai Singh Gaur**; Rutgers U.

Due to multiple agency relationships, venture capitalists (VCs) may rush to exit their investments in entrepreneurial firms and pass returns on to the limited partners (LPs) who supply their capital. In emerging markets characterized by institutional voids and delays, there is a tension between this tendency and local entrepreneurs' desire for more 'patient' (longer-term) capital. Premature exit can harm investee entrepreneurs, if it bluntly forces too great a focus on short term gains over long-term, sustainable performance. We investigate determinants of the VC investment holding period in 10 emerging economies using data from the Private Capital Research Institute (PCRI). We find that younger VCs, industry specialized VCs, and foreign VCs, particularly those investing in institutionally weaker host markets, exit deals faster. VCs in syndicated deals or with greater industry specialization also exit faster. Entrepreneurs, VCs, and LPs should all be aware of the potential downsides of these tendencies.

[view paper \(if available\)](#)

of monetary rewards on patent quality, while inventor's technology specialization attenuates such a negative effect. We establish a novel dataset by linking Chinese inventors to their patents in the State Intellectual Property Office, as well as to firm-level financial demographics. Our difference-in-differences research design delivers corroborating evidence to our predictions.

International Venture Capital Attractiveness and Performance: A Neo-Configurational Perspective

Author: **Amir Pezeshkan**; U. of Baltimore

Author: **Adam Smith**; Middle Tennessee State U.

Author: **Stav Fainshmidt**; Florida International U.

Author: **Anil Nair**; Old Dominion U.

Prior research suggests that market-supporting institutions are critical to attracting international venture capital (IVC), yet venture capital firms have been increasingly investing in countries characterized by institutional weaknesses. Consequently, the role of national institutions in attracting IVC firms remains unclear. We employ a neo-configurational institutional perspective to explore the institutional contexts that make countries attractive to IVC investment and favorable to IVC performance, thus illuminating the implied risk-reward tradeoffs in IVC firm location choice and ability to navigate institutional weaknesses. Utilizing fuzzy-set Qualitative Comparative Analysis, we find that a robust political system, transparent product markets, and openness to competition are key drivers of IVC investment attractiveness, but each requires complementary labor or capital market institutions. In contrast, well-functioning institutions do not necessarily lead to higher performance by IVC firms, suggesting that IVC firms may especially contribute to the success of ventures in economies with institutional weaknesses. We discuss implications for theory on venture capital firm internationalization as well as policy implications particularly relevant to the Asia-Pacific region.

SIM

Sustainability in Management Education: Where It Has Been, Is Now, and Is/Can Be Headed (session 770)

This 2020 Academy of Management Symposium (AoM) intends to build on our understanding of, and

Extant research pertaining to the relationship between formal institutions and the governance of equity-based subsidiary investments (wholly-owned subsidiary, or joint venture (JV) partnership) established by small-to-medium sized enterprises (SMEs) in foreign markets has generated equivocal results. To reconcile these disparate findings, we propose a more fine-grained conceptualization of the formal institutions construct. To do so, we employ an uncertainty-grounded lens to categorize formal institutions in terms of the distinct varieties of uncertainty (environmental versus behavioral) and transaction costs (information costs versus monitoring and enforcement costs) that they foster. More specifically, we theorize that formal institutions can be unbundled into environmentally-oriented formal institutions (EOFI) and behaviorally-oriented formal institutions (BOFI). We detail the distinct transaction cost-reduction mechanisms through which these two different types of formal institutions impact upon the equity-based governance choices of foreign-investing entrepreneurial firms in emerging markets. In brief, we propose that weaker BOFI foster both greater behavioral uncertainty and heightened monitoring and enforcement costs for these firms which will precipitate a preference for full ownership. Conversely, weaker EOFI induce greater environmental uncertainty and more pronounced information costs which will motivate these investors to engage in a JV with a local partner. The results of our tests of these hypotheses provide empirical support for the main effects of EOFI and BOFI, but only partial support for our hypothesis pertaining to the interaction effect between these two categories of formal institutions.

corruption, to what extent do external factors such as bureaucratic and economic constraints affect bribing activity, and how does bribing activity affect firm performance? To answer this question, I utilized embedded mixed methods. I interviewed local executives in Kyrgyzstan and Georgia and used the findings to provide interpretive validity and reliability to quantitative findings derived from World Bank Enterprise Survey data. Interestingly, many findings from the qualitative interviews were different from quantitative findings. Interviews indicated that informal competition had no effect on bribing activity or firm performance, whereas quantitative analysis indicated that informal competition did have a small but statistically meaningful effect. Findings from the interviews also complemented findings from the past literature. In particular, my interviews indicated that bribing helps firm performance. This supports a “grease the wheels” theory and runs counter to a “sand in the wheels” theory. The findings help us understand what motivates local executives in corrupt settings to make decisions about participating in corruption. The study also provides insights into nascent literature on corruption and into policy makers and practitioners on methods for reducing corruption.

Institutionally Derived Strategic Influence of MNE Subsidiaries

Author: **Ivar Padrón-Hernández**; Hitotsubashi U.

What role do host country institutions play for the strategic influence of subsidiaries in multinational enterprises (MNEs)? Through an inductive study of ten headquarters-subsidiary dyads across three MNEs, this paper identifies enablers of subsidiary influence in proposed strategies from headquarters, i.e., headquarter strategic initiatives. These enablers reside either in institutions themselves or in interfaces with the MNE. Furthermore, I show how these enablers may be leveraged by subsidiaries to either avoid or become involved in headquarter strategic initiatives. This is done through distinct tactics that target different organizational rationales related to the complex relationship between MNEs, subsidiaries and local institutions. The study contributes to the literature on global strategy and

A Home Country Institutional Perspective Towards the Internationalization-Performance Relationship

Author: **Sihong Wu**; U. of Western Australia

Author: **Di Fan**; Swinburne Business School, Swinburne U. of Technology

Author: **Liang Chen**; U. of Melbourne

Despite the widespread attention on the rise of emerging market multinational enterprises (EMNEs) in recent decades, the relationship between internationalization and performance for EMNEs remains an under-addressed issue in International Business (IB) research field. Drawing from an institution-based view, we suggest that the international strategic decisions of EMNEs can be regarded as the outcomes of their interactions with home country institutional parameters, including home government characteristics (formal institution), and social norms and ideologies (informal institutions). We utilizes a two-decade Meta-analysis and constructs a three-level (firm-, study-, and country-level) hierarchical linear model to identify the internationalization-performance relationship for EMNEs. Our findings confirm the existence of an overall positive relationship, and indicate that the relationship is affected by the home country government characteristics. We also find that these firm-government interactions are moderated by the ideology-induced informal institutions. To sum, our findings help elucidate the puzzle concerning the internationalization-performance relationship of EMNEs, provides additional value for institution-based view in IB area, and opens several avenues for future research.

Corporate Social Responsibility and Impression Management: ARAMCO, 1932-74

Author: **Wedian Albalwi**; Newcastle U. Business School

Author: **Tom McGovern**; Newcastle U.

Author: **Aly Salama**; Newcastle U. Business School

In emerging economies, economic development and corporate social responsibility (CSR) are closely entwined. Multinational corporations have presented a positive image of their economic and social activities to investors and society in general as part of their justification for exploiting the natural resources of these countries. This study examines the Arabian American Oil Company's (Aramco) CSR programs in employment, housing and healthcare during the period 1932 to 1974. These programs contributed to economic and social development but were also a mechanism used by the Company to maintain control of the Saudi oil assets. This research uses a computer-aided content analysis program, DICTION 7.0 to analyse the text in Aramco's published annual reports during this period. The narrative in the reports was further analysed to assess the application of impression management techniques in the presentation of content.

A Phenomenological Study on Spiritual Quotient and Holistic Human Resource Development Model

Author: **Adeel Ahmed**; Department of Management Sciences U. of Turbat, Pakistan

Author: **Arshad Mahmood**; U. Sains Malaysia

This study proposed the inclusion of spiritual quotient (SQ) in the holistic human resource development (HRD) model. This paper presents the findings of the three research objectives. The first research objective explores the development and implementation process of HRD model in organisations. Secondly, it determines the intelligence quotient (IQ) and emotional quotient (EQ) programmes within the current HRD models of organisations. Thirdly, this research examines the organisations' understanding of SQ and assesses its awareness about the importance of SQ in the HRD model development. By applying a qualitative methodology, the researchers directed all efforts to the selected phenomenology method. In this study, the primary data collection was conducted through face-to-face interviews with human resources managers and top management of three organisations of education sectors in Pakistan. Findings suggest that SQ is an important component for organisational development. Thus, future recommendations for such interventions are proposed for policy makers.

The Impact of Employees' Religious Beliefs on the Relative Importance of Efficacies on Performance

Author: **Erez Yaakobi**; Ono Academic College

Author: **Jacob Weisberg**; Bar Ilan U.

A structured framework is presented to account for the moderating role of religious beliefs on the relative importance ascribed to self and collective efficacies in predicting three core facets of performance. Two hundred and twenty Ultra-Orthodox and secular employees' quality, innovation and efficiency performance were evaluated, as well

past trauma harms a community's ability to prepare for the future, a preparation we call strategic agency. Thus far, however, scholars have overlooked how considering potential histories can change how the past is experienced. Here we describe how changing history can prepare a community for the future. To enable our description of this process, we dive into news from, and serendipitous interviews in, the US community hit hardest by the 2009 economic downturn. We emerge with the finding that by telling a new history, people of the community attached to a new conversational field, changed how they built the way they saw the world, and thereby created opportunities for strategic agency. Our findings contribute to the study of the rhetorical use of history by showing how future imperfect histories, which are many partial bets on potentially socially valid and personally appropriate histories, can be part of how the telling of history can change. Specifically, future imperfect history can help explain the processes whereby community members come to discard their tethering to a previously dominant field and tether to a new field. Further, we contribute to the literature on community history by describing how a new history can motivate a community to prepare for the future. Ultimately, we describe a community which, despite a history of traumatic shock, was able to create opportunities for strategic agency.

Moral Economy in Management History: Values and Valuation in the Organization of Firms and Markets

Author: **Daniel Wadhvani**; U. of Southern California
Author: **Eugene Choi**; Management History

This paper introduces a conceptual framework for the analytical integration of moral values and evaluation as an endogenous driver in the historical organization of firms and the dynamics of markets. In contrast to the stances that morality is either not an integral part of the analysis of organizations and the position that morality likes in the "norms" of an institutional environment, this paper conceptualizes values as integral the processes of value creation and valuation that are inherent to markets. We show the applicability of the framework to research

as their self and collective efficacies. The findings revealed that whereas among secular employees, self-efficacy was the best predictor of their performance, among the UO employees, collective efficacy had the greatest weight. In addition, these findings appeared to be dependent on the performance facet measured and appeared mainly for the efficiency performance facet but to a lesser extent for the innovative performance facet. These findings may help promote a much more comprehensive understanding of organizational behavior, given the growing diversity of employees entering the labor market worldwide. The discussion focuses on theoretical and practical contributions and applications such as providing more efficient managerial interventions and better tailored guidance to different employees to improve their performance.

A Distinct Dimension of Diversity? A Qualitative Study of Religious Identity in the Workplace

Author: **YingFei Héliot**; U. of Surrey
Author: **Ilka Gleibs**; London School of Economics and Political Science

Religious identity is recognised as a neglected facet of diversity with important connections to work behaviour and other outcomes. We conduct a qualitative study interviewing 51 religiously identified participants from four occupational groups: Christian healthcare workers, Christian teachers, Jewish teachers, Christian lawyers and Christian bankers. Following thematic analysis of their experiences, we develop five themes characterizing dynamics of religious identity in the workplace. Findings shed new light on how employees negotiate their religious identity in the workplace including experiences related to "disclosing and discussing religious identity in the workplace"; "tactics in managing conflicting identities"; "relationships between self and others"; "influence of religious values on professional conduct"; and the "salience of religious identity". The study makes two contributions to research on diversity and inclusion in the workplace. First, we find specific challenges that employees face when negotiating their own (or others) religious identity in

in entrepreneurship, organizational form, industry evolution, and international business.

Social Economy Evolution: From Voluntary to Secure Organizational Commitments to Social Mission

Author: **Helen Haugh**; U. of Cambridge

The historical depictions of how economies evolve are dominated by narratives of organizations that have persistently failed to adequately address global problems of poverty, inequality and environmental pollution. While the increase in the number of social enterprises in the 20th century diversified the organizational landscape, their commitments to social and environmental missions remained voluntary. Legislation in 2005 however, introduced a new organizational form that secured commitments to economic, social and environmental mission. This paper presents an historical account of the establishment of the Community Interest Company, an organizational form designed to ensure that organizational assets are committed to benefiting communities in perpetuity. The historical analysis of institutional evolution explains how the creation of the Community Interest Company employed the efforts of practitioners, civil servants and politicians and relied on actor legitimacy and solution selling between actor groups. The Community Interest Company organizational form ensures that company assets are locked in perpetuity to the social economy while leaving ambiguous the definitions of community, assets and community interests.

Religiosity and Layoffs: Constraint or Resource?

Author: **Pauline De Becdelieuvre**; ENS

Author: **François Grima**; UPEC

Author: **Lionel PRUDHOMME**; IGS

The research community has neglected both the role of layoff agents and the impact of religiosity on stress at work. This study aims to fill these gaps by examining how Catholic managers cope with laying off workers as their companies downsize. We drew on the theoretical framework of necessary evils and interviewed 32 Catholic layoff agents. Our findings reveal that religiosity has a complex effect on the stress involved in laying workers off. It serves as a resource for Catholic layoff agents—for instance, by offering frameworks enabling them to make sense of it, such as social support or helpful practices. However, we venture beyond a one-dimensional analysis to reveal that psychological engagement can also lead them to act against the interests of the downsizing company and the laid-off workers' future employers.

Ethical Leadership Development: Effects of Spiritual Practices and Intercultural Sensitivity

Author: Sang-won Byun; U. of Minnesota

Although ethical leadership has been recognized as a critical factor in the long-term success of organizations, extant literature provides limited insight into how ethical leadership is developed. To advance the understanding of ethical leadership development, I investigated the effects of spiritual practices on ethical leadership and the moderating effects of intercultural sensitivity on the relationship between spiritual practices and ethical leadership. Through a survey-based study of 103 leader-peer/follower dyads, I found that there were significant effects of gratitude practice, a sub-type of spiritual practices, on two sub-factors of ethical leadership: people orientation and fairness. In addition, I found that there were four significant quadratic relationships between spiritual practices and some of the sub-factors of ethical leadership. Also, intercultural sensitivity moderated a quadratic

effects model, the effect size was positive and moderate, $r = .40$, 95% CI [.37-.44]. On outcomes of OCBs, the results show that measures of religiosity (both religion-specific and spiritual) are positively correlated. Using a fixed effects model, the effect size was positive and small to moderate, $r = .30$, 95% CI [.27-.32]. Additionally, the present study offers a comparison analysis of effect size. The results show religion-specific studies were more predictive of job performance, whereas spirituality studies were more predictive of organizational citizenship behavior outcomes.

Advancing the Relational View of Followership: Behaviors and Experiences of Followers and Leaders (session 790)

As the world becomes increasingly dynamic and complex, challenges are being placed on leaders and followers to work together in different ways to get things done. Much of this calls for broader views of leadership that are distributed, collective and relational. These views have given rise to a new perspective in leadership research, the study of followership. Followership can be described as the role of individuals acting in relation to a leader, yet we know little about what these followership behaviors are or how individuals engage in them to effectively contribute to leadership outcomes. This symposium will share recent findings revealing what followership behaviors are and how individuals engage in them relative to leadership roles. The discussion will have critically important implications for organizational development and human resource management practice, as followership sheds light on necessary workplace skills that have been largely overlooked in traditional leader-centric views of leadership development.

relationship. I discuss a plausible explanation for the quadratic relationships based on the concept of a workplace spirituality continuum. I also offer implications for future research and practice.

Leading Without a Self: Implications for Spiritual Leadership Development

Author: **Mai Chi Vu**; Newcastle Business School, Northumbria U.

Author: **Louis W. Fry**; Texas A&M U. Central Texas

To date, Spiritual Leadership theory (SLT) has received widespread acceptance and considerable empirical support. One of the fundamental propositions of SLT is that it is couched at the level of spirituality that underlies the world's major religious tradition. While recent work has supported this for Islam, more work is needed to explore this proposition, especially as it relates to the contribution religious practices can inform approaches to inner life, which is seen as the source of spiritual leadership. The purpose of this paper is to explore how non-self from the Buddhist emptiness theory as viewed through the lens of the levels of Being in Being-centered leadership, contributes to our understanding of the inner life component of spiritual leadership. We extend Fry's and Kriger's (2009) work on Being-centered leadership using the notion of non-self from the Buddhist wisdom tradition to further explore and develop spiritual leadership towards nondual states of being. Finally, we discuss the implication for future theory, research, and practice.

Motivating Employee Innovative Behavior through Servant Leadership: An Empirical Investigation

Author: **Mavis Agyemang Opoku**; Gachon U.

Author: **Seung-Wan Kang**; Gachon U.

The study of follower-centered leadership has emerged as an important leadership style with benefits for individual and team performance indicators. Using the social identity theory, the current study focuses on how and when servant leaders facilitate employees' innovative behavior. A moderated mediation framework is employed to propose perceived insider status as the psychological mediating mechanism in the relationship between servant leadership and innovative behavior, and team-member exchange as an attenuating moderator on the indirect effect of servant leadership on employee innovative behavior. The results of this study based on a sample of 213 dyads comprising manufacturing workers and their immediate supervisors, support all of the study hypotheses. The theoretical contributions and implications, as well as the limitations and future research, are discussed.

Towards Developing Spiritual Higher Education Institutions: A Multiple Mediation Analysis

Author: **Mohammed Aboramadan**; U. of Milano-Bicocca

Author: **Khalid Dahleez**; Assistant Professor in Management, A'Sharqiyah U. - Oman

Author: **Anjali Bansal**; MICA, Ahmedabad

One of the approaches that can positively contribute to employees' wellbeing, effectiveness, productivity, and job performance is workplace spirituality. To this end, with the help of social exchange theory, we examine the impact of workplace spirituality on academics' job performance through the mediation by work engagement, affective commitment, and organizational trust. This research uses a quantitative research design and employs structural equation modelling to analyse the data collected from 207 faculty members representing Palestinian higher education sector. The results supported the indirect relationship between workplace spirituality and job performance through multiple mediation exhibiting the importance of client-orientation in the higher education institutions. This paper provides insights to university managers in creating spiritual workplaces followed by positive employee outcome in terms of engagement, commitment and trust on their organizations. This study advances the literature on workplace spirituality through studying it in a non-western setting.

Benefits of Empowering and Servant Leadership (session 779)

Molding the Heart of a Servant: How Servant Leadership Enhances Followers' Other-Oriented Values

Author: **Chad Hartnell**; Georgia State U.

Research on sacrifice in the context of teamwork has been limited, and what does exist suggests that sacrifice is beneficial for team functioning. However, not all sacrifice is created equal. This behavior may be motivated by its intrinsic value to the actor, but may also at times be externally motivated, making the actor feel as though they have to or ought to sacrifice for the team. The current study draws from Self-Determination Theory to suggest that the motives for sacrifice (one's own or one's teammates) may have different effects on an person's daily stress and team affect. We conducted an experience sampling study with 250 participants over 14 days. Contrary to the notion that making sacrifices for the team is unilaterally good, this research shows that motives for sacrifice matter to the individual. Findings indicate that autonomous motivation for sacrifice reduces daily stress, whereas controlled motivation increases daily stress. Autonomous motivation for sacrifice was also positively related to team affect, whereas the effects of controlled motivation varied. This study contributes to the literature on teams as well as Self-Determination Theory, and advances practical insights into individual well-being and attitudes in the context of teamwork.

A Multilevel Study of Group Affective Tone and Team Innovation: A Moderated Mediation Model

Author: **Yujing Liu**; Institute of Human Resource Management, National Sun Yat-sen U.

Author: **Liang-Chih Huang**; National Chung Cheng U.

Author: **Gordon W. Cheung**; U. of Auckland

Drawing on broaden-and-build theory and threat-rigidity hypothesis by Rhee (2007), we theorized and tested a multilevel model that examined the moderating effects of transformational leadership (TFL) on the team-level process linking group positive/negative affective tone (PGAT/NGAT) to team innovation via information elaboration. Data were collected from 299 team members and 65 leaders in Taiwan companies at two time points. The multilevel path analysis demonstrated support for a positive indirect effect from PGAT to team innovation via information elaboration and a negative indirect effect from NGAT to team

Author: **Angelo J. Kinicki**; Arizona State U.

Author: **Ryan M. Vogel**; Fox School of Business, Temple U.

Author: **Derek Jonathon Stotler**; Georgia State U.

A core supposition in servant leadership theory is that an individual is a servant first before they aspire to lead. Hence, according to servant leadership theory, servant leaders' primary mode of influence is through affecting followers' others-focused values. We apply the values activation perspective (Schwartz, 1977) to examine the process through which servant leaders influence followers' others-focused values. Data derived from a sample of 325 employees who reported to 134 different leaders in a large organization located in the Midwestern United States over three waves spanning 16 months supported our hypothesized predictions. Servant leadership indirectly influenced a change in followers' others-focused values through perceptions of leader benevolence and followers' prosocial motivation. We discuss the study's implications for theory and practice and identify avenues for future research.

The Firm that Would Not Die: Alumni Events, Sociability and the Residual Organization

Designated as a "Best Paper" for OB

Author: **Michael Kevin Power**; London School of Economics and Political Science

Author: **Penelope Tuck**; U. of Birmingham

This paper argues that alumni events are not only settings where professional identities are renewed in social gatherings, or simply instruments to build and sustain commercially valuable networks. They can also be continuous with the organizations they celebrate by reproducing latent structural features of these organizations long after they cease to exist. Based primarily on participant observation of three annual lunches for alumni of the former accountancy firm Deloitte Haskins & Sells, and interviews with participants, organizers and non-participants, the paper makes two inter-related contributions to the study of professional service firms and to organization theory. First, it argues that alumni events reveal the variable durability and re-enactment of hybrid professional-social relations - what we call "sufficient sociability" - which were formed during intense working in small groups. Second, we show that these social relations, via table seating choices at an alumni event, produce what we call the "residual organization". In this way, a modest alumni lunch in a central London hotel is transformed from an event of marginal interest, into a "site" where core issues of organization theory are at stake.

[view paper \(if available\)](#)

on the conservation of resources theory, we propose and test a model that accounts for why and when exhibiting empowering leadership provides actors benefits. Via experience-sampling survey research, we examine the impact of empowering leadership on actors' daily work engagement by focusing on the moderating role of power distance, and the mediating roles of negative affect and sleep quality, which operate in tandem. Results from 160 supervisors in two Chinese organizations indicated that exhibition of empowering leadership negatively relates to negative affect and positively related to consequent sleep quality and next day work engagement. The strength of this beneficial impact is bounded by power distance, such that supervisors with high power distance acquire fewer benefits after exhibiting empowering leadership. The theoretical and practical implications of these findings are discussed.

To Empower or Not? How Empowering Leadership Induces the Resource-Gain and Resource-Loss Pathways

Author: **Shuting Xiang**; Southwestern U. of Finance and Economics

Author: **Nan Ning**; Southwestern U. of Finance and Economics

Author: **Qiwei Zhou**; Beijing U. of Chemical Technology

Author: **Joe Wang**; Southwestern U. of Finance and Economics

While prior research has commonly emphasized the positive effects of empowering leadership, an increasing number of studies have called for attention to its "dark side". The mixed findings reveal that empowering leadership may cause "double-edged sword" effects. However, little is known about how and when empowering leadership may have these effects. Drawing on conservation of resource theory (COR), we investigate the internal mechanisms and boundary conditions of the "double-edged sword" effects of empowering leadership. Based on data collected from 170 Chinese employees across a 3-wave study, we test our hypotheses and demonstrate two divergent pathways of empowering leadership. For the

What Can the Body Tell You About Affect in Team Conflict? Using Biometric Data to Study Conflict

Author: Nicola Anne Thomas; Technical U. of Denmark

Author: Carina Lomborg; Technical U. of Denmark

Author: Philip Cash; Technical U. of Denmark

We introduce a new way of understanding the emotions in organizational conflict, showing that all types of conflict elicit much more emotion than previously thought. Building upon knowledge from psychology research—specifically, relationship psychology—we theorize all conflict as affective, dynamic and constantly changing. We suggest a framework for examining dynamic changes in affect during conflict. We empirically test this framework by capturing fluctuation of affective states through the measurement of facial expressions, biometric responses and self-reported affect during the entire conflict situation from 18 teams including all team members. Our findings reveal that regardless of the type of conflict, i.e. relationship or task, all conflict elicited negative affect disproportionate to the level of conflict reported. More strikingly, our results indicate a complete discrepancy between self-reported affect and physiological affect data. This highlights that future potential and importance of using biometric data when investigating affect. We advance conflict theory and affect theory by integrating knowledge from relationship psychology, which helps to see conflict and the potential impact on team performance in a novel way.

performance: organizational citizenship behaviors (OCBs) and counterproductive work behaviors (CWBs; or deviance), which are important components of job performance. The papers in the symposium present new theoretical directions and ways to conceptualize and study these behaviors. These include utilizing a person-centered approach to study profiles (rather than separate traits or behaviors). Specifically, the first paper studies how personality profiles (i.e., combinations of traits) predict discretionary behaviors. The second paper identifies deviance profiles and examines how they relate to traditional antecedents of deviance in non-traditional ways. The third paper examines how between- and within-person variance in CWBs depends on the total study duration and the time intervals between measurements. The second focus of this symposium is on discretionary behaviors in the context of the modern day workplace, thus expanding our understanding of the role that these behaviors play in aligning individual and organizational values in this dynamic environment. Specifically, the fourth paper examines how the interface (i.e., conflict vs. enhancement) between a gig-work identity and an environmental identity affects positive and negative discretionary behaviors. Finally, the fifth paper studies the effects of employee promotive and prohibitive voice on empowering leadership, and how this effect depends on a dynamic work environment. In sum, the papers in this symposium have implications for theory, research and practice in organizational behavior and human resources, as the papers enrich our understanding of attributes and processes related to job performance.

Envy, while being stressful and painful, is an inevitable part of our contract with life. We draw on control theory and the functional perspective on emotions to evaluate the effectiveness of envy-coping behaviors, including both others-dysfunctional (i.e., harming the envied) and self-functional (i.e., seeking self-improvement) behavior. In contrast to control theory, which suggests that closing the gap between desired and actual states is beneficial, we posit that the distinctive nature of envy-coping behavior produces differential well-being for the envier. Furthermore, because envy is often rooted in unfair advantages received by others, we explore an envier disposition related to fairness—justice orientation, or the extent to which individuals internalize justice as a moral virtue and pay attention to issues of unfairness—as a moderator. We argue that justice orientation is a contingency factor driving functional versus dysfunctional reactions to envy, thus contributing to our understanding of the envy --> coping behavior --> well-being relationship. We conducted an experience-sampling study with a sample of 192 Taiwanese massage therapists, whom we surveyed for 14 consecutive workdays. Confirming most of our predictions, we find that envious individuals high in justice orientation engage in more others-dysfunctional behavior, which in turn results in reduced positive well-being and increased negative well-being. Envious individuals high in justice orientation also engage in less self-functional behavior, which has an adverse impact on positive well-being. Interestingly, such individuals with low justice orientation engage in more self-functional behavior, which is beneficial for positive well-being. Theoretical contributions and practical implications are discussed.

While the management literature regards workplace gossip as a norm violating behavior, the broader literature on gossip regards gossip as functional in clarifying and communicating organizational norms. To reconcile these seemingly contradictory propositions, we develop an integrated model where we distinguish positive gossip from negative gossip, theorizing their independent and joint effects on gossipers' workplace status via both norm violation and norm clarification perceptions – two concurrent but countervailing mechanisms. In particular, negative gossip clarifies norms but it per se violates norms, whereas positive gossip clarifies norms without violating norms. Interactively, positive gossip buffers the norm violation effect of, and synthesizes the norm clarification effect of, negative gossip. Our key predictions were supported in a round- robin field survey with data collected from 37 teams and 783 members.

Team Gossip Prevents the Negative Effect of Abusive Supervision on Team Norms and Effectiveness

Author: **Rui Zhong**; Sauder School of Business, U. of British Columbia

Author: **Lingtao Yu**; U. of British Columbia

Author: **Jinlong Zhu**; Renmin U. of China

Author: **Yating Wang**; National U. of Singapore

Derived from team leaders' role modeling effect, aggressive interpersonal norms have been hinted as a key mediating mechanism explaining the negative effects of team abusive supervision on team effectiveness. However, some evidence contradicts with the role modeling effect and the mediating mechanism of aggressive interpersonal norms, suggesting that team members may instead view the abusive team leader as a common enemy and thus refuse to emulate aggressive behaviors exemplified by the common enemy (i.e., the common enemy effect). We seek to solve the above theoretical tension and answer the following question: Why do team abusive supervision impede team effectiveness via generating aggressive interpersonal norms in some teams while not in

other teams? To that end, we integrate self-categorization theory with social function theory of gossip to posit that team gossip, or the extent to which team members engage in negative gossip about the abusive team leader, serves as an important boundary condition. When team gossip is low, the role modeling effect prevails whereas when team gossip is high, the common enemy effect prevails. Our hypotheses regarding the role modeling effect and the common enemy effect are fully supported by a sample of 102 work teams using multi-wave, multi-source, and social network-based research designs. Theoretical and practical implications for abusive supervision and workplace gossip are also discussed.

How Supervisor Gossip and Regulatory Focus Interact to Impact Target's Proactive/Withdrawal Behavior

Author: **Weiyi Chen**; Xi'an Jiaotong U.

Author: **Zizhen Geng**; Xi'an International Studies U.

Author: **Chao Liu**; Xi'an U. of Posts & Telecommunications

Research on workplace gossip has predominantly examined its impact from the gossiper's and the receiver's perspectives. By regarding supervisor negative gossip as a stimuli of the target employee's job stress and self-regulation, this article elucidates the impact of the interaction of supervisor negative gossip and regulatory focus on target employees' cognitive appraisal of the gossip and subsequent proactive/withdrawal behavior. Integrating regulatory focus theory with the cognitive appraisal theory of stress, this article developed a dual-pathway model to explore how supervisor negative gossip interacts with the target employees' regulatory focus to influence their proactive/withdrawal behavior via increasing their challenge/hindrance appraisal of the gossip. It is proposed that the interaction of supervisor negative gossip and the target employees' promotion focus increases the employees' proactive behavior and decreases their withdrawal behavior through improving their challenge appraisal, while the interaction of supervisor negative gossip and the target employees' prevention focus decreases the

It's Not What You Say, it's How Others Take it: Contextual Factors that Induce and Inhibit Voice (session 786)

The literature on voice has arrived at a consensus about several reasons why employees speak up or stay silent. However, management theory and organizational practices have not reached a complete understanding of how to encourage employee voice and maximize supervisor receptiveness. To broaden the view of voice, the presentations in this symposium address contextual factors that affect the voice process and voicer outcomes at different levels. Three presentations investigate contextual factors for voice within work groups while two presentations address voice within employee-supervisor dyads. Taken together, this symposium adds to the field's understanding of voice by highlighting critical contextual factors — diversity, courage attributions, artificial intelligence tools, supervisor delegation to voicers, and supervisor self-reflections on employee objections — that shape voice outcomes for groups and employee-supervisor dyads.

Job Crafting in Organizations (session 778)

Expansion-Oriented Job Crafting Behaviors and Employee Performance: A Moderated Mediation Model

Author: Ceyda Maden Eyiusta; Kadir Has U.

Author: Onur Alten; Kadir Has U.

This study examined the mediating impact of psychological empowerment on the relationship between expansion-oriented job crafting behaviors (i.e., seeking resources and seeking challenges at work) and employees' job performance in small and medium-sized enterprises (SMEs). We also investigated the moderating role of perceived overqualification on the relationship between expansion-oriented job crafting behaviors and psychological empowerment. We tested the hypotheses with data gathered from 519 individuals and their supervisors in 69 SMEs operating in six major cities of Turkey. As the data had a nested structure, we used hierarchical linear modeling (HLM) to analyze the multi-level data. Results showed that psychological empowerment mediated the relationships between seeking resources, seeking challenges and job performance. Results also revealed that the relationships between seeking resources, seeking challenges and empowerment were positive and significant only for the employees who felt overqualified for their jobs. Similarly, conditional indirect impact of expansion-oriented job crafting on job performance through empowerment was also significant only for those employees who felt overqualified for their jobs.

How Having A Calling Leads to Job Crafting

Author: Amber Yun Ping Lee; National U. of Tainan

Author: Po-chien Chang; Macau U. of Science and Technology

Author: Hsien Chun Chen; Institute of Human Resource Management, National Sun Yat-sen U., Taiwan

Author: Heng-Yu Chang; Chang Gung U., Chang Gung Memorial Hospital

Author: I-Heng Chen; National Sun Yat-Sen U.

This study aims to examine the association between calling and proactive behavior by proposing a moderated mediation model. Drawing from the job crafting perspective, career commitment and job autonomy are identified as the mediator and moderator in the model, respectively. The authors tested the proposed relationships with an SPSS macro that utilizes a sample of 350 employees in a three-wave procedure. Results support all the hypotheses. The findings of the study reveal calling to be significantly associated with employees' job crafting behavior. The authors conclude that such a process begins with one's career commitment and is subsequently strengthened by the level of autonomy, thus yielding a pattern of moderated mediation. These findings answer recent calls for an integrative examination of calling in the workplace by demonstrating that career commitment and job autonomy represent key mechanisms in transferring one's calling into job crafting behavior. As such, this study complements existing literature on the theoretical and practical implications of calling in the fields of Organizational Psychology and Organizational Behavior.

The Development and Validation of an Electronic Job Crafting Intervention

Author: Lorenz Verelst; KU Leuven

Author: Rein De Cooman; KU Leuven

Author: Marijke Verbruggen; KU Leuven

Author: Colette Van Laar; U. of Leuven (KU Leuven), Belgium

Author: Loes Meeussen; KU Leuven & Research Foundation Flanders

This study examines the effects of an electronic job

crafting intervention on job crafting and person-job fit. We hypothesize that the e-intervention directly stimulates task, relational, and cognitive crafting (i.e., job crafting) and indirectly improves needs-supplies and demands-abilities fit (i.e., person-job fit). We expect that the e-intervention can stimulate job crafting because it provides information about job crafting and stimulates self-regulating job crafting activities by guiding participants in setting specific job crafting goals, in attaining these goals, and letting them reflect on the (lack of) attainment of these goals. We additionally test whether these change mechanisms (i.e., goal specificity, goal attainment, and reflection) indeed influence job crafting. We conducted a quasi-experimental field study with 107 employees who were either assigned to an intervention group (n = 53) or a control group (n = 54). Results revealed that the e-intervention was able to directly foster task crafting, but not relational or cognitive crafting, and that the e-intervention indirectly improves needs-supplies fit via task crafting. We conclude that the e-intervention is an efficient tool for organizations to stimulate job crafting, and especially task crafting, among employees.

From Boasting to Boosting: Positive Consequences for Observers of High-Rank Braggarts

Designated as a "Best Paper" for OB

Author: **Kelly Nault**; INSEAD

Author: **Andy Jiexiong Yap**; INSEAD

This research examines how bragging behavior conducted by relatively higher-ranked others affects observers' emotions, motivation, and work engagement. We developed and tested the idea of a bragging boost, that superior braggarts inspire lower-ranked observers by sharing performance-related information that reflects opportunities to succeed in the organization. Results from four studies revealed that (1) observers of superiors' (vs. peers') bragging readily report feeling inspired by this behavior, (2) conversations involving bragging behavior by superiors (vs. conversations devoid of bragging) lead to greater reported experiences of positive uncertain (e.g., hopeful, inspired, determined) emotions, (3) these increased positive uncertain emotions in turn lead to greater observer reported motivation at work and work engagement, and (4) these effects are present only when superiors brag about professional achievements (vs. personal consumption achievements), and diminish when superior braggarts repeatedly brag about the same accomplishments. These findings help illustrate the positive effects bragging can have on observers of such behavior, and how this behavior can affect important organizationally-relevant outcomes.

Is there an Upside to Leader Narcissism?

Author: **Geir Thompson**; BI Norwegian Business School

Author: **William Keith Campbell**; U. of Georgia

Author: **Lars Glasø**; BI Norwegian Business School

The present study examines how narcissism can relate to leadership effectiveness. We propose an untested path through which narcissism can predict leadership effectiveness - political skill. Data were collected from 238 supervisors and 1531 followers from a variety of businesses at different organizational levels. To test our hypotheses we performed structural equation model analyses and bootstrapping analyses. Finally, we conducted a hierarchical moderated regression analyses to examine a possible inverted curvilinear relationship between narcissism and follower performance and abusive supervision. The results showed that leader narcissism predicted political skill, and to the extent this relationship held, narcissism had a generally positive impact on follower outcomes, including higher performance and job satisfaction and decreased experience of leader abuse. Excluding the component of political skill in the model, narcissism predicted negative job satisfaction and negative follower performance. Evidently, the role of narcissism in organizational leadership is complex, with both positive and negative outcomes. The present study demonstrates the significance of political skill to generate more positive and less negative leader outcomes.

Exploring (In)Congruence of Leader Narcissism Identity and Reputation on Performance Outcomes (WITHDRAWN)

Author: **Jeremy Bernerth**; San Diego State U.

Author: **Michael S. Cole**; Texas Christian U.

Author: **Min Z. Carter**; Southern Illinois U. Carbondale

Author: **Joshua C. Palmer**; Florida State U.

Judgements about others' personal characteristics intertwine with social interactions in the workplace. Indeed, the personality and social psychology literatures show forming impressions of what others are like is vitally important, in part, because it facilitates the forecasting and acceptance of others'

behavior. Interestingly, very few studies consider others' (i.e., subordinates) judgements about their leaders' personality and whether correspondence between leaders' self-perceptions and these others' judgements is capable of providing meaningful and unique information. This study explores (in)congruence effects between leaders' self-ratings of narcissism (i.e., identity) and subordinates' ratings of leaders' narcissism (i.e., reputation) on performance outcomes via mediating mechanisms. Using polynomial regression and response surface analytical framework, we found our hypothesized (in)congruence effects were largely supported. These findings have important implications for leaders and organizations and suggest to fully understand the implications of leaders' narcissism, one should consider the perspectives of interacting parties and the joint effect of their converging or diverging perspectives.

Setting and Pushing Boundaries: Implications for Work-Life Balance, Well-Being, and Performance (session 789)

This symposium brings together a diverse group of management scholars to provide critical and often surprising answers to the question of how people set and push boundaries at work around a broad range of issues, including declining requests, replying to off-hours emails, asking sensitive questions, asking for extensions on deadlines, and reacting to interruptions. People often struggle to set boundaries. When responding to requests, refusers overestimate the interpersonal costs of refusal, as Krithiga Sankaran, David Tannenbaum, and Craig Brimhall find in their empirical examination of refusals. Relatedly, employees who send off-hours emails are mostly unaware of the pressure their receivers feel to reply right away, as Laura Giurge and Vanessa Bohns' work

meta-knowledge. The team level analysis with a multi-sourced data obtained from 37 teams revealed a significant negative relationship between functional diversity and information elaboration, and a significant positive relationship between information elaboration and team innovation. Furthermore, when the indirect effect of mediation was taken into account and the information elaboration was controlled for, the direct effect between functional diversity and team innovation became positive and significant. The implications regarding the variables that reflect the knowledge integration perspective of team innovation, have been discussed to gain a better understanding of an innovative team's cognition and to guide future research. On a practical level, teams are advised to incorporate information elaboration as a tangible step into innovation processes, highlight pro-diversity beliefs and contributions by each subgroup to minimize negative effects of functional diversity and support development of shared meta-knowledge within the team.

Innovation in China, India, and Singapore: Culture Differences Affecting Exploration & Exploitation

Author: **Sylvia Hubner**; National U. of Singapore (NUS)

Author: **Neha Tripathi**; National U. of Singapore

Author: **Xing Le Kong**; National U. of Singapore (NUS)

Author: **Tamara Kaschner**; Ludwig Maximilian U. of Munich (LMU)

This paper analyses how cultural differences across China, India, and Singapore influence team exploration, exploitation, and innovation. Previous cross-cultural and innovation literature mainly focused on Western cultures or differences between East and West. In this research, we elaborate on innovation related cultural specifics that differentiate China, India, and Singapore, and investigate differences in team exploration, exploitation, and innovation across those three cultures. We test our model in a survey study with matched answers of team members and their supervisors in innovation projects in China, India, and Singapore. Our findings suggest higher levels of

demonstrates. Aside from struggling to set boundaries, people also grapple with pushing boundaries as Einav Hart and Eric VanEpps find when it comes to asking sensitive questions, and as Jaewon Yoon, Grant Donnelly, and Ashley Whillans show when asking for extensions on adjustable deadlines (particularly for women). Further, as demonstrated by Elana Feldman and David Greenway, people can have varied emotional reactions to interruptions depending on their temporal perceptions of those interruptions as well as the context within which interruptions unfold. The key takeaway of the symposium is that navigating boundaries involves at least two perspectives – those who set/push the boundary and those who are affected by them – and these perspectives do not always align. Consequently, people may impact one another's work-life balance, psychological well-being, and performance in unintended ways.

Effect of CEO Transformational Leadership on Innovative Behavior in the Service Industry

Author: **Han Cheng Chang**; Guangdong U. of Finance and Economics

Author: **Yi-Ting Chu**; National Sun Yat-Sen U.

This study explores the relationships among CEO transformational leadership, organizational learning, and employee innovative behavior from the perspective of social exchange theory. The investigation is conducted on valid questionnaire responses collected from 42 companies (173 employees). The results show that CEO transformational leadership is positively related to organizational learning and employee innovative behavior. Moreover, organizational learning plays a mediating role in the relationship between CEO transformational leadership and employee innovative behavior. These results offer reasons to consider employees' innovative behaviors as the outcome of social exchange. Moreover, CEO transformational leadership exerts cross-level effects on organizational learning and employees' innovative behaviors.

literatures, we examine how team members' mean passion for innovation is indirectly related to team innovation through their reflexivity as a team and how these indirect effects are strengthened or weakened when members are homogenous in terms of their passion intensity. We predict that the two kinds of passion—harmonious passion (HP), which stems from autonomously viewing innovation as important to one's identity because of the characteristics of innovation itself, and obsessive passion (OP), which results from the internalization of innovation into one's identity due to intrapersonal or interpersonal pressure that is uncontrollable—will show different patterns given their distinct nature and influences. The results from a two-wave field study of 131 teams and a three-wave field study of 155 teams consistently supported the differential effects. Specifically, we found that mean HP had a positive indirect relationship with team innovation via team reflexivity, and this indirect effect was more positive when HP diversity was lower rather than higher. On the other hand, the indirect mean OP on team innovation via reflexivity were less negative when OP diversity was higher rather than lower. Our study has important theoretical and practical implications for understanding the effect of passion on innovation in team contexts.

[Making Lemonade: Dealing with Analytics Surveillance in the Workplace](#)

Author: **Marco Marabelli**; Bentley U.

Author: **Emmanuelle Vaast**; McGill U.

Author: **Paul R. Carlile**; Boston U.

In this paper we focus on how organizational practices are generated because of the introduction of analytics-based technologies aimed at monitoring

(e.g., isolation, poor social exchange), but less is known about how territorial employees interpret the surrounding environment. This research integrates the two different perspectives (i.e., how territorial employees define the relationship with both the environment and relevant others) to uncover its complex influence in shaping job performance. Integrating the literature regarding territoriality and organization-based self-esteem (OBSE) with self-construct theory, this study develops a model in which the independent self-construct stimulates the territorial employees to take attention of the increased control over work environment—a benefit for OBSE and job performance—while the interdependent self-construct motivates the employees to interpret the territorial behaviors as the threat to build harmonious relationships with their colleagues—a burden for OBSE and job performance. A field study (i.e., a multisource and time-lagged data) was used to test our model. The results demonstrated that employee territoriality is a double-edged sword for job performance and interact with employee self-constructs to predict positive and negative impacts on job performance, via enhanced experience of personal control and enhanced levels of OBSE (i.e., positive pathway) as well as increased perceptions of being excluded and decreased levels of OBSE (i.e., negative pathway). These research findings have significant implications for both theory and practice.

Shifting Attributions for Poverty Motivates Opposition to Inequality and Enhances Egalitarianism

Author: **Dylan Wiwad**; Northwestern Kellogg School of Management

Author: **Paul Piff**; -

Author: **Angela Robinson**; U. of California, Irvine

Author: **Brett Mercier**; U. of California, Irvine

Author: **Lara Aknin**; Simon Fraser U.

Author: **Azim Shariff**; U. of British Columbia

Amidst rising economic inequality and mounting evidence of its pernicious social effects, what motivates people to oppose inequality? Five studies (N = 34,442) show that attributing poverty to situational forces is linked to greater concern about

employees' performance. We use longitudinal data collected from June 2017 to December 2019 at a healthcare network in the Greater Boston Area. The related literature often points to negative aspects of workplace surveillance through these systems; what is more, it is not clear why some organizations can benefit from process improvement through analytics while other cannot. These mixed findings and a gray area around reasons underpinning the successful deployment of these systems motivate our study. We found that a mixture of top-down and bottom-up practices, in the long-term, promote collective actions of supporting the effective use of analytics. Top-down practices (management) focus on the reorganization of structures and formal processes; bottom-up practices (employees) concern cross-community bonding, creative workarounds to improve current practices and the attempt to transfer these (improved) practices to different contexts where the same analytics standards "rule." We theorize on how these practices need to be interwoven to be successful, and we highlight that this takes time. We therefore contribute to (and question the pessimism of) related literature by showcasing the bright side of analytics at work, happening over time.

Exploring Contagion in Digital Innovation - A Virus Perspective

Author: **Jeppe Agger Nielsen**; Aalborg U.

Author: **Mette Strange Noesgaard**; Aalborg U.

Author: **Tina Blegind Jensen**; Copenhagen Business School

Author: **Lars Mathiassen**; Georgia State U.

Researchers have used contagion metaphors such as diffusion, fashion, and mimicking to examine how digital innovations spread across an organizational field. We extend this line of inquiry by applying Virus Theory to a longitudinal investigation of how three Danish home care organizations adopted mobile technology into their day-to-day operations. Focusing on how innovations (the virus) play out within these three organizations (the hosts) over a 20-year period, we identify three patterns of contagion in digital innovation. In one case, mutation was evident as mobile technology

inequality, preference for egalitarian policies, and inequality-reducing behavior. In Study 1, situational attributions for poverty predicted reduced support for inequality across 34 countries. Study 2 replicated these findings with a nationally representative sample of Americans. Three experiments then tested whether situational attributions for poverty are malleable and motivate egalitarianism.

Bolstering situational attributions for poverty through a brief writing exercise (Study 3) and a computer-based poverty simulation (Studies 4a-b) increased egalitarian action and reduced support for inequality immediately (Studies 3-4b), one day later, and 155 days post-intervention (Study 4b). Causal attributions for poverty offer one accessible means of shaping inequality-reducing attitudes and actions. Situational attributions may be a potent psychological lever for lessening societal inequality.

A Social Comparison Perspective on Idiosyncratic Deals and Coworkers' Acceptance

Author: **Xiaoyan Zhang**; School of Economics and Management, Beijing Jiaotong U., China

Author: **Wenbing Wu**; -

Author: **Mingyu Zhang**; Beijing Jiaotong U.

Author: **Wen Wu**; Beijing Jiaotong U.

Author: **Daiheng Li**; School of Economics and Management, Beijing Jiaotong U., China

Idiosyncratic deals (i-deals) refer to customized work arrangements and employment conditions employees negotiate with employers. Significant scholarly attention has been paid to understand the responses of i-deals' recipients. However, little attention has been paid to coworkers' reactions to i-deals. This study examines how coworkers react to focal employees' i-deals. We tested our hypotheses with a sample of 255 employee-coworker pairs and found that coworkers are more likely to accept focal employees' flexibility i-deals than development i-deals. Specifically, we found that coworkers' felt status threat mediates the relationship between development i-deals and their acceptance of i-deals. Coworkers' perception of obtaining future i-deals mediates the relationship between flexibility i-deals and coworkers' acceptance. Furthermore, the empirical results show that coworkers' leader-

triggered a radical transformation that replaced a control-based with a trust-based regime. In another, incubation was prominent as mobile technology matured through a slow-paced transformation. In the third case, dormancy was essential as the organization first abandoned mobile technology and then revitalized it at a later stage. As such, the Virus Theory-inspired analysis highlights how the same idea about digital innovations unfolds differently within individual organizations, hence offering new understandings of the ongoing, interrupted, and long-term way in which digital innovations spread across a field. As a result, we argue that the Virus Theory contributes new knowledge about contagion in digital innovation compared to established theories of diffusion, fashion, and mimicking.

Temporal Frames: Exploring Sensemaking Through the Use of Planning Software

Author: **Julie Delisle**; [esg uqam](#)

Several technologies have been designed to assist employees in dealing with time. Although it certainly influences how people make sense of time, this topic has not been studied so far. This should not come as a surprise since technology has been identified as one of the major shortcomings of the literature on sensemaking. Answering this call, this research relies on multiple-case studies following the implementation of planning software in three groups of the same organization. Findings illustrate three distinct framings of temporality: integrated, discontinuous, and past prevalent, which lead to different responses toward the tool (accepting, resisting and selecting). These insights illuminate the mutual influence between affordances, framings and responses through the process of sensemaking, and as such, contribute to a better understanding of affordances in practice.

Relational Approach to Team-Level Pay

Satisfaction: The Roles of LMX Differentiation

Author: **Mee Sook Kim**; California State U., East Bay

Author: **Sanghee Park**; Hongik U.

Author: **Yuan Jiang**; Harbin Institute of Technology

Author: **Won-Woo Park**; Seoul National U.

Author: **Hyun Sun Chung**; Seoul National U.

This study introduces a relational approach to pay satisfaction, demonstrating that the variances in social exchange relationships with a leader (LMX differentiation) influence employee pay satisfaction beyond actual pay levels. Because pay satisfaction depends on perceived equity which is rooted in social comparison, we point to the need to examine pay satisfaction in a work team context where employees are proximal to one another and constantly exchange evaluative judgements of work environments. We propose that (1) pay satisfaction can be shared through reciprocal interactions and emerge as a collective attitude (team-level pay satisfaction) and (2) within-group agreement in pay satisfaction (pay satisfaction agreement) needs investigation as it serves as an important team-level phenomenon that is influenced by relational factors. Using the samples collected at two different time points, we demonstrate that LMX differentiation is negatively related to team-level pay satisfaction and pay satisfaction agreement as it undermines perceived equity and augment the unequal distribution of information and support. Decreased team-level pay satisfaction, in turn, negatively affects team performance. Further, leader conscientiousness and task interdependence moderate the indirect relationship between LMX differentiation and team performance via team-level pay satisfaction. Theoretical and practical implications are discussed.

Author: **Xinru Page**; Bentley U.

Author: **Marco Marabelli**; Bentley U.

Algorithmic work involves algorithms taking on management roles such as task allocation and performance evaluation and humans interacting with them to accomplish work tasks. In such work, algorithms and humans are 'co-workers'. The paper examines this 'human-algorithm co-worker' relationship. Algorithmic work has distinctive conditions such as lack of transparency of algorithmic outputs, difficulty of over-riding them, and extensive digital traces that form the data-bed for multiple computations across different managerial functions. Problematizing these conditions, we study how they shape the human-algorithm relationship. Noting that relationships among co-workers are embodied in organizational roles, we address the research question: How does having algorithms as a co-worker shape the human's work role? The empirical context of our study is algorithm driven ride sharing exemplified by companies such as Uber. We draw on data that includes interviews with 15 Uber drivers, a netnographic study of 1700 discussion threads among Uber drivers from two online forums, and archival analysis of Uber's web pages. The data represents taxi driving in the US. We develop a relational view of algorithmic work by delving into the role dynamics of the human-algorithm co-worker relationship to explain how algorithmic work can create algorithm driven role conflict and role ambiguity for the human, which manifests in negative work outcomes. Implications for theory, practice, and policy are discussed.

Job Connectedness as a Job Resource or Job Demand: Moving Beyond the Dichotomy

Author: **Rashimah Rajah**; Pulsifi

Author: **Lucas Monzani**; Ivey Business School

Modern advances in communication technologies allow endless possibilities for knowledge workers. While remaining connected to job matters remotely affords greater control over work matters and personal boundaries and can be welcome by employees, engagement in this behavior can be

view paper (if available)

RESEARCH

PAPER SESSION

ASYNCHRONOUS

disruptive to personal domains and well-being. Scholarly works have also had mixed results with regards to this phenomenon, as studies have typically examined the topic in dichotomies. In this study, we examine job connectedness and its effects on well-being and performance. Grounded in the job demands-resources (JD-R) theory, we postulated that job connectedness is related to different levels of well-being and performance based on individual appraisals of whether it is a job resource or a job demand. We move beyond a dichotomous view of whether job connectedness is indeed a job resource, or a job demand, by examining both possibilities in the same research model. Results from our experience sampling study with 194 employees over the course of a week showed that when individuals psychologically appreciated job connectedness as a job resource, they experienced higher job satisfaction and higher job performance. When individuals appraise job connectedness as a job demand, they experienced higher work-life conflict and burnout. Implications are discussed.

Sociomateriality and the IT Artifact (session 793)

Exploring Smartphone Affordances Through a Power Lens: The Case of Refugee Daily Life Organizing

Author: Randa Salamoun; American U. of Beirut

Author: Charlotte M. Karam; American U. of Beirut

Author: Crystel Abdallah; American U. of Beirut

In the current study, we investigate the connections between power and the technology-organizing nexus. To do this, we explore how the lived experience of refugees shapes the enactment of smartphone affordances in their day-to-day organizing practices. Our central research question is: "How do refugees perceive the affordances of the smartphone to enable (empower) or constrain (oppress) their daily organizing during settlement?"

ODC

Organizational Change Leadership Research: New Findings and Future Directions (session 245)

The scholarship of both organizational change and leadership is extensive. However, there have been few attempts to systematically integrate these fields of research in terms of theory or empirical examination. As a result, our understanding of the role and impact of leadership on organizational change outcomes is incomplete. This symposium is designed to generate a dialogue about what constitutes effective change leadership. It is comprised of four papers (two empirical and two theoretical), which explore factors that influence the effectiveness of change leadership in terms of strategic choices, behaviors, and the demands and resources related to the change leader role. Authors of the two most comprehensive reviews of change leadership scholarship – Jeffrey Ford and Shaul Oreg

To disentangle the role of technology from the activities necessary for organizing, we develop a hybrid lens that draws on a feminist interpretation of Affordance Theory and allows for an explicit consideration of power dynamics. We focus on the interrelation between the materiality of the smartphone, the action possibilities it provides in relation to organizing, and the related power dynamics. We adopt a qualitative analysis of 32 in-depth interviews with Syrian refugees settled throughout the Lebanese territory. Our findings highlight the specific affordances of the material characteristic whether empowering or subjecting the actor to oppression. Furthermore, we shed light on the pervasive role of the layers of power. Our main findings suggest that smartphone affordances can (1) be oppressive as well as empowering; (2) push the parameters of organizing thereby serving as a basis for mediated agency related to overcoming oppression; and (3) shape small changes impacting the experience of gender-based oppression. On a practical level, these findings suggest that initiatives aiming to empower refugees through technology should not build on empowerment and ignore oppression, but rather attempt to integrate both.

Making Houses Talk: How the Material Get Organized to Perform

Author: **Camille Endacott**; UC Santa Barbara

Using MacKenzie's (2006) interpretation of performativity, we explore how multiple objects are organized to perform as coherent systems. Though many studies examine how singular objects can be made to perform (Barley, 2015; Humphries & Smith 2014; Kaplan, 2011), this study explores how different objects come to be arranged and coordinated such that they speak with the same voice. To do so, it draws on field data from a year-long study of residential realtors to examine cases of realtors' work to make houses perform as coherent systems. Our analysis showed that the sequence in which realtors organized non-human actors into a system affected the extent to which they could bring them into alignment, because non-human actors varied in their malleability and

- will introduce and conclude the symposium. In introductory comments, Dr. Ford will comment on the state of change leadership research to date and remaining questions. Shaul Oreg will offer discussant comments that integrate the insights from the papers and propose directions for further research.

Institutional Change and Sociomaterial Practices: Healthcare Reform in the Turkish Healthcare Field

Author: **Kutay Gunestepe**; Istanbul Technical U.

Author: **Deniz Tuncalp**; Istanbul Technical U.

Institutions are changed and maintained through practices that encompass interactions between humans and materials. However, we know less about what kind of mechanisms take part in shaping these practices. In this paper, we seek the answer to this question through a qualitative inductive study. We reveal power-based mechanisms that have both social and material foundations, the latter of which are mostly underexamined in the extant research. We make use of the sociomateriality concept that helps us capture sources of power without privileging the social over the material. We analyzed sociomaterial practices in two emergency departments after the emergence of managerialist approaches in the healthcare services of Turkey. We show what kind of power-based mechanisms participate in changing or maintaining institutions through the model developed in this study. Accordingly, we have substantial contributions to three broad literature streams - institutional theory, power, and materiality - and also facilitate to cross-fertilize them.

The Intra-Action of Employees and Materiality in the Constitution of Work-Related Identity

Author: **Pekka Pälli**; Aalto U. School of Business

Author: **Ari Kuismin**; Aalto U. School of Business

Author: **Emma S. Nordbäck**; Hanken School of Economics

Applying a sociomaterial view to the material and human agency in doing work, this study explores the interdependent role of material arrangements and people doing knowledge-work. Using a Nordic

university organization as an example, the study specifically highlights how material-physical environment and its affordances, including spaces of work as well as “high technology” such as electronics and “low technology” such as furniture – gain agency and become significant in terms of work-related identity. We introduce three modes of work: cognitive-, embodied-, and emotional work, which describe cognitive, bodily, and emotional actions that are entangled in the expressions of knowledge workers’ work-related identities. Focusing on identity as an achievement in agentive “intra-action” between the human and the material, the article contributes to the research on the effects of material arrangements and technology in the activities that knowledge-work in a digitalized workplace in particular consists of. Keywords: work-related identity, sociomateriality, material agency

Place and Organizing for Emerging Technologies- Challenges of Scaling 3DPrinting Across a UK Hospital

Designated as a “Best Paper” for OCIS

Author: **Stavros Polykarpou**; U. of Exeter Business School

Author: **Michael Barrett**; U. of Cambridge

Author: **Eivor Oborn**; U. of Warwick

This paper examines how the role of place shapes the way emerging technologies scale across hospital organizations. Through a five-year ethnographic field study on organizing 3D printing across a major UK National Health Service (NHS) hospital, we extend theory on how places influence the attempted scaling of this emerging technology. Informed by a practice lens and a process research approach, we develop a model that theorizes the constitutive role of place in terms of its resources, materiality and location meaning, which taken together, explain how and why the scaling of 3D printing failed in three different situated places remained rather limited. Moreover, we unpack the idea of place dynamics, which entail processes of place bending, place extending and place framing to theorize the role of place in scaling an emerging technology. We conclude by discussing the implications for the organizing of emerging

technologies and highlight the ways in which place is integral to shaping the process of scaling.

Political Skills and Styles of Leadership (session 794)

Leading Between the Lines: How Leaders Use Political Behavior During Organizational Change

Author: **John Rensink**; Case Western Reserve U.

Author: **Corinne A. Coen**; Case Western Reserve U.

This is an exploration of how leaders utilize political behavior to direct successful organizational change in a highly politicized environment. Despite the ubiquity of politics in organizations, the construct of political behavior remains ill-defined and understudied. Using an inductive, qualitative approach, leaders of high-poverty, preK-12 public schools in a large Midwestern state were interviewed. Findings are contrary to the prevailing narrative in the scholarly literature. They suggest that leaders in highly politicized environments use political behavior as an essential tool in strategically managing work relationships and recognize it as a positive and necessary tool for change leadership.

Expanding Stigma Research: Exploring Stigmatized Actors and their Stigmatizing Audiences (session 247)

This Professional Development Workshop (PDW) aims to continue our successful PDWs on organizational stigma at the AOM meetings. Over the last few years, there has been an upswing in research on stigma, stigmatization, and stigmatized contexts. Building on our previous PDWs, we aim to encourage theoretically and methodologically consistent research on stigma as well as identify opportunities for future research efforts. Particularly, we hope to contribute to enhancing our understanding of stigma's role in influencing identities, organizations, professions, categories, industries, and fields. Overall, this PDW consists of three components: (1) an introduction that defines the topic and provides an overview of recent work, and (2) thematic roundtables, each facilitated by 2-3 well-known scholars, which will also focus upon "challenges" that researchers are experiencing in positioning, conceptualizing, and publishing their work. Roundtables will last 60 minutes and, as in 2018/2019, have a maximum of 6 participants per table, since we have experienced time constraints. Participants will need to pre-register and submit a 1-2-page document with an abstract of a project and a challenge statement that outlines which issue they would like to discuss at the roundtables. Finally, there will be a panel of three prominent experts - David Deephouse, Michael Jensen, and Kisha Lashley - who will present their reflections on how they conceptualize audiences in organizational contexts and its implications for the emergence, management, and outcomes of stigma, and for organizational and collective targets. The organizers

The purpose of this study is therefore to examine whether and how the leaders' political skills contribute to the leaders' own effectiveness and, ultimately, to change success. Specifically, we examine the effects of three types of political skills (social emotional competency, leader humor, and apparent sincerity) on leader effectiveness, change outcome and employees' intentions to support future change. With a quantitative study conducted among 463 employees working at various organizations, we show that leader political skills have a significant impact on leader effectiveness. We also find that leader effectiveness positively affects change outcome, which in turn affects employees' intentions to support future change. However, leader effectiveness does not directly affect employees' intentions to support future change. We then discuss the theoretical contributions and practical implications of our study.

The Relationship Between Leadership Styles and Organizational Identification: A Meta-Analysis

Author: **Kim Aitken**; Deakin U.

Author: **Kathryn Von Treuer**; The Cairnmillar Institute

Author: **Jeromy Anglim**; Deakin U.

Author: **Emily Kothe**; Deakin U.

Organizational changes such as service integration, mergers and acquisitions, joint ventures and strategic alliances, are often only partially implemented. Failure of fully implemented change is often attributed to leadership and lack of integration between organizational cultures. Therefore, understanding the role of leadership style in influencing employee organizational identification may be critical in successful organizational change. This study aimed to provide a meta-analytic estimate of relationship between a range of leadership styles and follower organizational identification. A meta-analytic review examined the correlation between followers' perceptions of leadership styles and their organizational identification across eight leadership styles. The meta-analytic estimate of the correlation between perceptions of leadership styles and organizational identification was $r = 0.47$ ($k = 62$, $N = 22,893$). While

will then facilitate a discussion on how audiences, those that perceive and actively stigmatize (i.e., stigmatizers) might shape, or should shape, our research, before opening the discussion to the group.

Intraindividual Dynamics of Leaders in Change Processes

Author: **Charlotte Blum**; Johannes Gutenberg U. Mainz

Author: **Thomas Rigotti**; Johannes Gutenberg-U. Mainz

Although a growing body of research links leadership behavior to follower well-being in change situations, comparatively little is known about leaders' experience and behavior during organizational change processes. This weekly diary study of 57 leaders examined the personal and organizational resources and demands of leaders in change processes, their effect on irritation and engagement and how the job demands-resources model theoretically informs this dynamic. This paper is the first to examine the role of change self-efficacy and change-commitment of leaders and their specific effects of strain and engagement. Main theoretical implications lie in the finding that—in line with job demands-resources theory – especially for engagement intraindividual factors are of importance. For practitioners, our results offer valuable insights regarding the specific support of leaders for organizational change implementation.

Climate Change 1 (session 795)

Does Fear of Climate Change Alter Entrepreneurial Opportunities?

Author: **Bari L. Bendell**; Suffolk U.

Author: **Suzyn L. Ornstein**; Suffolk U.

Currently, the global mood is one of anxiety and fear over catastrophes such as climate change. The important implications of these proliferating fears in the broader public notwithstanding, we concern ourselves with how this widespread and growing fear of impending climate change—which we refer to as the ‘Big F’—relates to entrepreneurial opportunity recognition and exploitation. A host of fears (e.g. fears of failure, rejection) have been explored theoretically and empirically in the entrepreneurship literature. However, the dominant approach to examining entrepreneurial fear has mostly been individual and situation specific across a limited time frame -- i.e., “little f” fears. We aim to explore whether entrepreneurship works the same way in the context of “Big F” fear (i.e. the fear of impending climate change that exists across large populations simultaneously, over an extended period of time) as it does under normal conditions. Thus, our paper examines how looming climate change likely influences why, how, when, and what entrepreneurial behavior occurs and who takes part.

The Carbon Dilemma: Intervening Effects of Technological Competition and Open Innovation

Author: **Christine Chou**; National Dong Hwa U.

Author: **Kuo-Pin Yang**; National Dong Hwa U.

The relationship between carbon emissions and firms’ performance has long been the subject of debate, but no solid conclusions have yet been reached. This study provides a dynamic view of this relationship and presents a performance paradox derived from carbon emissions with an additional analysis on the roles of both technological competition and open innovation. Based on a sample of 584 Taiwanese high-tech manufacturing

Corporate Sustainability and Social Responsibility (session 796)

Perceived Corporate Social Responsibility and Employee Ethical Behavior

Author: **Christian Sarfo**; U. of Otago

Author: **Jing A. Zhang**; U. of Otago

Author: **Paula Marie O’Kane**; U. of Otago

Author: **Nataliya Podgorodnichenko**; U. of Otago

The study examines how corporate social responsibility (CSR) affects employees’ ethical behavior. Specifically, building on the social learning theory, contingency theory and CSR literature, we develop a moderated mediation framework in which we hypothesize that CSR facilitates employee ethical behavior through promoting employees’ organizational commitment, and the effects of organizational commitment on employee ethical behavior are contingent on co-workers’ ethical behavior. Using a sample of 300 employees from listed firms in Ghana, our results confirm that organizational commitment partially mediates the relationship between CSR and employee ethical behavior. Moreover, co-workers’ ethical behavior interacts with organizational commitment to affect employee ethical behavior. These findings provide theoretical and managerial implications for researchers and practitioners attempting to enhance employee ethical behavior. Specifically, this research adds to the instrumentalist perspective of CSR and provides support for social learning theory in CSR by showing that CSR may improve employee ethical behavior.

An Attributional Model of CSR: Market Reactions to Water Actions in Different Stakeholder Domains

Author: **Rafia Afrin**; Queen Mary U. of London

Author: **Ni Peng**; Queen Mary U. of London

Author: **Frances Bowen**; U. of East Anglia

This study integrates attribution and expectancy violation theory to explain market responses to corporate social responsibility (CSR) actions oriented

firms over six years (2012-2017) with 3,504 firm-year observations, and applying the least square with dummy variable (LSDV) regression model, we find support for our proposed hypotheses. Specifically, we find that carbon emissions present a performance paradox for firms, in that prior profitability performance (e.g., ROA) induces a high level of carbon emission which, in turn, deteriorates subsequent market performance (e.g., Tobin's Q). We also find that the intensity of technological competition strengthens the positive relationship between prior profitability and carbon emissions, while firms' engagement in coupled open innovation weakens the negative relationship between carbon emissions and market performance. Our study provide explanations for why firms do not or cannot reduce their carbon emissions while they are profitable, as well as how they can avoid this paradox. We also offer suggestions for theory and practice.

Who are the Carbon Leaders? Improving Rankings and Business Ambition

Author: **Jane Lister**; Sauder School of Business, U. of British Columbia

Author: **Jocelyn Fraser**; UBC

As contributors to the problem of global warming and as innovators and implementers of clean energy solutions, corporations play a critical role in climate change mitigation. In growing numbers, companies are now calling for policy action and are engaging in voluntary carbon management efforts. However, the effectiveness of company response is unclear.

Investors, NGOs and governments rely on company CSR reports, sustainability rankings and ESG indices as proxy indicators, yet these are unreliable. In this paper, we investigate the question, who are the corporate carbon leaders? Mapping the main carbon efforts of recognized US brand companies we confirm inconsistencies and gaps in corporate sustainability leadership definitions, non-standardize measurement methodologies, and unclear and inaccurate performance metrics. To aid in greater corporate environmental accountability, more responsible decision-making and smarter regulation, we argue the need for more harmonized

towards primary and secondary stakeholders. We test our model and hypotheses empirically in the context of responsible corporate water actions. We argue that market reactions are affected by two important factors influencing attributions to a CSR action, the stakeholder orientation of the current action and the stakeholder orientation of prior CSR performance, which each shape shareholder beliefs and expectations regarding the firm's actions. We find the market reaction to a CSR action affecting primary stakeholders is significantly positive given its direct financial and strategic attributions, but it is not significant for actions affecting secondary stakeholders as these involve ethical or altruistic attributions. We further find that expectancy confirmation or violation moderates these stakeholder orientation effects, influencing how shareholders react to CSR actions. Our study is one of the first to explore market reactions to responsible corporate water actions, and apply both attribution and expectancy violation theory to the novel context of market reactions to CSR actions.

Keeping Up with the (SR) Neighbors: Community Dynamics and the Adoption of Commercial Solar PV

Author: **Ion B. Vasi**; U. of Iowa

Author: **Arturs T. Kalnins**; U. of Iowa

While research on corporate social responsibility (CSR) activities has identified a number of reasons why companies "go green", it does not account for the role of geographic communities for the adoption of these activities. We develop and test a model that examines the role of different community-level dynamics that influence companies' decision to adopt CSR initiatives in specific locations. We identify four factors that operate at the level of geographic communities: pro-social competition, natural resources, political climate, and social movement activism. We use an original dataset to analyze the adoption of practices that aim to address global climate change, in particular on the installation of solar photovoltaic (PV) panels by two large corporations: Walmart and Target. We present preliminary results and discuss research implication for theories of corporate social responsibility, social

and broader tracking and evaluation of company carbon performance that includes implementation evaluation and environmental outcome assessment.

A Conceptualization of Firm Activities Toward Sustainability Transitions

Author: **Roberto Hernandez Chea**; Post-Doctoral Researcher

Author: **Akriti Jain**; Department of Management Studies, Indian Institute of Science, Bangalore

Author: **Nancy Bocken**; Maastricht U., School of Business & Economics

This paper explores firm level perspectives for sustainability transitions by analysing the activity system of a firm from the transition management lens. While sustainable business model studies provide useful inputs for firms' sustainability actions, their role in contributing to sustainability transitions over decadal time scales remains largely unexplored. By identifying the content, structure and governance activity system of a firm we conceptualize their role in sustainability transition. Our conceptual framework suggests that specific activities from the value mechanisms of sustainable business models can change unsustainable dominant practices in organizations (short-term); internal and external operational structures (medium-term), and logics at the industry/sector and consumption levels (long-term). The paper details the above through a framework. The paper also contributes to theory by integrating the concepts of activity system approach and sustainable business model with transition management. Further, we understand how firm business model support transitions from a governance perspective. We provide recommendations for future research to further develop knowledge and help practitioners and policy makers in this urgent matter. Keywords: Sustainable business models; activity-system approach; sustainability transition, transition management

The emergence of Temporal Reasoning Capabilities in Corporate Sustainability Reporting

Author: **Nahyun Kim**; Ivey Business School

Author: **Oana Branzei**; Ivey Business School

Author: **Shane Wang**; Ivey Business School

This study abductively elaborates the relationship between cognitive linguistics and attention structures in the aftermath of the financial crisis. Using latent dirichlet allocation (LDA) topic modeling for 1,581 sustainability reports issued by 339 public firms in the U.S. and Canada from 2009 to 2017, we show that subtle linguistic updates in word assemblages capturing firms' financial and/or social responsibilities combine with proximal versus distant chronotypes (spatio-temporal frames). Fuzzy set qualitative comparative analysis for a subset of 86 frequent reporters reveals the emergence of latent classes robustly associated with three dictionary-based measures of long-termism (time horizons, long-term orientation, and future focus) collected year later. Long-termism requires convergence of distal chronotypes and social responsibilities. Firms resist long-termism through divergence between distal chronotypes on one hand and social and financial responsibilities on the other. Our study is among the first to explain why firms may develop opposite temporal reasoning capabilities while adapting to the same crisis.

Advanced Services: A New Dominant Logic for Manufacturers

Author: **Ali Ziaee Bigdeli**; Aston Business School

Author: **Tim Baines**; Aston Business School

This paper draws evidence from prior literature and industry practices to synthesise a set of foundational propositions that collectively describe how a manufacturing firm can compete through advanced service as a new business model. Our approach has been to form a conceptual framework and subsequent research questions, which address the various components of a business model. Each question is then addressed by a synthesis of evidence, identified through a systematic literature review and augmenting this with examples of industry practice, to arrive at a series of foundational propositions. Seven foundational propositions are presented that help to define and explain the key attributes of advanced service business models, how they deliver competitive advantage, and the organisational design required for their successful delivery. From the theoretical perspective, this paper has sought to embrace and galvanise contributions from a range of disciplines and. From practical perspective, this paper will help practitioners to conceptualise and understand advanced services and so lead to their broader adoption and improved operations.

Factors that Affect Collaborative Performance Management Systems

Author: **Simon Okwir**; Operations and Supply Chain Management

Author: **Umit Bititci**; Heriot Watt U.

Author: **Yilsy Maria Nùñez**; Technical U. of Madrid

The literature on Performance Measurement and Management (PMM) has documented multi-actor collaborations as extended enterprises and integrated systems an attempt to understand inter-organizational PMM. However, due to different needs within multi -actor collaborations, managing through collaborative measures becomes quite challenging to manage and extends the current boundaries of PMM practices to networked operations. As a consequence, factors that affect the management of collaborative performance management system inclusive of many actors are still not well articulated in literature. The purpose of this paper is to understand factors that affect the management of collaborative measures within a multi actor operational setting. Airport turnaround operations provides a unique operational setting for actors managing with collaborative measures. Through a sample of 2100 flight movements using a single performance management system, an Artificial Neural Network simulation is developed that identifies the criticality of airport resources such stand, size of aircraft, company, runway to cause bottlenecks & delays in airport operations. Additionally, observations were conducted. Findings indicate a selection procedure for optimal models and discard sub-optimal models regardless of the actor's interests. There are three factors that emerge to affect collaborative PMM, i.e complexity, continuous development and the existence of a social system.

[view paper \(if available\)](#)

Internet of Things (IoT) contributes to the manufacturers' advanced service development and delivery. In order to better understand the creation of these IoT contributions, the study adopts a socio-technical research perspective which expands the scope of the investigation and integrates the technological, information and social factors that enable these IoT contributions. A multiple-case research method was employed to investigate the IoT contribution scenarios of 15 manufacturers offering advanced services, and to examine their dependence on other non-IoT factors using inductive and deductive thematic analysis. The analysis identified five advanced service value propositions which are enabled by ten 'IoT-enabled IS artefacts' which specify the distinct interactions between the technological, information and social subsystems that support the manufacturers' advanced service value propositions. This study advances servitization research by showing that the IoT technology on its own is not sufficient for the creation of the IoT contributions. It shows instead the need for close interactions with a diverse range of other factors which are often not considered when developing the IoT strategy. The study further introduces the IS artefact notion as a unit of analysis that is an alternative to the commonly adopted techno-centric perspective used to conceptualise the IoT contributions. The study and its findings add to the development of a socio-technical perspective on the IoT in advanced services and generates a number of theoretical and practical implications.

The Effect of Experiencing a Catastrophic Event on Inventory Decisions

Author: **Christian Felix Durach**; ESCP Business School

Author: **Tomas Repasky**; Technische U. Berlin

Author: **Frank Wiengarten**; ESADE Business School

Low probability high consequence (lp-hc) risk events, such as specific natural disasters, are characterized by limited availability of historical and scientific data. In situations in which data is difficult to obtain, risk assessment becomes a resource intense task, in which managers must partly rely on their own perceptions. Perception based risk management responses are yet often biased by prior exposure to lp-hc events, with entailing financial performance consequences. This study investigates inventory levels, as a typical risk response, of manufacturers in the post recovery-phase of the 2011 Great East Japan Earthquake (GEJE). It considers raw material (RAW), work-in-progress (WIP) and finished goods (FG). We observe a significant buildup of RAW and lagged decreases of WIP and FG after the GEJE. Investigating the relationship between observed responses and firm risk-preferences, some light is shed on the question of whether observed reactions were driven by experiential learning, or are, to a significant extent, a reaction to changed risk perceptions. Results indicate that risk-averse firms reacted significantly stronger to the event. Supporting the assumption of partly perception-based adjustments of RAW inventories, and learning-based adjustments of WIP and FG. Across all firms, the observed reactions reduced the firms' return on assets by 0.428 percentage points. The GEJE provides an interesting case, as the risk of a similar event happening again did hardly change after 2011, suggesting observed managerial responses to be independent of a changed risk environment. As quantitative accounts of managerial responses to lp-hc events in general and the GEJE in particular are largely absent from the literature, this study advances our understanding of how firms frame such risks as to ascertain their decision-making process. The details of the observed response patterns are also of interest to insurers, investors and standard-setting organizations.

help organizations to build a sustainable competitive advantage. Although studies on one or some of the DTs gaining momentum over recent years, the literature on DTs adoption in DSC does not report a sufficient number of studies focusing on individual-level adoption behavior. The current study aims to bridge this research gap by examining the determinants of the successful adoption of DTs in DSCs in the USA. Accordingly, this study developed a conceptual model based on the technology–organization–environment (TOE) framework and diffusion of innovation (DOI) theory. Further, this study tested the hypotheses using the PLS-SEM, a partial least squares structural equation modeling. The results indicated that organizational and technology factors influence adoption decisions. Environmental factors such as competitive pressure also play a significant role in DT adoption, but innovation factors do not have any influence whatsoever. Moreover, this study contributes new knowledge to the body of literature on the antecedents of DTs adoption in DSC.

Direct to Consumer Firms: Investing in Differentiated Supply Chain Capabilities

Author: **Mike Goulder**; Case Western Reserve U.
Author: **Manoj Malhotra**; Weatherhead School of Management, Case Western Reserve U.

Direct-to-consumer (D2C) entrepreneurial activity is disrupting both traditional retailers and manufacturers by directly linking consumers with products and services, disintermediating elements of the traditional value chain. We conducted in-depth interviews with 24 leaders of small to medium sized D2C businesses to advance theoretical understanding of how they choose among different supply chain strategies to enhance performance. Contrary to expectations, only a subset of D2C companies are willing to invest in differentiated supply chain capabilities in order to serve their customers better than traditional retailers and packaged goods manufacturers. Based on the qualitative analysis of our data, we also identify the common sequential path these innovative firms follow to define their business model and develop their supply chain strategy. Focused findings from

Accident Hazard After a Minor Operational Incident: Internal Context and Social Contagion Source

Author: **Xun Tong**; U. of Groningen
Author: **Kevin Linderman**; U. of Minnesota

Managing safety has become increasingly important in global operations. Surprisingly, the literature provides limited clues regarding what influences future accident hazard following a recent minor operational incident (MOI) happened within an organization. This study examines the role of internal context (direct MOI experience) and external context (indirect MOI experience) on a focal organization's future serious accident hazard. Using an archival incident dataset from the global liner shipping industry and drawing upon social contagion theory, we find that following a recent MOI within a focal organization, direct (internal context) and indirect MOI experience (contagion source) can increase future serious accident hazard by 29 and 14 percent, respectively. Furthermore, within the indirect MOI experience, there is no differential impact between related (same type and same region) and unrelated experience; within the related experience, spatial (region) and social (type) proximity do not differ in influencing the chance for future serious accident hazard to happen. This study provides critical implications for theory, practice, and policymaking in safety management.

A Platform Ecosystem View of Servitization in Manufacturing

Author: **Kawaljeet Kapoor**; Aston Business School

Author: **Ali Ziaee Bigdeli**; Aston Business School

Author: **Andreas Schroeder**; Aston Business School

Author: **Tim Baines**; Aston Business School

This study investigates how the social and technical subsystems of a platform ecosystem change and interact with each other in the development and delivery of advanced services. An integrated research approach results in the development of an analytical framework accounting for the four perspectives of - technical core, key actors, structural boundaries and task aspects of a servitization-based platform ecosystem. The study draws from collective experiences of 14 senior executives from seven manufacturing companies using a multiple case study approach. The findings recognise modularity and standardisation as the essential components of the technical core, followed by how servitizing manufacturers redefine service-oriented roles to enable resource integration and value co-creation. Analysis of our findings also reveals that manufacturers concurrently operate across multiple structural boundaries, depending on which they adopt varying mechanisms to govern and orchestrate their actor network. Several theoretical and practical implications are identified.

acquisitions (M&As). M&As are accompanied by significant changes in organizations and operational systems, and the decision of M&A may be affected by potential challenges and operational risks in post-M&A integration. CSR may bring a broad set of corporate values to address these challenges. To empirically investigate the role of CSR in M&A decisions, we estimate bootstrap-based conditional logit models using secondary data from 2005-2016. We find that a firm's CSR score is positively associated with its acquiring possibility as CSR promotes a long-term perspective on value-creation, facilitates integration across organizations, and buffers against risks of failures. We also find such positive impact can be extended to cases when firms are lean in operations and when the purposes of M&As involve innovation or emerging market expansion. Our extended analyses further show that the beneficial role of CSR is primarily driven by the corporate governance dimension, instead of social or environmental dimension. Theoretical and managerial insights are also discussed.

An Optimal Pricing Strategy with Cannibalization

Author: **Atabak Mehrdar**; Rotterdam School of Management, Erasmus U.

Author: **Ting Li**; Erasmus U.

Cannibalization in pricing happens when the market share of some product categories decreases as a result of changes in the prices of other product categories. Despite the conventional wisdom of revenue management in avoiding cannibalization, we show that under certain conditions, it can be a part of an optimal pricing strategy in revenue maximization. In this paper, we focus on a capacity-constrained dynamic pricing problem faced by a firm in selling differentiated classes of products with price ranges. In case there are price overlaps across product classes, the higher class will cannibalize the market share of the lower class. We present real-world examples of such situations. Using a Markovian decision problem (MDP) approach, we determine the optimal price ranges for product classes. The result shows that having overlaps in price ranges is part of the optimal pricing strategy. Next, using data collected from a European storage

rental company, we use simulations to better understand how firms can benefit from our recommendations. Our results show that when the capacity constraints are tight in the lower class and less stringent in the higher class, in other words when firms profit from scattering the demand over different product classes, cannibalization is part of the optimal pricing strategy. Firms can use these insights to nudge their customers to act in a way that makes both customers and the firm better off.

Bureaucracy and Institutions: Empirical Evidence from Chinese History (session 799)

There is broad scholarly agreement that history and founding conditions matter in the design of institutions and organizations (Marquis, 2003). Yet study of institutional and organizational development rarely includes more than ceremonial references to specific country or regional settings, policy embeddedness, and cultural contingency (e.g., individual versus collectivist cultures). The analytical focus is typically on modern organizations and institutional development trajectories, which leaves us with the question of how history matters. To what extent do modern organizations and institutions reflect historic development trajectories, and how? That we know so little about the ways today's institutions and organizations are affected by the past is not reflecting lack of interest, but instead being constrained by data availability. Yet with increasing progress of digitalization of archival records, "new" historical data becomes available at an astonishing speed. What remains are concerns about data quality and validity. What can we actually learn from historic data about organizations and institutions, then and now? With this symposium, we show there is much to learn. With a regional focus on China and a wide variety of empirical evidence documenting local development over several thousands of years, this symposium brings together a set of four studies, which gather and apply

Sustaining Volunteer Organizations: Investigating the Internal and External Predictors of Turnover (session 800)

Volunteering represents an important and beneficial civic activity. United Nations estimates that the global volunteering workforce is equivalent to 109 million full-time workers. Although volunteers represent a sizable global 'workforce', management research on volunteering is fairly limited. The aim of the current symposium is to showcase how management theories and concepts traditionally developed to study paid workforce can be applied and adapted to study volunteers with the goal of improving volunteering sustainability. Collectively, the five presentations investigate the external (e.g., intergroup relations, leadership) and internal (i.e., cognitions, motivations, identification) factors that predict volunteer turnover. Enhancing and extending our understanding of volunteering 'work' will assist organizations in better attracting and retaining volunteers. This is an important managerial challenge, considering the enormous contribution made by volunteers to the society.

Designing Effective Recruitment Messages to Get Volunteers Through the Door and Keep Them

Darja Kragt; U. of Western Australia
Patrick Dunlop; Curtin Business School

historical data creatively, and contribute to a better understanding of institutional origins, organizational and institutional change, and their impact on contemporary development. The focus on China is not only interesting for its obvious importance in today's global economy and politics. The analysis of historic organizations and institutions (mainly bureaucracy) and their association with modern-day development also help identify causal processes of how and when institutions matter throughout time. China offers an ideal context. China displays vast within-country variation in its socioeconomic conditions, whereas provinces can serve as broad proxies of regional units. Furthermore, China is ethnically highly homogenous, with more than 90% of Chinese belonging to the Han group and has experienced only limited and well- documented internal migration flows over the last two millennia, which limits the influence of exogenous shocks introduced by broad- sweeping cultural shifts. Finally, the country has been characterized by a high degree of political and territorial unity for more than 2,000 years and has escaped substantial colonial influence, leaving historic development pathways less affected. The four empirical studies address two broader questions: 1) What are the antecedents and mechanisms that explain the emergence of institutions and organizations developed in and inherited from the past? and 2) how does history shape the opportunity structures for modern trajectories of institutional change? In other words, does institutional change today hinge on experience accumulated in the past — either in a positive or negative way?

**Abduction and the Problem of Null
(session 802)**

The use of the Hypo-Deductive model in management research has been questioned because it is very difficult to properly pre-specify hypotheses and tests prior to examining data. Abduction, and its close cousin, Inference to the Best Explanation (IBE), have been proposed as an alternative approach (King et al., 2019). But how does one “abduct”? There has been limited discussion in management research about the process of engaging with abduction, the challenges and opportunities it presents, how currently used research methodologies fit in an abductive framework, and the aspects that management scholars can take advantage of from the discussions in the philosophy of science about the abductive process. The purpose of this panel symposium is to have leading scholars to share their perspectives on the future of abductive studies in management.

**Grounded Theory: Establishing Conceptual Proof-
of-Life via a Prequel Stage in Crowdsourcing Case**

Author: **Kathleen Wilson;** Swinburne Business School, Swinburne U. of Technology

This article assesses the utility of a conceptual ‘proof-of-life’ prequel stage for grounded theory studies. When at the initial discovery stage researchers often do not know how to start to establish the viability of a new phenomenon or concept. Indeed, there is little overall known about the specific discovery activities which researchers need to engage to establish antecedent conceptual ‘proof- of-life’ to enable progression to establish a baseline research feasibility. Beyond utilizing a simple literature review of scant literature, I examine the use of Google Trends and Google Images as a case in conceptual proof-of-life, prequel-stage establishment of crowdsourcing. I examine over 800 Google images and form five crowdsourcing identities based on public opinion regarding what the crowdsourcing phenomenon represents. I use the combined artefacts to decide whether crowdsourcing is a viable research topic. My assessment of using Google Trends and Google Images as early impression-forming and sensemaking methods suggests this activity is particularly suited to very early discovery stage related to establishing the bona fide status of an emerging concept or phenomenon. I establish a framework for researchers wishing to engage in very early discovery research.

Systematicity: The Nature of Scientific Management and Organizational Knowledge

Author: **Markus Scholz**; FHWien der WKW U. of Applied Sciences for Management and Communication

Author: **Paul Hoyningen-Huene**; Leibniz U. Hannover

We ask if and how one can demarcate scientific knowledge with regard to management and organizational phenomena from other kinds of knowledge (e.g., from practitioners' knowledge or knowledge created by consultancy firms) that deal with the same subject matter. We find the answer to this question in systematicity theory as recently presented by philosopher of science Paul Hoyningen-Huene (2013). According to systematicity theory, scientific knowledge differs from other kinds of knowledge by being more systematic with regard to nine dimensions. We compare three pieces of knowledge regarding the chances of survival of a set of organizations in a particular environment: (1) Knowledge that is generated by a practicing manager with the help of her business network, (2) knowledge that is generated by a consultancy firm and (3) knowledge that is generated by organizational ecologists. Our analysis confirms our pre-theoretic intuitions that (1) is not scientific, that (3) is scientific, and that (2) is somehow in between. However, systematicity theory not only reproduces our pre-theoretic intuitions and thereby demonstrates its adequacy; it also offers insights into the reason for the given classification of the different kinds of knowledge as being more or less scientific.

Capturing Group Dynamics through Retrospective Team Events and Affect Mapping: Introducing R-TEAM

Author: **Desiree Van Dun**; U. of Twente

Author: **Julia Wijnmaalen**; U. of Twente

While team scholars increasingly view small groups or teams as dynamic entities, capturing team

processes and/or patterns over time remains cumbersome. Methodologically, team research 'in the wild' typically involves (cross-sectional) questionnaires but they are rarely used in combination with interviews and naked-eye observations. Given the inherent limitations of just using questionnaires for examining complex team dynamics, different longitudinal data-collection approaches are warranted. The Retrospective Team Events and Affect Mapping (R-TEAM) method, presented and illustrated here, uniquely blends elements of the focus group method; life story interview; the critical incidents technique; and visual elicitation. The R-TEAM method entails: 1) an intake; 2) a short questionnaire; 3) selecting team representatives; 4) a group interview with those team representatives; plus 5) presenting the results to all the other group members in order to validate them. Compared to other available methods for longitudinal team-level studies, R-TEAM interviewing is less time intensive and can even curb researcher bias, making it eminently fitting for exploratory group-dynamics research. The R-TEAM method is also suitable for abductive, action, or social-constructive type of research. R-TEAM may thus enable scholars to directly engage with groups in organizations and facilitate team learning while advancing various academic theories on (small) group dynamics.

Thematic Trajectory Analysis: A Temporal Method for Analysing Dynamic Qualitative Data (WITHDRAWN)

Author: **Leighann Spencer**; U. of Liverpool Management School

Author: **Laura Suzanne Radcliffe**; U. of Liverpool

Author: **Rachel Spence**; U. of Liverpool Management School

Author: **Nigel King**; U. of Huddersfield

This paper introduces a novel, temporally sensitive analytical method for qualitative researchers. This approach is simultaneously timely and necessary given increasing recognition of the fundamental, yet curiously neglected, part of organisational life and scholarship. As a result of this recognition, research designs considering temporality have substantially increased over the past decade. However, while

methods for qualitative data collection using longitudinal and 'shortitudinal' designs, in particular qualitative diary methods, have become increasingly common, analytical methods capable of fully exploiting the temporal nature of the data collected have arguably lagged behind their quantitative counter-parts, where we see marked progression in analytical methods and procedures. In this paper, we argue that this lack of progression in approaches for analysing such data, hinders our knowledge and theoretical development when it comes to incorporating temporality, particularly for those seeking to embed temporality in their exploration of phenomena at individual-/micro-levels. We respond to these challenges by introducing a novel, step-by-step analytical approach that facilitates rigorous incorporation of temporality into the analysis and theorisation of micro-level qualitative data, termed Thematic Trajectory Analysis (TTA).

Accomplishing Strategic Change: Rhythms, Sensegiving, and Mindful Ambidexterity (session 803)

The Rhythmic Work of Strategic Change

Author: **Kathleen Ann Stephenson**; Vrije U. Amsterdam, School of Business and Economics
Author: **Joep Cornelissen**; Erasmus U. Rotterdam

Strategic change is difficult, not just because people have to revise their cognitive frames that give meaning to their work and organization, but also because such changes oftentimes imply that they have to adjust their daily rhythms. In this two-year qualitative study, we examine a strategic change that a leader initiated within her academic research group and explain how the success of the change hinged on whether and how members of the group modified their frames and work-related rhythms in a conjoint manner. Taking an approach informed by process and practice thinking, we construct a model that articulates how strategic framing and rhythmic

SIM

Corporate Misconduct (session 806)

Competition Intensity, Stakeholder Voice, and Environmental Irresponsibility

Author: **Punit Arora**; City U. of New York

We incorporate industry environment in the literature on institutional antecedents of environmental irresponsibility. While scholars have recently undertaken important steps to examine institutions antecedents of corporate social responsibility, research has thus far mostly focused on macro-level factors. In this paper, we both introduce missing macro-level institutions as well as integrate the role of firm's immediate institutional environment, viz., competition intensity in determining firm behavior. Specifically, using a longitudinal, multi-country sample, we show that moderate competition curtails environmentally irresponsible behavior. This direct effect is also moderated by the national voice and accountability environment of the country in which focal firms are located. In doing so, we elucidate the interplay of

work are interwoven and co-evolve over time. Our process model contributes to the strategic change literature by illustrating how strategic framing and rhythmic work interrelate in change recipients' sensemaking and how rhythms oftentimes ground strategic frames in individuals' physical bodies. In this manner, we point to the broader importance of developing theoretical accounts that consider both discursive and material, embodied aspects of strategic changes.

Strategizing for Digital Transformation: An Ethnography of Framing Across Multiple Initiatives

Author: **Frederik Schrøder Jeppesen**; Aarhus BSS, Aarhus U.

Author: **Toke Bjerregaard**; Aarhus BSS, Aarhus U.

This paper seeks to contribute new insight into how framing is involved in strategizing in situations of ongoing change. It examines how practitioners' strategy framing efforts constantly combine and (re)construct elements of past and current strategy proposals in a multi-episode setting over time. The paper furthermore responds to calls for more practice-based research on how information system strategists and practitioners frame and pitch strategic issues and initiatives. The article thus reports the findings of an ethnographic field study of strategizing for digital transformation within a large manufacturing company, showing how information system practitioners constantly reframe past strategy initiatives to gain support to new strategy proposals. It contributes to understanding of how framing in strategizing under ongoing change constantly draws upon, add distance too and even reconstruct framing elements of past strategy initiatives. The study examines these framing dynamics as they unfold over three consecutive, seemingly distinct processes of strategy formulation for digital transformation.

Inherited Scepticism and CSR-Washing: Evidence from a Post-Communist Society (WITHDRAWN)

Author: **Petya Koleva**; Coventry U.

Author: **Maureen Meadows**; Coventry U.

The sizeable theoretical and empirical literature on corporate social responsibility (CSR) and business ethics in developed economies and Western countries indicates that the topic has attracted significant interest from academics and practitioners. There is, however, less evidence of the practice of CSR and business ethics in non-Western, transition economies, and insufficient attention is paid to the contextual specification and underlying processes that may lead to different versions of CSR. Therefore, this paper examines the practice and sense-making of CSR and business ethics from the perspective of the fertile and under researched post-communist context of Central and Eastern Europe (CEE), in order to join the growing academic debate about the impact of cultural and historical traditions on the practice and sense-making of CSR and business ethics in non-Western contexts. The study adopts a particular focus on the post-communist and under researched context of Bulgaria where CSR is still a relatively new phenomenon. By following an exploratory research design and by collecting qualitative data from 34 executives employed by public and private sector organisations in Bulgaria, the study finds that the local business environment is composed of a complex mix of various institutionalised pressures and challenges that predispose organisations to adopt a particular approach to CSR, ethical misconduct and CSR-washing. As a result, apart from the significant contributions to the CSR literature related to divergence in the practice, understanding and contextualisation of CSR in non-Western countries, the study also adds depth to the emerging literature on CSR-washing, literature on entrepreneurship, business ethics and the challenges of transition economies. The study also offers important contributions for practitioners and policy makers.

Age

Author: **Verena Bader**; Bundeswehr U. Munich

Author: **Georg Loscher**; Bundeswehr U. Munich

Digital technologies can bring multiple benefits to employees (e.g. autonomy through mobile work) but at the same time they can bring harms to employees (e.g. control and surveillance). In a number of cases where digital technologies are implemented, their outcome and resulting dynamics in practice are unprecedented and not predictable. Strategists in the field of employment relations are facing these tensions in their ongoing negotiations and they are in a meaning-making process of "co-determination 4.0". In this paper, we show how sensegiving strategies play out in contra vocal domains. Based on four case studies on the negotiation practices of HR managers and works councils, we identify enablers and seven strategies by the employer side as well as seven strategies of the works councils leading to two pathways in which the contra vocal strategic actors come to shared understandings of "co-determination 4.0". Our findings extend current research on sensegiving by taking groups with different interests in an organization into account and analyzing sensegiving strategies of groups within the organization. Furthermore, we offer an analysis of the co-determination context in Germany and show how the different actors deal with changes resulting from digitalization. Our findings inform a conceptual framework showing pathways of strategies and their outcomes in the process of dealing with strategic challenges and sensegiving interactions of groups with diverging interests.

Friends in Need? New Board Ties and Firm Performance After Revelation of Financial Fraud

Author: **Chuljin Park**; UNSW Sydney

Author: **Razvan Lungeanu**; Northeastern U.

This paper investigates how new board ties formed after public disclosure of a firm's financial fraud may affect the firm subsequent stock market performance. Although prior research has highlighted the importance of board ties between firms in generating favorable firm performance outcomes, we argue that the effects of board ties will be different in the context of corporate fraud as fraudulent firms face challenges in capturing the benefits normally associated to board ties in non-fraud contexts. We test the differential performance effects of new board ties by analyzing financial fraud cases identified between 1998 and 2010 and we isolate the impact of new board ties under fraud conditions by using a matched-panel design. The study pays special attention to the type of ties that are created in the aftermath of wrongdoing revelation to show how different types of new board ties formed post-revelation influence fraudulent firms' performance. Our paper contributes to research on social networks by providing evidence that the effect of forming board ties typically considered to be positive for firm performance is in fact dependent upon the context in which such ties are formed. We also contribute to research on firm wrongdoing by exploring how firms can better manage the aftermath of wrongdoing revelation.

General Deterrence of Systemic International Misconduct: The Role of Firms' Territoriality Beliefs

Author: **Emmanuelle Reuter**; U. of Neuchatel

Author: **Florian Ueberbacher**; U. of Zurich

Author: **Andreas Georg Scherer**; 13093

For decades, Swiss banks' private wealth management (PWM) business had systemically engaged in organizational misconduct based on jurisdictional arbitrage. Swiss banks complied with Swiss regulations, but persistently transgressed United States (U.S.) law by helping clients evade U.S.

specific impact of using information technologies (IT), in addition to pertinent cultural dimensions of firms, on effective strategy-making remains unexplored. Such research gaps are even more prominent when we consider distinct benefits and drawbacks, which we can consider as being outcomes, of an open strategy approach in the extant literature. This study uses a case-based, macro-level approach to explore this outlined lacuna. Data on different degrees of openness, use of IT in strategy-making, and the existence of an open culture in cases of strategy have been analysed in this study using a set-theoretic approach and fsQCA technique. The findings show that inclusiveness in strategy-making and use of IT have a central role in the effectiveness of strategy in firms. In addition, we find transparency to be a core condition in strategy-making and its absence leads to the likely failure of strategy. The paper discusses these contributions against the existing literature on open strategy and explicates potential implications of the study for both practice and research.

Do Small Businesses Pay More? Firm Size, Informal Payments, and Mitigating Strategies in Africa

Author: **George Acheampong**; U. of Ghana

Author: **John Rand**; U. of Copenhagen

Bribery and corruption remain as one of the most binding constraints that businesses in Africa have to deal with. In this paper, we sort to understand the effect of firm size on demand for and payment of bribes by African firms and the strategies needed to overcome them. We developed and tested a contingent framework. We argued that size represents a selectionist pressure on firms to cede to corrupt demands while strategies (formalization, relational intensity and foreign participation) from the adaptive perspective of the organization are tools to deal with these pressures. We test our framework using data from the World Bank Enterprise Surveys in Africa. We find that the liability of smallness effect exists as the larger a firm gets the fewer bribes in percentage terms it pays out to corrupt public officials. We find also that formalization, relational intensity and foreign participation are significant moderators of this effect. The study makes a contribution by testing a contingent framework that integrates the selectionist and adaptive views of organizing.

A Cosmopolitan Theory of International CSR: Re-Defining the Ethical- Social Implication of MNCs

Author: **Kaiyu Shao**; China U. of Political Science and Law

Author: **Maddy Janssens**; KU Leuven

Author: **Michelle Greenwood**; Monash U.

This paper turns to cosmopolitan theory to advance the future direction of research on international CSR. Questioning the field's global-local dichotomy in understanding the international condition of MNCs' CSR, we propose to engage with cosmopolitan theory and its normative-sociological discussion on global connectivity. Building on the normative stance of cosmopolitan as well as its attention on the social conditions in terms of self-other relation and transformation, we develop a domain-specific theory of cosmopolitanism for international CSR, with an application to the ethical-social implication of MNCs' responsible activities. As central to a cosmopolitan theory of international CSR, we put forward 1) a normative-sociological approach to international CSR, 2) understanding international CSR as a transformative effort, 3)

This study examines whether and how anticorruption efforts may mitigate the risk of corporate fraud. Based on a sample of Chinese publicly listed firms over the period of 2008 to 2017, we find that anticorruption efforts reduce the likelihood of fraud commission and increase the likelihood of detection given fraud. These effects are driven by state-owned enterprises and politically connected firms through politician board members. We also find that firms located in regions with well-developed market and legal institutions are less likely to commit fraud in the post anticorruption period. Firms increasing internal monitoring by appointing local independent directors with accounting background help to explain the reduction of fraud in these regions. This study contributes to the literature on corporate wrongdoing and the design of strategies to mitigate the risk of corporate fraud in an emerging economy context.

Accounting and Construction of Wage Theft: A Form of Organisational Corruption

Author: **Md Shoaib Ahmed**; U. of Essex

Author: **Danielle Tucker**; U. of Essex

This study examines the role of accounting in the construction of wage theft and its association with organisational corruption. In so doing, we reveal that owners develop skilful accounting practices to steal workers' wages, overtime payments, bonuses, maternity allowance and other benefits legitimate and illegitimate ways which we argue an act of corruption. It appears that wage theft is not an isolated act that is practised by an individual organisation, rather it becomes a norm across a particular sector of an economy. In fact, to secure their wealth and power, owners rationalise, socialise, and institutionalise wage theft across the industry which we argue 'normalisation of organisational corruption'. This study, therefore, argues that wage theft is not only skilful accounting practices but also an act of organisational corruption which is normalised in an emerging economy through secrecy, social and cultural norms, and political power of the owners and their association.

conceptualizing the relation between MNC and host community as a self-other relation, and 4) acknowledging the situatedness of international CSR within time and space. In the discussion, we highlight the value of a cosmopolitan theory of international CSR, advancing reconceptualization of international CSR, MNCs, and globalization.

Which Duties of Beneficence Should Agents Fulfill on Behalf of Principals?

Author: **Santiago Mejia**; Fordham U.

Business ethics scholars, especially those who favor shareholder primacy, frequently claim, either that the manager should not fulfill corporate duties of beneficence, or that if she is required to fulfill them she has to do so by going against the interests of shareholders. Establishing some distinctions between structurally different types of duties of beneficence and recognizing the full force of the normative dimension of the principal-agent relationship reveals that this view needs to be qualified. If the manager is conceptualized as the agent of shareholders, then she is not required to fulfill wide duties of charity but she is required to fulfill a wide variety of narrow duties of beneficence. In addition, fulfilling these duties should be seen as aligning with the interest of shareholders, not as going against them.

RESEARCH

PAPER SESSION

ASYNCHRONOUS

done examining how managerial discretion translates into a company's ability to engage with stakeholders for better firm financial and social performance. We contend that this is a multi-level issue: managerial discretion is influenced at the institutional level by the explicit/implicit nature of CSR and at the firm level by organizational stakeholder culture, which then trickle down to the manager's level with implications for stakeholder engagement. We show that high managerial discretion may be beneficial to firms and their stakeholders, but it may also be harmful, depending on the institutional and firm level influences that determine whether the manager will behave opportunistically with an agency orientation, or more stakeholder-oriented, with active stakeholder engagement that is beneficial to the firm.

Organizing and Sustainability (session 807)

Organisational Silos and Decoupling in Sustainability

Author: **Lucas Amaral Lauriano**; King's College London

Author: **Juliane Reinecke**; King's College London

Author: **Michael Andreas Etter**; King's College London

The decoupling between policies, practices and outcomes have been extensively studied in sustainability. As our comprehension of the phenomenon expands, new explanations for such disconnections emerge. In this article, we introduce the relationship between decoupling and organisational silos, a situation when communication and alignment between parties is minimal. We draw on a qualitative case based on 480 hours of ethnography and 73 semi-structured interviews to understand the implementation of sustainability in a highly siloed organisation. Our findings reveal a vicious cycle between silos and

SIM

Responsibility in Developing Markets and Supply Chains (session 805)

A Typology of Socially Responsible Suppliers

Author: **Simon Oldham**; Department of Management, Royal Holloway

Author: **Laura J. Spence**; Royal Holloway, U. of London

Research on socially responsible supply chains has tended to define suppliers as either responsible or irresponsible. This paper illuminates the varied roles of broadly socially responsible suppliers, particularly small businesses, by seeking to nuance the differences and highlight the heterogeneity of the approaches taken. Distinguishing our approach from extant corporate social responsibility categorisations, a typology is outlined, drawing on Jungian Theory of Extraversion and the strategic capability of smaller firms. The analysis suggests four groupings, each characterised by an idiosyncratic approach to the practice of social responsibility: strategic engager; strategic contemplator; active connector and active reflector.

decoupling that makes it very hard for sustainability to be implemented. The more the sustainability department is isolated in the company, the more disconnected their activities become from their intended outcomes. With widespread decoupling, the reinforcement of departmental walls to keep resources and projects is needed. Thus, even with the recognition of the problem, the organisation trapped in this cycle indefinitely. We contribute to sustainability implementation studies by moving away from instrumental approaches; we show complex reasons for failures that are beyond mere organisational design choices. We contribute to decoupling studies by unpacking the silo-decoupling relationship, proposing an explanation for its emergence and persistence.

An Organisational Change Towards Sustainability: A Micro-Foundational Perspective

Author: **Veselina Petrova Stoyanova**; U. of Strathclyde

Author: **Stoyan Petrov Stoyanov**; U. of Bath

This paper aims to contribute to discussions related to organisational change and evolution of sustainability in organizational settings. We explore longitudinally and across levels of analysis how a major financial organisation transforms its capability base to become a more sustainable organisation in the aftermath of the global financial crisis. The study explores the micro-foundational changes, which occur, on micro- meso- and macro-levels of context and over time. The research extends extant literatures pertaining to debates distinguishing between corporate social responsibility (CSR) and sustainability, organizational behaviour and sustainability, and the micro-foundations of capabilities.

More Than Just a Big Name: Reputation

Development in Emerging Economies

Author: **Erin E. Makarius**; U. of Akron

Author: **Charles Edward Stevens**; Lehigh U.

Author: **Aloysius Marcus Newenham-Kahindi**; U. of Saskatchewan

Recently there has been an increased interest in organizational reputation development, or how formal evaluations of a firm are formed. Much extant research on firm reputation has focused on how reputation is developed and maintained in developed country contexts. Yet, much less is known about how reputation operates in developing economies. Given that reputation is a social evaluation, the social context where these judgments take place is important to consider. The dynamics of reputation development in developing economies is significant because people and firms in these types of markets operate under assumptions and behaviors that are often fundamentally different from those in developed markets. To better understand how firms develop reputations in developing economies, we conducted an in-depth qualitative study in East Africa, a region that is experiencing large increases in foreign investment across a wide variety of industries and product markets. We find that firms are not able to simply 'import' their reputation with them when they enter Africa, and that the dynamics of reputation development in developing economies is more complex.

Author: **Johnny Boghossian**; FSA ULaval (Laval U.)

A growing number of studies in management are conducted in organizations whose missions are the emancipation of underprivileged populations, such as micro-credit organizations, work integration social enterprises, or organizations providing support to migrants. Early insights from these studies reveal that emancipatory organizations are unconventional organizations employing distinct mechanisms to pursue their social missions. However, much of this research focuses not on the emancipation per se, but on other challenges specific to these organizations, for example, due to their hybridity. In this paper, we investigate organized emancipation, i.e. the process of emancipation orchestrated within dedicated organizations. First, we integrate the theory of social justice of Nancy Fraser with operational categories of analysis from Organization Theory (OT) to develop a theoretical framework for the study of organized emancipation. Second, we apply this framework to a network of successful emancipatory organizations: Maisons familiales rurales (MFR). For more than 80 years, MFRs have been successfully delivering professional education to underprivileged youth in rural, historically economically challenged areas of France, and more recently to underprivileged youth in some urban areas. Our qualitative study relies on 70 interviews and 200+ archival documents. We map out the challenges, mechanisms, tensions and synergies of organized emancipation.

Let's Clean Up and Bring Some Order Here! Moral Regulation of Markets in Yaoundé, Cameroon

Author: **Aurélie Toivonen**; U. of Tampere
Author: **Ignasi Lanuza Martí**; ESADE Business School-Ramon Llull U.

This study examines activities and processes through which projects of moral regulation are implemented, as well as, lived, transformed, and resisted by their targeted actors. Our ethnographic study focusses on the discourses and practices on civism and hygiene in the rehabilitation of marketplaces in Yaoundé, Cameroon between 2004 and 2016. Our analysis shows how a moralising process consisting in problematizing the conduct of market vendors and defining new norms of appropriateness saw the emergence of three moral sub-categories of actors: the good vendor, the subversive vendor and the bad vendor. Through an interactive approach, we highlight the recursive aspects of the process of moral regulation to show how moral orders emerge from social interactions

view paper (if available)

qualitative research was designed in two phases: first consulting with specialists on the topic, and then gathering information from corporations recognized by their innovative and socially responsible approach. The findings suggest that companies perceive to be part of a wider social innovation ecosystem and seek to understand their role within it. Five different levels of incorporating social innovation into the business strategy were noted, from more peripheral initiatives, in which the company mainly invests financial resources, to initiatives intrinsically linked to its essential activities, using business intelligence for developing new solutions to society's problems. Several critical factors that facilitate or hinder social innovation have been raised, being the importance of high leadership engagement and well-established sustainability commitments and structure the common factors in cases where there has been a greater degree of incorporation into the business strategy. We expect to provide insights for deeper reflections on the role and potential of corporations, not only in mitigating the negative externalities of their business, but also as propellers of additional positive impacts on society.

Social Entrepreneurship Through a Complexity Theory Lens: An Inquiry into Generative Leadership

Author: **Luc Glasbeek**; Vrije U. Amsterdam

In this qualitative paper, we contend that the extant social entrepreneurship literature tends to depict individuals in leadership roles as personally attributable to organizational successes. This portrayal resonates with the view of commercial entrepreneurs as independent heroes. However, our empirical material from Greece—a country in

occupational health and human resources staff and staff from a UK cancer support charity. Post-diagnosis support for employees with cancer was negotiated in subjective, individualised ways, drawing on their pre-diagnosis workplace contribution as well as the perceived deservingness of cancer as an illness. Despite the outcomes of these negotiations sometimes benefiting individual employees, support offered on grounds of deservingness did little to address structural issues of workplace accessibility and undermined employee entitlements. Managerial support for employees with cancer defaulted to dated stereotypes of disability and ill-health regarding genuineness and/or deservingness that did not reflect current equality, diversity and inclusion agendas. Pervasive and unhelpful notions of deservingness in the context of ill-health and disability have distinct and worrying implications for ageing workforces, particularly across the global north. This paper offers recommendations for research to address them.

Coping with the Inclusiveness-Efficiency Paradox in Cross-Sector Partnerships

Author: **Leona Henry**; Tilburg U.

Author: **Andreas Rasche**; Copenhagen Business School

Author: **Guido Moellering**; U. of Witten/Herdecke

This paper discusses how cross-sector partnerships (CSPs) for sustainability manage the paradoxical tension between stakeholder inclusiveness and administrative efficiency. Drawing on evidence from a case study of a CSP focused on urban sustainability, we show how the inclusiveness-efficiency paradox unfolded throughout the studied collaboration. We uncover three practices of paradox management that occurred, “customized inviting” (during the formation phase), “sequential including” (during the preparation phase), and “tailored instructing” (during the implementation phase) and theorize these practices as instances of boundary work. Based on these findings, we argue that: (1) practices of boundary work provide a powerful response to paradoxes in CSPs and (2) that there is a reciprocal relationship between paradox

chaos, facing prolonged economic, political, and social turmoil during our involvement—prompts us to rethink such perspectives. We subsequently develop the concept of “generative leadership” to explain our findings. We find that generative leaders are influencers who contribute to their organization’s development by creating conditions through which new ideas and approaches emerge, rather than engaging in top-down interventionism in a controlled fashion. In our inquiry, we use complexity theory as a foundational frame of reference. We argue that this system of ideas is suitable for studying social entrepreneurship in chaotic environments such as Greece. This paper makes two key contributions to the academic debate. First, we enhance the scholarly understanding of social entrepreneurship by conceptualizing generative leadership as an outward-looking rather than self-referential way of working. Second, we respond to calls to interpret longitudinal empirical data on social entrepreneurship through complexity theory, thereby complementing mainly theoretical work in this area.

Social Entrepreneurship: A Systematic Scoping Review and Prospects for a Postmodern Turn

Author: **Luc Glasbeek**; Vrije U. Amsterdam

In this systematic scoping review, first, we critically evaluate how scholars define and apply social entrepreneurship as an organizational concept. Drawing on arguments from the philosophy of science, we posit that academic definitions of social entrepreneurship are often problematic and theoretically deficient, for instance, when they are tautological. In response, we propose a principled approach based on a “theory of definition” (Suppes, 1957) for articulating alternative definitions of social entrepreneurship. Second, we appraise the theoretical devices that scholars use to interpret social entrepreneurship. We find that scholars repeatedly remain silent regarding their choice criteria, underlying assumptions, and added value of theoretical lenses. Finally, third, we outline future research avenues by advocating a postmodern perspective that facilitates multidisciplinary social

and boundary work practices, providing illustration of how this relationship unfolded over time.

How Strategic Management Shed Business Policy's Sense of Social Responsibility in the 1980s

Author: **Gaston De Los Reyes**; George Washington U.

A staple of the business curriculum for nearly forty years, Michael Porter's five forces framework answered the needs of, and quickly epitomized, a fledgling discipline, Strategic Management, with a Harvard-backed framework that aligned with the Chicago School's dismissal of social responsibility. I show that the successful positioning of the five forces as an extension of the Harvard Business Policy tradition derived from Kenneth Andrews's decision to introduce the concept of strategy with a structured framework that separated social responsibility from the analytical search for "economic strategy." Ironically, the effort to boost social responsibility hastened its marginalization in the core curriculum.

Fine-Tuning the Expectations of Business Simulation Technology Through the Lens of Counterfactuals

Author: **Marian Eabrasu**; European Business School Paris

Great technological leaps in computation capacity and machine autonomy have increased the business community's expectations of simulators. While setting aside the technical issues that might limit or unleash new functions of simulators, this article looks into the philosophical analysis of counterfactuals for arguing that the expectations from technology are over-optimistic, while the role of theory is underestimated. To do so, it highlights three key discussions (transworld identity, modal realism, and predicting counterfactuals) and shows that they lead to a tripartite distinction of simulations based on their objectives: training,

entrepreneurship studies. We argue that this perspective can potentially extend research on social entrepreneurship by promoting different ontological and epistemological positions and thereby better acknowledge the multifaceted array of organizational and management theories. This is important, as it allows for shifting scholarly attention away from attempting to capture the core meaning of social entrepreneurship in a single but theoretically narrow definition. We argue that our approach provides a more inclusive entry point for the study of social entrepreneurship that better captures its richness and plurality in scope, meaning, and purpose.

Becoming a Group: A Social Identity Formation Approach to Social Entrepreneurship

Author: **Franziska Schwarzer**; EBS U. für Wirtschaft und Recht

Our understanding of the processes that lead to the formation and change of social identities especially in smaller groups has become broader in the past 15 years. However, our knowledge of how larger-scale groups with weakly defined ingroup-outgroup boundaries initially develop, negotiate and re-negotiate their social identity still remains limited. This study investigates this via the case of social entrepreneurs in Germany – a group that is still in the formation process. In order to investigate their social identity formation process, we draw on extensive documental data, covering a period of 20 years, 15 months of observational data as well as on interview data. We develop grounded theory and a process model depicting the dialectic nature of inductive and deductive processes of social identity formation initiated by individuals as well as by superordinate group categories which in combination lead to iterative changes in group boundary perceptions. More concretely, we elaborate on five phases of social identity formation: genesis, initial expansion, expansion & intrusion, diminution & connivance, and expansion & re-intrusion. Our study adds to the growing research on social identity formation processes as well as to research in the field of social entrepreneurship and highlights how the group as an entity, supporting

assisting, and forecasting. The point of applying counterfactual analysis to business simulations is to lay out a series of theoretical limitations related to each of these three types of simulators, that the technological advances (no matter how sophisticated they might be) cannot overcome. These limitations should further contribute to adjusting practitioners' expectations. While this article confines its analysis to showcasing the conceptual challenges that different types of business simulations face, it also calls for a more in-depth study of the methodological and practical precautions to be taken in using them.

Non-Liability of "Foreignness": Theorizing Immigrant Entrepreneurs in the Practice of Bricolage

Author: **Eliada Griffin-El**; Robert Morris U.

Author: **Joy Olabisi**; Rochester Institute of Technology

Applying Bourdieu's theory of practice, we theorize the non-traditional resource mobilization of immigrant entrepreneurs within the adversarial social and institutional context of their country of residence. Through a rigorous analysis of eight cases of immigrant entrepreneurs and their South African-based enterprises, our findings suggest that the habitus of immigrant entrepreneurs is a unique resource in that it represents an internalization of both cognitive and adaptive dispositions. Cognitive dispositions refer to their home-based frameworks through which their cognitive disposition is formed to interpret existing resources in novel ways. Adaptive dispositions refer to their ability to adjust and be responsive to the pressures of a new environment due to biases that perceive foreigners to be a liability. We posit that the habitus of immigrant entrepreneurship is that which embodies and applies both dispositions within even discriminatory environments in order to mobilize or construct resources via non-traditional means through local social capital. We conceptually extend this formulation to depict the practice of bricolage by immigrant entrepreneurs in an adversarial host country social field.

Corporate Political Strategy in Context (session 817)

Organizational Theories, Practices & Pedagogies (session 822)

Many arguments have been proposed in favor of organizational theorists broadening their sights — that it “creates synergies, increased value-added, and positive results for individuals, organizations, society, and the field of management and organizations” (source: <http://aom.org/annualmeeting>). Yet, as foundational frameworks on managerial agency (behavioral, evolutionary, sensemaking) indicate, the cognitive, affective, and institutional barriers for broadening our sight are profound. Effectively, theorists—just as managers— focus on local opportunities; and, as a consequence, organizational theories, practices, and pedagogies often fall short of addressing societal grand challenges. The proposed symposium showcases contemporary efforts in strategic management and entrepreneurship to address some of these concerns. The symposium features presentations by five scholars [Gino Cattani, Todd Zenger, Saras Sarasvathy, Richard Whittington, and Shubha Patvardhan] focused on broadening the sight on topics core to organizational theories, practices, and pedagogies— innovation, value creation, strategic agency, entrepreneurial education, and corporate oversight. Drawing on extensive conceptual and empirical work on innovators, entrepreneurs, and strategy practitioners, the panelists offer a revised understanding of (i) how innovators evaluate investment in a resource—not only on the basis of its “real option” value but, more importantly, its “shadow option” value [Gino Cattani] (ii) how economic actors operate —not just as “computers” “processing information”; but as “scientists” engaged in “theorizing” [Todd Zenger]; (iii) how strategic agency should be portrayed and practices—not just as oriented to “adapt” to the environment and “boundedly rational;” but as also oriented to “shape” the environment, and capable of “creative rationality” [Shubha Patvardhan]; (iii) how entrepreneurship education should be imparted—as a “method” a la the scientific method to “all”, rather than as an “outcome” of policy focused on “unicorns” [Saras Sarasvathy]; (iv) how corporate oversight can be most effectively accomplished — not just via traditional, “regulatory” mechanisms, but more through “normative” means [Richard

We Fly Congress: Market Actions as Corporate Political Activity in the U.S. Airline Industry

Author: **Min-Seok Pang**; Fox School of Business, Temple U.

Author: **Russell James Funk**; U. of Minnesota

Author: **Daniel Hirschman**; Brown U.

The literature on corporate political activity (CPA) generally views nonmarket actions aimed at influencing political actors (e.g., lobbying or campaign contributions) as related but separate activities from market actions. This study demonstrates how firms’ core market actions (e.g., market entry or geographic expansion) can function as CPA. We theorize two mechanisms through which firms leverage market actions as CPA—“pork” and “perk.” We document these mechanisms through an empirical analysis of data from the U.S. airline industry in 1990-2019. Specifically, we find that airlines increase the supply of flights from airports in the home district of the Chair of the Transportation Committee in the U.S. House of Representatives (pork). In addition, such an increase in flight supplies is negatively associated with formal policy changes in Congress. We also find that the airlines increase the supply of flights to Washington, D.C. from the home district of the Speaker of the House and the home state of the Senate Majority Leader (perk). We contribute to the literature on CPA by demonstrating a blurred boundary between market and nonmarket actions, which may help explain firms’ competitive actions that cannot be explained by market considerations alone.

The Value of Political Geography: Evidence from the Redistricting of Firms

Author: **Joaquin Artes**; U. Complutense de Madrid

Author: **Brian Kelleher Richter**; U. of Texas at Austin

Author: **Jeffrey Timmons**; New York U. Abu Dhabi

We demonstrate that political geography has value to firms. We do so by exploiting shocks to political maps that occur around redistricting cycles in the United States. These keep some firms in Congressional districts that are largely unchanged at one extreme and reassign other firms to entirely new sets of constituents at the other extreme. Our main finding is that firms suffer from being reassigned into districts that are competitive across parties relative to safer districts. The effects are not trivial in magnitude. Moreover, they do not depend on whether firm retain the same politician or actively make campaign contributions.

Contextualizing Political Strategies

Author: **Maria Andrea De Villa**; U. EAFIT

We examine firms' selection of political strategies. Building on institutional theory, we develop a conceptual understanding of how firms select particular political strategies depending on the institutional and political quality of the contexts of countries. Specifically, we propose that in contexts with high institutional and political quality, firms are more likely to select the engaged political strategies of information, constituency-building, or financial incentive, traditionally discussed in the literature. In contrast, in contexts with low institutional and political quality, firms are more likely to use either

bribery and state capture, or the non-engaged political strategies of low visibility, rapid compliance, reconfiguration, and anticipation. Moreover, in contexts with high institutional but low political quality, firms are more likely to select the information strategy. Finally, in contexts with low institutional but high political quality, firms are more likely to use either the information and constituency-building strategies, or bribery and state capture. By focusing on the contexts of countries, our model goes beyond traditional attention to engaged and legal political strategies, incorporating not only non-engaged but also illegal strategies among the options available to firms. We contribute to political strategies and institutional research by offering a contextualization of the selection of political strategies.

Creating and Capturing Value in Platform-Based Markets (session 814)

Digital Platform Strategies: Strategic Trade-Offs in Multi-Sided Markets

Author: **Marvin Hanisch**; U. of Groningen

Research on digital platforms has proliferated in recent years. While some studies have started to analyze the strategies of digital platform firms, we still have an incomplete understanding of the strategic trade-offs digital platforms face. Part of the reason is that conventional strategic trade-offs such as cost vs. quality leadership, first mover vs. follower advantage, and make vs. buy decisions are often inapplicable to platform providers because complementors typically control the majority of platform services (including their quality and cost), network effects punish late entry, and the market-hierarchy duopoly does not exist for firms that create their own markets. In response to these paradigmatic shifts, we introduce a conceptual

Firm-Stakeholder Interaction in the M&A Process (session 819)

Shareholder Activism, M&A Completion, and the Long-Term Effect of Agency Violations on Performance

Author: **Thomas Lindner**; WU Vienna

Author: **Jakob Müllner**; WU Vienna U. of Economics and Business

Author: **Harald Pühr**; WU Vienna

Research on agency theory provides explanation and evidence of shareholder value destruction through M&A activity. We extend this research by looking beyond agents' M&A activity to agents' probability to withdraw from contested acquisitions. Specifically, we theorize on and model the effectiveness of different channels of post-announcement shareholder activism (e.g. stock sell-off & abnormal returns, board activism and shareholder protection) in the first stage. In a second stage of analysis, we assess the long-term performance effects of agents violating

framework based on the idea that digital platforms face a fundamental trade-off between diffusion and differentiation. We then translate this idea to the multi-sided context of digital platforms and discuss the implications of the diffusion-differentiation trade-off for a platform's supply, demand, and rival sides. We also elaborate on two factors that influence platforms' positioning regarding this trade-off: resource availability and timing of market entry. Our paper contributes to the emerging scholarship on digital platforms by introducing a multi-sided generic strategy framework and typology for the analysis of platform firms' strategic positioning.

The Effect of Micro Entrants on Generalists' Performance

Author: **Rosario Silva Froján**; IE Business School

Author: **Oksana Gerwe**; Brunel Business School

Author: **Gideon D. Markman**; Colorado State U.

Resource partitioning theory and market entry research provide tremendous clarity on specialists, generalists and entrant-incumbent dynamics, but such scholarship overlooks micro enterprises—a distinct strategic group of firms who are very small in terms of scale, scope, and/or capability yet they are often seen as specialists. This is a serious oversight because unlike specialists who erode incumbent positions one at a time, micro entrants not only act differently, they often ride on top of multisided platforms (e.g., Airbnb, Uber, Etsy, Facebook, etc.) and gain market access almost overnight. In addition, while extant research focuses on adversarial entrant- incumbent relations, our study redirects attention to why and how the entry of micro enterprises augment the performance of generalists. Using panel data on entrants who provide dwelling capacity via the Airbnb platform from 2010 to 2015, we show that micro entrants enhance the performance of large incumbents (i.e., four-star hotels). We also find that an influx of micro entrants has even a stronger positive effect on generalists' performance when the generalists' market is more concentrated, and the activity of the multisided platforms is regulated. All in all, we show that when resource partitioning theory recognizes micro enterprises it provides new and greater clarity

shareholders' interests by completing contested deals. Using a sample of 10,770 international and cross-border acquisitions, we find that, on average post- announcement stock-selloffs, board activism and shareholder protection laws decrease the probability of acquisition completion. In the long-term, agents announcing better deals and avoiding violations of agency by completing contested deals create more long- term shareholder value.

Left at The Altar: How Do Firms Explain M&A Terminations?

Author: **Zhe Xing**; Santa Clara U.

Although a growing body of literature has begun to examine the drivers and consequences of M&A terminations, we still know little about how firms strategically manage to influence stock market reaction to these terminations. Aiming to fill this gap, this paper draws insights from attribution theory to examine whether investors react differently to firms' heterogeneous attributions on deal terminations. Results suggest that while stock market reactions to deal terminations are negatively associated with its reactions to the initial announcements of the deals, these reactions may be softened by acquirers when they attribute the termination to external and uncontrollable factors. This paper thus contributes to the literature on M&A by suggesting that firms could use various types of attributions to strategically manage audience reactions.

diligence, and renegotiations. This study builds off of strategy literature on completing M&A deals by investigating the determinants of the time to complete an acquisition. Our premise is that acquiring firms face conflicting time incentives during the completion process. Synergistic motivations and competitive pressures suggest that firms need to execute an acquisition quickly, or be subject to potential profit losses and losing the target firm in the competitive bidding process. On the other hand, there are significant resource requirements to moving quickly in the closing process as explained using the theory of time compression diseconomies. We expect that increasing complexity of the acquisition and dividing acquirer resources between multiple concurrent acquisitions will increase the time to complete an acquisition. Additionally, we expect the presence of an anti-competitive lockup clause will diminish the preemption incentive to quickly execute the acquisition. We find empirical support using data from the biotechnology and pharmaceutical industries.

Disclosure Regulation & Competition from MNCs: Evidence from Canadian Oil Investment (WITHDRAWN)

Author: **Robert J. Weiner**; George Washington U.

What is the role of the information environment in foreign investment? Do foreign multinationals gain from host-country transparency regulation? This paper explores the informational aspects of liability of foreignness, taking advantage of a natural experiment in the petroleum industry. Canadian securities regulations since 2004 mandate that oil and gas companies include the estimated size and value of underground reserves in their financial reporting. Using gas and oil field acquisition data, the paper examines whether this change affects the asset valuations of reserve acquirers, and whether the valuation effect is different between foreign and domestic firms. Analysis of 2299 oil reserve deals finds that greater transparency has a positive effect on valuation, and the effect is stronger for domestic investment than for FDI, suggesting that domestic firms gained in competition with foreign MNCs for

Knowledge Sharing and Learning in Alliances (session 813)

Strategic Alliances and Inventor Mobility - Evidence from US Pharmaceutical Industry

Author: **Victor Cui**; U. of Manitoba
Author: **Jang Woo Kim**; Bocconi U.

Attention on the same domain (e.g. industry, technology) often leads intensive competition between the firms; and such an attention also increases the likelihood of alliance formation, too. Particularly, in learning alliances, those 'competitors turned collaborators' often have a tension between to collaborate more to create new knowledge and compete within the alliance to misappropriate each other's knowledge. While sustaining collaboration with good faith and trust would help to generate more technological innovation, poaching of the partner's corporate scientists is often a result of such an effort of knowledge misappropriation. While the non-poaching mobility is held stable, within-alliance competition increases poaching as the returns from learning-by-hiring exceeds those from the learning alliance. Integrating datasets of R&D alliances, corporate scientist mobility, and product market competition in the U.S. pharmaceutical industry from 1985 to 2008, we found that a firm's competitive aggressiveness toward its alliance partner in the pre-alliance period positively affected the number of corporate scientists it poaches from its partner during the post-alliance period. This main effect is negatively moderated by the geographical and technological proximities between the paired partner firms and positively moderated by the firm specificity of the partner's knowledge base.

supply sources. The paper draws on economic theories of adverse selection and knowledge perspectives on economic geography to explain its findings.

Managing Multiple Business Models (session 812)

Business Model Portfolio Configurations and Firm Performance (WITHDRAWN)

Author: **Phillipp Buss**; WU Vienna
Author: **Nina Hampl**; Alpen-Adria U. Klagenfurt, Austria
Author: **Werner Helmut Hoffmann**; WU Vienna U. of Economics and Business
Author: **Florian Smeritschnig**; WU Vienna U. of Economics and Business

We study the impact on performance when incumbents operate multiple business models in a business model portfolio. Drawing upon data from the global airline industry we conduct QCA analysis and document conflicts as well as complementarities between distinct business models over time. Our results suggest that aligning monetization mechanisms across business models can actually mitigate classic stuck-in-the-middle dilemmas that occur when a firm operates a price leader and differentiated business model at the same time. In contrast to conventional views we also find that sharing resources across a firm's business models does not unlock synergies per se but may actually lead to negative performance consequences. We match our findings to settings in other industries and discuss theoretical and managerial implications for business model innovation and diversification of business model portfolios

Burying the Hatchet? How Competition Affects the Performance Benefits of Diversity

Author: **Giada Di Stefano**; Bocconi U.

Author: **Elena Novelli**; Cass Business School, City, U. of London

Author: **Martin Hetu**; HEC Paris

The performance of a work group is positively affected by diversity resting on skill- and information-based differences. However, what happens when competition creeps in, and group members start worrying about sharing knowledge with each other? In this paper, we engage in a field study of a selection process where, at regular intervals of time, candidates are forced to work together in randomly formed groups. We analyze data on all cohorts who have gone through the selection process between July 2015 and September 2017, and observe what happens as candidates of each cohort get closer to the end of the selection process. To better isolate the effect of competition, we designed and conducted a field experiment with participants of the September 2018 cohort, where we manipulate their perceived level of competition. We show that when competition intensifies the benefits of working in groups where members are expert in different knowledge domains dissipate. On the contrary, the potential disadvantage originating from working with a mix of highly- and badly-skilled individuals is offset when competition kicks in. We explain both effects through a learning mechanism, centered around the idea that competitive pressures can either stimulate or hamper knowledge sharing. In the future, we intend to provide some evidence in support of such intuition by means of an online experiment where we could measure the moderating effect of competition on the propensity of individuals to share knowledge within diverse groups.

Parallel Experimentation as an Entrepreneurial Strategy: Evidence from Finnish Microdata

Author: **Liinus Hietaniemi**; London Business School

Author: **Aleksandra Joanna Kacperczyk**; -

Author: **Juhana Peltonen**; Hanken School of Economics

Our study examines how experimenting with multiple businesses simultaneously can drive startup performance. We hypothesize that entrepreneurs who experiment with multiple businesses simultaneously face two interrelated tradeoffs: firstly, experimentation allows these so-called portfolio entrepreneurs to generate more innovative startups, but at the same time, the startups are more resource-constrained than those of their peers. Secondly, the startups of portfolio entrepreneurs underperform in the short run but, given the benefits of experimentation and selection, outperform their peers in the long run. To test our hypotheses, we use linked employer-employee data for Finnish entrepreneurs between 1995 and 2015. Our findings support our hypotheses and, as such, provide new insight into the drivers of entrepreneurial startup performance.

Customer Complementarity in the Digital space: Exploring Amazon's Business Model Diversification

Author: **Stefan Haefliger**; Cass Business School, City U. London

Author: **Francesca Hueller**; Cass Business School, City U. London

Author: **Danielle Reza**; Samsung

In spite of the striking evidence that many firms run multiple business models, scholars and practitioners still lack a comprehensive understanding about business model portfolio dynamics, particularly when this happens in the digital space. Prior research on business model diversification tends to focus on supply-side complementarities, such as a firm's synergies among resources and capabilities. Yet, the demand-side with its customer complementarities remains theoretically and empirically unexplored, despite offering interesting opportunities for firms' competitive advantage. By developing a qualitative, longitudinal (1995 – 2018)

Business School, U. of Amsterdam

Author: **Zi-Lin He**; Tilburg U.

Author: **Geert Duysters**; Tilburg U.

Received research has focused on knowledge domain distance to conceptualize the cognitive distance in inter-firm learning. In this research, we revisit this approach. We conceptualize the cognitive distance based on two dimensions: knowledge domain distance and knowledge architecture distance, and theorize the association of each dimension with firm learning in alliances. We test our theory on a sample of 278 dyadic R&D alliances in the semiconductor industry. We use content analysis to identify the technological scope of each alliance to minimize the noise in the operationalization of cognitive distance dimensions. Our findings show while knowledge architecture distance has an inverted-U shape association, knowledge domain distance has a negative association with firm learning.

Toward a Knowledge-Based View of the Business Model: Ontology, Architecture, and Dynamics

Author: **Guannan Qu**; Tsinghua U. School of Economics and Management

Author: **Luyao Wang**; Tsinghua U. School of Economics and Management

Drawing on a knowledge-based view (KBV), this study investigates the ontology of the concept of the business model (BM) and builds an integrated framework in which to explore its architecture and dynamics. In this framework, a BM can be viewed as a structured knowledge cluster which contains both explicit and implicit parts. The architecture of a BM consists of three levels: components, sub-cluster business themes and the overall BM. Based on this, the design and imitation of BMs is conceptualized as a dynamic process of (implicit and explicit) knowledge creation and cross-boundary diffusion. The proposed framework could provide managers with a deeper understanding of the ontology and structure of BMs, assist in the design of business-related knowledge components and valuable linkages regarding its hierarchy, and help new entrants to successfully and effectively learn a well-established BM “archetype”. This study conceptualizes business models at a more fundamental level and the implicit part of BMs is explored and its importance in BM design and imitation is discussed.

Performance Feedback, M&A, and Divestiture (session 821)

Influences of Performance Close to and Far from Aspiration on Business and Geographic Divestitures

Author: **Elizabeth Lim**; Georgia State U.

Combining resource-based view and the behavioral theory of the firm, we examine influences of performance close to and far from aspirations in both negative and positive attainment discrepancies on the extent to which firms reconfigure resources through corporate-level business and geographic divestitures. We predict firm performance deteriorations below aspirations will increase exits from businesses and geographies to fix performance problems up to a point after which this relationship tapers off due to threat-rigidity response. Firms whose performance increases above aspirations will increase business divestitures but decrease geographic divestitures to enhance growth and profitability up to a point after which this relationship tapers off because strong performance induces riskier goals. Results supported the curvilinear main effects.

Corporate Headquarters and a Tradeoff in Diversification Strategy

Author: **Tatsuo Ushijima**; Keio U. Japan

Author: **Ryo Ogawa**; Chiba U. of Commerce

Author: **Hideaki Miyajima**; Waseda U.

The roles of structure in corporate strategy are a central issue of strategic management. However, systematic evidence on this topic is seriously lacking. Based on a panel of Japanese firms, we contribute to filling the void by studying the causes and consequences of the variation of headquarters' size across firms. Consistent with the view that firms enlarge headquarters to profit from operating synergy based on inter-divisional resource sharing, we find that firms with higher R&D and advertising intensities and firms with a more related business portfolio have larger headquarters. However, the size of headquarters is inversely associated with internal capital market efficiency, suggesting that large headquarters handicap firms in profiting from financial synergy. These results lend credence to the notion that firms cannot be ambidextrous in profiting from diversification because of distinct structures required for operating and financial synergies.

A Dual-Self Theory of Strategic Decision Making (WITHDRAWN)

Author: **Veronica Roberta Cappelli**; HEC Paris

Author: **Cedric Gutierrez**; Bocconi U.

Author: **Rahul Anand**; HEC Paris

This paper builds on the behavioral theory of the firm tradition and proposes a novel modeling solution for decision making under uncertainty, when reference points matter. We use insights from dual-process theory to relax some of the constraints that are set by both the behavioral theory of the firm and prospect theory upon the way in which reference points shape risk taking, while preserving some of their desirable properties, such as the consideration of multiple reference points and resource-dependent risk attitudes. In order to study the empirical validity of our modeling strategy, we apply it to the decision of a firm to divest an asset. Using records on divestments of publicly listed firms in the European Union between 2001 and 2015 we find that our model provides a good fit for the pattern of divestitures observed in our data.

Author: **Dan Schley**; Erasmus U. Rotterdam

Managers involved in acquisition premium decisions

MNEs. This phenomenon has not been well explained in research to date. We hypothesize that affiliation to diversified business groups, owing to beneficial knowledge and resource combinative effects pre- and post-acquisition, encourages such strategies. We hypothesize, moreover, that motives derived from private ownership and strategic asset seeking amplify the effect from domestic business group diversification. Employing ordered logit modelling on a sample of 662 Chinese international M&As (from 2006 to 2015) we find strong support for our hypotheses. Our results underscore the paradoxical nature of unrelated diversification in the context of a dominant resource- and institution-based narrative of Chinese firms attempting to spring-board and catch-up. Business group diversification, ownership structure and strategic asset seeking motives combine to provide both inducement and ability to cope with unrelated acquisitions in foreign locations. Our findings contribute to the theoretical discussion regarding the potentially idiosyncratic strategies of emerging market MNEs.

How Do Firms Diversify? Institutional Relatedness and Diversification

Author: **Niron Hashai**; Arison School of Business, The Interdisciplinary Center (IDC), Israel

Author: **Sai Chittaranjan Kalubandi**; Professor, Indian Institute of Management Bangalore

Author: **Amit Karna**; Indian Institute of Management, Ahmedabad

Author: **Mukesh Sud**; Indian Institute of Management, Ahmedabad

The extant diversification literature has been long dominated by Rumelt's product-market relatedness diversification conception. In this study, we highlight the importance of a different type of relatedness – "institutional relatedness" and show its prominence in explaining the diversification of business group affiliated firms operating in emerging markets. Specifically, we relate to a particular type of institutional relatedness - that is the intensity of specific institutions present in an industry. We hypothesize that business groups are more likely to operate in industries with higher intensity of

commonly must make choices armed with incomplete and uncertain information. One way they deal with this uncertainty is by relying on references – i.e., comparable choices made in the past. While such references have diagnostic value, overemphasizing on these references can also have an anchoring effect. In this study, we articulate how and when two potentially salient references in acquisition premium decisions: the previous acquisition premium paid by another firm in the target industry (external reference), and the premium paid by a focal firm for its own preceding acquisition (internal reference) influences focal acquisition premium decisions. We theorize that while the external reference plays both a diagnostic and biasing role, the internal reference likely plays just a biasing role. We also extend this work by theorizing on how more powerful and overconfident CEOs will rely more on internal references than on external references. Our results based on a hedonic regression analysis of 3,237 completed acquisitions provide support for our hypotheses. By clarifying and elaborating the nuanced influence of multiple references, this study synthesizes and extends recent work both in the acquisition premium literature and the anchoring literature more broadly.

Rethinking Technological Innovation: Where to Settle Between Material Space and Value Space? (session 823)

When an existing market space is challenged by creative disruptions (Schumpeter, 1942), organizations need to strategically re-position themselves in both material and value space. Material space encompasses an innovation's physical attribute, practice, or design, whereas value space represents how the innovation is judged, evaluated, or imbued with meanings. Navigating

international contexts by exploring the role of institutional arbitrage opportunities that make cross-border M&A partners more threatening competitors. Drawing on the institutional arbitrage lens, we argue that when firms engage in cross-border M&As they can exploit the institutional differences between acquiring and target firms' countries to access or conserve financial resources through increased borrowing limits, lower credit interest rates and reduced tax burden, thus they can enhance their competitive position on the market. Consequently, gains from financial and fiscal institutional arbitrage opportunities can pose a substantial threat for the rivals of the M&A partners and should provoke an increase in rival firms' interfirm responses. In addition, we argue that the effect of institutional arbitrage opportunities of the M&A partners on the variation of rival firms' interfirm responses is moderated by rivals' awareness, motivation, and capability. An analysis of rival firms' M&As, alliances and joint ventures before and after horizontal cross-border M&As of their competitors in the manufacturing industry between 1999- 2014 provides some support for our theoretical reasoning.

Towards a Resource-Based View of Internal Capital Markets

Author: **Ghahhar Zavosh**; HEC Montreal
Author: **Olivier Bertrand**; Fundação Getúlio Vargas/EBAPE
Author: **Samira Fallah**; Louisiana State U.

The literature on internal capital markets assumes that allocations are efficient if a headquarters shifts relatively more capital to subsidiaries with higher market growth opportunities (i.e., picks the winners). However, the empirical work has failed to consistently link deviations from winner-picking logic to firms' value destruction. In this paper, we underscore the connection between the firms' dominant view of strategy and their capital allocation patterns. We argue that winner-picking logic only corresponds to the industrial organization (IO) view of strategy (Porter, 1981) and neglects firms' idiosyncrasies. Taking a resource-based view (RBV) of strategy, we theorize and empirically show

these two spaces simultaneously can be difficult. This symposium seeks to understand how firms manage conflicts across material space and value space during technological innovation. We include four papers to examine how 1) firms bring values to technological innovation through technology positioning in material space, and how 2) institutional structures that establish orders for material space affect valuation of technological innovation during commercialization. These four papers employ a variety of methods – ranging from archival, qualitative, and quantitative – to study these issues. Authors of this symposium are experts on the proposed theme and have extensively published on innovation, value, and meaning creation. We believe this symposium will advance the field by proposing a holistic approach to examine technological innovation.

The Transmission of Economic Shocks in Multi-Divisional Firms: A Capabilities-Based View

Author: **Timo Sohl**; U. Pompeu Fabra

Author: **Brian T. McCann**; Vanderbilt U.

Author: **Govert Vroom**; IESE Business School

This study develops a capabilities-based perspective on resource allocation by examining the influence of parent- and division-level capabilities on the transmission of economic shocks in multi-divisional firms. We begin by arguing that the effects of parent-specific crises spread to divisions, resulting in significantly reduced asset growth in these divisions compared to divisions for which the parent is not exposed to a crisis. We contend, however, that differences in experience levels across firms, both at the parent and division levels, lead to heterogeneity in capabilities, and these capabilities attenuate the transmission of economic crises. This is because parents with greater capabilities should be less exposed to economic shocks, while divisions with greater capabilities may be less dependent on parent resources. Analyses of panel data on 2,051 foreign divisions of global retailers provides evidence supportive of our arguments: financial crises in parent home countries negatively affect division-level investment, and this effect is attenuated by greater experience of parents, focal divisions, and sister divisions in the same geographic market. Overall, our work provides new insights into how capabilities at multiple corporate levels can influence resource allocation and the exposure of divisions to parent-level shocks.

R&D Subsidy and Corporate Innovation: An Integrated View of Resource Allocation and Utilization

Author: **Yeyao Ren**; Xi'an Jiaotong U.

Author: **Liang Zhang**; Xi'an Jiaotong U.

Prior research on corporate innovation has highlighted the roles of public support especially R&D subsidy. However, there are mixed findings regarding the effect of R&D subsidy on corporate innovation output. In this study, we develop an integrated view of resource allocation and resource utilization to study how this effect may vary according to resource utilization efficiency of firms when firms are awarded R&D subsidy based on different rules. We hypothesize that when R&D subsidy is allocated to a firm based on its technology capability, such subsidy will have stronger positive effect on innovation output with the presence of high resource utilization efficiency. In contrast, when a firm is allocated to R&D subsidy based on political connection, the positive effect of R&D subsidy on innovation output becomes weaker with decreasing resource utilization efficiency. Our results based on data of Chinese privately listed firms between 2010 and 2016 confirm these hypotheses. The findings offer fresh and comprehensive insights on how government allocation rules might influence the ways in which firms use resources to innovate and further influence the effectiveness of public support in emerging countries.

Malaya/Cambridge Judge Business School

development process to move forward. This study complements and extends prior research on search depth in open innovation by focusing on how a deep link to external partners within one particular search channel, public research organizations (PROs), shapes a firm's perception of new technology concepts. It examines how the depth of communication, conceived as a composite notion of high-quality information and close participation by the partners, in such collaborations helps firms in utilizing new knowledge in the future. However, due to narrowed perceptions, attention allocation problems, and increased internal communication boundaries, it can also blind firms to identify new opportunities for co-developed knowledge. We address these mixed implications of communication depth in conjunction with two context-specific factors—partner fit and the asset specificity of co-developed knowledge—that can weaken the curvilinear (inverted U-shaped) effect of communication depth on knowledge utilization. The results of our study suggest that firms may need no excessive communication depth with PROs and may align it with partner- and asset-specific contexts to best utilize knowledge from R&D collaborations with PROs in the long-term.

Knowledge and Collaboration Networks and Local Search Behaviors of Inventors

Author: **Hongjuan Zhang**; Tianjin U.

Author: **Jia Guo**; Tianjin U.

Author: **Feng Guo**; Tianjin U.

Inventors are embedded both in knowledge networks consisting of links between knowledge elements and in collaboration networks with other inventors. The two networks are decoupled, their structural features are distinct, and they interactively influence inventors' local searches for knowledge. Based on a longitudinal patent data, we explore the effects of two structural features of inventors in the networks—centrality and structural holes—on their local search behaviors. We find that inventors' centrality in a firm's knowledge network will contribute to the depth and breadth of their local searches while structural holes will hinder it. Moreover, the efficiency of centrality in the

Author: **Jenny Chu**; Cambridge Judge Business School

Author: **Shi Tang**; U. of Cambridge

We integrate gender stereotype theories under a theoretical framework of stereotype activation to theorize and test the effects of legislative quotas on two distinct aspects of female board representation – selection (female board percentage) and retention (female board turnover). Results based on a longitudinal dataset of 1071 firms across 42 countries and supplementary interviews show that quotas positively relate to both female board percentage and turnover. Based on stereotype activation theory, quota helps women bypass gender barriers created by social-role-based stereotype to promote women's access to boards, while simultaneously activating the stigma of incompetence stereotype that jeopardizes women's retention on boards. Moreover, the national culture of gender egalitarianism moderates these relationships by suppressing the salience of the two gender stereotypes. Specifically, quotas relate more positively to female board percentage and less positively to female board turnover, when gender egalitarianism in the home country is higher than when it is lower. Taken together, the nuanced theoretical underpinnings and our findings on the complex effects of quotas on female board representation reconcile the fierce global debate on quotas by decoupling the enabling and inhibiting effects of quotas on different facets of corporate boards and identifying important boundary conditions.

Finding Needles in Haystacks: A New Perspective on the Search for Breakthrough Innovations

Author: **Timo Ehrig**; Max Planck Institute for Mathematics in the Sciences

Author: **Johannes Rauh**; Max Planck Institute for Mathematics in the Sciences

Author: **Thorbjørn Knudsen**; U. of Southern Denmark

We study how theories guide managers while they search for breakthrough innovations. Such situations are characterized by the impossibility to learn about improvements using performance feedback from an existing product. Managers can get a glimpse of feedback by relying on diagnostic indicators like prototypes. Drawing on simulation (Bayesian theory-based search), we study how managers should choose indicators and use the information gained from indicators to successfully launch innovations faster. Contrary to prior scholarship, our results suggest that it is not experience with similar search problems, but logical discipline in imagination that enables strategists to success with such search processes. Our results have implications for the resource-based view, and our understanding of dynamic capabilities, as approach informs about the means necessary to generate superior information.

How Power and Discretion Attenuate the Queen Bee Phenomenon in Top Management Teams

Author: **Emily Sue Corwin**; U. of Arkansas

Author: **Holly Loncarich**; U. of Arkansas

Author: **Jason Ridge**; U. of Arkansas

The Queen Bee (QB) phenomenon posits that senior women in male dominated work contexts (e.g., top management teams) strive for success by distancing themselves from junior female colleagues. This psychological distancing is theorized to be a response to longstanding gender discrimination. However, findings that have tested this phenomenon are mixed. We suggest that this may be due to institutional constraints, rather than female CEO preferences. We posit that female CEOs will have a higher representation of women on their TMT, and thus avoid the QB phenomenon, when not constrained by organizational factors. We find that female CEO presence does negatively relate to TMT female representation (as QB literature suggests), but that this relationship is weakened by CEO power, lack of board vigilance, and CEO confidence.

Adaptation and Change: Adaptation to Institutional Change (session 825)

Factors Impacting the Adoption of a New Dominant Institutional Logic

Author: **Jaemin Kim**; Oakland U.

Author: **Michael Greiner**; Oakland U.

Building upon institutional logics theory, we argue for a model in which all three levels of a field – the institutional level, the organization level, and the individual level – must be convinced of the need for a change in dominant logics before one logic is abandoned in favor of a new one. Separate factors will push each level toward changing dominant logics, but as these factors are considered, the different levels will interact to create overall movement toward a new logic. Due to the fact that these levels vary from one organization to another within the field, organizations will adopt the new logic at varying times until the new logic replaces the old dominant logic in the field. We find support for our theory in a test on a unique database of Major League Baseball data, taking advantage of a natural experiment in which the publication of the book *Moneyball* and other technical advances created pressure for baseball clubs to move from a scout-driven approach to a more analytical data-driven method of management.

Motives in the Sharing Economy: Evidence from Field Experiments on a New Online Task Platform

Author: **David Maslach**; Florida State U.

Author: **Richard Devine**; DePaul U.

Author: **R. Michael Holmes**; Florida State U.

Online, task-based platforms have exploded in popularity in the sharing economy. A key reason for their growth is that prospective users are motivated to use them, but what are these motives? Building on the Theory of Planned Behavior, we perform two field experiments to explore how platforms encourage prospective users to become active users. In Study 1, we use a field experiment on a new task-based (editing) platform that had few users to explore how new platforms appeal to prospective users. In Study 2, we use a field experiment with professional editors to explore the factors that encourage them to become active users. The results show that prospective users have increased intentions to become a user because of financial outcomes rather than nonfinancial outcomes. We also show differential gender effects in both active participation and the quality of this participation. These results have implications for the understanding of motives, gender, and platform design in the sharing economy.

How Open-System Intermediaries Stimulate Bridging Among Firms: Evidence from Science Parks in Europe

Author: **Laura Lecluyse**; Ghent U.

Author: **Annelore Huyghe**; Cass Business School, City U. London

Author: **Mirjam Knockaert**; Ghent U.

Increasing attention has been devoted to open-system intermediaries, such as science parks, which are aimed at stimulating bridging among their member firms. However, prior evidence, providing contradictory findings regarding the ability of open-system intermediaries to facilitate bridging, reflects the need for insights into the conditions under

Chinese manufacturing firm sample from 2005 to 2007, we find that subnational social trust has a positive effect on firm innovation but this relationship is weakened when firms are state-owned and affiliated with higher political hierarchy, while is more pronounced for startups. The paper contributes to the literature on interplay between institutional environment and firm strategies by going beyond the concept of institutions, providing great insights into how informal institutions shape innovation activities.

Green Innovations as a Response to Ecological Community Pressures

Author: **Paul Huenermund**; Maastricht U.

Author: **Yannick P.M. Bammens**; Maastricht U.

We examine to what extent business organizations respond in a substantive manner to ecological pressures at the community level through the introduction of green process and product innovations. We argue that the noneconomic utility in the form of personal reputation gains that business owners derive from such substantive responses is greater when owner identifiability is high, and that owner identifiability therefore strengthens the effect of ecological community pressures on the introduction of green innovations by firms. Our hypotheses are tested on a sample of over 2,800 German firms using instrumental variable regression analyses, and we find support for our ideas. This study contributes to institutional theory by clarifying how the utility derived from substantive responses to institutional pressures depends on owner identifiability, thereby advancing insight on the heterogeneity in organizational responses to such pressures.

Social Information Disclosure in C2C E-commerce: A Natural Experiment

Author: **Ke Rong**; Tsinghua U.

Author: **Di Zhou**; Tsinghua U.

This paper aims to explore the influence of social information disclosure on the sales rate in the online C2C trading market, and a mediator effect of privacy and a moderator effect of trading experience are considered. We conducted a large-scale online experiment in 80 days on a C2C commodity trading platform in China. Based on the experiment data, the empirical results show that partial social information disclosure would decrease the sales rate while full social information disclosure would increase the sales rate. The mediator effect of privacy would increase the sales rate, but the impact is relatively small compared to the trust. The moderator effect of trading experience would only enhance the negative influence of partial social information disclosure but have no effect on the influence of full social information disclosure. This paper encourages the cooperation between social platforms and trading platforms by introducing the real social relationship into the online trading market.

Getting Complementors On Board: Evidence From the 7th and 8th Generations of Video Game

Draw on imprinting theory and dynamic institution-based view, this study focuses on how the speed of institutional change at founding influences innovation through inducing firms to develop innovation capabilities which were subsequently institutionalized and persisted. We introduce the concept of dynamic institutional imprinting, identifying an important process whereby a firm develops characteristics that reflect prominent dynamic features of institutional change. Using a longitudinal dataset of Chinese manufacturing firms from 2008 to 2018 in the context of market-oriented reforms, our findings show that firms' dynamic institutional imprint positively affects innovation. Moreover, while the imprint's strength is weakened by family influence during imprint genesis, TMT's R&D background and external innovation intensify its strength by acting upon the mechanisms underlying imprint persistence. Our study contributes to a better understanding of imprinting, the implications of dynamic institutional imprint, and firm innovation.

Author: **Ranjan Prajapati**; Maas & Kleiberg
Subsidieadvies

This paper analyses how three facets of platform openness explain complementor participation in the video game console industry. Three facets are considered boundary resources, exclusive content, and the breadth of content offerings. This study focuses on the number of complementors rather than complements and makes a first attempt to measure platform boundary resources. Fixed-effects regressions on a panel comprising two generations of consoles across six platforms showed that the breadth of content offerings have a positive effect on complementor participation. The results support the importance of boundary resources in attracting complementors. Exclusive content plays a higher role during the early stages of platform development rather than during mature stages due to intense competition among complementors in the latter stage. Our results suggest that by following the right open-platform strategies, platform firms can orchestrate a large network of complementors and proliferate a variety of complementary product offerings.

Firms' differences in their ability to sustain a competitive advantage depend on the sources of

Author: **Loris Gaio**; U. of Trento
Author: **Alberto Nucciarelli**; U. of Trento

Despite the critical role of the pre-commercialization phase, little is known about industry-level dynamics where focal areas nurture user entrepreneurship and ultimately industry inception. By conducting an historical case study on the emergence of the global sport climbing industry through the RockMaster event in Arco (Italy), this study examines an under-theorized type of phenomenon, the “catalyzing places”—iconic venues which trigger and sustain processes for industry inception and emergence. We show how these places can potentially exert, over communities of practice on a global scale, three distinctive types of forces—centripetal, catalyzing, and centrifugal—and originate cyclical processes which foster industries through the establishment of new entrepreneurial ventures, products, technologies, and practices. We discuss the implications for theory and practice on industry inception, spaces, and user entrepreneurship.

Institutional Categories and Emergent Frames: Categorization Schema and Audience Approval

Author: **Yimin Lin**; Singapore Management U.
Author: **Simon JD Schillebeeckx**; Singapore Management U.
Author: **Gerard George**; Singapore Management U.

Audiences categorize firms and their market offerings in an effort to simplify complex information. Firms are positively evaluated when they conform to established categories, whereas non-conformance is punished. While studies identify contingencies to this categorical imperative, they do not compare alternative categorization schemas that result in different sensemaking structures. We compare institutional categories, artefacts of human and temporal sensemaking, with emergent frames, artefacts of algorithmic and atemporal sensemaking. Using patent data from the agricultural industry, we investigate how an invention’s relatedness to high and low valence prototypes (i.e. prototypicality) influences audience approval. We find that inventions closely related to high valence prototypes of institutional categories

failure in recognizing and exploiting valuable growth options through innovation. By investing in a sufficiently diversified portfolio of technologies, firms can create a broad knowledge base for future innovation opportunities. However, in this study, I argue that short-term earning pressure, providing managerial incentives to increase predictability and reduce waiting time for results, can alter how managers allocate resources among research projects leading to a narrower knowledge base. I employ a difference-in-differences specification and find that, relative to the control group, firms in the treatment group suffer a decline in the level of the breadth of their knowledge base scope (in terms of technological diversification) after the introduction of mandatory quarterly reporting in EU.

Leveraging Crowdsourcing: The Moderating Role of External Search Breadth

Author: **Jakob Pohlisch**; Technical U. of Berlin
Author: **Marcel Bogers**; U. of Copenhagen & U. of California Berkeley

Since the introduction of the open innovation concept, scholars have been studying the importance of boundary-spanning search for innovation performance. In our study we specifically address the effect of crowdsourcing – a unique approach to finding external knowledge – on innovation performance. We moreover investigate the moderating effect of external search breadth on this relationship. Based on a large-scale survey of 4,500 German companies, the results confirm our hypothesis that crowdsourcing is significantly and positively associated with innovation performance. However, as additionally hypothesized, its effect is strongly moderated by the external search breadth of the focal firm. That is, firms with either low or high levels of external search breadth benefit most from crowdsourcing. At the same time, firms with optimal levels of search breadth, do not exhibit additional benefits from crowdsourcing or even a decrease in innovation performance.

[view paper \(if available\)](#)

are negatively evaluated by audiences. For emergent frames, we find that relatedness to both low and high valence prototypes results in positive audience approval, suggesting the latter exposes latent opportunities in the knowledge structure. Yet, these opportunities are not equally available to all firms. Our analyses reveal that inventions related to low valence prototypes are positively evaluated if they come from a generalist than a specialist firm. However, inventions related to high valence prototypes are positively evaluated if they come from a specialist than a generalist, and this effect is stronger if the prototype is identified by emergent frames. With the increasing use of artificial intelligence or machine-based sensemaking in practice, our results shed light on the effects of categorization schema on audience approval. Our study contributes to the literature on categories by exposing that often-opaque properties of the schemas themselves crucially determine audience evaluations.

A Machine-Learning Approach to Creative Forecasting of Ideas

Author: **Linus Dahlander**; ESMT European School of Management and Technology

Author: **Morten Fenger**; Aarhus BSS, Aarhus U.

Author: **Michela Beretta**; Aarhus U.

Author: **Shahab Kazami**; Aarhus BSS, Aarhus U.

Author: **Lars Frederiksen**; MGMT, BSS, Aarhus U.

New technologies provide new opportunities to collaborate across organizational boundaries. While the antecedents of idea generation and implementation have received much attention, creative forecasting—the act of evaluating whether an idea will take off—is less understood.

Acknowledging the multitude of possible theoretical explanations, we take guidance from data and algorithms using a machine-learning (ML), text- and image-mining approach. Using data from 35,821 recent design ideas published on the LEGO Ideas ideation platform, we developed variables based on three groups of explanations, all resonating with plausible theoretical explanations: (1) the ideator's own characteristics and behavior, (2) behaviors from others toward an ideator or their previous ideas,

In Search for Quality: Understanding the Effect of Cognitive Proximity and Experience on Decision

Author: **Chuqing Zhang**; North China Electric Power U.

Author: **Shayegheh Ashourizadeh**; postdoctoral Research Fellow

Author: **Xiaoting Hu**; School of Economics and Management Tsinghua U.

Thousands of funding projects from diverse fields have been launched every year, and the approval decisions highly depend on reviewers' evaluation results. The purpose of this paper is to test how the cognitive proximity and evaluation experience influence decision quality. By using the Negative Binomial Model to test 1,261 observations of the 2017 Beijing Innofund data, the study finds that cognitive proximity has an inverted "U-shape" relation to decision quality. Moreover, experience in evaluation cannot only exert a positive influence on decision quality but also a positive influence on the inverted U shape between cognitive proximity and decision quality. These findings fill the gaps in the current research on cognition-based perspective by specifying the mechanism of cognitive proximity in decision making in the evaluation field and further advance management research by elucidating the evaluating experience on evaluation.

The Cure for the NIH Syndrome: Examining the Effects of Technology and Origin on Selection

Author: **Curba Morris Lampert**; Florida International U.

Author: **Minyoung Kim**; U. of Kansas

Author: **Raja Roy**; New Jersey Institute of Technology

Author: **Francisco Polidoro**; U. of Texas at Austin

This paper investigates the determinants of opportunity selection, in which an opportunity is defined in the literature as an idea for an innovation that may have value with additional investment of resources. Drawing on the literature of decision making under uncertainty, we hypothesize that rational and political factors may influence which opportunities are selected. Our empirical analysis studies 3,100 pharmaceutical compounds selected to advance from Preclinical to Phase I testing over a

and (3) characteristics of the new idea itself. We cross-validated our findings by comparing our creative forecasts with actual idea success for future ideas not included in the data that the ML models were trained on. Comparing the results from different ML approaches, we find that some explanations have predictive power, but that many plausible theoretical explanations have only negligible effects, which provides the opportunity to develop a more parsimonious theory. We distill these insights into post hoc theorizing, and reflect on how these methods can be used to further organization science.

YouTubers Balancing the Paradox of Novelty and Conformity

Designated as a “Best Paper” for TIM

Author: **Sumeet Malik**; IE Business School

Author: **Chandrika Rathee**; IE U. - IE Business School
Madrid, Spain

Author: **Taiyuan Wang**; China Europe International
Business School (CEIBS)

The categorical imperative suggests that since the audience devalues offerings that do not fit within a category, producers should follow conventions to gain legitimacy. This poses a paradox of optimal distinctiveness to entrepreneurs driven by novelty. However, the extant research assumes homogeneous audience and crisp boundaries of the categories in which the entrepreneurs operate. We test these assumptions in a context with multiple audiences and fuzzy categories. By analyzing 208,136 videos of 283 YouTubers nominated for the “Streamys” – prestigious awards in online video – and correcting for endogeneity, we find that novelty is less likely to win an award, but is liked more by its regular platform audience. However, the negative evaluations of the jury audience towards novelty are moderate in fuzzier categories while the regular audience likes novelty more in well-defined categories. Further, we find that winning of Streamys gives YouTubers a status-boost to be more novel in the future. Our results inform firms and entrepreneurs about how they can position themselves to augment their value among audiences.

10-year period. The findings are threefold. First, we find that compounds from new technological domains are more likely to be selected than those from existing technological domains, supporting rational preference arguments for pursuing new areas with potentially higher returns. Second, we find that externally developed compounds are less likely to be selected than internally developed compounds, supporting a “Not-Invented-Here” (NIH) political partiality. Third, we find that the NIH bias does not exist for compounds from new technological domains.

Open Innovation: Contributor Decisions and Activities (session 828)

Is Status Detrimental to Distributed Innovation?

Designated as a "Best Paper" for TIM
Author: **Jens Foerderer**; TUM School of Management, Technical U. of Munich
Author: **Karin Hoisl**; Mannheim U.

In distributed innovation projects, crowds and communities are the main drivers of innovation. We investigate the relationship between the status of such a project and the innovation rate, i.e. the share of innovative contributions, it attracts. Status has been shown to attract a greater audience, thereby increasing the odds of receiving innovative contributions. Drawing on status theory and literature on the determinants of innovation, we argue that status may also decrease innovation through motivational crowding (i.e. high status crowds out intrinsically motivated contributors) and reputational contributing (i.e., high status attracts career-conscious contributors). To investigate the status-innovation relationship, we use data on 2,045 open-source software (OSS) projects. Our empirical setting qualifies for a regression discontinuity design. In particular, we exploit exogenous variation in project status due to its appearance on the prestigious front page of Hacker News, a Silicon Valley tech media. We find that status decreases the innovation rate of an OSS project. In particular, projects appearing on the prestigious front page experience a decline in its innovation rate by between 6.3% and 7.8%. Further analyses suggest that this decline can at least partially be attributed to motivational crowding and reputational contributing. Our findings contribute to a better understanding of the determinants of innovation, in general, and of distributed innovation, like in OSS projects, in particular.

Bias, Barriers, and Behavior: Exploring the Mechanisms Behind the Gender Gap in Entrepreneurship (session 750)

Gender inequality remains an issue in entrepreneurship. Women are engaging in entrepreneurship at increasing rates, but they still lag behind men. Furthermore, women who do participate receive significantly lower levels of funding and support that keep them from experience the same success as men. Scholars have addressed these inequalities from a variety of perspectives. Some suggest that bias and stereotyping results in negative perceptions of women in entrepreneurship, while others suggest that female entrepreneurs behave differently than male entrepreneurs. Still others assert that men and women start from different places in their pursuit of entrepreneurial activities. They suggest that differences in social networks provide more opportunities to men than women. In this symposium, we present four studies that use real world field data to test different mechanisms to explain the gender gap in entrepreneurship. In support of the 2020 AOM theme, we hope to inspire conversations that consider how bias, access, and behavior may be simultaneously contributing to the challenges women face in entrepreneurship.

The Effects of Receiving Assistance on Participation in Online Knowledge-Sharing Communities

Author: **Frank Nagle**; Harvard Business School
Author: **Eunkwang Seo**; U. of Illinois at Urbana-Champaign
Author: **Sonali Shah**; U. of Illinois at Urbana-Champaign

Online knowledge-sharing communities have become increasingly important arenas for knowledge-sharing that benefit participants and firms alike: participants receive support and assistance, while firms benefit from reduced support costs and innovative insights. Scholars have begun investigating the motives that drive voluntary participation in online knowledge-sharing communities, but whether or not and how interactions between users shape future participation remains underexplored. This study examines whether receiving an answer to a question—and from whom the answer is received—affects a new participant’s likelihood of participating again. We consider this relationship based on fifteen years of data from Statalist, the online community that formed around the Stata statistical software package. The data show that receiving an answer from a “regular” community member is positively associated with asking future questions and negatively associated with answering others’ questions. However, receiving an answer from a Stata employee is positively associated with both future asking and answering. Our findings suggest firms can take simple steps to promote deeper involvement by new community participants.

potential for the sourcing of future innovations. Yet we lack an understanding of how new ideas emerge within the maker movement. This study investigates social interactions' influences on ideas' newness in an online maker community. In accordance with previous research, we argue that, on average, makers with a broker status in the online community develop more novel ideas. We further argue that not all brokers have the same access to diverse knowledge and that the assumed positive relationship between broker status and idea newness is stronger for brokers with access to more diverse knowledge—individuals we refer to as generalists. We collected data from a popular online maker community containing 18,146 ideas, 19,919 maker profiles, and 52,663 comments. Analyzing this dataset with topic modeling (Latent Dirichlet Allocation) to extract hidden knowledge elements and with social network analysis to identify brokers, we find support for the positive relationship between broker status and idea newness. Surprisingly, we find that knowledge concentration, held by what we refer to as specialists, (and not knowledge breadth) strengthens a favorable broker position, and discuss this counterintuitive finding as well as theoretical and practical implications.

Leveraging the Household Sector: Local Knowledge, Local Formulation, and Depth of Contribution

Author: **Ademir Vrolijk**; George Washington U.

Author: **Zoe Szajnfarder**; George Washington U.

This paper unpacks how the public—or household sector—creates their most valuable contributions to better understand how organizations can leverage them. Scholars have examined the barriers that prevent organizations from adopting the public's contributions. They have also theorized the public's core problem-solving constructs: local knowledge, local formulation, and depth of the contributions provided. But few studies have bridged these two. As such, we connected the public's problem-solving dynamics to those contributions that made the most impact on the focal organization. We observed a shift to welcome public input in a National Aeronautics and Space Administration program. This

shift was strongly influenced by one engagement where the public contributed to a space mission design decision. In analyzing their contributions, we found that an individual's use of their local knowledge correlated directly to the substance of their contribution. We also found that local formulation —reformulating the NASA problem in their own terms—increased the likelihood of substance because it increased the depth of the contribution. Our results show the importance of deep interactions to translate the public's local ideas into meaningful contributions to the organization. They also show that the free-innovation paradigm can be directed to non-consumer good contexts.

New Venture Creation and the Development of Entrepreneurial Cognition

Designated as a "Best Paper" for ENT

Author: **Gabi Anja Kaffka**; Utrecht U.

Author: **Raja Singaram**; U. of New Mexico

Author: **Jeroen Kraaijenbrink**; Amsterdam Business School, U. of Amsterdam

Sensemaking describes how actors fill in a meaning void whereas sensebreaking deals with the process of creating that void by disrupting current understandings of individuals. Over a period of one year we followed 30 entrepreneurs engaged in new venture building. Applying the concept of sensebreaking, we analyzed the influence of crucial stakeholders on their entrepreneurial cognition using the real-time, longitudinal data set of weekly diary entries we collected. The examination of 7200 distinct units of analysis revealed 115 sensebreaking instances. We show how sensebreaking initiated by specific stakeholders aids novel sensemaking via three possible mechanisms: questioning, reframing and redirecting. We contribute to the micro-level foundations of entrepreneurial cognition empirically demonstrating that it is socially situated. We shed new light on entrepreneurial opportunity developed in concert with stakeholders during the early stages

Economic Development Meets Ecosystem (session 746)

Entrepreneurial Ecosystem: Network Embeddedness, Institutions, and New Venture Growth in China

Author: **Xi Chen**; U. of Nottingham, China

Author: **Jiaosha Chen**; U. of Nottingham, China

Author: **Bat Batjargal**; Oklahoma State U.

Social network theory has established that the diversity of entrepreneurs' ego network is especially important for new venture growth. However, less attention is paid to how entrepreneurs' personal network is embedded in the local and institutional context. In this paper, we propose that entrepreneurs' personal network is embedded in the entrepreneurial ecosystem and their institutional context. We define ecosystem embeddedness as the degree to which an entrepreneurs' ego network covers a variety of sectors in an entrepreneurial ecosystem. We examine how and when it influences new venture growth in an entrepreneurial ecosystem in China. Employing a longitudinal survey of 83 entrepreneurs in China, we found that the ecosystem embeddedness of entrepreneurs' ego network is positively related with new venture revenue growth,

of a new venture.

Rivalry, Revenge, and Reactance: The Dark Sides of Entrepreneurial Motivation

Author: **Mark Bolinger**; Indiana U. - Kelley School of Business

Author: **Alex Bolinger**; Idaho State U.

Popular accounts are replete with examples of individuals who cite the influence of others (e.g., competing with rivals, desiring revenge, or seeking to prove others wrong) as primary motives for engaging in entrepreneurship. However, researchers have not systematically explored these “dark” sides of the influence of others as sources of motivation for initiating or persisting in entrepreneurial ventures. In this paper, we describe how the motivational effects of the dark side of the influence of others (DSIO) contrasts with more familiar sources of entrepreneurial motivation. Then, drawing on social comparison, equity, and psychological reactance theories, we unpack the distinct emotions and action tendencies associated with rivalry, revenge, and reactance, and the conditions in which each is more likely to foster entrepreneurial motivation. We describe the implications of our theorizing for broadening our understanding of the potential sources of entrepreneurial motivation and raise a variety of directions for future research.

Regional Entrepreneurial Ecosystems in Mexico: Gendered Perspectives

Author: **Allan Oswaldo Villegas-Mateos**; U. de Monterrey

Author: **Linda Elizabeth Ruiz**; EGADE Business School, Tecnologico de Monterrey

This research underlies the entrepreneurial ecosystem’s theoretical framework to analyze the variance in gender perceptions at regional levels. Using one of the Global Entrepreneurship Monitor’s surveys, the National Experts Survey, applied to a sample of N= 675 key informants in Mexico at ten entities, 183 of which were women expert’s responses. We used non-parametric statistics to compare the differences between women and men experts in Mexico and by each entity. The results indicate that only two entities (Mexico City and Querétaro) have a majority of the conditions of the ecosystems better perceived by women experts and none of the conditions evaluated show repeated levels of significance among all the entities, meaning that it is crucial to evaluate each regional ecosystem independently. These results may have some bias caused by the selection of an unbalanced sample between women and men experts in each entity. Therefore, it presents opportunities for the different levels of government to increase the impact of their policies and programs fostering more women and men to involve in entrepreneurial activities. It also contributes to the empirical literature of regional entrepreneurial ecosystems in emerging Latin American economies and to understand the role of women and men within the same.

Harry Potter and the Start-Ups: Fictional Personality Profiles Predict Entrepreneurship

Author: **Martin Obschonka**; Queensland U. of Technology

Author: **Teemu Kautonen**; Aalto U.

Author: **Tobias Ebert**; U. of Mannheim

Author: **Friedrich Goetz**; U. of Cambridge

Identifying relevant personality traits represents a renewed focus in modern entrepreneurship research. Researchers have been expanding the scope of personality models (e.g., by considering dark traits) but we particularly lack a deeper understanding on relevant personality profiles that connect bright with dark traits. To advance conceptual approaches and the empirical basis, here we ask: Is the fictional personality typology of Harry Potter houses, which offers a taxonomy of bright and dark traits in the general population, a useful concept in the empirical study of entrepreneurial personality? We present unique, new data from the TIME Magazine Harry Potter Study (N = 795,829 participants) that measured Harry Potter personality types (Gryffindor, Hufflepuff, Ravenclaw, and Slytherin). Based on psychological personality scales (Machiavellianism, agreeableness, courage, honesty-humility, and conscientiousness) and expert ratings that assign these traits to Harry Potter houses, we study relationships between the houses and entrepreneurial activity across 338 MSA's in the US. As expected, we find that the houses of Gryffindor and Slytherin, as a local personality cluster, predict

Entrepreneurship

Author: **Regan M. Stevenson**; Indiana U.

Author: **Alex Kier**; Washington State U. Vancouver

Author: **Shannon G. Taylor**; U. of Central Florida

Is public sponsorship effective at sparking innovative entrepreneurship or does it under-deliver given its intended outcomes? To deepen our understanding of public policies to promote innovative entrepreneurship, we investigate the short and long-term effects of grant sponsorship on venture growth and subsequent private investment funding. We adopt a temporal approach and assess our results using discontinuous growth modeling. This approach allows us to unpack the complexity of sponsorship interventions and provide insights into how quickly, how long, and under what conditions such policies augment growth. Using a proprietary sample of 129 ventures located in eight incubators over a four year period, we find that securing an initial grant increases the rate at which ventures acquire private investment capital over time, but decreases the rate at which ventures grow revenue over time. These results indicate that although there are advantages to receiving public sponsorship, there are also potential shortcomings as it appears to slow revenue trajectories when a longer term temporal perspective is used. We consider venture size as a moderator for these relationships and find significant moderating effects. We leverage signaling theory and draw on emerging research related to organizational sponsorship to discuss how our findings inform public policy and contribute to the entrepreneurship literature.

provide both type of firms with an opportunity to shape the regulatory framework for the emerging industry. We find that by forming a coalition, and working together, new and diversifying firms provide complementary political resources that allow them to capture a regulatory institution's production process. Specifically, new firms provide signals of credible technical and industry knowledge, while diversifying firms provide traditional political resources that new firms lack (i.e. political ties and financial resources). As industry regulators require increasingly specific knowledge, this serves as a catalyst for change in the composition of existing coalitions and drives the emergence of new ones.

Entrepreneurial Intentions (session 744)

Corruption and Entrepreneurial Intentions: A Cross-National Comparative Perspective

Author: **Yifan Wei**; Asper School of business, U. of Manitoba

Author: **Yefeng Wang**; U. of Wisconsin, Whitewater

Author: **Da Huo**; Dalian U. of Technology

Author: **Lei Xu**; U. of Wisconsin, Whitewater

How does corruption in a country affect entrepreneurship? The literature provides conflicting views, with one stream suggesting that corruption is detrimental to entrepreneurship, and another stream suggesting that corruption is beneficial. Our study is designed to reconcile this conflict by arguing that individuals simultaneously weigh the expected returns against the expected risks of entrepreneurship as corruption deteriorates. We suggest that there is a U-shaped relationship between corruption and entrepreneurial intention, and such relationship is moderated by two institutions: the level of market development and the level of restraint culture. Using cross-national data that includes 109 countries, our hypotheses receive strong support. Our study sheds

Family Firm: Survival and Performance (session 743)

(A)Void Suffering from Instability: A Meta-Analysis on Family Firm Performance

Author: **Todor Stefan Lohwasser**; WWU Münster

Author: **Felix Hoch**; WWU Münster

Author: **Franz Kellermanns**; U. of North Carolina, Charlotte

This meta-analysis, (176 studies from 36 countries), examines how the institutional environment and institutional instability moderate the relationship between family firm involvement and firm performance. Specifically, we trace the between-study variance to differences in regime type and political instability, while drawing on institutional voids as an explanatory factor. We show that family involvement has a positive influence on firm performance in democracies and autocracies but a negative influence in anocracies. Furthermore, we demonstrate that political instability negatively moderates the relationship between family firms and performance. Implications for family firms and institutional theory are discussed.

An Integrated Conjunctive Model of the Drivers of Entrepreneurial Intention for Different Purposes (WITHDRAWN)

Author: **Evan Douglas**; Sasin School of Management, Chulalongkorn U., Bangkok

A common framework for the analysis of commercial, social, and other types of entrepreneurial intention (EI) is developed and tested. The model treats profit, psychic-income, social-impact, and innovation outcomes as interdependent goals underlying the perceived desirability of entrepreneurship. Heterogeneous valences of these goals generate multiple pathways to EI which evoke the different types of entrepreneurs found in the extant literature. The model is tested using fuzzy-set qualitative comparative analysis, revealing multiple configurations that each culminate in EI of one type or another, and reveal fine-grained information about interdependent causation and asymmetric data relationships consistent with the complexity of entrepreneurial behaviour.

Is Entrepreneurial Intention an Antidote to Ambiguity Aversion?

Author: **Anisa Shyti**; IE Business School

Many entrepreneurial decisions involve substantial ambiguity. Using contemporary decision theories, I elicit ambiguity attitudes, without estimating utility functions or risk attitudes. The experiment features two main conditions that are quantitatively equivalent, but differ in their textual framing. In the chance frame, likelihood of success depends on environmental contingencies, whereas in the skill frame, entrepreneurial skill can influence the likelihood of success. I control for participants'

A Trickle-down Model of Abusive Supervision and Firm Performance in Family and Non-Family Firms

Designated as a "Best Paper" for ENT

Author: **Kai Christian Bormann**; Bielefeld U.

Author: **Christina Hoon**; Bielefeld U.

Author: **Michael Graffius**; Berlin School of Economics and Law

Author: **Christopher Hansen**; U. of Trier

Social-exchange theory predicts higher-level leaders' abusive supervision to trickle-down to lower-level leaders' abusive supervision. We develop and test an extension to this conception by suggesting organizational level factors to shape this relationship. Integrating theories of stewardship and threat responses, we suggest that in family-owned firms the trickle-down effect of abusive supervision should be weaker than in non-family firms because of the former's higher stewardship culture and increased fear of competitive threats. This is then theorized to predict competitive differences among family and non-family firms. At the organizational level, we suggest higher-level abusive supervision to impair financial performance via serial mediation: It increases lower-level abusive supervision (Stage 1) and decreases employee job satisfaction climate (Stage 2). This indirect effect should be weaker (stronger) in (non-)family firms. We test our predictions across a field study of matched data from 61 supervisors and 190 employees and a multisource study containing 37,308 respondents from 149 organizations. We find support for most of our predictions. Implications for theory and future research are discussed.

Family Firms Survival in an Economic Downturn: The Generational Stage and Collaborative Intensity

Author: **Joan Freixanet**; Graduate School of Management, Saint Petersburg U.

Author: **Gemma Renart**; Research Group on Statistics, Econometrics and Health (GRECS) U. de Girona

Author: **Pilar Marques-Gou**; U. de Girona

entrepreneurial intention and relative overconfidence. Key findings indicate that, first, in both conditions, ambiguity attitudes depend on likelihood of success. Second, in the chance frame, participants predominantly exhibit ambiguity aversion, whereas in the skill frame, ambiguity seeking prevails. Third, relative overconfidence, orthogonal to entrepreneurial intention, does not explain the observed differences in ambiguity attitudes between skill and chance frames. Finally, entrepreneurial intention is relevant to the skill frame only, in which setting it significantly reinforces ambiguity seeking. Hence, entrepreneurial intention offsets ambiguity aversion in the pertinent context.

Non-Monetary Predictors of Entrepreneurial Intention Among Higher Educated Organizational Employees

Author: **Anna-maija Nisula**; Post-Doctoral Researcher

Author: **Heidi Olander**; Lappeenranta U. of Technology

The present study investigates entrepreneurial intentions among higher educated organizational employees, who intend to transit from an employee career to a self-employed one. Specifically, we investigate creativity as a desirability factor that gives rise to entrepreneurial intention, and general self-efficacy as a feasibility factor that refers to individual's confidence to take an intended action. In addition, we investigate general self-efficacy as a moderating variable between creativity and entrepreneurial intention. Based on a data collected from 303 higher educated organizational employees, we tested the proposed research model with SEM-PLS modelling. Our results show that creativity is a significant predictor of entrepreneurial intentions. We also found that general self-efficacy moderates the relationship between creativity and entrepreneurial intention and that the moderation effect is positive. It means that the higher the general self-efficacy the stronger the relationship between creativity and entrepreneurial intention will be.

This study examines the complex relationship between family governance and firm survival in the context of an economic downturn, by focusing on the influence of two key factors: the generational stage and collaborative intensity. For a proper test of these relationships, we performed Cox survival analyses over a sample of 269 SMEs followed from 2005 until 2014. The results show that while family firms survive more overall, their performance suffers more during a period of economic downturn, although they retain higher survival odds. The results further suggest a higher risk for first-generation family firms, thus pointing to the effect of the liabilities of newness. Finally, the findings indicate that, in a period of economic stability, those family firms with higher collaborative intensity with private firms exhibit a higher likelihood of survival. Instead, the results do not show benefits of a higher collaborative intensity with public entities, or that developed during an economic downturn, possibly due to the higher risks of partnerships which may set-off the potential benefits. The paper concludes with a discussion about academic, managerial and public policy implications.

Preserving Family Wealth: Toward a Theory of Social Capital in Enterprise Families

Author: **Maarten De Groot**; Vrije U. Amsterdam, School of Business and Economics

Author: **Oli Mihalache**; Vrije U. Amsterdam

Author: **Tom Elfring**; U. of Liverpool Management School

Enterprise families share ownership in multiple entities and multiple assets. Many strive for wealth preservation and benefit from family social capital. In the family business literature little attention has been paid to the families behind the enterprises. We answered to recent calls to uncover the origins of family social capital. Employing a multiple case study method, we offer a deeper understanding of the origins of family social capital by studying transgenerational enterprise families. We open the drapes on this secretive and hard to access unit of analysis by studying seven cases where the enterprise family maintained monetary prosperity for more than one hundred years with wealth

averaging billions shared by hundreds of family members. Our inductive qualitative study finds that enterprise family social capital appears to be enhanced by organizational structures, family learning, family identity and by family grounding. We distinguish our analysis from the literature on wealth creation through business venturing with these aggregate dimensions that explain how social capital is created and this may form the basis for wealth preservation strategies of enterprise families seeking transgenerational success. Furthermore, our findings pave the way for future research on family social capital.

Look Who is Talking ...and Who is Listening: Integrative "We" voice in Entrepreneurial Scholarship (WITHDRAWN)

Author: **Dimo P. Dimov**; U. of Bath

Author: **Reiner August Schaefer**; Haskayne School of Business, U. of Calgary

Author: **Joseph Pistrui**; IE Business School

This paper explores the relationship between the study of entrepreneurs and the entrepreneurs we study. Scientific description invites a third- person stance toward phenomena. Entrepreneurial action has an irreducible first-person ontology of human agency. We argue that the sharing of ends and reciprocity of reasons can bring scholars and entrepreneurs together into a unifying practical decision-making perspective. An integrative voice in scholarship can collapse the dualism of rigour and relevance.

Corporate Taxes and Entrepreneurial Activity

Author: **Ana Venancio**; ISEG (Lisbon School of Economics & Management), U. de Lisboa

Author: **Victor Barros**; ISEG (Lisbon School of Economics & Management), U. de Lisboa

Author: **Clara Raposo**; ISEG (Lisbon School of Economics & Management), U. de Lisboa

We examine the impact of corporate taxation on entrepreneurship, using a quasi-natural experiment, which substantially reduced the corporate tax rate for start-ups located in inland municipalities in Portugal. Using a difference-in-differences approach and IV regression, we find that the tax reform increased firm entry by approximately 0.41% and birth job creation by 0.24% on a monthly basis, corresponding to an increase of 29,150 new firms, and 223,500 new jobs over a period of three years. We find that the entrepreneurs that took advantage of this tax reform are male, relatively older and well-educated individuals. Their start-ups are relatively larger (up to 10 employees) and are on average more productive and more likely to survive their first three years. These findings suggest that corporate taxation is an imperative constraint for entrepreneurship, particularly for high-quality

Author: **Kevin Morrell**; Durham U. Business School
Author: **Andy Lockett**; U. of Warwick
Author: **Deniz Ucbasaran**; U. of Warwick

A common theme in the entrepreneurship literature is that founders experience greater freedom than those working in established organizations. Much of this literature relies on a contrastive sense of freedom: either “freedom from” structures of control or “freedom to” realise personal potential. We advocate a more expansive account of founder freedom drawing on existentialism. Freedom is the central concern of existentialist writers and this diverse group emphasises not just the opportunities of freedom but its intrinsic and perpetual challenges – what one might call the “dark side” of freedom. This is not a contrastive “freedom from” or “freedom to” but a more fundamental state of “being free”. We develop a broader conceptualization of founder freedom and derive implications.

Did Edith Penrose’s Theory of Entrepreneurship Borrow Frank Knight’s Notion of ‘Services’?

Author: **Jason M. Pattit**; U. of St. Thomas
Author: **J C. Spender**; Kozminski U.

Entrepreneurship theorists puzzle whether the creation of economic value differs from its acquisition, and over the ‘business ethics’ involved. Organization theorists generally see value creation as the fruit of disciplined design and administration. In contrast, economists find value and its growth more perplexing. While Paul Romer’s theory of endogenous growth won him the 2018 Economics Nobel, his colleagues mostly ignore Edith Penrose’s theory of firm growth, even as they accept firms are the principal engines of economic growth. When she became Fritz Machlup’s student in 1947 Penrose found little in mainstream or Austrian economics to guide her. While she conceded Kenneth Boulding’s influence, we suspect she drew more on his teacher Frank Knight’s notions. Perhaps unwittingly, she borrowed Knight’s separation of the firm’s resources from the economic services they provided. This became core. Along with John Commons, Knight helped shape US institutional economics, as well as Ronald Coase’s 1937 questions about why entrepreneurs chose to create firms when markets

entrepreneurs. High-quality entrepreneurs can more easily overcome the hurdles of tax legislations and raise the required capital to start their ventures.

Evaluating the University Impacts of the Research Excellence Framework in the United Kingdom

Author: **Maribel Guerrero**; Newcastle Business School, Northumbria U.

Policymakers, scholars and the higher education funding bodies believe that the outputs of research should be as widely accessible as possible. For this reason, a public policy intervention, known as research excellence frameworks (REFs) have been designed and introduced in 2014 and 2021 in the United Kingdom. REF covers both research-related outcomes and impact on the regional and national economy. This study offers the first evidence about the implementation and the preliminary outcomes of public intervention (REF2014) in universities which remains a gap in the literature. This study estimates the direct effect of policy on university outcomes and organisational factors that increase the university outcomes under REF.

Is Starting Unregistered Beneficial for Firms? The Moderating Role of Institutional Context

Author: **Dawit Assefa**; U. of Messina
Author: **Bisrat Misganaw**; NEOMA Business School
Author: **Ana Colovic**; NEOMA Business School

Building on the resource-based view and social network theory, we examine the relationship between informality and firm performance. Based on an empirical investigation covering 121 countries over the 2006-2018 period we show that firms that started unregistered perform better than firms that started registered. We also show that the relationship between time spent unregistered and firm performance is curvilinear, taking and inverted-U shape, and that firms operating in countries marked by poorly functioning formal institutions benefit longer from staying unregistered. Our

were available. Penrose engaged related questions. Given mainstream economists' pursuit of rigor at the expense of practical relevance and their continuing inattention to Coase's work, we argue further exploration of Knight's and Penrose's entrepreneurship might lead to useful new insights.

The Lighthouse-Keeper in Economics: Property Rights Entrepreneurship and the Externality Problem

Author: **Thomas J Dean**; Colorado State U.

Author: **William R. Forster**; Willamette U.

The lack of effective property rights regimes is a root cause of numerous undesirable outcomes from market-based systems. We argue for more attention to the nature of property rights for a host of assets and propose a dynamic theory of property rights which recognizes their evolutionary nature and the role of entrepreneurs in their creation and development. We suggest that the actions of profit-motivate entrepreneurs initiate and encourage the development of property rights for markets for externalities. We argue that property rights entrepreneurship is more important and pervasive than recognized in the literature and point to numerous examples throughout economic history, from evolving intellectual property protections for biotechnology firms to the protection of Alaskan king crab fisheries. We present a process model which summarizes the dynamics of property rights entrepreneurship. We also introduce novel constructs to the field, including property rights voids, enabling conditions, the activation level of excludability, accelerating resource degradation, the presumption of rights, and distinctions between asset-rights and product-rights entrepreneurship. We also distinguish between rights creation (the generation of regimes of excludability) and rights capture (the acquisition of those rights). Finally, we discuss implications for the efficient functioning of markets, the preservation of resources, and social welfare.

Legalizing Legitimate Ink: Licensing and Entry in the Tattooing Industry

Designated as a "Best Paper" for ENT

Author: **Fabian Diaz**; Syracuse U.

Author: **Maria Minniti**; Syracuse U.

Consensus in the legitimacy literature suggests that more legitimacy is always preferred to less. This, however, neglects to consider the cost of different legitimization strategies. We expand upon extant literature by treating legitimacy as a process and arguing that the costs entrepreneurs must incur to legitimize their ventures are contingent on the viability of substitute strategies, that is, the presence of both conformance and cognitive legitimacy strategies. Furthermore, we suggest that these costs also influence significantly the attractiveness and potential exploitation of opportunities. We test our argument using licensing requirements and measurable variations in established cognitive legitimacy in the tattooing industry. We find support for the notion that regulatory and cognitive legitimacy represent substitute legitimization strategies. We also find evidence that the costs of legitimating strategies matter. Specifically, we find that the early introduction of regulatory conformance strategies can induce firm entry, but this effect dissipates as cognitive legitimacy in the industry increases

Embracing Challenging Environment: Decision-Making Approaches and Performance of Russian SMEs

Designated as a "Best Paper" for ENT

Author: **Galina Shirokova**; Graduate School of Management St.Petersburg State U.

Author: **Anastasiia Laskovaia**; Graduate School of Management St.Petersburg State U.

Author: **Hossein MahdaviMazdeh**; U. of Calgary

Prior research established effectuation and causation as two decision-making processes (behavioral logics) having distinct, context-dependent implications for firm performance. This study aims to broaden the understanding of these decision-making processes by investigating their effectiveness for Russian SMEs in the context of adverse economic conditions. Furthermore, first time in the literature, we embrace a broader view of performance implications of effectuation and causation, theorizing and empirically testing their impact not only on the level of firm performance, but also on its variability. The findings suggest that the context of economic crisis in an emerging market creates significant contingencies in the relationships between effectuation, causation, and firm performance, substantively affecting the effectiveness of these behavioral logics. In particular, we demonstrate that for the firms affected by crisis, causation brings marginal performance improvements while also making it highly unreliable (variable), while effectuation leads to performance improvements coupled with higher reliability.

How Co Creative Entrepreneurs Respond to the Tension Between Art and Business?

Author: **Viktoriia Pisotska**; Department of Business and Management, LUISS Guido Carli U.

Author: **Luca Giustiniano**; Luiss Guido Carli U.

Author: **Kerem Gurses**; La Salle, U. Ramon Llull

Relying on the paradox and entrepreneurship literatures, coupled with social network and practice theories, this study uncovers how creative entrepreneurs respond to the tension between art and business in terms of their inherent motivations, social ties and practices in the process of creative entrepreneurship, divided into three cumulative phases of prelaunch, launch and post-launch. The multiple case studies method is used by examining founders of creative enterprises operating in the film industry in Europe. The research contributes to the under-researched phenomenon of creative entrepreneurship from both personality and social perspectives, to the literature on paradox and contradiction by exploring the micro- foundations of tensions, to the practice theory by highlighting the agency of creative entrepreneurs in generating and adapting practices necessary to deal with conflicting demands of creative entrepreneurship. Managerial implications for the training of creative entrepreneurs are highlighted.

To What Extent Do Board Interlocks Matter for New Venture Growth and When Do They Matter More?

Author: **Tatevik Harutyunyan**; NHH Norwegian School of Economics

The extant research addresses different aspects of the role of boards in new ventures (Li, Terjesen, & Umans, 2018). Board interlocks, instead, are understudied in the entrepreneurial setting (Lamb & Roundy, 2016). Moreover, findings on one of the most researched relationships in interlock literature – the relationship between board interlocks and firm performance – are inconsistent (Lamb & Roundy, 2016). Therefore, the paper investigates the extent to which and under which conditions board interlocks are related to new venture growth. The paper suggests a closer look at the characteristics of board interlocks, interlocking firms and environment surrounding new ventures in search for instances when board interlock matter (more) for venture growth. To address the relationships, I employ the Norwegian registry data – a longitudinal employer-employee matched dataset of all Norwegian residents and firms with the possibility to identify board directors and their affiliations, among an array of other variables/indicators. Enabled by data, the study design is longitudinal that is a step forward in board research (Mizruchi, 1996). As of 2014, the sample consists of about 62,000 interlocking firms, and among these, 25% are new ventures (15,000). The analyses show that board interlocks are double-edged swords, as their presence and characteristics are in contrasting relations with different aspects of new venture growth – growth in sales, assets, equity, profit and number of employees.

Institutionalizing Informal Interactions: The Daily Stand-Up Meeting as an Interaction Work Ritual

Author: **Jinia Mukerjee**; Montpellier Business School

Author: **Raghu Garud**; Pennsylvania State U.

We examine a work practice labelled the “daily stand-up meeting” (DSM) employed by a successful entrepreneurial firm to institutionalize emergent coordination. Drawing on Collin’s theory of interaction rituals, our ethnographic study identifies how the DSM facilitates informal interactions between members around emergent issues to enable task and socio-emotional coordination. Task coordination occurs by (a) establishing accountability and predictability, (b) generating task-related feedback and decision-making, and (c) creating common knowledge. Socio-emotional coordination occurs by facilitating (a) the sharing of positive emotions, and (b) the sharing of negative emotions. Besides enabling task and socio-emotional coordination, the daily standup meetings also serves two organizational functions—the socialization of newcomers, and providing the organization with a capacity to deal with unexpected events during scale-up.

Organizational Interventions for Change (session 244)

Loosening Control Without Losing It: Learning to Speak Up in a Military Organization

Winner of ODC Division Best Doctoral Student Paper

Author: **Steven Van Baarle**; Eindhoven U. of Technology

Author: **Annelies Bobelyn**; Eindhoven U. of Technology

Author: **Sharon Dolmans**; Eindhoven U. of Technology

Author: **Georges Romme**; Eindhoven U. of Technology

Speaking up is essential to employee empowerment and organizational performance. Extant research on employee voice in organizations has focused primarily on its various outcomes and has hardly or not addressed voice as a process (i.e. the mechanisms that precede or enable voice, the reception of voice, and its effects on reflection and decision making) in an actual organizational setting. As such, existing models and theories do not explain how powerful actors can actually empower other actors to speak up. To address these shortcomings, this study explores how speaking up can be fostered in an organizational setting that has long thrived on command and control. For this purpose, an intervention was designed and subsequently tested it in ten military teams including 133 participants. Primarily drawing on 120 hours of recorded meetings, and additional qualitative and quantitative data, our findings suggest that the decision whether, when, or how to speak up is a learning process unfolding over time, for both powerful and less powerful actors involved. This learning process can be facilitated by the deliberate use of transformative power, by dynamically combining three activities: guiding, inviting and challenging both powerful and less powerful actors in the context of their team meetings. Whereas the intervention appears to increase psychological safety and foster individual and team voice outcomes, its effects are limited when the team context is turbulent or when the expectancies of the team leader and team members diverge. Grounded in qualitative and quantitative data, we develop a causal loop model capturing the various contexts, triggering conditions, processes, outcomes, and feedback loops relevant to voice.

The Flourishing of School Principals: An Intervention Study

ODC Action Research Paper Award

Author: **John Molineux**; Deakin U.

Author: **Jon Billsberry**; U. of Wollongong

Author: **Adam Fraser**; The Energy Factory

The paper reports the findings of a 12-month-long action learning intervention study involving 13 groups of school principals and other school leaders. It was developed in response to a pressing need in school principals to improve their levels of stress, wellbeing, work-family balance, and recovery, caused in part by their isolation. With theoretical underpinning from the human flourishing literature, professional development focused on improving the connectiveness of participants while lessons from positive psychology were being embedded. The intervention itself consisted of an integrated set of techniques designed into four one-day workshops over a 12-month period plus development activities spaced between the workshops. The techniques were drawn from psychology, health, human resource management, and other fields in a unique and context-specific design. Specific techniques included practices from positive psychology, mindfulness, the Third Space (Fraser, 2012), job crafting, acceptance and commitment therapy and work-life changes. The process involved significant

relationship support within the action learning groups and through the use of buddies. The outcomes of the intervention were measured both quantitatively and qualitatively. The results show significant reductions in stress and increases in wellbeing, work-family balance, and recovery. In the discussion, the applicability of this intervention for use in other countries and contexts with school leaders, school principals and head teachers is discussed.

Creating Safe Spaces - Accelerating Change by Unlocking the Full Potential of Employees

Author: **Gary Allen Gray**; Bowling Green State U.

Have you ever been in a meeting or a conversation at work and didn't speak up about something you disagreed with or knew was wrong? Do you have people in your group that don't voice their opinions? Have you used the phrase "silence is acceptance"? These are the questions I explore in this article and what the impact of these types of behavior are on individuals and the organizations where they work. Organizations need people to contribute to the activities of the business fully, and remaining silent is potentially withholding valuable information. If you have done this, how did you feel afterward? Did you feel good about it, or did you worry that something might go wrong, and you could have prevented it? Organizational change is uncomfortable for many people, but if we all contribute, regardless of if we agree or not, the best possible changes may occur. Disagreeing with a proposed change is not always a bad thing; some changes shouldn't happen. If you have done any of these things, or are guilty of creating an environment where these types of behavior occur, then you need to understand the importance of safe spaces in organizations, and ending the silence of employees.

From Review to Framework: Conceptualizing Generativity for Organization Development

Author: **Cees Hoogendijk**; U. of Twente

During the last two decades, the term generativity and its adjective generative have acquired a modest place in the vocabulary of organization development practitioners and scholars; they describe generativity as an idea-giving, future-forming and self-perpetuating ambition of sustainable change and development. The literature review presented in this paper shows that this and many other interpretations of generativity in organizational contexts contain fragility, which may weaken the underlying aspirations of moving toward flourishing organizations. We promote a more robust and proper use of the term generative/ity. For this, we develop in this paper a conceptual framework that broadens our sight on generativity and its related concepts in the context of organization development. We offer suggestions for further research into strategies or interventions that have the fitness to strengthen organization's possibilities to adapt and survive. Can generativity be organized, and if so, how? We invented the word genarrative to address the 'performative proficiency' of organization development practitioners and (their) change leaders who strive for healthy, flourishing organizations. For an optimal return on organizational generativity we need scholars and practitioners of organizational development to join forces, mainly by adapting to the processual nature of generativity, and its seven manifestations.

Factors of Social Exchange Relationships for TQM Involvement of Employees in Hotels (WITHDRAWN)

Author: **Chung-Jen Wang**; National Pingtung U. of Science and Technology

Author: **Chin-Pin Li**; Tainan Municipal Jincheng Junior High School

This study examines how the quality of social exchange relationships at work with a leader (leader-member exchange; LMX) and team members (team-member exchange; TMX) can predict employee TQM involvement in the context of hospitality. Using Structural Equation Modeling (SEM), various hypotheses are tested using data gathered from 811 frontline employees of international tourist hotels in Taiwan. The results reveal that both LMX and TMX have direct positive effects on employee TQM involvement. Further, mediated path analyses show that both LMX and TMX have indirect positive effects on employee TQM involvement via self-efficacy and job satisfaction, and these results provide a clear understanding of the causal chain mechanism about employee TQM involvement behavior operating in such social relationships. The implications of these findings in hospitality are also discussed.

Organizing Work with Algorithmic Augmentation and Artificial Intelligence (session 251)

With the rise of artificial intelligence (AI), we see renewed interest in algorithms that underlie all digital work. The aim of this symposium is to gather our different understandings of algorithms across different disciplines and divisions, and make sense of what we know and what is important to focus on next. Current scholarship shows us that algorithms - a set of digital instructions that are implemented to achieve a goal - enable humans to work more effectively and augment our capacities. At the same time, algorithms are affordances that, in use, can manifest consequences differently to plans and design. Algorithms organize, manage, and control many tasks that are delegated to them by humans; however, this control is not always obvious, transparent, or equitably balanced. We also know that machine learning algorithms are moving beyond initial design to offer unique solutions for unsupervised and uncertain environments and problem spaces. There is growing anticipation about the possibilities of AI and algorithms at work. We hope to unpack current scholarship in this symposium and seek overlap between different domains interested in algorithms and AI in organizational settings and beyond.

daily influence of workplace cyberbullying on interpersonal deviance by using an experience sampling method. We collected 750 matched data from 150 full-time employees working in the public service sector in China for 5 consecutive days. A multilevel analysis was then performed to construct a moderated mediation model. The results showed that daily workplace cyberbullying increased interpersonal deviance by increasing personal ego depletion. Furthermore, the indirect effect of workplace cyberbullying was stronger when there was a low level of perceived supervisor support. Our research provides a comprehensive and dynamic insight into the relationship between workplace cyberbullying and interpersonal deviance.

Sociability Between Coworkers and Social Fit at Work

Author: **Thomas Lyttelton**; Yale U.

Social interactions vary across workplaces, in part because workers and managers treat informal social interactions as a facet of workplace cultures, encouraging it in some instances and suppressing it in others. Equally, such interactions are consequential for social capital, and may be a dimension of cultural fit. Thus processes of status attainment and resource allocation may vary across workplaces in concert with their sociability. Using a new measure of time spent with coworkers, constructed using the American Time Use Survey, this paper shows that work explains a great deal more variation in sociability between coworkers than individual characteristics. The extent of shared workplace identities, influenced by occupational competition levels and union membership, and incentives to socialize are two important mechanisms in this process. Moreover, norms and expectations of appropriate behavior in the workplace accompany occupational differences in sociability, and matching these expectations is consequential for workers' earnings.

How Social Dominance Orientation Effects Social Influence? A Serial Mediation Model

Author: **Tahira Saudagar**; Information Technology U.

Author: **Adeel Tariq**; National U. of Sciences and Technology (NUST)

Author: **Afsar Bilal**; Hazara U.

This research investigates how social dominance orientation of employees gain social influence in their organizations. A serial mediation model has been developed where impression management and workplace status have been suggested as serial mediators between social dominance orientation and social influence. The theoretical model has been explained using social influence theory that explain how people gain social influence through different tactics. A total of 350 multi-sourced responses were collected through a time lagged design with three-time intervals from service sector organizations. Results indicated a good support for the proposed model and it was empirically supported that employees who possess social dominance orientation use impression management tactics to achieve higher workplace status and ultimately, gain social influence in the organization. Limitation, future research and managerial implications have been discussed.

When Do I-deals Make One Central? Contextual Effects of Task Interdependence and Power Distance

Author: **Farid Jahantab**; U. of Texas at El Paso

Author: **Prajya Rakshit Vidyarthi**; U. of Texas at El Paso

Author: **Smriti Anand**; Illinois Institute of Technology Stuart School of Business

In this study, we integrate idiosyncratic deals (i-deals) research with social network perspective and examine the implications of i-deals for employees' social networks. Specifically, drawing upon social exchange theory we suggest that i-deals have implications for employees' centrality in the workgroup advice network and that advice network centrality mediates the relationships between i-deals and job performance. Further, accounting for

the workgroup context, we suggest that workgroup structural and social attributes influence the strength of the relationship between i-deals and advice network centrality. Multi-level modeling using time-lag data from 222 employees nested in 40 workgroups showed a positive relationship between i-deals and advice network centrality with advice network centrality mediating the relationship between i-deals and job performance. Moreover, moderation analyses revealed that the workgroup structural attribute of task interdependence and social attribute of leader power distance strengthen the i-deals-advice network centrality relationship. Implications and directions for multi-level and social network research are discussed.

The House is on Fire! Business Action Towards the 2030 United Nations Sustainable Development Goals (session 831)

With this professional development workshop, we aim to develop an insightful discussion on the role of companies in achieving the Sustainable Development Goals (SDGs) on time. The 2030 Agenda for Sustainable Development consists of 17 goals with 169 targets to be achieved by all member countries jointly. This list includes actions to address major grand challenges such as climate action, affordable and clean energy, responsible consumption and production, quality education, sustainable cities and communities, social equality, the eradication of poverty, and the development of partnerships for achieving these goals, among others. Understanding the role of companies in the pursuit of the SDGs is important as they are crucial actors within the different UN member countries. We believe this PDW might be of interest for ONE Division members because tackling grand challenges through the achievement of the UN SDGs is critical for our community. We are lucky to have a panel of diverse and well-reputed scholars from our division that will share their insightful thoughts on the topic. The format of the workshop will provide a meaningful experience since the audience will have the opportunity to interact with the panel members and other attendants to spur dialogue on the critical issues that threaten our era.

This PDW is open to all interested persons

Shared Leadership in Context: The Mutual Influences of Situation and Process (session 253)

Although shared leadership has been demonstrated to play an intriguing role in enhancing team effectiveness, both the theory and empirics of shared leadership, particularly regarding context, are still somewhat sparse. This hinders us from a better understanding of how this construct works during team processes. Focusing on the context around shared leadership, what becomes imperative is to understand when and how shared leadership develops and becomes effective in the team process. Accordingly, this symposium highlights the function team contexts play in the process of shared leadership development as well as provides insights and unique perspectives for researchers to better understand the nomological network of shared leadership. With four empirical studies employing different research methodologies, including survey, lab experiment, and experience sampling, our symposium utilizes an innovative, breakout-style format (called for by Academy leaders) and discussion-theme integration to facilitate better interaction for our Academy participants. Finally, our research and innovative format are brought together by the renowned researcher in leadership and teams, Dr. Dorothy Carter, as she discusses our symposium's exploration of the mutual interaction between leadership process and team situations.

Subcontracted Labor Mix in Projects Teams: The Benefits and Costs on Financial Performance

Author: **Antoaneta Momcheva**; Operations and Supply Chain Management

Author: **Fabrizio Salvador**; IE U.

Author: **Emmanouil Avgerinos**; IE U. - IE Business School Madrid, Spain

Organizations increasingly staff project teams with subcontracted workers, in order to adapt to variations in demand and access specialist expertise. Despite the importance of this phenomenon, there is scant research on the effect of subcontracted workers on project performance. Investigating such an effect is important because past findings on the effects of subcontracting in retail or assembly lines cannot be simply extrapolated to the more demanding project tasks. We therefore develop and test a theoretical model to conceptualize how and under what conditions subcontracted workers impact project performance. We test our hypotheses analyzing 413 projects of a European high-tech manufacturing firm. Our results show that reliance on subcontracted workers in complex projects can positively impact project margins, especially for larger teams. However, the positive effect is attenuated in projects with many scope changes. We also focus on the level of expertise of subcontracted workers and find that the positive effect on project performance is stronger for lower skilled subcontracted workers than for higher skilled ones. Our results also show that project managers systematically underestimate project margins at the beginning of the project when using a substantial amount of subcontracted labor.

Prototyping a Routine Building-Intervention to Develop Towards a Lean Organization

Author: **Wilfred Herman Knol**; HAN U. of Applied Sciences

Author: **Kristina Lauche**; Radboud U. Nijmegen
Author: **Roel Schouteten**; Radboud U. Nijmegen
Author: **Jannes Slomp**; HAN U. of Applied Sciences

This paper prototypes an intervention based on the premise that to develop towards a lean organization, organizational routines need to be built in lean operations and continuous improvement (CI). We draw on organizational routine theory to develop four intervention principles covering the interplay between the performative aspect (refers to enacting), the ostensive aspect (related to understanding) and artefacts of lean operating and CI routines. The intervention aims to identify suitable lean operating routines and then build CI routines to improve lean operating routines. The intervention consisted of five workshops and several coaching sessions for managers and employees of a small manufacturing company. The data support our intervention principles; building CI routines developed understanding of lean operating routines and implemented related artefacts. Subsequently, both improved lean operating routines. These findings support the premise of building organizational routines for lean management and suggest that the prototype intervention helps to develop towards a lean organization. Practitioners can use these findings and the intervention to reflect on their own development towards a lean organization. Consultants and educators can use them to reflect on their activities, educational programs and belts and incorporate organizational routine-building into their approach.

Buyer-Supplier Networks and Innovation: The Role of Shared Technological Knowledge

Author: **Shubhobrata Palit**; Georgia Institute of Technology

Author: **Manpreet Hora**; Georgia Institute of Technology

Author: **Soumen Ghosh**; Georgia Institute of Technology

Supplier networks are an important source technological knowledge spillovers. We analyze the role of shared technological knowledge between

buyers and their supplier networks on the former's innovation performance. Using a panel data of buyer-supplier relationships and the patenting activity of the respective firms, we address the following research questions: What moderating role does shared technology between a buyer and its supplier network play on the relationship between technology diversity of a buyer's supplier network and buyer's innovation performance? What moderating role does shared technology between a buyer and its supplier network play on the relationship between geographic proximity of the buyer from its supplier network and buyer's innovation performance? What moderating role does shared technology between buyer and its supplier network play on the relationship between buyer's diversification level and its innovation performance? We show that the level of shared technological knowledge, representing complementary or similar knowledge, can be significant in strengthening or weakening the associations between different characteristics of supply chain partners and innovation performance.

When Managers Meet Models: Integrating Human Judgment and Analytics

Author: **Rebekah Inez Brau**; U. of Arkansas Sam M. Walton College of Business

Author: **John Aloysius**; U. of Arkansas Sam M. Walton College of Business

Author: **Enno Siemsen**; U. of Wisconsin, Madison

Data analytics and machine learning are increasingly prevalent in emerging forecasting practice. Despite the growth in model-based forecasting, practitioners continue to employ human judgment to incorporate contextual information to improve the accuracy of model forecasts. Our research uses an experiment to examine how human judgment and statistical models may be best integrated to improve forecast accuracy within heterogeneous forecasting environments. Our findings suggest that human judgment provides a significant benefit to forecasting. Specifically, integrated forecasts (i.e., forecasts that combine human judgment with computational analytics) can substantially improve forecast accuracy compared to non-integrated

forecasts. We find however that this improvement in accuracy is dependent on the method of integration. Human guided machine learning is the most effective method of integration in comparison to other methods commonly used in practice and studied in the academic literature. In keeping with theory, we call for further empirical testing of forecasting methods that leverage the strengths of human judgment and the strengths of models, and urge study of implementation issues in practice.

Atop the Shoulders of Students: The Hidden Costs of Academic Entrepreneurship

Author: **Maria Roche**; Harvard Business School

This paper examines the impact of exposure to an advisor engaged in entrepreneurship on the innovative output of their advisees. Using a unique sample of advisors and advisees in computer sciences and engineering at a top US research university, we assess variation in PhD students' innovative and career outcomes before and after research faculty transitions into entrepreneurship. We address concerns associated with sorting by examining factors determining an advisor-advisee match. We further apply an instrumental variable approach to address the potential endogeneity of entrepreneurial activity. Our results suggest that although starting a company only slightly impacts professors' own productivity, exposure to an advisor engaged in entrepreneurship has a substantial negative influence on PhD student publication during and after completion of the PhD program. Further, we find that exposed students are more likely to become entrepreneurs upon graduation, less likely to have their first position at a prestigious firm, and less likely to hold faculty positions. We provide evidence that these results are unlikely to be driven by selection on observable quality characteristics or reduced mentoring, but more likely a result of managerial changes. Overall, this paper takes an important step towards understanding the consequences of entrepreneurship for scientific productivity and the development of human capital providing broader implications for the organization of science and management research.

Gender-Based Preferences for Tech? Field Evidence from an Internet-of- Things Platform

Designated as a "Best Paper" for TIM

Author: **Nilam Kaushik**; IIM Bangalore

Author: **Kevin Boudreau**; Northeastern & NBER

Why do gender disparities persist in STEM education and technology sector employment? We report on a field experiment in which 92,678 U.S. university-educated individuals from all disciplines and career stages were given the opportunity to join a representative tech opportunity designed to accept all backgrounds. While males are more willing to participate than females in broadest population averages; females in male-dominated fields are at least as willing to participate as male counterparts. Results cannot be explained away by work environment, academic achievement, opportunity costs, or differences in age and cohorts. Therefore, while results indicate widely varying "tastes for tech," it is incorrect to suggest that either sex has a generally higher propensity to participate.

Origin of Originality in Science: Inter-Generational Knowledge Transfer in Academic Training

Author: **Sotaro Shibayama**; U. of Tokyo

Author: **Jian Wang**; Leiden U., The Netherlands

Novelty drives the progress of science. While the previous literature has uncovered a variety of determinants of

novelty, our understanding is still scant as to how individual scientists acquire the skills and tastes for novelty and how novelty is built into the practices and norms of science. To fill this gap, this study focuses on academic training as a key mechanism for fostering novelty in junior scientists and thus passing novelty down to the next generation. With a sample of 696 PhD graduates and 153 their supervisors in life sciences, this study presents three key findings. First, students' novelty is significantly associated with their supervisors' inclination to novelty. This association is further magnified when students are allowed higher autonomy and greater room for exploration. These findings suggest that academic training does offer an arena for transferring novelty across generations. Second, PhD graduates trained by supervisors with novelty inclination continue making novel discoveries even 10 years after graduation. This training effect is pronounced if they are engaged in novel PhD projects, suggesting that learning-by-doing plays a role in training for novelty. Third, students trained by supervisors with novelty inclination exit earlier from academic careers. This suggests a tradeoff in academic training oriented towards novelty, which nurtures novelty in the junior generation but risks their career progression.

Fire and Mice: The Effect of Supply Shocks on Basic Science

Designated as a "Best Paper" for TIM

Author: **Stefano Horst Baruffaldi**; U. of Bath

Author: **Dennis Byrski**; Max Planck Institute for Innovation and Competition

Author: **Fabian Gaessler**; Max Planck Institute for Innovation and Competition

We study how a negative supply shock to research-related assets affects the production of scientific knowledge. In particular, we exploit the 1989 Morrell Park fire that destroyed a considerable share of the world's largest mice breeding facility, the Jackson Laboratory, and killed approximately 400,000 mice. This fire led to an unforeseen and substantial supply shortage in mice for the North American biomedical research community, which we can isolate at the strain and scientist level based on proprietary archival data. Using difference-in-differences estimations, we find that the scientific productivity of affected scientists decreases when measured in simple publication counts, but much less so when we adjust for the publications' quality. Moreover, affected researchers are more likely to initiate research that is unrelated to their previous work. This indicates that affected scientists switched research trajectories but maintained their scientific impact. In the aggregate, the temporary supply shortage of particular mice strains led to a permanent decrease in their usage among U.S. scientists. These results highlight the important role of supply chains in basic science.

Graduate Students as Boundary Spanners: How Academic Engagement Can Influence Firm Innovation

Author: **Karin Berg**; School of Business, Economics and Law U. of Gothenburg

Author: **Maureen McKelvey**; U. of Gothenburg

This paper contributes to literature on "academic engagement with industry", by exploring graduate students as boundary spanners between firms and universities. As contrasted with studies of commercialization of scientific results through patents and start-up firms, literature on academic engagement focuses on how faculty members and students engage in knowledge-related interactions with external organizations. Extant literature has focused more on universities and less on firms. We conceptualize graduate students as holding a boundary spanning position between the firm and university, focusing empirically upon firm employed PhD students in engineering. More specifically, we investigate how their activities constitute a form of academic engagement, in

order to further understand their influence on the firms' absorptive capacity. We revise an existing conceptual framework and further develop the notion that there are two pathways – e.g. a direct and an indirect pathway – by which collaborative research may impact innovation outcomes within firms. When doing so, we specify how graduate student activities mainly support the development of firm capabilities for early stages in the innovation process, specifically recognizing the value and, to some extent, assimilating new external knowledge. We conclude with two propositions about how boundary spanner activities can be conceptualized as organizational routines underlying search capabilities.

Authenticity, Identity Work, and Non-Compete Agreements (session 252)

Working Authenticity: A Study of Organizational Career Management and Ideal Self-Discrepancy

Arnon Reichers Best Student Paper Award Nominee

Author: **Linna Zhu**; U. of Science and Technology of China

Author: **Lan Wang**; U. of Science and Technology of China

Research on ideal self-discrepancy suggests that individuals proactively strive to reduce ideal self-discrepancy due to the discomfort and emotional vulnerabilities associated with it. Less is known about whether companies can help in this individualistic process through career management practices. Using a sample of 331 employees from a four-wave eight-month longitudinal study, we show that organizational career management is negatively associated with ideal self-discrepancy via organizational identification, and such relationship is strengthened by protean career orientation. Moreover, though individual career management in general complements organizational career management in narrowing ideal self-discrepancy, only employees with high protean career orientation see the effect of individual career management on strengthening the relationship between organizational identification and ideal self-discrepancy whereas their counterparts see an opposite effect. This study extends prior work by bringing in the role of organizations and shows that even in the boundaryless career era with high mobility, employers can still help employees reduce ideal self-discrepancy via organizational identification through differentiated human resources management based on protean career orientation.

Low-Wage Workers and the Enforceability of Non-Compete Agreements

Careers Division Best Overall Paper Award Nominee

Designated as a "Best Paper" for CAR

Author: **Michael Lipsitz**; Miami U. Ohio

Author: **Evan Penniman Starr**; U. of Maryland, College Park

We exploit the 2008 Oregon ban on non-compete agreements (NCAs) for hourly-paid workers to provide the first evidence on the impact of NCAs on low-wage workers. We find that banning NCAs for hourly workers increased hourly wages by 2-3% on average. Since only a subset of workers sign NCAs, scaling this estimate by the prevalence of NCA use in the hourly-paid population suggests that the effect on employees actually bound by NCAs may be as great as 14-21%, though the true effect is likely lower due to labor market spillovers onto those not bound by NCAs. While the positive wage effects are found across the age, education and wage distributions, they are stronger for female workers and in occupations where NCAs are more common. The Oregon low-wage NCA ban also improved average occupational status in Oregon, raised job-to-job mobility, and increased the proportion of salaried workers without affecting hours worked.

Identity Work of Persistent Liminars Following Voluntary Career Change

Careers Division Best Overall Paper Award Nominee

Designated as a "Best Paper" for CAR
Author: **Karan Sonpar**; U. College Dublin
Author: **Federica Pazzaglia**; U. College Dublin
Author: **Hardik Agarwal**; IIT Delhi

Through interviews with former military officers who left the Armed Forces to pursue new careers, we explore how individuals come to find themselves in a state of persistent liminality following voluntary career changes and document the identity-based tactics they use to manage such liminality. Our study finds that the anxiety and uncertainty experienced by individuals post voluntary career changes and ongoing critical interactions with former and current colleagues make them aware of a dislocation between their new occupations and their self-concept. Informants' ambivalence towards their new occupation (by expressing excitement about its opportunities despite feeling like misfits in it) and their old occupation (by emphasizing how it lost its meaning despite its values continuing to be relevant to them in the present) placed them in a state of persistent liminality. Individuals strived to cope with persistent liminality through adaptive and maladaptive identity work tactics: On the one hand, actions such as distinguishing social from work interactions and masquerading made it hard to discard the old identity; on the other hand, unlearning some old behaviors and experimenting with new careers demonstrated efforts to identify in the new occupation.

PUBS

AMD Showcase Session: Theoretical and methodological approaches to studying digital transformation. (session 260)

There are several digital technologies—e.g., Internet of Things, 5G, Cloud, Distributed Ledgers/Blockchain, Big Data, and Artificial Intelligence—which, in isolation or jointly, provide new capabilities to economic actors. Such a process is often described as “transformational” for institutions, organizations and the broader communities. However, given its intrinsic complexity, digital transformation poses two grand challenges. First, in the management literature, there is an ongoing debate on whether established assumptions in extant management theories still hold when faced with the pervasive diffusion of such digital technologies. This debate is far from settled. Second, researchers need to triangulate evidence and perspectives and intertwine complementary methodologies to disentangle the nature of digital transformation accurately. Interdisciplinary teams are more likely to contribute and establish successful research programs. Yet, the management of expectations on how the research process will unfold is complex. This session addresses these grand challenges and builds on the experience of working with dozens of submissions to the 2018 Academy of Management Discoveries’ Special Issue on “Digital Transformation: What is new if anything?” After the panelists’ presentations, an open discussion will center on suitable empirical strategies that fuel an abductive approach when dealing with contemporary phenomena such as digital transformation, and the relative opportunities and limits.

Open Strategy: Spatiality, Legitimacy, and Effectiveness (session 261)

Adopting Openness with Closed Eyes: Mobilizing Participation in Agile-based Open Strategy Processes

Author: **Iben Sandal Stjerne**; Copenhagen Business School

Author: **Joana Geraldi**; Copenhagen Business School and Technical U. of Denmark

Author: **Matthias Wenzel**; Leuphana U. Lüneburg

Lured by potentials to induce organizational flexibility, Agile methods have been opening up organizations' strategy processes to broader internal and external actors. While prior literature on open strategy focuses attention on the 'giving' of participation in the strategy process, it largely takes the 'taking' of participation for granted, as if the prospects of participating would be attractive enough for actors to participate. Our paper extends this literature by denaturalizing participation in the strategy process as an accomplishment that must be effortfully invoked. Based on an in-depth study of the adoption of Agile in the strategy process of a large bureaucratic firm, we identify four bundles of practices through which actors mobilize, but also abstain from participation in open strategy. Thereby, our study extends beyond interests in Agile as a seemingly innocent method for spurring flexibility by conceptualizing it as an organizing form that builds on 'openness' as an organizing principle.

[view paper \(if available\)](#)

Open Strategy and the TV Series "Borgen"

Author: **Jeannie Holstein**; U. of Nottingham

Author: **Anniina Rantakari**; U. of Oulu

In this study, we examine participation in open strategy from the perspective of spatiality. While prior studies on Open Strategy has already elaborated the participation and inclusion as key aspects of openness, spatiality is left as an underexplored feature of participation. We draw on ideas from the literature of organizational space to better understand the source and locus of participation. To make an empirical illustration, we draw from a Danish TV series Borgen to elaborate the spatial configurations related to participation. From our analysis, we note three distinct features of how openness of the space predicates participation, namely intrinsic openness, openness as a moving feature, and the materialization of openness and closedness. We show that spatial configurations play a central role in the orchestration of openness. Our study thereby extends previous Open Strategy literature by adding the dimension of space as a key analytical element to the understanding of the dynamics of openness and closure.

Open Strategizing and Organizational Legitimacy: Hybridizing Strategic Responses in Practice

Author: **Josh Morton**; U. of Leeds

Author: **Alex Wilson**; Loughborough U.

Extant literature associates a central purpose of open strategizing with organizations seeking to create legitimacy. As a result, and to date, legitimacy has been highlighted in open strategy work as an entity; a

potential 'effect' or 'outcome' of strategic openness. Research has not, however, made theoretical connections to alternative institutional views of legitimacy which can guide understanding of specific open strategizing practices as a process legitimacy management through strategic responses. This approach is adopted in this research, focusing less so on legitimacy as an entity and more on the dynamic nature of managing legitimacy in practice over time. In offering new insights, this research adopts a longitudinal, single case analysis to explore a professional association who developed and implemented a new strategic plan over a five-year period - openly including their staff and wider community. The findings indicate how open strategizing practices represent the case organization switching between distinct strategic responses used to manage legitimacy. In particular, we find that openness represents a hybridization of strategic responses which result in the balancing, negotiation, and adoption of demands (a desired acquiescence) in clear opposition to strategic responses of avoidance and defiance, which seek to dismiss, challenge, and buffer the expectations of stakeholders. Our work thus offers an important contribution by accentuating the principal relevance of openness as a means of representing various strategic responses in the managing of legitimacy in organizations.

Broadening Our Insight: Bridging and Blurring Boundaries Between Creativity and Innovation (session 258)

Finalist for MOC Division Best Symposium Award

The symposium sets out to foster a deeper dialogue between two interrelated bodies of literature that are too often treated as disconnected, namely research on creativity and innovation in organizations. We present and interrelate five contributions that blur both the disciplinary boundaries and levels of analysis of these traditions. At the heart of our broadening effort is a reconsideration of neglected and overlapping processes of bringing about something new. Examples range from idea thieving behaviors, idea evolution and relationships in creative circles, elaborative play to deal with hazy problems, and creativity assessment over time by institutional gatekeepers, to understanding how diversity in producers and/or products drives innovation. Such processes range from micro- level, individual behaviors, to shifting institutional fields, and back.

In Pursuit of Job Crafting (session 259)

Extending the Job Crafting Theory: A Mixed Methods Investigation

Designated as a "Best Paper" for OB

Author: **Huda Masood**; York U., Toronto

Author: **Stefan Karajovic**; York U.

Author: **Marie-Helene Elizabeth Budworth**; York U.

The current study brings together the literature from job design, motivation, and careers literature while considering the role of expectancy theory to answer the broader and much sought after question of why individuals craft their jobs. The paper builds on the existing literature on job crafting in two specific ways; first, it considers a predicting role of career outcome expectations in determining employee job crafting behaviors. Second, it attempts to highlight the reinforcing role of extrinsic motivation on job crafting. Further, we consider the role of turnover intentions within our moderated-mediation model, in determining job crafting behaviors. A mixed-method study was employed to investigate the motivational determinants of job crafting. Our quantitative study (N= 129), suggested a direct relationship between career outcome expectation and job crafting. Further, mediation analysis indicates the relationship between career outcome expectations and job crafting is mediated by extrinsic motivation. Finally, we find support for the moderating role of turnover intentions between career outcome intentions and extrinsic motivation. Thematic analysis from our qualitative study (N= 25) contended that when employees experience unfulfilled career outcome expectations, they attempt to align their work situations to their career-related expectations. Such expectations are often tied to various forms of work-related extrinsic motivation (e.g. benefits, rewards, promotion, etc.). Failure to attain the expected career-related outcomes usually results in turnover intentions. Managerial implications and future directions are discussed.

**The Approach-Avoidance Job Crafting Scale:
Development and Validation of a New
Measurement**

Designated as a "Best Paper" for OB

Author: **Elisa Lopper**; Humboldt U. of Berlin

Author: **Kai T. Horstmann**; Humboldt-U. zu Berlin

Author: **Annekatriin Hoppe**; Humboldt U. of Berlin

We developed and validated the Approach-Avoidance Job Crafting (AAJC) scale to assess a new conceptualization of job crafting based on a theoretical review by Zhang and Parker (2019) in four studies. First, the AAJC scale was developed in a stepwise procedure (Study 1). In Study 2 the scale was first tested, revised, and the factor structure, reliability, and convergent validity were examined. In Study 3 we replicated these results. The criterion validity of the AAJC scale was investigated in Study 4. The results indicated that it is more sensible to use two independent factors, namely approach and avoidance crafting, instead of one job crafting factor. Furthermore, approach and avoidance crafting each consist of four job crafting dimension which reflect a hierarchical structure of job crafting. The distinction between approach and avoidance crafting was also apparent when the different validities were examined. Approach crafting is positively related to existing approach-oriented job crafting strategies as well as to work-related outcomes. Avoidance crafting is positively associated with existing avoidance-oriented job crafting strategies, but negatively associated with work-related outcomes. Given our results, we argue that organizations should primarily focus on promoting approach crafting among their employees, as both employees and the organization itself can benefit.

Impending Exit and Employee Effort: Do Quitters Phone It In?

Designated as a "Best Paper" for HR

Author: **Yea Hee Ko**; U. of Wisconsin, Madison

Author: **Charlie Trevor**; U. of Wisconsin, Madison

Turnover research has extensively documented negative effects of turnover on organizations. However, this focus on the critical post-turnover disruption has limited our attention to potentially important pre-turnover periods: might part of turnover's disruption actually occur before employees leave? Drawing on expectancy theory, we argue that impending exit reduces perceived instrumentality between work performance and rewards and motivates employees to withhold efforts from tasks unlikely to affect their utility before leaving. Further, we predict heterogeneity in impending exit effects based on the level of supervision and on the post-turnover destination firm. The effect of impending exit on effort withholding is stronger for employees under supervision than for those unsupervised, and the effect is weaker for employees who retain ties to the organization upon leaving. We find empirical evidence supporting our predictions using longitudinal data on 4,525 patent examiners who left the USPTO from March, 1st, 2002 to June, 1st, 2018.

Digital Tools for Entrepreneurial Activity (session 256)

Digital Technology Support and Employee Intrapreneurial Behavior

Author: **Valentin Petzsche**; Technische U. Kaiserslautern

Author: **Tanja Rabl**; Technische U. Kaiserslautern

Author: **Matthias Baum**; U. of Bayreuth

Drawing on the model of the corporate entrepreneurship process and the conservation of resources theory, this paper examines the relationship between digital technology support and employee intrapreneurial behavior. We propose management support for innovation as an organizational resource and intrapreneurial self-efficacy as an individual resource that moderate this relationship. Findings from a metric conjoint experiment with 1360 decisions nested within 85 employees showed that support by collaborative technologies, support by social media, and support by intelligent decision support systems were significant predictors of employee corporate entrepreneurship participation likelihood and employee likelihood of intrapreneurial behavior. However, the relative impact of support by these digital technologies varied with different levels of management support for innovation and intrapreneurial self-efficacy. Thus, results indicate that digital technology support reduces the amount of resources necessary to perform intrapreneurial activities, which leads to net resource gains. This opportunity to gain further resources is better recognized when employees have additional organizational or individual resources at their disposal.

Capturing Digital Opportunities - The Role of Founder Experience

Author: **Elisabeth Mueller**; German Graduate School of Management & Law (GGs)

Author: **Lorna Syme**; Frankfurt School of Finance &

voluntary turnover of valuable employees by incentives may fall short in such industry conditions. This paper investigates useful starting points for an expanded management perspective on employee turnover, considering post-employment commitment. Leaving the organization and still being committed is an option that to date has seen very little attention. Accordingly, the managerial consequences of accomplishing enduring relationships with previous employees are poorly understood. Our empirical findings from five consulting companies in Germany reveal that investing in normative and affective components of organizational commitment, together with the institutionalization of post-employment networks and liabilities, are key management tasks. However, we conclude, that the emergence of post-employment commitment is all but automatic. We therefore argue that it is only when the organization is seen as trustworthy that it is possible to stretch organizational commitment beyond de facto membership. Openly addressing potential turnover right from the outset during the socialization process is an important signal of an employer's trustworthiness.

Guarding the Exits or Fueling the Search: An Investigation into the Efficacy of Employee Guarding

Designated as a "Best Paper" for HR
Author: **Timothy P. Munyon**; U. of Tennessee, Knoxville
Author: **Timothy M. Gardner**; Utah State U.
Author: **Peter Hom**; Arizona State U.

Employee guarding is a downward influence strategy used by managers to maintain access to valued employees over whom they feel a sense of psychological ownership. Although research suggests that the practice is widely used, questions remain regarding the efficacy of these territorial expressions. In this investigation, we directly test how employee guarding affects managerial access to subordinates. Using time series analyses in a global dyadic sample of managers and randomly-selected subordinates, our findings suggest that employee guarding speeds, rather than slows, the

Management

Author: **Thorsten Doherr**; Centre for European Economic Research (ZEW)

In young, technology-driven firms, founders play an important role in determining the technological direction of the firm. Digital technologies offer risky but promising technological opportunities for those firms that are able to recognize and capture them. This ability is influenced by the technical expertise and experience of the founder. Using a sample of start-ups which were founded in Germany between 1999 and 2016, we investigate the effect of founder technical experience - both prior to founding and acquired through in-firm activities - on the ability of the firm to capture digital opportunities. We find that prior related experience influences the speed at which firms are able to recognize and capture digital technologies and demonstrate the persistence of this effect which extant studies have not directly considered. Related prior experience allows firms to overcome the constraint of their original technology choices and capture opportunities in new technologies. The results have implications for founders in terms of their choice of founding team members and individuals that join the top management team at a later stage.

Digitalization in Startups and the Proclivity to Professionalize – Ignorance is Bliss?

Designated as a "Best Paper" for ENT
Author: **Martin Murmann**; U. of Zurich
Author: **Christoph Grimpe**; Copenhagen Business School
Author: **Nathan Rietzler**; Copenhagen Business School

The determination of an organizational design is a major milestone in the evolution of successful startups. In particular, the introduction of middle management frees up scarce founder attention for processing important information and make strategic decisions. However, digitalization, i.e. the use digital tools and technologies, changes the volume and nature of information for processing in startups. We theorize based on information-processing theory that startups respond to these

time process of voluntary turnover, reducing managerial access to subordinates. Specifically, both nurturing and persuasion forms of employee guarding speed the time to voluntary turnover, reducing manager access to valued subordinates. We also find that nurturing weakens the positive relationship between job embeddedness and time to voluntary turnover. Although these findings run contrary to the predictions of territoriality and mate-guarding theories, they are consistent with psychological reactance theory, suggesting that employee guarding is a potentially counterproductive influence practice.

Welcome Back? Boomerang Employee Performance and Turnover Compared to Internal and External Hires

Designated as a “Best Paper” for HR

Author: **John D. Arnold**; U. of Missouri

Author: **Chad Van Iddekinge**; U. of Iowa

Author: **Michael A. Campion**; Purdue U.

Author: **Michael C. Campion**; U. of Texas Rio Grande Valley

“Boomerang” employees are workers who leave an organization and are later rehired by that same organization. Although many organizations rehire former employees, only a handful of studies have examined this phenomenon. The present study uses a large, longitudinal data set to examine the performance and turnover of boomerang employees rehired into management positions ($n = 1,318$). Further, we provide some of the first comparisons between boomerang employees and two traditional sources of employees: external hires ($n = 20,850$) and internal promotions ($n = 8,546$). Evaluations of job performance before and after being rehired revealed that boomerang managers tended to remain the same—rather than increase or decrease—after being rehired. Furthermore, boomerang managers performed similar to internally and externally hired managers in the first year on the job, but both internal and external hires improved more than rehires over time. Internal and external hires were also less likely to turn over from the organization than rehires. The overall results call into question some of the assumed benefits of

new, digital information challenges with an increased proclivity to professionalize and introduce middle management, especially when founder attention is scarce and other startup activities demand attention. We test our hypotheses using a sample of 1,441 startups founded in Germany between 2010 and 2015 and find that increasingly digitalized startups rely relatively early on middle management in their lifecycle. This effect is stronger when founders lack prior management experience and the startup is comparatively large. Our findings have important implications for theory on the emergence of organizational designs in startups and the consequences of digital-ization for the allocation of entrepreneurial attention.

Examining Social Media: Attention Effects of Non-Conformance Rhetoric Among New Ventures

Author: **Benedikt David Christian Seigner**; TUM

School of Management, Technical U. of Munich

Author: **Hana Milanov**; TUM School of Management, Technische U. München

Author: **Erik Lundmark**; Macquarie Business School

Author: **Friderike Bruchmann**; Technical U. of Munich

Attracting attention precedes legitimation and is vital for new ventures to engage in resource exchanges with their environment. In traditional media new ventures are advised to conform to established norms to obtain attention. Once they have gained subsequent legitimacy, more non-conformance is recommended to additionally differentiate from competition. In contrast to traditional media, scholars have suggested that the crowded social media context is a boundary of existing theory, as it should direct attention towards extreme and thus non-conforming content. We hypothesize that depending on the legitimacy levels of the sender two distinct types of non-conforming online narratives will have opposing effects on social media attention. We separate non-confrontational and confrontational non-conforming narratives. Our results, derived from Twitter accounts of 298 US-based and VC-funded ventures in the IT sector within a time frame of 5 years, are in contrast to reasoning in recent social media research, however

rehiring and suggest that organizations consider factors such as the reason for initial departure, the time horizon of performance, and the availability of other types of hires before considering boomerang employees. Future research opportunities to further delineate factors related to boomerang employees are discussed.

Exploring Drivers of Financial Performance in Health Care (session 848)

Hospice Inpatient Services Provision, Utilization, and Financial Performance

Author: **Mengying He**; California State U., Los Angeles

Background: Hospice performance is an overlooked area in the health care field due to the nature of hospice care and the infrequent hospice quality inspection. Purpose: The objective of this study is to explain differences in the financial performance of hospices with regard to hospice inpatient services provision when considering the average length of stay (LOS) in the relationship.

Methodology/Approach: A longitudinal secondary data set (2009 to 2013) was merged from three sources: (a) Hospice Cost Reports from the Centers for Medicare and Medicaid Services (CMS), (b) the Provider of Services (POS) files, and (c) the Area Health Resources Files (AHRF). The dependent variable in this study was hospice financial performance measured by total margin (TM) and return on assets (ROA). The independent variable was hospice inpatient services' offering. Mixed effects regression models were used in the multivariate regression analyses. The mediation effect of hospice average LOS in the relationship between hospice inpatient services' provision and two financial performance measures was also tested. Results: The presence of hospice inpatient services was negatively related to average LOS ($\beta = -0.050$; $p < 0.01$), total margin (TM) ($\beta = -0.028$; $p < 0.01$), and return on assets (ROA) ($\beta = -0.059$; $p < 0.01$). However, average LOS was positively associated with TM ($\beta = 0.077$; $p < 0.01$) and ROA ($\beta = 0.177$; $p < 0.01$). The relationship between hospice inpatient services' offering and financial performance was partially mediated by hospice average LOS. Conclusion: Hospice inpatient services provision and average LOS were associated with financial performance. Practice Implications: Offering the inpatient services to patients decreased average LOS and lowered the hospices' overall

Contemporary Employment Relations (session 832)

The Use of Flexible Work Arrangements and its Consequences: Lessons from Families in Business

Author: **Isabell Stamm**; Technical U. of Berlin

Author: **Fabian Bernhard**; EDHEC Business School

Author: **Nicole Hameister**; Deutsches Zentrum für Altersfragen (DZA)

The present study scrutinises the conditions and consequences of using flexible work arrangements (FWA) by examining a unique context: Individuals working in their family's business which have easier access to FWA because of their entrepreneurial status and nepotistic privileges. This group faces less of the organizational constraints, that typically hinder employees taking advantage of FWA, and thus allows us to learn about the consequences of FWA use in full operation. Utilising representative data from the German Family Panel, our comparative analysis based on propensity score matching suggests that individuals working in their family's business do indeed make greater use of FWA than those working in regular employment. Against common assumptions in the literature, we find higher workloads only for owner-managers but not for family employees. Further, families in business show no differences in how they divide household tasks compared to regular employed - yet they perceive that division to be fairer. This study thus introduces family ownership and kinship ties as important boundary conditions to existing theories on FWA, and it provides empirical data that suggests the need to revise commonly assumed consequences of FWA use.

Clinical and Financial Performance of Hospitals with Physician CEOs vs. Nonphysician CEOs (WITHDRAWN)

Author: **Leon Moores**; U. of Alabama, Birmingham

Author: **Nancy Borkowski**; U. of Alabama, Birmingham

Author: **S Robert Hernandez**; U. of Alabama, Birmingham

Author: **Amy Yarbrough Landry**; U. of Alabama, Birmingham

Leaders impact organizational behavior and performance, and CEOs may have a greater impact via numerous mechanisms. Because of this, organizations expend considerable resources recruiting and selecting CEOs and may benefit from information suggesting a positive impact on organizational performance based upon measurable CEO characteristics. With this said, little work has been done comparing the performance of hospitals with physician CEOs versus non-physician CEOs, in spite of the ease of identification of this characteristic and extant leadership theories suggesting a relationship between technical expertise and success in leading highly technical organizations. We examined physician CEOs versus non-physician CEOs led hospitals in respect to various clinical and financial performance measures and found no statistically significant differences between the two groups. The 30-day AMI mortality rate showed a positive statistically significant difference in bivariate analysis (p -value <0.001), but the effect was nullified in the multivariable regression analysis.

The Role of Organizational Slack in Buffering Financially Distressed Hospitals from Market Exits (WITHDRAWN)

Author: **Neeraj Puro**; Florida Atlantic U.

The current research examines i-deals differentiation, defined as a team-level construct describing the variability in i-deals among members of a team, and investigates how it impacts team functioning and performance. Applying insights from social comparison theory and role theory, we argue that career- and flexibility i-deals differentiation yields a positive relationship with team conflict, resulting in lower team performance. In contrast, we propose that task i-deals differentiation is associated with lower team conflict and higher team performance. We further argue that team size strengthens these relationships. Our theoretical model was tested with a sample of 143 team members comprising 59 teams and their managers. Supporting our hypotheses, results indicated that career- and flexibility i-deals differentiation were positively associated with team conflict and lower team performance, whereas task i-deals differentiation was negatively related to team conflict and associated with higher team performance. Of particular note, the impact of career- and task i-deals differentiation was only supported in larger teams. Our research suggests that the impact of i-deals differentiation can be positive or negative for teams, depending on the nature of the i-deals.

Author: **Nathan Carroll**; U. of Alabama, Birmingham

Financial distress is a persistent problem in the US hospitals leading many hospitals to close at an alarming rate over the past two decades. Given the potential adverse effects of hospital closures on healthcare access and public health, interest is growing in understanding more about the financial health of US hospitals. In this study, we set out to explore the extent to which relevant organizational and environmental factors potentially buffer financially distressed hospitals (FDH's) from closure, and then even at the brink of closure, enable some of them to merge into other hospitals instead of closing. We test our hypotheses by first examining how factors such as slack resources, environmental munificence and environmental complexity affect the likelihood of survival against closing or merging into other organizations. We then test how the same factors affect the likelihood of merging relative to closing for FDH's that undergo one of these two events. We find that different types of slack resources and environmental forces impact different outcomes, and we discuss the implications of our findings regarding financial distress for hospital stakeholders.

Professional or Day Laborer?: A Relational View of Professional Work on Digital Platforms (WITHDRAWN)

Author: **Jina Mao**; Skidmore College

Author: **Michael Dunn**; Skidmore College

Author: **Mohammad Hossein Jarrahi**; U. of North Carolina, Chapel Hill

The rise of the "gig economy" and the technological advances in the use of digital platforms in mediating work have led to a rapid increase in the number of highly skilled professionals working as "online freelancers". In this paper, we argue that the use of digital platforms for mediating freelancing goes far beyond just providing an online marketplace for matching freelancers with clients, it cuts deep into the very essence of professional work and has a direct impact on how professional work gets carried out. Based on interviews with 20 professionals who freelance through digital platforms (working as designers, writers, marketers, and IT administrators) and 19 clients, we explore how the use of digital platforms transforms the nature of relationships between professionals and their clients, their professional communities, and their work. Using labor process theory as a foundational framework, we assert that platform-mediated work introduces a new form of labor control, "relational control", that online freelance workers learn to navigate and resist. The findings suggest that the technological features of the platform have a big impact on the social process of production.

PAPER SESSION

urban general acute care hospitals. We used three secondary datasets in the study: the American Hospital Association (AHA) Annual Survey, Medicare cost reports (CMS), and Area Health Resource File (AHRF). We used cluster analysis and multiple regression models with control for time and state fixed effect to analyze data. Our results suggest that on average about 37 percent of hospitals pursue a cost-leadership strategy, and about 5 percent of hospitals pursue the differentiation strategy. Hospitals with hybrid strategy outperform hospitals with cost-leadership strategy and stuck-in-the-middle. The absence of a coherent strategy (i.e., stuck- in-the-middle) is likely to lead to poor performance. The results demonstrate the usefulness of strategic group studies like this study as a method for managers to assess their current strategic situations.

Author: **Zo Ramamonjjarivelo**; Texas State U.

Author: **Ferhat Zengul**; U. of Alabama, Birmingham

Author: **Luceta McRoy**; Southern Adventist U.

Author: **Robert J Weech-Maldonado**; U. of Alabama, Birmingham

Hospitalists (physicians specializing in hospital-based practice), have grown significantly in the U.S. in the last two decades. Prior studies on hospitalists have focused on costs and length of stay mainly at the patient level. Using a national longitudinal sample of acute care children hospitals operating in the US between 2007 and 2014, this study explores the impact of hospitalists staffing intensity on children hospitals' financial performance. Data from the American Hospital Association (AHA) Annual Survey, the Area Health Resource File (AHRF), and the Centers for Medicare and Medicaid Services' (CMS) costs reports and Case Mix Index files were used for this study. A panel design with facility and year fixed effects regression were used for data analysis. Results showed that children hospitals that switched from not using hospitalists to using a medium and high hospitalist staffing intensity had both increased patient revenues and higher

operating costs per adjusted patient day. The higher operating revenues were offset by increased patient costs, resulting no significant increase in operating profitability.

Imagineries of Community: Business Elites' Philanthropy and Community Development in India

Author: Arun Kumar; U. of York

Community development, or the socio-economic transformations of local communities, has been a significant focus of ethical organizations. Various through and in the name of CSR, philanthropy (strategic or otherwise), stakeholder management, and now development partnerships, private corporations have contributed to community development programmes in the so-called third world countries, including those in South Asia. Despite the growing attention on the subject, conceptual vagueness and lack of clarity around what or who constitutes a community persists. In this article, I explore the ways in which communities are imagined, historically. Such a historical focus, I argue, brings into relief the shifting imagineries of the term as well as help understand why such conceptual vagueness might exist in the first place. In so doing, I draw on the history of philanthropy of the Tata Group, India's leading multinational conglomerate, from the 1860s onwards. I offer a periodization of community and explain what prompted the Tatas to articulate these starkly differing imagineries of community.

Hard Work as Identity Work in the Migrant Economy

Author: Tayo Korede; Newcastle U. Business School

The social construction of identity has associated certain identities and bodies with entrepreneurship and as enterprising and constructed other bodies as non-enterprising. In this study, I explore how stigmatized and racialized bodies constructed as 'unentrepreneurial' use the agency of hard work to negotiate stigma associated with their identity and project a coherent self-identity that is congruent with their entrepreneurial identity. By conceptualizing hard work as identity work at the intersection of entrepreneurship and embodiment, I theorize the body as a performative site of entrepreneurial legitimacy and identity negotiation. I argue that although hard work is critical to ventures' growth and success, hard work can become racialized. Racialized hard work is excessive, overbearing and disempowering. A good proportion of the work done within the black migrant economy under the guise of entrepreneurship is done as identity work. This study contributes to the research in identity work by identifying hard work as an intersectional site of identity work.

Decolonising MOS as Praxis and an Other Critical Performativity

Author: **Nuria Cadete**; U. of KwaZulu-Natal

Author: **Alexandre Faria**; EBAPE/FGV

Author: **Gavin Jack**; Monash U.

Author: **Nimruji Jammulamadaka**; Indian Institute of Management, Calcutta

Author: **Shaun Denvor Ruggunan**; U. of KwaZulu-Natal

This paper presents the findings of an action research and team-based autoethnographic research project aimed at decolonizing current debates on critical performativity. The literatures on critical performativity and decolonizing management and organizational knowledge have developed in parallel, offering us the opportunity to investigate the nexus of the two. We first identify the Eurocentric conditions of possibility of critical performativity and CMS, and as disruption of these epistemic limits, propose the notion of decolonial praxis as an 'other' (pun intended) performativity. We unpack this idea empirically by drawing upon qualitative data and participant and organizer

reflections on an academic workshop (co-organized by the authors) held in South Africa on the topic of decolonizing management and organizational knowledge. Our thematic findings draw attention to the embodied, affective nature of such decolonial praxis, as well as the importance of 'knowing' and 'doing things' with a double consciousness. Organized under two key themes (connected borderlands; phronetic border thinking/doing), these findings enable us to specify some conceptual features of decolonizing (management) practice that exist beyond colonial difference, and to draw out practical implications for management academics and Business Schools seeking to pursue a decolonial agenda.

Platform Colonialism: The Lower Circuit at the Center of Capitalist Accumulation

Author: **Erica Souza Siqueira**; EAESP - FGV / SP

Author: **Marlei Pozzebon**; HEC Montreal & FGV/EAESP

The study seeks to analyze how the self-employed are inserted in the context of financialization and how this insertion enables financial capital accumulation. We initially adopted the concept of neoliberal rationality of Dardot and Laval as our main theoretical lens. However, our immersion in the research field showed us the value of integrating Latin American authors. Through the story of a self-employed couple in the confection industry, and applying hermeneutic analysis, our results make two main contributions. First, we build a new concept – that we call platform colonialism – that unveils the mechanisms by which the work of micro-entrepreneurs constitutes a source of accumulation for financial capital. Although this concept emerged from a Latin America context, their transferability to other 'colonized' contexts is plausible and open to future investigation. Second, we argue that when trying to understand a social phenomenon taking place in a peripheral territory, it is worth to also mobilize local theories, instead of mechanically just borrowing Western-based ones, therefore nourishing the increasing movement of 'decolonizing' our minds. Additionally, our study illustrates the use of critical hermeneutics, showing its potential to increase our ability to deepen

understand the interplay of different trajectories, from life stories to historical accounts.

Consulting and Coaching to Build Engagement and Performance (session 849)

The consultant as an inclusion agent: an approach from the perspective of singularity.

Author: Eric Gautier; U. Pantheon-Assas (Paris II)

Author: David Christophe MORIEZ; ISC Paris Business School

Author: Catherine Voynnet Fourboul; U. Pantheon-Assas (Paris II)

With increased workforce diversity, organizations are recognizing the need to create inclusive workplaces; yet little is known about how consultants can enhance workplace inclusion (Nishii, 2013; Oswick & Noon, 2014; Shore, Randel, Chung, Dean, Ehrhart, & Singh, 2011). The revelation of the singularity of four client organizations with the help of a consultant (Kakabadse, Louchart & Kakabadse, 2006; Schein, 1997) provides valuable information. Different modes of inclusion were observed: prototyping, identity revelation, collective intelligence. Our ethnographic research shows that the identity revelation serves three purposes : 1) self-inclusion, 2) group inclusion, and 3) inclusion of sense. In terms of process, the inclusion of members is in the expression of their singularity and their preparation for action. All in all, our results show how support in revealing organizational singularity turns out to be a powerful catalyst for inclusion and the hitherto ignored role of the consultant as an inclusive agent.

Approaches Student Learning and Management Education

Controversy Teaching Approaches in Management Education

Author: Stuart A. Allen; Robert Morris U.

Teaching that includes controversial topics is a potentially powerful method in the management classroom and can develop students' skills in areas such as critical thinking and communication. Controversy is implicit to leadership and management roles in workplaces where multiple views and goals exist. The present multipart study presents a new instrument to measure controversy teaching approaches and explores evidence for the reliability and validity of the measure. In addition, the relationship between the controversy teaching approaches and outcomes, such as learning, teaching effectiveness, and instructor credibility, is examined. The validity and reliability of the new instrument was supported in three studies with samples of management and leadership students across multiple U.S. institutions. Multiple perspectives (balance versus bias) and avoidance were found to be two dimensions of controversy teaching approaches that predict various teaching outcomes. The controversy teaching approaches and instruments can support further research, as well as instructional development for management educators.

Author: H. Michael Crowson; U. of Oklahoma

Professional development is a common tool to encourage development of employee knowledge and skills which, in turn, supports organizational goals and objectives. The use of case study narratives is one possible strategy to facilitate deeper engagement with and processing learning content within professional development settings. Nevertheless, it is important to consider the possibility that not all employees will engage with case study narratives in the same way. Individual difference factors, work-related perceptions, and even characteristics of case studies themselves may play a role in the degree to which workers attend to (learning) task demands and meet higher-level objectives. In our study, we investigated the roles of dispositional need for closure, openness to experience, conscientiousness, workplace need for closure, and case study narrative framing - in workers' cognitive engagement and learning intentions when presented with a complex, case study narrative task. Nearly 350 professional adult workers were assessed via established measures and path analysis was used to test hypotheses. Overall it was found that the model fit the data well. Of particular interest were that individuals experiencing lower workplace need for closure and who were higher on openness to experience and conscientiousness reported greater cognitive engagement with the case study narrative than those higher on workplace need for closure or lower openness and conscientiousness. Implications for theory, pedagogy, and workplace development are discussed.

Co-Creating Curricula with Industry Partners: A Case Study

Author: Samir Shrivastava; Swinburne Business

School, Swinburne U. of Technology
Author: **Anne Bardoel**; Swinburne Business School,
Swinburne U. of Technology
Author: **Nikola Djurkovic**; Swinburne Business
School, Swinburne U. of Technology
Author: **Timothy Plueckhahn**; Swinburne U. of
Technology
Author: **Diana Rajendran**; Swinburne Business
School, Swinburne U. of Technology

In this paper we describe how a mid-sized business faculty in Australia relaunched its Master's in Human Resource Management program in 2019. In a bid to create a niche for its program, the faculty co-created the program's curriculum with industry partners. In what was a unique approach, the industry partners also co-delivered some content. We argue that the approach adopted can help business faculties cope with the tension between ensuring academic rigor and industry relevance in their curricula. We intersperse our description of the curriculum co-creation process with first person narrative accounts and offer pointers on how business schools could develop a decision matrix on the nature of industry involvement in classrooms to enhance learning outcomes. The case study suggests that the following are essential for effective curricula co-creation: support from senior management; administrative and logistical support for recruiting suitable industry partners; effective leadership at the local level; preparatory work to identify the quantum and nature of industry contribution; processes which make partners' ongoing involvement less onerous for them with every iteration; and, most importantly, strong relationships with executive champions from partner organizations. Keywords: Curriculum development, university industry collaboration, Master's in Human Resource Management, management education

**Students' Self-Regulation, Behavior Engagement,
and Performance in a Flipped Learning
Environment**

Author: **Sunyoung Park**; Louisiana State U.
Author: **Nam Hui Kim**; Korea Research Institute for
Vocational Education & Training

The purpose of this study is to examine the effect of students' self-regulation, co-regulation, and behavioral engagement on their performance in flipped learning environments in higher education. The subjects were college students taking an education course offered in a 4-year university in South Korea. A total of 221 responses were analyzed by adopting structural equation modeling. The findings indicated that the more students are self-regulated, the more likely they are to engage in co-regulation with other students in the class. Students' self-regulation and co-regulation also significantly affected by their behavioral engagement. Finally, students' self-regulation positively affected their academic performance, while co-regulation and behavioral engagement did not affect their performance. Based on these findings, this study provides meaningful implications for scholars and practitioners on how to select and use more appropriate instructional strategies to improve students' positive behavior, engagement, and performance in a flipped learning environment.

Consideration of Appreciative Inquiry as a Methodology for Experiential Learning in Large Classes

Author: **Tracey Messer**; Case Western Reserve U.

Author: **Chantal Van Esch**; Cal Poly Pomona

Author: **Hector Augusto Martinez**; INCAE Business School

Author: **Mai P. Trinh**; Arizona State U.

Larger class size (60+ students) has often been assumed to negatively impact the experience and engagement of both students and faculty. We argue that by adopting an unconditional positive regard and an appreciative lens, instructors can leverage the large class attributes often deemed as deficits into resources of experiential learning. Theoretically, Kolb's Experiential Learning Theory promotes the concept of a hospitable learning space that is learner-centered and psychologically safe, thus allowing for learners to pursue their interests and develop meaningful relationships with classmates and instructor(s). Managing this hospitable space requires instructors to change their educator roles

Cultural Intelligence (session 851)

The Development of Cultural Intelligence in Situated Learning

Author: Kézia Andrade Da Silva; UNISINOS U.
Author: Amarolinda Klein; UNISINOS U.

The development of Cultural Intelligence (CQ) is fundamental for individuals who cross geographic and cultural boundaries to work or to study. Several studies state that the development of Cultural Intelligence (CQ) occurs mainly through the experiences of individuals in contact with other cultures, but there are few studies that demonstrate how this occurs throughout an intercultural experience. This study aims to analyze how the development of Cultural Intelligence (CQ) occurs in situated learning. The research method employed was Netnography, involving the monitoring of an online community (created through a mobile application) composed of 12 undergraduate management students during an international exchange, in different countries. The application allowed the daily monitoring of students through their video, text and photo posts and chat interactions. Three rounds of interviews were also held, one at the beginning of the exchange, one during the exchange, and one after its completion, to understand the Cultural Intelligence (CQ) development process. The main results indicate that the development of Cultural Intelligence (CQ) occurred especially in everyday activities and intercultural interactions not only with local

in order to dynamically match with students' learning styles. Practically, we draw from Appreciative Inquiry, an organizational development intervention methodology, to offer concrete, actionable principles for instructors to effectively facilitate experiential learning processes in their large classes. We conclude with implications for pedagogy and practice.

Having Fun is Not Enough: The Interplay Between Procrastination, Task Enjoyment, and Resilience

Author: Daniela Datzler; LMU Munich
Author: Michaela Schippers; Erasmus U. Rotterdam

Given the vast evidence of the often deleterious consequences of procrastination, especially in an academic context, developing an understanding of what prevents such a dilatory behavior is of great importance. In our study, we used bi-weekly diary data over a period of nine weeks (Nbetween person=350; Nwithin person=5,388) to inform the so far limited understanding of protective factors with regard to habitual procrastination tendencies of undergraduate business students. We argue that having fun when working on tasks is not enough to mitigate negative effects of habitual procrastination, but that individuals also need high levels of resilience. In fact, we found that the negative effect of habitual procrastination on daily effort can only be overcome when students enjoy the tasks which they are working on and also comprise high personal resources as encompassed within high personal resilience. We discuss our results against the background of an interactionist perspective and thus inform the literatures on procrastination and resilience.

CQ Development Through Information and Network Gathering Abroad: A Human/Social Capital Perspective

Author: **Samuel Davies**; U. of Liverpool Management School

Author: **Fabian Jintae Froese**; U. of Goettingen

Author: **Vesa Peltokorpi**; Hiroshima U.

Author: **Jiao Jiao Feng**; Zhongnan U. of Economics and Law

While international experience has been conceptualized and empirically found to improve cultural intelligence (CQ), relatively little is known about the process that facilitates CQ development. Adopting a proactive, human and social capital perspective, we examined the mediating effects of foreign exchange students' human capital (cultural and study information gathering) and social capital (local national and foreign national network gathering) between proactive personality and CQ development following their return from study abroad. We tested our hypotheses with a sample of 167 foreign exchange students in Germany by using a three-wave, pre- and post-CQ test design. Results largely support our hypotheses, showing first that proactive personality positively relates to human capital development in terms of cultural and study information gathering, while only positively relating to social capital development, foreign national network gathering. Second, cultural information gathering and network gathering with foreign nationals facilitates CQ development. Theoretical and practical implications are discussed.

Improving Students' Problem-Solving Skills with Smart Personal Assistants

Global Forum Best Paper Award for the paper that best creates the opportunity to address global issues of significance to management education and/or development.

Author: **Rainer Winkler**; U. of St. Gallen, Institute of Information Management

Author: **Matthias Soellner**; Kassel U.

Author: **Jan Marco Leimeister**; U. of St. Gallen and U. of Kassel

Tomorrow's organizations need employees who are able to deal with rapid changes and solve non-routine problems. Gaining problem-solving skills is considered the number-one skill for future employees to succeed professionally. Predominant learning theories agree that the most effective way to gain these skills is for everyone to receive individual support by their own private tutor. For educational institutions such as high schools and universities, this is often not possible due to financial and organizational restrictions. A new emerging class of information technology – specifically Smart Personal Assistants (e.g., Google's Assistant or Amazon's Alexa) – has the potential to address this problem by interacting with students in a manner comparable to human tutors because of its high degree of adaptability, interactivity and accessibility. Even though there exists a growing body of research about the design and use of Smart Personal Assistants for learning, empirical evidence of their ability to help students improve their problem-solving skills is still scarce. Grounded on technology-mediated learning theory, this study uses a mixed-method approach consisting of two field quasi-experiments and one post-experiment focus group discussion at a business high school and a vocational business school with a total of 90 students to measure the effect of using Smart Personal Assistants on acquiring problem-solving skills. The empirical results show that students in the experiment classes acquired significantly more problem-solving skills than those in the control group mainly explained by changes in their learning process. The findings provide empirical evidence for the importance of using new emerging Smart Personal Assistants on general skill development,

Cultural Intelligence Development: Types of Change and the Role of Intercultural Experience

Author: **Valerie Alexandra**; San Diego State U.

Increasing globalization and cultural diversity have accentuated the importance of developing cultural intelligence (CQ). Many studies examined CQ development, which has been typically operationalized as a change in mean CQ over time. However, inconsistent results paint an unclear picture of whether CQ can be developed. Synergizing research on the types of change in individual capabilities with research on stages of CQ development, this work posits that in addition to the quantitative change in mean CQ, individuals could also experience a reconceptualization of CQ and recalibration of CQ measures as part of the CQ development process. Failing to examine the presence of reconceptualization and recalibration in studies of CQ development could lead to Type II error, inconsistent findings, and create a threat to the substantive interpretation of research results. Moreover, this work posits that individuals with different levels of intercultural experience may experience different types of change at different stages of the CQ development process. This work demonstrates different types of change and the role of intercultural experience in a pretest-posttest study of CQ development among participants of an international business course. Methods for assessing different types of change in CQ development are discussed with implications for improving management learning and education research and practice.

From We to Me: Social Identity and Task Autonomy in Student Teams

Author: **Gerard Beenen**; California State U., Fullerton

Author: **Jenny Zhang**; California State U., Fullerton

Author: **Shaun Michael Pichler**; California State U., Fullerton

Although student team assignments have become a standard component of management education there are a lack of research-based strategies to help instructors facilitate effective working relationships in student teams. We propose that students can improve their working relationships in student teams by emphasizing both team social identity and individual task autonomy. In a quasi-experimental study of 557 business undergraduates, we tested strategies to enhance social identity and task autonomy by investigating students' ability to self-select and name their own teams, and team communication. Team self-selection and communication (face-to-face and electronic) were positively associated with social identity, while communication was positively associated with task autonomy. Social identity mediated the relationship of both team formation and communication to personal skill development; task autonomy mediated the relationship of communication to personal skill development. We discuss implications for the design of student team assignments in management education.

Developing Cultural Intelligence in a Serious-Game-Centered Blended Course

Author: **Tobias Schumacher**; ESCP Business School

Author: **Marion Festing**; ESCP Business School

competencies and their influence on quality coaching relationships within a business context. In addition, this is the first study to establish a shared validation of what coaches and clients experience as relevant and important competencies in their interactions. Our qualitative study of 32 coaching dyads finds that emotional intelligence competencies are key factors influencing quality coaching relationships. The top four EI behaviors displayed by outstanding coaches include the competencies of empathy, coach and mentor, inspirational leadership and adaptability. Study results indicate that outstanding coaches leverage their EI competencies to positively influence quality coaching relationships. By exploring how the coach's EI behaviors influence quality dyadic coaching relationships, this empirical study aims to contribute to research and practice in the interdisciplinary fields of psychology, management, and executive coaching.

LTO and the Passage of Time: Time to Revisit Hofstede's Cultural Dimensions?

Author: **Douglas Chun**; U. of La Verne

Author: **Zhen Zhang**; U. of La Verne

Author: **Eric Cohen**; Centro U. FMU, Brazil

Author: **Richa Awasthy**; Ambedkar U. Delhi

Author: **Julio Botero-R**; U. de la Salle, Colombia

Author: **Maria Bastida Dominguez**; U. of Santiago de Compostela

Author: **Liviu Florea**; Washburn U.

Author: **Omer F. Genc**; Youngstown State U.

Author: **Ana Maria Soares**; U. of Minho

Using concepts used to measure Long Term Orientation (LTO) from both Hofstede's revised VSM08 questionnaire and Bearden et al.'s (2006) modified scale, we conducted a survey in Brazil, China, Colombia, India, Portugal, Romania, Spain, and Turkey, collecting 1452 valid responses. We found the countries surveyed no longer appear to be in the same relative positions as when Hofstede first published his results in the 1980, or his more recent results after using data from the World Value Survey (WVS). Implications for practitioners, academics and students are discussed.

The current discussion about how to best develop cultural intelligence (CQ), as well as increasing demands for digitalization in education, was the starting point for introducing and empirically testing an innovative blended intercultural management course involving a serious game as its central component. The design of the serious game and the course was primarily based on experiential learning theory, aiming to address different learning preferences as operationalized by the four experiential learning styles: Diverging, accommodating, assimilating and convergent. In a longitudinal study, using matched samples and pre- and posttest measures, we found that students who participated in the course, were able to significantly improve their overall CQ significantly, regardless of their learning styles, and they also developed all four CQ dimensions, namely, cognitive, metacognitive, motivational, and behavioral CQ, respectively. These findings contribute to understanding the antecedents of cultural intelligence and how culture-in-context learning can be facilitated virtually by using serious games. In addition, the paper emphasizes the relevance of experiential learning theory in designing intercultural management courses in order to increase learning effectiveness for a diverse student population.

Teaching Capabilities of Doctoral Graduates: PhD Learning Outcomes and Labor Market Expectations

Author: **Adam Keeley**; Maynooth U., Ireland

Author: **Olga Igorevna Ryazanova**; Maynooth U.

Author: **Peter McNamara**; Maynooth U.

Teaching is at the center of an academic's life. It is an important factor in the faculty recruitment and selection process for new graduates. Consistently, recruiters and new faculty reflect that doctoral programs do not equip graduates with sufficient teaching capabilities. Current conversations in the academic literature are calling attention to the difficulties graduates are facing with their teaching responsibilities due to a lack of skill and experience. This can lead to high levels of teaching anxiety in new faculty and create a challenge for academic

view paper (if available)

employers. Our research reviewed the literature to explore employers' expectations when hiring new faculty members, with a specific focus on pedagogical capabilities. We then review the literature seeking insights into approaches to structured teacher training within doctoral programs. While there exists a common expectation surrounding teacher training and capabilities among aspiring academics and faculty recruitment panels, many students and early career academics comment that they did not receive teacher training, leaving them to develop these skills through trial and error. Our paper presents some mechanisms which can be incorporated into teacher training to develop teaching capabilities in students and early career academics by doctoral-granting and hiring institutions.

Perspective on Business School Rankings and Accreditation (session 853)

Networking Strategies of Business Schools, Ranking and Regional Factors

Author: **Abdulrahman Chikhouni**; Bissett school of Business

Author: **Isabel Ing**; Bissett school of Business

This paper investigates how business schools use networking to take advantage of their reputation to build their networks of relationships with other schools. We also investigate the influence of the region on the networking strategies of business schools. We studied the networking behaviour of the business schools that are part of the Financial Times Global MBA ranking (138 schools). We explored how ranking changes affect the size and density of business school networks over the period from 2000-2016. We found a positive relationship between the increase of the ranking and the size of the network, but not with its density. We found that schools that receive better ranking tend to build a network that is full of structural holes. Regarding the

Perspectives on Assessment (session 852)

Reassessing How We Grade in Today's Business Schools

Author: **Mark A. Serva**; U. of Delaware

Author: **Amanda Convery**; U. of Delaware

Author: **Amanda Bullough**; U. of Delaware

Grades are meant to be a metric of a student's learning, and business schools place a huge weight on them. GPAs determine who gets into undergraduate and graduate programs, and who graduates with honors (and who does not). Grades have been referred to as a currency that can quantify learning, which enables market-based comparison and barter. This paper offers a new direction to business schools for the measurement of student learning—specifications grading—that proposes to overcome these concerns. Specifications grading assesses a student's competence based on how her/his work meets certain criteria, or specifications. We first define specifications grading and delineate how it differs from the traditional grading model, outline the

regional tendencies, we found that the relationship between the improvement of ranking and the size of the network is stronger for American compared to European and Asian business schools.

It's About Time: Categorization Theory and AACSB Tenure's Effect on Business School Differentiation

Author: **Bret Sanner**; Iona College

Author: **Bernadine J. Dykes**; -

Author: **Daisung Jang**; U. of Queensland

Significant scholarly attention has been given to understanding if the Association to Advance Collegiate Schools of Business (AACSB) helps or harms business school differentiation. In contrast, we apply categorization theory to investigate which and when AACSB business schools are more differentiated. Because middle AACSB tenure schools perceive differentiation as being more beneficial than longer AACSB tenure business schools and as posing less risk to their continued accreditation than shorter AACSB tenure business schools, we propose an inverse-u shaped relationship between AACSB tenure and differentiation. We also imply that private business schools are enabled to differentiate more than public business schools, leading to private business schools having greater differentiation across lengths of AACSB tenure. These patterns are supported by data from a variety of sources. In addition, post-hoc analysis shows an indirect effect from a business school being affiliating with a private university to students' starting salaries through the business school prioritizing social acumen. Our findings highlight the importance of investigating between-school differences in differentiation.

Cross-Functional Integration Skill Sets: Minding the Gap Between Employer Needs and BizEd Delivery.

Designated as a "Best Paper" for MED

Author: **Danuse Bement**; U. of North Texas

Author: **Derrick E D'Souza**; U. of North Texas

Author: **Elisabeth M. Struckell**; U. of North Texas

Cross-functional integration (CFI) capabilities of veteran managers have always been viewed as important, but organizations now expect new undergraduate business hires to demonstrate these skill sets prior to entering the organization, and they expect educational institutions to provide these skill sets. There is a reasonable body of evidence which suggests that despite their well-intended efforts, business schools are not meeting employer expectations. In this paper, we investigate why this may have occurred. We note that the CFI construct has not been clearly articulated and we posit that the adoption of a multidimensional characterization of this construct would help researchers and business program administrators articulate the gap between an organization's CFI needs and the educational institute's deliverables. The research framework introduced offers an opportunity for researchers to map the CFI needs of organizations to the deliverables of undergraduate business programs on three CFI dimensions – collaboration, coordination, and communication – which can then be used by administrators and course-designers to focus their thinking on curricula and associated instructional resources to deliver the right mix of CFI skill sets that organizations expect to see in their new business-major hires.

Can an Engagement Platform Persuade Students to Stay? Applying Behavioral Models for Retention (WITHDRAWN)

Author: **Arijit Sengupta**; Florida International U.

Author: **Scott D. Williams**; Wright State U.

Author: **Sangho Lee**; KAIST College of Business

By building on insights from institutional isomorphism, this paper investigates different development paths of the latecomer academic institutions (engaged in business and management research) in Hong Kong, (South) Korea, Singapore, and Taiwan. While it is known that latecomers benefit from the act of isomorphism by imitating incumbents' practices, we depart from the view to argue that latecomers do not simply follow the dominant rules of the game but create their own paths. Our preliminary analysis on the academic institutions of four 'Dragons' of East Asia shows that business knowledge production in Hong Kong and Singapore was more strongly influenced by coercive (research strategy) and normative (faculty recruitment strategy) isomorphic pressures than Korea and Taiwan. The influence of mimetic (co-authorship strategy) isomorphic pressure was lower in Hong Kong and Taiwan than in Singapore and Korea. Furthermore, our econometric analysis shows that research, faculty recruitment, and co-authorship strategies affect the research impact (citations) of the academic institutions across each country differently. This study sheds new light on the role of sociological institutional forces in the emergence of latecomer academic institutions.

Making the Case for our Legitimacy: Broadening the Management Education Curriculum to Achieve Impact

Author: **Caroline McGroary**; Dublin City U.

Author: **Raja Clouse**; Dublin City U. Business School

Author: **Razan Alshebel**; Princess Nourah Bint Abdulrahman U.

Author: **Anne S. Huff**; Dublin City U.

"The aim (of education) must be the training of independently acting and thinking individuals who, however, see in the service to the community their highest life achievement" - Albert Einstein. There has been much recent debate about the legitimacy of business schools in a world that increasingly views education as a commodity and questions the value and impact of traditional scholarly activities. In this paper, we demonstrate the need for business

This paper presents the effects of a technology-based engagement platform, referred to as IMPRES (Interactive Mobile Platform for Retaining and Engaging Students). IMPRES is a mobile application, backed by a set of data analysis services, which seeks to engage and retain its users to enhance their professional development. Specifically, the application intends to enhance students' engagement in their college and improve student retention. The method is influenced by and evaluated from the standpoints of four theoretical models previously used in research on computing and behaviour. First, the self-determination theory perspective on digital games explains users' motivation. Second, social identity theory explains users' psychological connections to their college. Third, continuance theory explains continuity of users' engagement. Finally, the persuasive system design perspective associates IMPRES's features with users' motivation. By integrating these theories, we develop and find much support for a model of IMPRES's effects on students' intent to continue their studies.

Personality and Academic Performance: The Lens of Economic Background and Time

Author: **Akhila Veldandi**; Indian Institute of Management Indore

The present study extends the literature of personality and academic performance. It examines an interesting yet unanswered question: Does the impact of personality on academic performance depend on the economic background of an individual. It also investigates whether the effect of personality over academic performance changes with time. Based on the academic performance data on 33 different courses from a sample of 333 management students, spanning a period of 9 months, the present study attempts to understand personality and academic performance relationships through the lens of economic background and time. We argue that the effect of personality on academic performance changes with time: the negative effect erodes over time, and the positive effect strengthens over time. The implications of the study were discussed.

schools to embrace all three facets of scholarship – teaching, research and service to society – to make a compelling argument regarding our continuing legitimacy. This paper describes how an AACSB accredited business school, delivering degree programs with a partner university in the Middle East, designed its strategic management curriculum around a national political, economic, and social issue, namely the financial literacy levels of citizens. Using the framework of the UN Sustainable Development Goals (SDGs), this innovative curriculum led to the design and implementation of a range of impactful educational initiatives, empowering over 200 students to improve their own lives and those around them, while also achieving learning outcomes based on a curriculum that emphasized multidisciplinary learning, industry engagement and active citizenship.

The Persuasion of Performative Technologies: Constructing Calculating Selves in Universities

Author: **Elin Funck**; School of Business and Economics, Linnaeus U.

Author: **Kirsi-Mari Kallio**; U. of Turku, School of Economics

In recent decades there has been an avalanche of numbers in public life and academia is no exception. Among Business Schools the competition for status has forced them to apply for various accreditations. While the number of studies pointing to the fact that increased reliance on performative technologies (PT) tends to challenge the academic ethos is quite large, less attention has been paid to the process of how the technologies becomes so powerful that they starts to appeal to the inner mentalities of the professionals. This paper address this by casting lights on an AACSB accreditation process at a Swedish university and how it takes on different roles as it (un)consciously lure people to internalise the underlying logics and construct calculating selves. By applying the CMIS-framework (Englund & Gerdin, 2019) the purpose is to explore the different roles and psychological mechanisms that the PT play and appeal to. The results demonstrate how different roles and psychological mechanisms appear in different stages of the construction

Evaluating STEM-Based Sustainability Understanding: Using Cognitive Maps in Post-Secondary Settings

Author: **Elizabeth Petrun Sayers**; RAND Corporation

Author: **Christopher Craig**; Murray State U.

Author: **Emily Skonicki**; Montana State U. Billings

Author: **Grace Gahlon**; RAND Corporation

Author: **Susan Gilbertz**; Montana State U. Billings

Author: **Song Feng**; U. of Arkansas

Businesses will encounter increasing climate variability and shifting weather patterns in the future. Business leaders will be required to face the degradation of the natural environment, market challenges, moral dilemmas, and other sociopolitical issues. Considering the magnitude of climate change, future leaders need to navigate the complex impacts from these changes and respond appropriately to innovate, coordinate with other institutions, and change operations as needed. Greater emphasis on sustainability should be guided by science, technology, engineering and math (STEM) competencies, which are often missing from business curricula. In response, we proposed new STEM-based sustainability curriculum that was integrated into four existing business courses. An additional challenge associated with curricula design and development includes evaluation. Measurement tools that exceed self-reported knowledge are lacking, which prompted researchers to seek new approaches to measure sustainability proficiency. One such method of assessing STEM-based sustainability understanding is through cognitive mapping. This research builds on previous cognitive mapping literature and explores the ability of the method to capture changes in student outcomes after exposure to STEM-based sustainability curriculum. Using a treatment and comparison approach, we use cognitive mapping to explore the impact of the new STEM-based sustainability curriculum. We describe the cognitive mapping instrument, and overview the results which answer: (1) Will students experience a change in mapping capabilities after receiving the STEM-based sustainability business content?; and (2) Is cognitive mapping a viable method for assessment student learning in STEM-based sustainability business

process. Early on the PT allows individuals to realise themselves; thereby persuading them to conduct different forms of subjectivising work upon themselves. However, as the PT is put into practice the repressive and coercive forces become more perceptible.

Vedic Leadership Principles for Organizational Success – A Case Study

Author: **Anil K. Maheshwari**; Maharishi U. of Management

Author: **Rakesh Kumar Gupta**; Maharishi U. of Management

Vedic Leadership is predicated on the notion of highly developed self-awareness of leaders who transcend surface reality and connect with the broad essential wholeness of the world. The most important Vedic principles for leadership relate to the nature of the Self and Action – i.e. who we are and what should we do. We present key Vedic concepts – of nondual Consciousness, moral duty (dharma), and dispassionate action (karma) to articulate a simple Vedic leadership formula as follows: Authentic leaders are self-realized people who do their work dispassionately according to their moral duty. We also present a simple V-theory of transcendence that enables multiple techniques for leaders to increase their self-awareness. Vedic leadership ideally leads to a sustainably growing organization that engages the wholeness of Being and fullness of knowledge, for mistake-free action on everyone's part. In such an organization, everyone performs their specific assigned role to the best of their natural ability and talent, while keeping the greater good of the whole in mind. We also present a validated professional CEO's account of

Autonomy in Distributed Teams: The Roles of Leader Role Clarity and Daily Team Communication

Author: **Sut I Wong**; BI Norwegian Business School
Author: **Suzanne Van Gils**; BI Norwegian Business School

Author: **Weng Si (Clara) Lei**; Macao Institute for Tourism Studies

Author: **Matej Cerne**; U. of Ljubljana

In the contemporary digital era, leader roles largely shift to coordination of distributed teams via digital means in order to keep the team members connected as well as autonomous. We propose that too much autonomy, especially when the distributed teams are loosely coupled and the leaders' roles are diffuse, can be detrimental. Particularly, we propose that finding the right balance between granted autonomy and connectedness is key for leadership functioning, both in terms of team members perceiving their leaders as effective (Study 1), and in terms of the team coordination that results from the leaders' efforts (Study 2). Moreover, we found that the curvilinear effect of autonomy on leadership functioning is contingent on the leaders' own role clarity (Study 1) as well as on the daily communication between the team at large (Study 2).

Indigenous Networks: Broadening Insight into the Role they Play, and Contribution to the Academy.

Author: **Ella Henry**; Auckland U. of Technology
Author: **Jason Paul Mika**; Massey U., Manawatu Campus

Author: **Tania Wolfgramm**; Auckland U. of Technology

This paper evolved from a study of Maori business networks in New Zealand in 2018. The findings from that study led to an expanded research, based on further case studies with Indigenous peoples in Canada and the United States in 2019. The research contributes to the small but burgeoning Indigenous development literature. It more specifically focuses on the role these networks play, and the ways they raise the social, cultural and spiritual capital of Indigenous communities, which in turn holds the potential to impact on Indigenous enterprise, self-determination and development. This is particularly important, given the shared history of colonial conquest, economic and social disenfranchisement, and the diminution of Indigenous cultures, traditions, and economic and political sovereignty. This study broadens the insight of the academy into Indigenous enterprise, encourages greater collaboration between Indigenous peoples and non-Indigenous scholars, and proposes the idea that networking may enhance spiritual capital for Indigenous and non-Indigenous peoples and enterprise.

Indian Worldview and its Implications for Management Scholarship and Practices

Conditional Effects of Workplace Flexibility on Health Across Communication Classes - A LCA Analysis

Author: **Tim Manfred Goetz**; HSG U. of St. Gallen

In the 21st century, flexible work is one of the megatrends shaping how modern work takes place. Particularly prior research on the relationship between workplace flexibility and health has shown inconsistent findings. Following the assumption that not every workplace setting is suited for spatially dispersed working behavior, it is expected that this inconsistency may be due to unobserved heterogeneity in the workplace setting of employees. Specifically, the means of communication, as well as task interdependence characteristics, might explain some of this heterogeneity. Using latent class analyses, five communication classes, are identified based on participants responses regarding their use of several communication channels for information exchange with colleagues. Based on Conservation of Resources (COR) theory, it is theorized that there are different relations between workplace flexibility behavior and health, i.e. emotional exhaustion, for employees in different communication classes. Hence, the role of varying task interdependency levels is examined within those classes. Hence, we hypothesize that workplace flexibility can unfold positive effects on employees' health especially for employees that are used to communicate virtually. Moreover, we follow that high task interdependency implies high communication requirements, and thus, workplace flexibility can only be beneficial when strong virtual communication is practiced. We follow an exploratory person-centered approach by applying latent class analyses with a secondary model (Asparouhov & Muthén, 2014) to explore the sample of 7'178 German employees. Results support the hypotheses and indicate that workplace flexibility is particularly beneficial for employees with high virtual communication and high task interdependencies. The factors are considered as crucial boundary conditions for examining relations of workplace flexibility.

Worldview is the philosophical outlook that a person, knowingly or not, utilizes to organize his or her belief system and activities. A worldview comprises of culturally organized and inter-related macro thoughts that organize much of the body of symbolic creations and ethnophilosophy among many other epistemic and ontological stances. This article is aimed at deciphering the Indian worldview by elaborating the nature of human self, goals of human life and the role of work in the human life subscribed in the Indian traditional wisdom and their theoretical implications on management in general and Management-Spirituality and Religion (MSR) in particular. Indian worldview is replete with spiritual wisdom and the insights about how to bring spirituality or Adhyatma into the practice in day to day affairs of individual or collective life. Hence, MSR is the natural home division for this submission.

Being in Business: A Sensemaking Perspective on Spiritual Transformation at Work

Author: **Lasse Lychnell**; Stockholm School of Economics

Building on sensemaking theory and Erich Fromm's distinction between the existential modes of having and being, this paper explores the process in which managers integrate spirituality into their working lives through a longitudinal, clinical research project. The being mode of existence offers a way to bypass the grip of identity in the sensemaking process, opening up for new ways of enactment, and thus, a way for spirituality to be integrated into the evolving self. The interplay between identity and context in the sensemaking process is discussed, and it is suggested that the existential mode of being may

The Temporal Dimension of Copresence in Medical Practice: The Case of Telestroke

Author: **Iman Taani**; National U. of Singapore
Author: **Isam Faik**; National U. of Singapore
Author: **Shi Ying Lim**; National U. of Singapore
Author: **Tian Ming Tu**; Department of Neurology, National Neuroscience Institute

This paper examines how co-presence is enacted in technology-mediated medical practices, particularly under time pressure. Extant literature highlights time (e.g. immediacy and duration of interactions) as a critical condition for copresence, but there has been little attention to the variation of copresence over time. In this paper, we investigate this variation through an ethnographic study in three emergency departments that are linked via a telemedicine system called Telestroke, which is used to diagnose and treat stroke patients at a distance. We draw on the sensemaking literature to uncover how copresence is enacted across different phases of technology-mediated medical practice. Our findings reveal four mechanisms that shape the variation of copresence across time, namely extracting cues, retrospection, perspective-taking, and selective attention.

How Do Worldviews Shape Human Moral Behaviors? Rediscovering the Moral Microfoundation Laid by Adam

Author: **Zheng Zhao**; U. of Kansas

Author: **Mark Pritchard**; Central Washington U.

Vast research has shown that human moral behaviors are profoundly influenced by their worldviews. Yet, how worldviews shape moral thinking and behavior at a micro level remains unclear. In this paper, we distinguish worldviews as open and closed system based on the ontological aspect of General Systems Theory. We then use this lens of open vs. closed system worldview to examine Adam Smith's seminal work of the Theory of Moral Sentiments (TMS) which he wrote 250 years ago. Through a careful examination this work, we were illuminated by Smith's insights linking major moral constructs such as sympathy, self-interest, and restraint to self-interest to worldviews. Although these insights were largely overlooked by the subsequent generations, it is important for us to bring them back to the forefront of moral and ethical discourse as they laid the indispensable microfoundation of moral behaviors. We also draw implications of these Smithsonian insights which shed light on three type of ethical perspectives in the business context: shareholder value, stakeholder value, and open-system purpose driven perspective.

The Punctual and Sustained Effect of Recognition-Based Rewards in Online Communities

Author: **Coen Van Der Geest**; KIN Research, VU Amsterdam

Author: **Joey Van Angeren**; Vrije U. Amsterdam

Author: **Mahmood Shafeie Zargar**; KIN Research, VU Amsterdam

Managed online communities frequently use recognition-based rewards such as badges to motivate members to actively contribute to the community. To members, rewards constitute both a goal to be achieved and a token of recognition for their contributions. However, whether such rewards also actually lead to a sustained increase in members' contribution levels is unclear and a hitherto contested and untested issue. In this paper we argue that the effectiveness of rewards partially depends on the activity that is being incentivized, because individuals' ex-ante motivations differ from one activity to another. Advancing this argument, we categorize between the inherently distinct core and supporting activities; core activities being more intrinsically rewarding and central to the community, and supporting activities being less glamorous and visible yet crucial to community functioning. Our empirical investigation of the StackExchange community allows us to demonstrate a goalpost effect consisting of exponential activity growth in the ramp-up towards the rewards across activity categories. The post-reward-attainment activity levels, on the other hand, remain sustainably higher for supporting activities while dropping to the baseline values for core activities, suggesting a lasting motivational effect induced by the recognition-based reward.

Crowdsourcing (session 856)

A Process Theory on Transformation of Work Through Internal Crowdsourcing

Author: Michael Greineder; U. of St. Gallen

Author: Ivo Blohm; U. of St. Gallen

Internal crowdsourcing showed a substantial increase of use in recent years, since it describes a promising alternative to traditional orchestration of employees in today's digital era. However, literature falls short in explaining the transformation process that is enacted by such approaches of platform-based work organization. By using a work organizational perspective with the existing body of knowledge in combination with a revelatory case study, this paper develops a process theory explaining the transformation process of internal crowdsourcing over time and how the organization of work transform during this process. Moreover, we discovered four different forms of organizing work with a completely new form of work organization: the "Hybrid Flash Organization". Scholars can identify critical incidents and process phases, while practitioners use our findings as a transformation guideline of internal crowdsourcing to detect potential threads, opportunities and constraints along the way of a successful implementation.

Learning, Capability, and Routine Dynamics (session 859)

How to Achieve Consistency Between Day-to-Day Practices and Changing Demands

Author: Bjarne Espedal; NHH Norwegian School of Economics

Author: Svein Tvedt Johansen; uit - the arctic U. of norway

This study explores how and under what conditions organisational actors achieve consistency between their day-to-day practices and new or changing demands. An explorative field study is conducted in a selected company, and the study's results show that consistency is a learning outcome achieved within an ecology of learners. In this context, two types of learning are involved in the change dynamics. First, the adjustment to new, external ideas through the revision of the collective mindset based on learning from the experiences of others. Second, the adjustment of internal routines and practices to the new mindset based on the organisational actors' experiences and the translation of new ideas into practice. The findings of this study indicate that the balance between these two types of learning depends on a stable and safe contextual environment for the learning and change process. These aspects emerge in the context of a temporarily situated learning network, which creates the temporary dispenses of demands, rules, and constraints of the everyday organisational life. As a result, the organisational actors discover the intelligence of a new mindset, become committed to that mindset, and learn to develop routines and competence with respect to the new mindset.

[view paper \(if available\)](#)

The objective of this research is to investigate how the categorization process shapes audience evaluation in crowdsourcing communities. Guided by the existing literature on crowdsourcing and the ecology of categories, the current research explores the ecological influences of categorical niche width and category contrast on crowd evaluation. Empirical results from a 6-year panel of 130,806 designs submitted to ongoing contests hosted by Stitchly (a pseudonym) indicated that (a) niche broadness and (b) reduced contrast triggered positive reactions from crowd members. Further, an idea's average contrast negatively moderated the positive association between categorical niche width and crowd evaluation. Theoretical and practical implications are also discussed.

Resource Openness: Towards an Integrated Theoretical Approach

Author: **Franziska Kraken**; U. of Cologne

Author: **Daniel Schlagwein**; The U. of Sydney

Author: **Detlef Schoder**; U. of Cologne

Several leading firms have used the Internet to open (for free and public use) some of their most valuable resources (e.g., code, patents, APIs). Examples of such 'resource openness' range from Facebook's APIs, to Google's Android source code, and Tesla's electric car patents. Resource openness appears to contradict the tenets of conventional theories, notably the Resource-Based View, which calls for resource protection. How can we conceptualize why firms open resources, what resource openness entails and its consequences? We identified 12 theoretical approaches from several disciplines, all with some applicability towards resource openness. However, our review showed that no coherent theoretical framework existed that could capture all the key aspects of resource openness available to date. In our work, we develop an initial theoretical framework that conceptualizes resource openness as well as its preconditions, nature, and consequences. We provide pointers for how this theoretical approach can be furthered.

Stretching Routines: How Newcomers' Learning Process Shapes Routine Dynamics

Author: **Virginia Rosales**; HEC Montreal

Author: **Medhanie Gaim**; Umea U.

Author: **Linda Rouleau**; HEC Montreal

In this paper, we examine the unfolding process of newcomers' learning in routine dynamics. Mainly viewed as cognitive schemas, previous research has provided evidence for the storage of routines as procedural memory. As mindful accomplishments, studies in routine dynamics have shown that learning can be an ongoing process, as individuals adapt their performances and pattern routines accordingly. Nonetheless, little is known about how learning takes place when routines are not to change but the organizational members performing them are. We address the questions of how organizational members learn to competently perform routines, and how this learning process shapes routine dynamics, through a four-year ethnographic study of an emergency room at a university hospital characterized by high rates of personnel turnover. We find that, in learning how to perform routines, newcomers draw on four learning practices (stunt performing, virtual performing, collegial learning, and self learning), which result in routine stretching. Our findings lead to a theoretical framework which outlines the learning process newcomers go through and its influence on routine dynamics. Our study contributes to research on routines by articulating the learning process organizational members undergo in becoming skillful at performing routines and how this enables new and old routine participants to align their lines of actions in reproducing routines as patterns-in-variety.

On the Relative Efficiency of Crowdsourced Rating Mechanisms: Experimental Evidence

Author: **Joshua Foster**; U. of Wisconsin, Oshkosh

This paper experimentally tests the effectiveness of three crowdsourced signalling mechanisms on their ability to resolve an asymmetric information problem over product quality for a set of consumers. Motivated by naturally occurring environments, the first mechanism allowed experimental subjects to submit a signal of high product quality only, the second allowed for a signal of high and a signal of low quality, and the third a five star rating scale of quality, which reported the average rating. In support of the primary hypothesis, the experimental results reveal positive returns to the degree of signal specificity in the rating system given to consumers. Namely, the five-star rating mechanism reduces the presence of asymmetric information more than the high quality signal only mechanism. The high-and-low quality signalling mechanism, which offers an intermediate level of signal specificity on quality, is not statistically different from the other two mechanisms. Furthermore, an analysis of individual characteristics finds evidence that the willingness of a subject to rate products, and thus aid in producing valuable information for other consumers, is critically linked to their pro-social tendencies.

Leaders, Empower Your Workforce! Analyzing Leadership in Internal Crowd Work

Author: **Benedikt Simmert**; Research Center for Information System Design (ITeG) - U. of Kassel
Author: **Christoph Peters**; U. of St. Gallen and U. of Kassel

New digital and agile forms of work organization require new leadership styles and competencies. Still, the understanding of leadership in these new forms of work is in its infancy. We select internal crowd work (ICW) as one, clearly defined new form of work and increase understanding of leadership in this context by analyzing four distinct cases of ICW.

evidence linking this ability to the achievement of individual and organizational outcomes (d'Abate, Eddy & Tannenbaum, 2003; Grant, 2010; Ladyshewksy, 2010). However, although there is empirical evidence that where managers are effective coaches of their subordinates, performance will improve (see for example Hagen 2012 for an exemplar overview of the literature), there is much less explanation as to why coaching works. We suggest this is a problem as it is hard to develop better practice if the reasons for efficacy are unclear. As a result, in this paper we offer a potential explanation by redefining coaching as an organizational capability. In this paper we present the development of a theoretical picture of coaching as an organizational capability, and then implications for practice in the areas of change, improvement in outcomes of learning and development initiates and return on investment if coaching is a dynamic organizational capability, and the potential for future research in this area.

Reflexive Learning from Emotionally Challenging Organizational Experiences

Author: **Paul Hibbert**; U. of St Andrews
Author: **Lisa Jane Callagher**; U. of Auckland
Author: **Frank Siedlok**; U. of Auckland
Author: **Nic Beech**; U. of Dundee

This paper considers how reflexive practices can enable learning to be developed from emotionally challenging or (potentially) traumatic experiences. We argue that while such experiences can be remembered in detail, learning does not necessarily follow unless reflexive practices help individuals to move on from containing painful memories to explicating and exploring them. We employ a relationally reflexive method in which the authors take dual roles as autoethnographic researcher-participants. We build on a framework of emotional experiences and reflexive learning comprised of: breaching extreme emotional experiences; attending to emotions as triggers of reflexive practice; discussing, through reflexive dialogical engagement, to open up aspects of emotional experiences for learning; and recovering from traumatic circumstances through reflexive personal

Based on qualitative interviews, we describe how employees perceive psychological empowerment and develop workforce agility through different leadership styles in ICW. As our main contribution, we detail and extend existing research regarding ICW and empowerment by identifying structural antecedents that affect psychological empowerment of ICW as well as consequences of an empowered workforce in ICW. Thereby, we indicate that an empowered workforce is an important factor for the implementation of workforce agility in ICW. Moreover, regarding leadership, we explain the design and changes of leadership in ICW in detail and explicate a new requirement for leaders in agile and digital form of work organization: the flexible handling of different context-specific situations, projects and tasks. For this purpose, we develop a theoretical model that describes the effects of shared leadership, empowering leadership and e-leadership on workforce agility mediated by an empowered workforce.

Cultural Entrepreneurship Within, Outside, Between, and Across Categories (session 864)

A rich body of "cultural entrepreneurship" research has matured over the last decade, offering unique insights into the meaning-making and cultural processes by which market categories shape, and are shaped by, entrepreneurial action. Although cultural entrepreneurship research recognizes that actors must construct the meaning-system that underpins emerging categories, early research on the topic typically assumed that categories stabilize once they become established. More recently, a growing body of work has begun to question whether the boundaries and underlying meanings that underpin categories are ever really settled, suggesting a need for a more dynamic understanding of market category evolution. Thus,

conscientiousness moderates the relationship between CEO curiosity and bold moves. Our study contributes to upper echelons research by studying the role of central personality traits among the most prominent subgroup of the TMT.

Leader's Individualized Reframing for Strategic Change Towards Sustainable Business Model

Author: **Divya Bhutiani**; LM Thapar School of Management Thapar U. Patiala (Punjab) India

Author: **Padmakumar Nair**; LM Thapar School of Management Thapar U. Patiala (Punjab) India

Author: **Gregory G. Dess**; U. of Texas at Dallas

Framing has been widely seen as a communication, negotiation and decision-making tool for leaders and managers. However, it has not been well established as a leadership tool for institutionalizing corporate sustainability. There is a plethora of research related to the need for adopting corporate sustainability by organizations but much more needs to be known about the 'how' part of it. Using an inductive approach, we studied how Interface Inc., the largest carpet tiles manufacturer in the world, was transformed to one of the most sustainable corporations in the world. Our qualitative study discovered that the founder-CEO, Ray Anderson, effectively used individualized reframing based on the role expectations of his firm's stakeholders in order to overcome resistance and change towards an emphasis on sustainability across the value chain. We also offer useful practical insights for practitioners on the process model of change that was adopted by the CEO in institutionalizing sustainability across Interface Inc.

Author: **Clare Rigg**; U. of Liverpool Management School

Amidst public acknowledgment of malpractices in the volatile financial services industry, Internal Auditing (IA) does not seem to have done enough to combat misconduct. Why does misconduct recur despite regular IA reviews? How has IA realized its responsibility as a line of defense for the organization? This paper explores whether changes in IA approach can effectively enable internal auditing as a practice, to fulfill its governance role in managing 'conduct risk' i.e., any behavior a firm engages that would cause problems to consumer protection, market integrity or competition. We examine the deficiencies of the existing compliance-based IA approach and explain its ineffectiveness in auditing conduct risk from a turbulent environment. Using an action research inquiry, led by a Chief Internal Auditor, we explain the relevant changes necessary to define a new conduct-focused IA approach that equips auditors with relevant insights to design auditing practices that mitigate the weaknesses of the compliance-based approach. This new approach launches auditors into unfamiliar but critical areas to examine new crevices where conduct risk resides. We also examine changes in auditor's mindset and attributes to identify essential ingredients that underpin the effectiveness of the new internal auditing approach in a sustainable way.

Strategy Implementation Capability: The Role of Middle Manager Leadership and Coordination

Author: **Alex Tawse**; Georgia State U.

Author: **Leanne Atwater**; U. of Houston

Author: **Dusya Vera**; U. of Houston

Author: **Steve Werner**; U. of Houston

Strategy implementation (SI) is a critical component of organizational performance. We propose that SI can be conceptualized as a dual-purpose capability; i.e., a capability with operational and dynamic elements. At an operational level, we identify work team coordination as a critical process that is part of implementing strategy on a daily basis, and contributes to its effectiveness. At a dynamic level we propose that middle managers - who have

primary responsibility for SI - use transformational and instrumental leadership to change the way work is done in an organization, and these leadership styles contribute to SI effectiveness. Using a sample of 44 work teams within an organization undergoing a large-scale strategic change, our results show that middle managers' transformational and instrumental leadership styles directly affect SI effectiveness and that middle managers' transformational leadership also has an indirect effect on SI effectiveness through coordination processes. Our findings show that middle manager leadership, and middle managers' ability to coordinate strategy-supporting work, play an important role in the strategy implementation process.

History and Tradition in Organizations: Cross-Level Perspectives and Puzzles (session 863)

Research organizational scholarship has examined the various ways history and tradition shape organizational experience (Dacin et al., 2018, Wadhvani et al. 2018). Issues of temporality and the influence of the past have been perennial concepts in management theorizing (e.g. Nelson & Winter, 1982; Hannan & Freeman, 1977); however, more recent scholarship has begun to examine how the past can be a "source of social symbolic resources" (Wadhvani, Suddaby, Mordhorst, & Popp, 2018: 1664). Rather than being an immutable source of path dependencies, the past is a source of interpretations that shape action in the present and future. In spite of this theoretical flourishing, many questions still remain for the uses of history and tradition in organizations. While most research has focused on top- down processes (e.g. how leaders use history for sensegiving; Suddaby, Foster, & Quinn Trank, 2010) or a single level of analysis (e.g.

Institutional Legacy (session 860)

How Community Alignment Affects Bank Survival: Institutional Legacies and Resource Dependence

Author: Jaemin Lee; Imperial College Business School

Author: Ji-Yub (Jay) Kim; INSEAD

Author: Henrich Greve; INSEAD

Despite an increasing academic interest in the interaction between organizations and geographic communities, we know little about how firms strategically align themselves to communities, and when they benefit from such practices. Based on research on resource dependence and institutional legacies, we develop a theory on community alignment by organizations. We propose that organizations can attempt to align by adjusting key organizational elements or fulfilling the community's social needs. The benefits of such efforts can offset the added costs, particularly at times of financial crisis, through the forging of mutual dependency which offers an informational advantage, access to community social capital and joint actions. Testing our hypotheses using data from the U.S. commercial

the organizational level), we know less about how history or tradition are used across levels of analysis. It remains unclear the ways that history and tradition shape the experience of individuals within organizations, as well how micro-practices of using history influence the more macro-level outcomes examined in existing theory (e.g. organizational identity formation). To explore some of these questions, this session brings together a diverse group of scholars who are studying history and tradition across levels of analysis.

SYMPOSIUM

ASYNCHRONOUS

Author: **Marco Clemente**; IESEG School of Management (LEM-CNRS 9221)

Author: **Alessandro Piazza**; Rice U.

We study how event stigma can shape the evaluation of the conduct of actors at the field-level. Specifically, we argue that in the aftermath of a traumatic event, event stigma breeds skepticism in a generalized fashion, so that all actors within the field should face more contestation. Moreover, we expect high-status actors to face a larger increase in the contestation levels compared to low-status ones because event stigma is associated with a generalized loss of trust, which is especially damaging to high-status actors. Finally, we argue that event stigma will translate into a stronger preference for monitoring and control; as a result, perceived failures to act (omissions) will face particular contestation, and especially so in the case of high-status actors. A study of media coverage of Italian football referees' decisions before and after the 2006 Calciopoli scandal provides support for our arguments.

Stigma Types and Directors' Professional Devaluation from Firm Bankruptcy

Author: **Klavdia Evans**; St Mary's U.

Author: **Seemantini Madhukar Pathak**; U. of Missouri, St. Louis

Author: **Dusya Vera**; U. of Houston

Author: **Ashley Salaiz**; U. of Tampa

We examine the effects of a stigmatizing event, firm bankruptcy, on board directors' professional future. We differentiate between directors associated with the origin of the bankruptcy and with bankruptcy filing, and ask how the stigma of incompetence (associated with bankruptcy origination) and stigma by association (or courtesy stigma; associated with bankruptcy filing) impacts directors' professional devaluation in terms of their board appointments in the post-bankruptcy period. We also examine the impact of layered stigma, which exists when directors carry both the stigma of incompetence and courtesy stigma by being present during the origination and filing of Chapter 11 bankruptcy. Our findings confirm that directors are treated

differently by the elite labor market based on the types of stigmas they carry. Moreover, directors likely to be stigmatized as incompetent carried fewer board appointments than those with courtesy stigma or layered stigma.

Inside the Stigma Panzer: Organizational Members' Emotional Work in Response to Organizational Event

Author: **Sanne Frandsen**; Lund U., School of Economics and Management

Author: **Mette Morsing**; Stockholm School of Economics and Copenhagen Business School

We investigate how organizational members manage their emotional experiences of organizational event stigma as an implication of organizational wrongdoing. Our research is based on a longitudinal case study of Best Bank, that has been involved in a money laundering scandal of historical magnitude. Our study of organizational members shows how their pride and organizational loyalty makes them develop a 'stigma panzer', i.e. a number of emotional responses when at work as well as at home, that serves to protect them against the negative implications of the event stigmatization. We show how the stigma panzer may benefit the individual employee facing the event stigma at work, while we question if this emotional stigma panzer at home is also beneficial for the organization. We conclude by calling for more stigma research to understand better the implications of emotions at work and at home for organizational stigma related to organizational wrongdoing.

The Protracted Socio-Economic Impact of Perceived White-collar Crime

Author: **Navdeep Arora**; U. of Exeter Business School

Author: **William Stopford Harvey**; U. of Exeter

While the antecedents, consequences, and

management of stigma have been well analyzed, it is less well understood how the double stigma of white collar crime and incarceration impacts upon individuals. We also know less about how individuals respond to such stigma in their attempts to manage the perceived devaluation, prejudice, and discrimination before, during and after their incarceration. Drawing on three waves of semi-structured interview and focus group data with 70 inmates at a federal prison in the United States (US) over a period of 16 months, this paper explores how white-collar inmates are impacted by and think about responding to challenges associated with their perceived stigmatization as incarcerated felons. The paper provides three theoretical insights. First, the perceived unintended consequences of stigma associated with incarceration exceed the intended benefits of incarceration. Second, we show six inter-related strategies that help incarcerated individuals to overcome the negative consequences of perceived stigma: i) rationalizing and educating, ii) selective engagement and disclosure, iii) borrowing credibility and networking, iv) demonstrating ability to contribute, v) reassuring soundness of character, and vi) morphing Identity. Third, we conceptually decouple legal illegitimacy, which is time-bound, from social illegitimacy, which is incessant and creates a vicious cycle of self-fulfilling prophecy. Practically, this leaves us to question whether existing approaches to criminal justice overly stigmatize white collar criminals and result in protracted negative socio-economic consequences.

Values-Driven Organizing (session 861)

There has been renewed attention to values in both business and politics. Organizations are making claims of their commitment to societally-relevant values, and using them to define and explain organizational actions (Grimes, Gehman, & Cao, 2018; Kraatz & Block, 2017). Corporations are

increasingly pursuing purpose beyond profits, seeking to establish genuine values that they enact through their choices (Business-Roundtable, 2019; Financial-Times, 2019; Grimes et al., 2018). Political parties and movements have likewise shown renewed interest in embracing strong shared values to create emotional energy and foster a shared identity that attract potential supporters (Berezin, 2002; Jasper, 2011). These developments have been mirrored in academic research, with burgeoning work on how values underpin organizational action and identification. Investigating values in organizations can help direct our attention to moral concerns and help generate contributions with greater societal impact (Bansal, 2003; Ferraro, Etzion, & Gehman, 2015). This symposium contributes to the growing stream of institutional literature on values in organizations. We focus on values-driven organizing as processes and practices of organizations that leverage values to inform their choices, motivate membership, and create active stakeholder engagement.

The objective of this paper is to understand the performance effects of green service practices that aim to provide support to manufacturing firms on business and environmental performance and to study also how different governance approaches affect these performance results. We draw on a sample of both SMEs and large firms in the Chinese context. Our results show that there is indeed a positive link between the implementation of green service practices and business and environmental performance. However, no differences are found with respect to large and SMEs types of firms. Regarding the interplay between green service practices and governance mechanisms, our results show that formal governance mechanisms diminish the effectiveness of green service practices in environmental and business performance. In addition, we provide evidence that the business and environmental performance effects of green service delivery are strengthened when the firm operates with uncertified EMS.

Evidence on Social and Financial Performance: Mapping the Empirical Garden of Forking Paths

Author: **Luca Berchicci**; Rotterdam School of Management, Erasmus U.

Author: **Andrew King**; Boston U. Questrom School of Business

Worldwide, almost 30% of professionally managed assets are invested in funds that use social performance as a screening or selection criteria. Scholars have encouraged such investment by contending that social and financial gain are linked, but reviews of empirical research on the connection between social and financial performance have been inconclusive. In fact, six of the most influential articles on the subject reach conflicting conclusions despite using the same sources of data and appearing in the same peer-reviewed journal. Some scholars opine that no synthesis of these disparate findings is feasible, but we use new ideas from epistemology and statistics to show how it can be done. We conclude that the interpretation of the evidence depends on empirical assumptions,

Inconsistency in Performance Feedback and Corporate Environmental Performance

Author: **Jian Guan**; Central South U.

Author: **Yi Que**; Central South U.

Author: **Li Yang**; Central South U.

Environmental issues have absorbed attention from social authorities and individuals. Although enterprises are the primary bearers of social responsibility, at the same time, they produce substantial environmental pollution. Under this background, based on a behavioral theory of the firm and prospect theory, this article takes A-share substantial polluting companies listed in Shanghai and Shenzhen from 2012 to 2017 to discuss how companies will manage their environmental performance when companies in different performance feedback results base on historical and social aspiration levels. The research results show whether it is a historical or social aspiration level when actual corporate performance is worse than the aspiration level, the higher the degree of difference, the worse the corporate environmental performance level. When actual corporate performance is better than the aspiration level, whether it is a historical or social aspiration level, the higher the degree of difference, the lower the corporate environmental performance level is. Further research found that when multiple performance feedback results and their feedback directions are both inconsistent, the more significant negative historical performance feedback and the more positive social performance feedback, the better the environmental performance of the enterprise.

Contentious Policies and Local Politics: Learning from Coal-Fired Facilities' SO2 Emissions

Author: **Joon Woo Sohn**; Seattle Pacific U.

Author: **Arkangel Miguel Cordero**; U. of Texas At San Antonio

Building on the theory of social movements, we theorize that the influence of social movement organizations (SMOs) at the state level on their targets will depend on the broader regulatory context at the federal level. Specifically, we argue that contentious federal policies open up political opportunity structures and provide a favorable sociopolitical environment for SMOs at the state level. We use data on coal-fired facilities' sulfur dioxide (SO₂) emissions to address the question of whether the influence of SMOs at the state level on facilities' environmental performance was influenced by the contentiousness (or lack thereof) of federal-level policy mechanisms. The empirical results show that when the national-level Acid Rain Program (ARP) was regarded by stakeholders as a contentious regulation (2010–2011), the direct impact of SMOs and other related state-level sociopolitical contexts on facilities' emissions increased. This is because when the federal policy was not contentious (2003–2009), coal-fired facilities, local government officials, key stakeholders, and even SMOs themselves attended to the implementation of the federal law. However, when the key policy mechanism was brought into question, SMOs stepped in to support and supplement the contentious policy at the local (state) level. Moreover, we contend that coal-fired facilities became more responsive to their local sociopolitical environment because the federal policy no longer fully secured their stable operation. From a political mediation perspective, our theory and results suggest that evaluating the direct influence of local social movements on organizations requires a dynamic approach that considers the broader institutional context at different societal levels.

Organizational Post-Traumatic Growth: How Disasters Affect Responsiveness to Environmental Forces

Author: **Lucrezia Nava**; U. Ramon Llull, ESADE Business School

Author: **Kenichi Matsuno**; Babson College

Author: **Florian Kohlbacher**; Xi'an Jiaotong-Liverpool U.

Prior studies have emphasized that learning from natural disasters is crucial to increasing preparedness for similar threats in the future. Yet, our understanding of the wider effects of learning through natural disasters on organizational capabilities and responsiveness to unrelated environmental forces is limited. Natural disasters radically change organizational worldviews, and this change is likely to affect the organization far beyond preparedness to future disasters. Based on this idea, we model how being affected by a natural disaster triggers a change in organizational values and beliefs towards a higher prosociality that, in turn, favors organizational sensitivity to the environment, and its latent threats and opportunities, both directly and through the development of explorative capability. Our findings suggest that organizations surviving a natural disaster are reborn with improved capabilities to respond not only to future disaster threats but also and more strongly to unrelated social changes, such as population aging and growing demand for sustainable products. To capture these effects, we develop the concept of organizational post-traumatic growth. Through this richer explanation and empirical assessment, we contribute to a greater clarity of how, amidst heaps of debris and rubble, some organizations are able rise from their ashes with renewed capabilities and strength.

What is Boiling in the Pot? On the Patent Toxicity of Globally Banned Chemicals

Author: **Gianluca Biggi**; U. of Pisa

Author: **Elisa Giuliani**; U. of Pisa

Author: **Arianna Martinelli**; Scuola Superiore Sant'Anna

Industrialized economies have historically maintained the hope that the advances in science, technology and innovation would have offered to the humanity a wide range of options to improve its well-being and attain a sustained economic growth. The transition towards a high technological frontier arising from the rapid advances of science, technology and innovation have opened a debate on the relations between innovation-induced industrial activities, related possible social and environmental threats and the role of policies to keep up with industry developments. To investigate those relations, we collect a unique dataset that includes patent applications in chemical and pharmaceutical technologies and analyse their disclosed groups of compounds by means of computational chemistry techniques to predict their potential noxious effects on human health, environment and ecosystems. We further examine historical and emergent patterns of innovation and diffusion behind those technologies. Our paper contains new methods for measuring the toxicity of patents in the context of chemical and pharmaceutical inventions, as well as sight on the evaluation of regulatory initiatives aimed at sustainable development.

U. of Lahore

Author: **Muhammad Usman**; COMSATS U.,
Islamabad, Lahore Campus

By applying the spiritual leadership and fairness theories in the environmental context, the present study examined the relationship between spiritual leadership and target-based organizational citizenship behaviors for the environment (OCBE). The study also tested the mediating and moderating roles of employees' environmental justice orientation and harmonious environmental passion in the relationship between spiritual leadership and target-based OCBE. Based on time-lagged and two-source data collected from 337 supervisor-employee dyads in 41 Chinese firms, the results showed that spiritual leadership is positively related to target-based OCBE, both directly and indirectly via environmental justice orientation. Interestingly, the study found that the direct relationship between spiritual leadership and target-based OCBE was contingent on harmonious environmental passion. Other than contributions to the literature on justice orientation, spiritual leadership, and OCBE, the study guides managers to gauge a wide range of pro-environmental behaviors and make appropriate managerial interventions to reduce organizations' carbon footprint.

The Circular Economy: Motivating Recycling Behavior for a More Effective System

Author: **Marieke Huysentruyt**; HEC Paris

Author: **Magali Delmas**; UCLA

Author: **Emma Barnosky**; UCLA

In the last few years, the circular economy has come to the foreground as a promising means through which to achieve sustainable development. In removing inefficiencies in production, many argue, a circular economy is beneficial not only for the environment, but also for the economy at large. However, there are still many barriers to overcome to move to a true circular economy. Among other things, because the circular economy concept stems from the engineering and economics literature, there has been much focus on the role of technology, governments and corporations in

this paper is Cleaner Production Audit (CPA) programs implemented in China. Using a difference-in-difference (DID) method, our findings suggest that there is a positive regulation effect on green innovation. The innovation-induced effect is more pronounced in encouraging radical green innovations measured by environmental invention patents than incremental green innovation measured by environmental utility patents. Furthermore, we investigate the moderating effects of industrial pollution intensity and firm's ownership. For firms belonging to pollution intensive sectors, the impacts of this regulation on green innovation, both incremental and radical, are much stronger. The moderating effect of firm ownership, however, is not supported, suggesting that state-owned enterprises (SOEs) and non-SOE firms have no statistically significant differences in environmental innovation in response to the CPA programs.

Regulatory Transparency, Organizational Change, and the Adoption of Pro-Environmental Practices: Evidence from the Chinese Banking Industry, 2007-2016 (WITHDRAWN)

Author: **Xuege (Cathy) Lu**; Cornell U.

Author: **Shipeng Yan**; City U. of Hong Kong

Author: **Lisha Liu**; Cornell U.

Recognizing the need to better understand how regulatory institutions enable organizations to become more public-oriented, we examine the effect of regulatory transparency on organizational change towards proenvironmental practices. We define regulatory transparency as the extent to which regulatory institutions share information on enforcement activities and their outcomes. We argue that regulatory transparency facilitates organizational change by (1) reducing the information asymmetry in risk assessments and (2) increasing the symbolic value of information to build trust. Our argument highlights how regulatory institutions can function as market intermediaries, and we hypothesize that regulatory transparency has a stronger enabling effect on organizations that have a more market-oriented ethos, although this effect varies with the nature of the information being shared and the development of market

setting up and transitioning to circular economy policies and infrastructure. However, the human behavior aspect of the circular economy is often left out. In this paper, we categorize key barriers to individual recycling and propose promising solutions to motivate recycling based on behavioral science. Specifically, we find a promising model of behavior change in Mutual Health Organizations (MHOs), which allows individuals to act as their own experts and lead transition neighborhood habits on their own rather than being pressured by external forces. We describe parallels between the change mechanisms highlighted in well-known MHOs such as Alcoholics Anonymous and Weight Watchers and a French recycling start-up, Yoyo.

A Daily Investigation of the Effect of Performance Pressure on Pro-Environmental Behavior

Author: **Dan Yang**; Chinese U. of Hong Kong

Author: **Kenneth S Law**; Chinese U. of Hong Kong

Author: **Guiyao Tang**; Shandong U.

Research on workplace pro-environmental behavior is on the rise, but little research has examined the dynamic fluctuations in pro-environmental behaviors. Due to the scarcity of that research, it remains unclear when and under which conditions employees' pro-environmental behavior will be triggered or constrained from time to time. This research provides insights into the dynamic nature of pro-environmental behavior and its work-relevant predictors. Drawing on threat rigidity theory, we theorize that daily performance pressure, as one of the most salient threatening work experiences, will increase self-concern which correlates with task-related pro-environmental behavior, and will decrease other-concern which correlates with prosocial pro-environmental behavior. Moreover, employees' functional attitudes towards pro-environmental behavior are predicted to moderate these effects. In an experience sampling study of 114 employees across 10 consecutive workdays, we found that daily performance pressure had a negative effect on prosocial pro-environmental behavior through a decrease in other-concern. Furthermore, this relationship was mitigated by employees' value-expressive function such that the

institutions. We test our hypotheses using novel panel data on the lending activities of 46 Chinese banks in 32 provinces and the changes they make in response to the 2013 Green Credit Initiative, which increased the pressure on banks to adopt sustainable lending practices. Our findings show that regulatory transparency can facilitate environmental governance and we extend theories on the role of regulatory institution to empower organizational change.

The Power of the Environment on Firms

Author: **Immaculada Martin-Tapia**; U. of Granada

Author: **Juan-Alberto Aragon-Correa**; U. of Granada

Author: **Rocio Llamas-Sanchez**; U. of Granada

Early literature on organizations and natural environment focused on analyzing the existence of a business case for environmental management and, as a consequence, multiple works have highlighted that the firms should voluntarily make environmental progress because it provides financial rewards; however, unfortunately, subsequent empirical findings and descriptive evidence are far away of being definitive about this. More recent institutional perspectives have emphasized that institutional stringency from strict legal and cultural pressures is a more homogeneous positive influence on firms' environmentally progress, however previous research has paid limited attention to how institutional stringency may influence the relationship between a firm's environmental progress and its financial performance. We accept this positive influence, but also predict that environmental institutional stringency has limited the firms' opportunities to get benefits from their voluntary approaches. We use a meta-analysis of previous empirical studies to obtain statistically aggregating findings. After including all the published papers analyzing the business case for environmental management published from 2012 to 2016, we yielded a final sample of 70 studies, from which we obtained a total of 126 related correlations which are based on 17,152 observations of firms. Our results confirm that industry environmental institutional stringency influences negatively the relationship between a firm environmental progress and its financial

negative effect was weaker for employees with a high (vs. low) value-expressive function towards pro-environmental behavior. Interestingly, we also found that daily performance pressure had a negative effect on task-related pro-environmental behavior through an increase in self-concern. Theoretical and practical implications of these findings are discussed.

Knowledge Sharing for Corporate Sustainability – A System Dynamics Approach

Author: **Siarhei Manzhynski**; Umea U.

Author: **Maria Elisabeth Bengtsson**; Umea U.

Author: **Herman Ivar Stål**; School of Business, Economics and Law U. of Gothenburg

Research is scarce on how competitors share knowledge with the intent to create balanced economic, social and environmental value. In this paper we conduct a single, in-depth case study and apply the System Dynamics approach to investigate how knowledge is shared and leveraged, as a system that evolves over time. In the developed model we identify causal loops that reinforce and hinder this system, including efforts both to work out, create and balance economic, social and environmental value. Based on the applied approach we suggest managerial mechanisms that could simultaneously regulate knowledge sharing interactions and balance sustainability demands.

Emerging Issues in Conducting and Publishing Organizational Research (session 870)

Reviewing Conversations on Low-Profile Ethical Misconducts in Management Research from 1998 to 2017

Author: **Lakshmi Balachandran Nair**; Utrecht U.

Circular economy is an increasingly popular concept that aims to reconcile economic growth with the use of limited natural resources. Shifting from a linear to a circular economy requires novel business models that offer new sustainable products or services and new market opportunities. The research objective is to get insights into the triggers, elements and barriers of business model innovation contributing to a circular economy within the agricultural sector. Eight European cases are studied with interviews and on-site visits which focus on agro-waste and by-product valorisation via a closing loop or cascading approach. Results show that circular business model innovation in the agricultural sector depends on various trends and drivers, wherein the larger business ecosystem plays a crucial role. Different innovation types exist, concerning either the overall business model or single business model elements at a technological, organisational or social level. Main innovation barriers are internal financial and technological or external political-legal and market-related. From this study, it can be concluded that business models for a circular economy in the agricultural sector need to innovate themselves towards new configurations, but that they still follow rather usual linear innovation strategies. Real disruptive technological and organisational innovations are still rare or have difficulties to be economically viable.

Familiness as Driver for Sustainable Innovation - Evidence from Family Businesses in the Wine Sector

Author: **Alisa Sydow**; U. Cattolica del Sacro Cuore
Author: **Laura Maria Ferri**; Catholic U. of the Sacred Heart, Milan
Author: **Chiara De Bernardi**; IUSS Pavia

Based on a field study of 28 family firms in Germany and Italy, we investigate how familiness can leverage sustainable innovations. Prior research highlights that family firms are less innovative. In contrast, our findings reveal that local embeddedness as well as congruent family and firm identity can stimulate sustainable innovations. However, we also show that they intentionally build up formal and informal institutions and therefore fulfill the role as change

Author: **Andrea Ascani**; Gran Sasso Science Institute

There has been ample evidence that ethical misconduct is persistent and pervasive in business and management research. Such misbehaviours vary in a continuum from low to high profile. So much attention has already been paid to high-profile misconduct (fabrication, falsification, and plagiarism), their identification, assessment, and involved costs to reputation. Nonetheless, the field of management is yet to develop a comprehensive understanding of practices which can be considered as low-profile misconduct. Therefore, we conduct an integrative literature review using a conventional qualitative content analysis technique to provide an overview of how management academics discuss low-profile misconduct during a 20 year period (1998 to 2017). In particular, we (1) identify, classify, and illustrate various low-profile misconducts as discussed in management literature and thus provide an initial holistic conceptualization of the topic (2) provide an agenda for future research in the area of ethical misconduct in management sciences.

Best Practices for Defining and Measuring of Micro, Small, and Medium- Sized Enterprises

Author: **Justin Carrero**; U. of Queensland Business School

Author: **Anna Krzeminska**; Macquarie Business School, Macquarie U.

Author: **Charmine E. J. Hartel**; Monash U., Australia

Author: **Peter Ellis**; U. of Queensland Business School

We offer best-practice recommendations for authors, journal reviewers and editors regarding the definition and measurement of micro, small, and medium-sized enterprises (MSMEs). MSMEs are a principal research topic and resource for governmental policy due to their substantial impact on job and wealth creation as well as their omnipresence, representing an estimated 99% of all businesses. Based on a systematic review of academic and non-academic literature relating to enterprise size we reveal challenges researchers face when studying MSME and resulting issues for defining and measuring MSMEs as a socially constructed phenomenon. The identified issues represent major barriers to comparing and/or aggregating research findings and thus building our knowledge base on MSME. Our recommendations address challenges applicable to researchers, practitioners, and policy makers, in addition to studies that examine this phenomenon across multiple countries and/or industries. The implementation of our recommendations will likely facilitate the aggregation of scholarly knowledge on

to the open innovation literature, one of the main pitfalls of the solutions developed by non-expert designers can be the mismatch between the idea proposed, and the companies' actual capabilities to implement such solutions. Companies' involvement throughout the planning, co-creation, and evaluation phases of the innovation contests, can potentially address this mismatch. Through participant observations, the authors followed the design, development, and final outcome of a "sustainable innovation challenge". Each of the 16 participating companies proposed a challenge in one of the fields of circular economy, energy efficiency, social innovation, or 'sustainable' organizational initiatives. A series of workshops were then facilitated using design-thinking principles. Solutions to the proposed questions were co-created by company's members with volunteers participating in the challenge as well as target users. Our data suggest that innovation contests open to the public, developed and assisted by organization's members, are useful as vehicles for experimentation for sustainability-oriented innovation. The outcomes of the contests, however, were perceived by the participants as effective to create new collaborations, and to deepen the understanding of the sustainability problem, as opposed to providing radical solutions to these problems.

The Size of Author Teams in the Social Sciences

Author: **Gernot Pruschak**; U. of Vienna

The last decades have seen an unprecedented rise in the size of author teams across all academic disciplines. In the social sciences, existing literature highlights that the number of authors varies greatly between research fields, geographical regions, job positions and experience. Yet we lack comprehensive understandings of the specific effects of these factors. By employing data from a large-scaled worldwide survey, we shed light on this conundrum. Our results show that psychologists as well as information technologists and operations researchers work on average in larger author teams while sociologists and political scientists work in smaller author teams. In addition, we find that Eastern European scholars work in smaller author teams and that postdocs tend to have more single-authored publications. Based on our results we call upon those in charge of search and tenure procedures to focus more on multi-authored publications while keeping the applicants' different research field and geographical backgrounds in mind. Furthermore, we highlight the importance of academic conferences as they allow scholars to establish fruitful networks for future collaborations.

[view paper \(if available\)](#)

Asynchronous

PAPER SESSION

ASYNCHRONOUS

Nevertheless, newly emerging digital technologies, collectively known as Industry 4.0, are changing the ways through which firms innovate and create value. Despite their common goals and synergetic relationship, CBMI and Industry 4.0 are mostly treated in isolation both in theory and in practice. By adopting an integrative literature review approach, this paper shows how the progression of Industry 4.0 facilitates CBMI. Three distinct stages of industry 4.0 are abstracted and mapped in association with three levels of CBMI with the respective logic of value creation. For theory, this research suggests an alternative and higher level logic for value creation than goods and service-dominant logic; that is called "Regeneration-Dominant Logic". Finally, by focusing on the intersection of Industry 4.0 and CBMI, the paper proposes an integrative framework to guide firms to design and innovate their BM towards higher levels of circularity.

Business-Government Relations (session 872)

Corporate Political Activity as an Insurance Mechanism: Implications for Reducing Firm Risk (WITHDRAWN)

Author: **Michael Hadani**; Saint Mary's College of California

A common assumption underlying CPA scholarship is that CPA positively impacts firm outcomes. Yet consistent empirical evidence to that effect is lacking, with some scholarship reporting CPA can benefit firms' bottom line, some scholarship reporting no such effect and recent scholarship indicating a negative effect of CPA on firms' financial performance. However much of this scholarship has ignored the role of CPA as an uncertainty buffering mechanism in which access to public policy makers, afforded by CPA, provides firms with information and intelligence regarding public policy making; leading to CPA used as an insurance tool rather than

identifying the various tensions emerging between them, as well as elucidating the research opportunities evolving from these tensions as well as from within the clusters themselves. By clustering studies cited in SAP research, we identify five clusters of SAP research and additionally a set of connections of SAP research: 1) social practice, 2) the sensemaking approach, 3) discursive perspectives, 4) sociomaterial practices 5) practice-driven institutionalism, and 6) connections of SAP with other fields of research. Building on our review of the identified clusters, we observe four key tensions between them, process vs. practice, practical vs. critical, micro vs. macro, and sociomaterial vs. discursive. We propose that addressing these four tensions provides a fertile agenda for future research in the field.

Strategy as Practice and Routine Dynamics

Designated as a "Best Paper" for SAP

Author: **Benjamin Grossmann-Hensel**; U. of Zurich

In this paper, we compare Routine Dynamics (RD) and Strategy as Practice (SAP) based on an extended literature review. RD and SAP are distinctive communities of thought in organization studies that exhibit a number of striking parallels: both subscribe to the overall "practice turn" in the social sciences, want to bring the human being back in, and predominantly focus on the level of action involved in organizational routines and strategy. However, in spite of all the obvious parallels and points of connection between RD and SAP communities, there hasn't been any systematic comparison of these two research streams. Against this background, we compare similarities and differences of RD and SAP, focusing in turn on their underlying theoretical perspectives, their treatment of the relation between micro and macro and the empirical methods employed. Based on that, we discuss what RD can learn from SAP and vice versa. We conclude with some general reflections on the future relation between the two research communities and develop an agenda for research areas of possible "cross-fertilizations" in future research.

a direct means to improve the bottom line. Diversified firms, in particular, may be exposed to more political risks as their expanded line of services or products increases their exposure to different public policy arenas and their inherent uncertainty and risk. Utilizing the S&P 1500 firms across 14 years of data I find that CPA is negatively associated with both systematic and unsystematic risk but mostly for diversified firms, providing support for an insurance view of CPA. These findings have significant implications to theorizing on the motivation behind CPA and to extant scholarship on CPA.

Are Venture Firms More Charitable After Receiving Government Subsidy? A Social Exchange Perspective

Author: **Wei Liu**; Qingdao U.

Author: **Wen Li**; U. of Technology, Sydney

Author: **Jingyu Yang**; U. Of Sydney

Research has suggested that firms in an emerging economy often engage in philanthropy to secure political legitimacy. A natural follow-up question is: will a firm remain charitable after it gains political legitimacy? We draw on the social exchange theory to posit that firms gaining greater political legitimacy, as indicated by the amount of government subsidy they received, tend to donate more than those who received less, to pay back the favour from the governments. In addition, this effect becomes stronger when the leadership in either the firms or governments changes, but becomes weaker when both the leadership change. Analysing a sample of venture firms publicly listed on China's Growth Enterprises Market Board during the period between 2009 and 2017, we found support for the ideas.

Nothing But a Name? Discursive Temporal Work in the Context of an Organizational Name Change

Author: **Marius Andersson**; BI Norwegian Business School

Starting from the recognition that an organizational name may serve as a meaningful representation of both organizational identity and strategy, this paper investigates how the temporal tension between an organizational identity anchored in an illustrious past and an exclusively future oriented strategic vision plays out in the case of an organizational name change. The paper employs a critical discursive analysis perspective in order to investigate how temporal work is discursively conducted outside the boundaries of the focal organization. The findings elucidate the micro-discursive elements and temporal orientations underpinning the legitimation and contestation efforts performed by both internal and external stakeholders in a discursive struggle that played out in the media concerning the organizational name change of a long-lived company.

California

Research on corporate political activity (CPA), a popular non-market oriented strategy, has primarily focused on its nature and instrumental value and the conditions that impact its efficacy, or lack thereof. Yet, most of this research, with few recent exceptions, has avoided exploring the non-performance based costs or the risks associated with CPA, both theoretically and empirically. In this study we explore how the buffering nature of CPA as strategy aimed at reducing socio-political uncertainty as well as its ability to provide benefits or political protection, may result in actions that cause politically active to be targets for litigation. Exploring the S&P 1000 firms for 16 years we find evidence that CPA is associated with lawsuits, in particular, CSR related lawsuits and that governance mechanisms do not moderate the association between CPA and lawsuits, CSR or otherwise. We also find that that for non-heavily regulated firms CPA is associated with lawsuits, in general. The findings shed a novel light on the need to explore the risks and costs associated with unintended consequences of CPA and should inform new directions in CPA research as well as its possible societal costs.

Legitimacy Loss Following Data Breach: Examining Government Contract Awards and Firm Lobbying

Author: **Karen Ashley Gangloff**; U. of Missouri, Columbia

Author: **Matt C. Hersel**; College of Business, Clemson U.

Author: **Scott Kuban**; Tulane U.

Author: **Michael Seth Nalick**; U. of Denver

Seeking and securing government contracts can be a lucrative strategy for legitimate firms. However, firms' ability to secure such contracts following a transgression that threatens its legitimacy is unclear. Building on previous research about the consequences of and firms' response strategies following a transgression, we examine the awarding of government contracts following a data breach, unique transgressions that have become increasing salient for both firms and government. We also

Entrepreneurship in Indigenous and Marginalized Communities (session 874)

Marginalization and Organizational Tensions: The Case of Indigenous Entrepreneurs of Wendake

Author: Emilie Fortin-Lefebvre; U. du Québec à Montréal

Author: Sofiane Baba; U. of Sherbrooke

Based on a qualitative study of indigenous entrepreneurship in Wendake, an indigenous community in Quebec, this paper offers three main contributions to the literature on indigenous entrepreneurship and organizational tensions. First, it conceptualizes four dimensions of the marginality of indigenous entrepreneurs. Then, it presents and analyzes three permanent tensions that are inherent to indigenous entrepreneurship related to identity (individualism or collectivism), approach (conformity or differentiation), and scope (openness or isolation). Finally, this paper suggests that indigenous businesses are marked by a phenomenon of double marginality, both at the intra- community (internal) and the society level (external).

Sustainability Through Balance: Community-Based Entrepreneurship in Toquaht Nation

Author: **Matthew Murphy**; U. of Victoria

Author: **Wade Danis**; U. of Victoria

Author: **Johnny Mack**; U. of British Columbia

Author: **Judith Sayers**; U. of Victoria

We draw upon research undertaken in partnership with the Toquaht Nation to explore how Indigenous values, knowledge and heritage shape community-based entrepreneurial opportunity recognition and evaluation. Our analysis reveals six recurring themes related to environment, culture, community and economy, which underpin the Toquaht Nation's vision for sustainable economic and social development, and shape efforts to create multiple forms of value via entrepreneurship. We also describe a socio-culturally sensitive decision support and monitoring system developed to evaluate entrepreneurial opportunities and to assess their impacts.

Cultural Bricolage as a Tool to Mainstream the Marginalized

Author: **Rishikesan Parthiban**; Indian Institute of Management, Calcutta

Author: **Israr Qureshi**; Australian National U.

Author: **Babita Bhatt**; ANU College of Business and Economics

Author: **Somprakash Bandyopadhyay**; Indian Institute of Management, Calcutta

Bricolage has emerged as an important mechanism for social enterprises (SEs) to work around resource scarcity, especially in developing nations. Given the resource constraints and the importance of cultural context in developing countries, in this paper we inquire how SEs can negotiate through the entrenched traditions to sustain their enterprise. Specifically, we study the case of MargLink, a SE that dealt with the problems faced by retired elderly in a city, who lacked productive ageing options and underprivileged children in rural areas who lacked quality education options, by connecting the two communities using Information and Communication Technologies (ICTs). Our findings revealed that the bricolage activities by MargLink to mainstream the two marginalized sections occurred through four key mechanisms: contesting social rigidities;

identifying complementarities; mobilizing available resources; and building reciprocal alliances. Drawing on this, we discuss our contributions to the bricolage and social entrepreneurship literatures and implications for research and practice.

Reframing Indigenous Peoples from Stakeholders to Rightsholders

Author: **Peter Nicholas Pomart**; Social Issues in Management

The right of Indigenous peoples to provide or withhold consent in relation to development projects on or adjacent to their ancestral lands has been affirmed and articulated in international human rights instruments in recent decades, most recently iterated in the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). In response to the UNDRIP, a number of industries have developed consultation protocols that are not only inconsistent with FPIC characteristics by conflating the unique rights of Indigenous peoples as equivalent to other stakeholder interests. By so doing, these protocols may actually be the source of resistance to development projects. Simultaneously, management literature has sought to understand the right to FPIC from the lens of stakeholder management procedures and social license to operate. Drawing from literature in law, and expert opinion from the United Nations Expert Mechanism on the Rights of Indigenous Peoples, this paper seeks to explain why Indigenous peoples continue to oppose resource development projects, while also offering a human rights-based paradigm with which FPIC may be understood by reframing Indigenous peoples as rights-holders rather than conventional stakeholders.

Issues in Family and Entrepreneurial Businesses (session 873)

A Social Exchange Perspective to Successor Withdrawal from Intergenerational Succession

Author: **Lil Rodriguez Serna**; Western Sydney U.

Author: **Dilupa Nakandala**; Western Sydney U.

Author: **Dorothea Bowyer**; Western Sydney U.

Author: **Nestor Nonato**; Western Sydney U.

We investigate why eligible successors of family businesses decide to withdraw from the succession process. Using an inductive exploratory multi-case study design, we investigate six Australian food manufacturers currently undergoing the successor training stage. Interviews, observations and archival data reveal that successors' decision to remain or withdraw from the succession is driven by the combination of two dimensions: pursued outcome and reciprocity in the relationship with the incumbent. Successors afflicted by economic concerns accompanied by incumbent-successor negative exchanges are prone to withdrawing from the succession process despite their eligibility. Positive exchanges based on trust and commitment appear to encourage successor retention.

Are Non-Kinship-Based Family Firms Key to Socio-Ecological Sustainability? An Exploratory Study

Author: **Bruno Dyck**; U. of Manitoba

Author: **Savanna Vagianos**; U. of Manitoba

The world needs more businesses that place optimizing social and ecological well-being ahead of maximizing profits. The literature suggests that such firms are more likely to be family businesses than nonfamily businesses. This exploratory study examines and compares a small sample of two types of organizations that place optimizing social and ecological well-being ahead of maximizing profits: Stewardship family firms (based on kinship), and Universal family firms (based on affinity). Our findings suggest that, as predicted, compared to Stewardship family firms, Universal family firms: a) have a greater long-term commitment to the larger community (versus to the firm), and b) place greater

Agency Theory Perspectives on Corporate Governance (session 890)

The Best of Both Worlds? Examining the Performance Consequences of Executive Board Chairs

Author: **Ryan Adam Krause**; Texas Christian U.

Author: **Rob Langan**; U. of Geneva

Author: **Markus Menz**; U. of Geneva

Agency theory views the proper role of the board chair exclusively as providing independent oversight to monitor and control the CEO. Recently, firms have introduced an innovation in board leadership that confounds this view. The executive board chair, a governance hybrid involved in both strategy and oversight, challenges agency theory's prescription that the two remain separate. We argue that executive board chairs can contribute the necessary expertise for effective governance without the conflict of interest associated with CEO duality—and therefore generate stronger performance. We also argue that the performance advantage differs depending on the type of agency problem most in need of mitigation (i.e., principal-agent or principal-principal). Analysis of S&P 1500 firms from 2003 to 2017 provides general support for our arguments.

Family Control and Opposition Party Connections: Evidence from the Korean Family Business Groups

Author: **Dong Shin Kim**; U. of Texas at Dallas

Author: **Seung-Hyun Lee**; U. of Texas at Dallas

While the immediate benefit is clearly expected from having connections to the incumbent government, benefits from the opposition parties seem to be subtle and distant. Then, what motivates firms more likely to seek political connections to the opposition political parties that are political rivals of the incumbent government, despite the potential negative consequences? In this research, using South Korean family business group-affiliates as our research context, we argue that firms with strong family control are likely to seek more opposition party connections as a realization of their long-term orientation. Moreover, we find that the higher public approval, the legislative power, the conservatism of the incumbent government, and firms' short-term performance pressure mitigate the positive impact of family control on more opposition party connections.

Author: **Burcu Koc**; Pamukkale U.

Author: **Ozlem Yildirim**; Bogazici U.

Author: **Sevil Sönmez**; U. of Central Florida

The purpose of this study is to examine the impact of economic and non-economic dynamics (i.e.,

We also predict that the effect monitoring and pay incentives on CSR will differ for organizations with a stewardship focus. More specifically, firms with a stewardship focus should respond to external monitoring (i.e., analyst coverage) by increasing CSR, but non-steward firms will respond by decreasing CSR. Similarly, weak internal monitoring (in the form of large boards) should allow managers in stewardship- focused firms to increase CSR, but allow managers in non-steward firms to decrease CSR. In terms of pay incentives, because managers expressing a stewardship focus are more internally than externally motivated, the incentives effects of cash and option pay should be more muted, reducing their effects. Using a unique combined dataset for 1,688 firms for the period 1998-2012, we provide robust empirical support for most of our hypotheses.

Examining Antecedents and Consequences of Effective LIDs: The Quad Model Approach

Author: **Dinesh Hasija**; Augusta U.

Author: **Alan E Ellstrand**; U. of Arkansas

Author: **Jason Ridge**; U. of Arkansas

Author: **Jonathan Johnson**; U. of Arkansas

This paper examines a relatively new contribution to board leadership, the Lead Independent Director (LID) which has not received much attention in the corporate governance literature. From an agency theory perspective, this leadership position should enhance board monitoring. However, according to symbolic management theory, LID may make no significant changes to the board's monitoring mechanism. Using the quad model, we explore the antecedents and consequences of having an effective LID on the board. Using a sample of S&P 500 firms, we found that underperforming firms were more likely to select an effective LID. We also found that when firms adopted effective LIDs, board meetings in the following year had higher attendance, and problem directors on boards were more likely to be dismissed.

CFO Turnover Drivers and Consequences

Research: Time to Move Beyond Wrongdoing?

Author: **Aya S. Chacar**; Florida International U.

Author: **Angela Langevin Heavey**; James Madison U.

Author: **Dasol Sim**; Florida International U.

Author: **Danielle Renee Combs**; Florida International U.

Interest in CFO turnover has resulted in a growing body of multidisciplinary but often disparate research. We provide an integrative review of all quantitative CFO turnover research in the Financial Times 50 journals. We find the field focused on, and documenting, a positive relationship between financial misrepresentation and CFO turnover, with CFOs leaving firms prior to or after wrongdoing revelations. Small study samples suggest wrongdoing instances are limited. The evidence also suggests CFOs may be at times scapegoats or under the undue influence of CEOs. Nonetheless, CFOs still bear negative career consequences from their firms' financial misrepresentation. Conclusions on the state of governance are more complex. Post-wrongdoing turnover rates although higher than control groups are not very high, suggesting the CFOs may not be involved or governance is still lax in those limited numbers of firms engaging in wrongdoing. Major research gaps still exist though. Unlike broader research on executive succession and turnover, limited attention has been paid to the relationships between firm performance and CFO turnover, and post-succession research remains nascent. More attention is needed to better understand drivers of voluntary turnover, and the links to CFO intellectual capital as well as firm strategic choices and consequences beyond wrongdoing.

Fairness Asymmetry and Changes of Trust and Explicit Contracts in Buyer-Supplier Exchanges

Author: **Mengyang Wang**; Huazhong U. of Science and Technology

Despite the critical role of fairness in economic transactions, studies about asymmetric perceptions of fairness between exchange parties are very limited. By adopting a dyadic and dynamic perspective, the study investigates the impacts of fairness asymmetry on changes in trust and explicit contracts over time. With a two-wave longitudinal sample of 229 buyer-supplier dyads, the results show that over time, fairness asymmetry leads to a decrease of shared trust and an increase of explicit contracts. Our findings also reveal that both market uncertainty and behavioral uncertainty make the effect of fairness asymmetry on change in shared trust more adverse. Moreover, market uncertainty enhances the role of fairness asymmetry in developing explicit contracts. The study provides novel insights into the implications of fairness for formal and informal governance mechanisms in ongoing interorganizational relationships.

Contract-Based Knowledge Protection and Cooperation Performance

Author: **Li Wang**; School of Management, Xi'an Jiaotong U.

Author: **Longwei Wang**; Xi'an Jiaotong U.

Author: **Min Zhang**; Queen's Management School, Queen's U. Belfast

Based on the perspective of TCE and institution theory, this study demonstrates the important effects of task and institutional environments on firm's knowledge protection activity in cooperation and cooperation performance. Using a survey data collected from 227 manufacturing firms in China, in this study we find that technological turbulence and legal system completeness both have a significant and positive effect on contract-based knowledge protection. In addition, technological turbulence weakens the positive relationship between contract-based knowledge protection and cooperation performance, while legal system completeness strengthens the same relationship. The findings

Downsizing and Downscoping Divestitures

Author: **Rahul Anand**; HEC Paris

Extant research examining the effect of environment on firm divestitures has led to some contradictory findings. This is primarily because previous research has not paid enough attention to changes in divestiture strategy under varying environmental conditions. Firms undertake divestitures either to get rid of the inefficiencies resulting from excessive diversification or to eliminate efficiencies resulting from having redundant capacity within businesses. Downscoping divestitures create value for the firm by reducing business scope whereas downsizing divestitures improve firm performance by reducing business size. This paper argues that in a less munificent environment resulting from an exogenous change in access to capital, firms undertake 75% fewer downscoping divestitures and 31% more downsizing divestitures as compared to the munificent environment. Also, downscoping does not improve firm performance in a less munificent environment whereas downsizing leads to growth in firm performance. The study uses the European debt crisis as a context for a less munificent environment. This paper resolves ambiguity in previous findings on divestitures and also contributes to the literature on corporate strategy and business diversification.

Biased to Downsize? A Socio-Cognitive Perspective on Workforce Downsizing

Author: **Matthias F. Brauer**; Mannheim U.

Author: **Martin Zimmermann**; Mannheim U.

From a rational, economic perspective, the prevalence of workforce downsizing as a managerial practice is puzzling. Studies on the performance implications of workforce downsizing have fairly consistently shown that downsizing is associated with negative reputational effects and, very often, also negative financial outcomes. To explain this puzzle why executive managers continue to downsize despite high risks of reputational and financial losses, we build on a socio-cognitive perspective on downsizing. The socio-cognitive perspective on downsizing purports that the

enrich our knowledge on how task and institutional environments are related to performance outcomes through shaping firm's behaviors and provide insight into firm's knowledge protection measures in cooperation.

When Contracts Backfire: A Study on Buyer Opportunism in the Automotive Industry

Author: **Linda Hofsäss**; Freie U. Berlin

Author: **Sarah Maria Bruhs**; Aarhus U., Department of Management

Author: **Thomas Mellewig**; Freie U. Berlin

We explore the varying effects of contracts on blatant and lawful buyer opportunism. Building on contradicting findings on the effects of contracts on opportunism, we analyze contractual effects on blatant and lawful opportunism separately. In a sample of 104 buyer-supplier-relationships in the German automotive industry, we find that contracts supporting the supplier and the ratio of supplier to buyer contract support trigger different types and directions of opportunism. Suppliers that receive more contractual support face more blatant buyer opportunism. Contracts favoring the buyer more than the supplier decrease lawful buyer opportunism. Opposing TCE predictions, our results suggest that safeguarding clauses favoring the supplier increase blatant buyer opportunism. The differing effects of contracts on blatant and lawful opportunism imply that the general opportunism construct falls short to account adequately for the effects of contracts.

Governance Choice in Dyadic Relationships and Performance - A Transaction-Cost Theory Meta-Analysis

Author: **Michael Gusenbauer**; U. of Innsbruck School of Management

Author: **Andreas Rauch**; U. of Sydney Business School

The choice of optimal governance structure to

institutionalization of downsizing goes back to the emergence and collectivization of a dominant "downsizing is effective" schema among executive managers. In keeping with this notion, we argue that the inclination of CEOs to adopt a "downsizing is effective" schema, and thus to resort to downsizing, becomes greater if CEOs have recently engaged in downsizing activity ("familiarity bias"), and if CEOs' monetary incentives in form of stock option pay limit their financial downside when carrying out downsizing. Moreover, we reason that positive stock-market feedback to prior downsizings strengthens these links. Our empirical findings which are grounded in the analysis of 262 U.S. firms over a 12 year period are largely supportive of our theoretical reasoning. Collectively, our findings contribute to both workforce downsizing literature and behavioral (governance) theory.

The Impact of Corporate Downsizing on Analysts' Earnings Forecasts

Author: **Ann-Christine Schulz**; U. of Applied Sciences for Management and Communication

Author: **Margarethe F Wiersema**; U. of California, Irvine

Corporate downsizing continues to be prevalent, yet we do not fully understand how investors value these decisions. To improve our understanding of how the financial community evaluates these managerial decisions, we examine how investment analysts, important information intermediaries in the financial market, respond to corporate downsizing. Using panel data on S&P 100 companies for the 1990?2000 period, we find that corporate downsizing decreases the accuracy of analysts' earnings forecasts, resulting in a greater discrepancy between their earnings forecasts and actual realized earnings by the firm. In addition, we find that size of the firm, analyst coverage and the extent of prior downsizing activity improve the accuracy of analysts' earnings forecast in response to corporate downsizing.

[view paper \(if available\)](#)

control an exchange relationship is most critical for the success of organisations. Yet, scholars debate what constitutes optimal governance, and specifically how the core governance constructs of transaction-cost theory (TCT) – market, hierarchy and hybrid – relate to a broader notion of governance that includes various mechanisms like contractual or procedural coordination. Following calls for a more fine-grained analysis of governance structure, we test the predictions of TCT with a novel model that consists of governance modes and governance mechanisms as distinct, yet complementary control instruments to jointly structure transactions in dyadic exchange relationships. To illustrate the distinct performance-effects of governance choice, we meta-analytically synthesise 198 samples from different streams of management literature containing 54,734 dyadic inter- and intra-organisational organisational relationships between 1960 and 2014. Our evidence shows that governance mechanisms are generally positively related to performance, yet substantially influenced by moderating-effects – both by specific transaction-cost conditions and the governance mode the transaction is embedded in. As predicted, we find that governance mechanisms work especially well for market-based governance, compared to hierarchies or hybrids. Specifically, our results show that for transactions that occur under conditions of governance “voids” – i.e. when relationships are governed by insufficiently integrated modes according to predictions of TCT – governance mechanisms work particularly well to control the exchange. With our findings we contribute to transaction-cost theory and the broader literature on organisational controls and governance decisions.

[A Review of Corporate Divestiture](#)

Author: **Sina Amiri**; Georgia College & State U.

Author: **Samuel M DeMarie**; Iowa State U.

Divestment represents an important corporate strategic tool; however, research on divestment is eclipsed by research on mergers and acquisitions, and divestment is often incorrectly considered an inverse of an acquisition. Further, most divestment research focuses on performance at the expense of antecedents and processes that set the foundation for later performance. Our review provides a more complete picture of the stages of divestment with a focus on summarizing literature on divestment antecedents and processes. The result shows a need to integrate theoretical perspectives and look at divestment more holistically at the same time that divestment capabilities may be limited to specific modes. Additional implications for management research and practice are identified.

Boards of Directors Leadership: Implications for Strategic Decisions and Firm Performance

(WITHDRAWN)

Author: **NURIT NAHUM**; PhD

Author: **Abraham Carmeli**; Tel Aviv U.

This paper investigates whether and how the respectful leadership of the chairperson influences the Boards of directors (BOD) capacity to integrate its different roles and drive firm performance. As more firms separate the chairperson role, we shed some light on certain chairperson characteristics that support BOD effectiveness. Our model suggests that professional and relational respectful leadership, enables trust that supports strategic decisions' quality, resulting in enhanced firm performance. We contribute to governance literature by shedding some light on the mechanism in which BODs manage the paradox of power and collaboration. We discuss the BOD fiduciary duty in making the requisite resource allocation and strategic choices, and point to the long-term orientation as a guidance. The theoretical model is supported by empirical results from 200 companies in two studies.

The Impact of Ability, Motivation, and Opportunity on Directors' Monitoring Effectiveness

Author: **Felipe Calvano Da Silva**; U. of Missouri, Columbia

Author: **Karen Schnatterly**; Virginia Tech

Are boards effective monitors? There is a general consensus that directors' ability and motivation are critical to board effectiveness. However, when dimensions of ability and motivation have been tested, results have been inconclusive. We suggest that, while ability and motivation are important, there is another important factor. Building on the mechanisms proposed by agency and resource dependence theories, we argue that boards are most effective when directors with ability and motivation are able to use these characteristics. As the work of the board gets done in committees (Kesner, 1988; Kolev, Wangrow, Barker, & Schepker, 2019), we argue that when directors with ability and motivation are on committees that align with their ability, boards are most effective. If directors with

The Influence of CEO Values on Firm Open Innovation

Author: **Wei Zheng**; U. of International Business and Economics

Prior research has focused on exploring the factors promoting openness in innovation from firm characteristics, industrial economy and environmental determinism perspectives, while the "microfoundations" of open innovation remain relatively ill understood. Our study attempts to fill the research gap by investigating the "human side" of open innovation, with a focus on the fundamental determinants of CEO values. Using a three-phase (from 2014 to 2016) survey of 655 Chinese manufacturing firms, we find that firms with CEOs who have higher other-regarding values are more likely to adopt open innovation, and this main relationship is enhanced in state-owned enterprises, while weakened by a higher level of recent innovation performance or regional intellectual property protection. This research enriches the open innovation literature by exploring the role of CEO and by providing empirical evidence to depict how individual, organizational and environmental level factors interacted affect firm-level openness and further innovation performance.

Organizational Learning & Change

This study contributes to the ongoing debate on the benefits and costs of multiple directorships by investigating how and when multiple directorships affect firm performance. More concretely, we study the effect of multiple directorships on firm performance, while taking into consideration board meeting attendance as a channel and firm growth as a context. Based on the unique data of 352 firms listed on the Pakistan Stock Exchange, we find that board meeting attendance mediates the negative effect of multiple directorships on firm performance. In addition, we find that the negative effect of multiple directorships on board meeting attendance is mitigated by the higher firm growth and accordingly, the indirect effect on firm performance become less negative as firm growth increases.

Mortality Saliency and CSR: The Moderating Roles of CEO Values and Ideology

Author: **Cuili Qian**; UT Dallas

Author: **Nishant Kathuria**; U. of Texas at Dallas

Author: **Louise Yi Lu**; Australian National U.

Author: **Raymond Law**; Hang Seng U. of Hong Kong

Existing research has made contradictory arguments regarding how death saliency affects individual behavior. Some research suggests that individuals exposed to death saliency reduce prosocial behaviors, while other research suggests that death saliency actually leads individuals to engage in more prosocial behavior through death reflection process. Integrating terror management theory with strategic leadership research, this study investigates the micro-foundations of corporate social responsibility (CSR) and theorizes that CEOs' values and ideologies, particularly personal values for benevolence and political ideology, interact with mortality saliency to affect the extent to which their firms engage in CSR strategies. In a longitudinal study of U.S. publicly listed firms, we use death of directors in firms during 2002-2013 as exogenous shocks to CEOs and examine the effects of death saliency on CSR. We predict and find that when exposed to death saliency, CEOs with greater benevolence values are more likely to engage in CSR practices and CEOs who are political conservative are less likely to engage in CSR. In a supplementary study using an

experimental design and primary data from working professionals, we find further evidence that provides support for our predictions.

CEOs Poverty Experience and Corporate Acquisitions

Author: **Yongqiang Gao**; School of Management, Huazhong U. of Science and Technology
Author: **Haibin Yang**; City U. of Hong Kong

In this study we examine whether a CEO's poverty experiences in early life affect corporate strategy of acquisitions. Drawing upon insights of imprinting theory and inferiority-compensation logic, we argue that CEOs growing up in poverty environment, compared to their counterparts growing up in non-poverty environment, may experience a feeling of inferiority because of their disadvantageous background, which motivates them to undertake acquisitions so as to seek for compensation in material wealth, self-esteem, and social standing. We therefore posit that CEOs with poverty background (i.e., grew up in poverty environment) are likely to demonstrate a higher level of acquisitiveness. We further propose that the inferiority compensation logic will be strengthened when CEOs experienced famine or when their firms are located in more affluent regions. Evidence from public-listed manufacturing firms in China largely supports our predictions.

Institutional Differences and Firms' International Acquisitions Strategies (session 883)

The Impact of Nation-Level Institutions on Acquisition Premiums (WITHDRAWN)

Author: **Chengguang Li**; Ivey Business School
Author: **Jeray M. Halebian**; U. of California, Riverside

Author: **Ian McCarthy**; Simon Fraser U.

Notwithstanding the growing academic and managerial interest towards big data, it is not yet clear when it is beneficial for firms. This lack of clarity is mainly due to the fact that big data is commonly considered to be positive for firms, while both benefits and costs are embedded in it. Moreover, the theoretical mechanisms that permit unlocking the benefits of big data have not yet been thoroughly analyzed, nor has a method to effectively assess the availability of big data been devised. Grounding our analysis on a resource-based view, we argue that big data can have a positive impact on firm performance when companies are able to create and capture value from it, allowing its benefits to overcome its costs. To understand the conditions in which a positive impact occurs, we unpack big data into three dimensions, i.e., Volume, Variety and Veracity, and we evidence how it is possible to measure them. Our results highlight that a high Volume of big data has a negative effect on firm performance, evidencing a dark side of big data. The presence of high Variety moderates the effect brought about by the Volume, while simultaneous high values of Volume and Variety allow value creation for companies positively affecting their performance. In addition, high levels of Veracity may further permit companies to benefit from big data by creating value from it. In doing so, we shed light on the circumstances in which big data may be beneficial for firms, contributing to a better academic understanding of the phenomenon, and providing useful indications to managers.

Change and Stability in Industry Architectures: Firm Actions and Performance Effects (WITHDRAWN)

Author: **Sebastian Stabenow**; U. of Antwerp

Author: **Sascha Albers**; U. of Antwerp/ Antwerp Management School

Author: **Jost Daft**; Deutsche Lufthansa AG

This study analyzes performance effects of firm efforts to shape the structure of an industry. We view industry structure through the conceptual lens of industry architectures and posit that firms shape

Institutional theory argues that institutions shape organizational decisions in uncertain contexts. Since acquisition negotiations are mired in uncertainty, we expect institutions to influence such negotiations, and the resulting bid premiums. Perhaps surprisingly, though, relatively little work has taken an institutional theory approach to explaining acquisition premiums. Accordingly, we draw on institutional theory to derive a set of cognitive, normative, and regulatory nation-level institutional forces that may shed light on premiums offered. In the case of cognitive institutional forces, we hypothesize that other firms' prior premium decisions influence premiums offered in focal acquisitions—although we expect they will exercise a weaker influence when prior premiums greatly deviate from each other, as larger deviations weaken prior premiums' role as a taken-for-granted reference. We also argue that normative forces in the form of the cultural values uncertainty avoidance and future orientation affect bid premiums, as they influence how firms deal with the uncertainty and payoff time inherent to acquisitions. Lastly, we propose that regulatory pressures through a country's rule of law influence premiums, since it affects a firm's confidence in its regulatory environment. We employ a large sample of 23,059 acquisitions in 42 countries from 1997 to 2017, and find support for our hypotheses.

Firm Exposure to Environmental Regulations: Multinational Mobility and Non-Market Capabilities (WITHDRAWN)

Author: **Anne Jacqueminet**; Bocconi U.

Author: **Joao Albino Pimentel**; Copenhagen Business School

What types of firms are attracted or deterred by strict environmental regulations? In this paper, we contribute to answering that question by identifying configurations of firm capabilities that favor their exposure to relatively stricter or laxer regulations in their global operations. We propose that firms' bundles of technical capabilities- in the form of technological and environmental capabilities-, multinational mobility capabilities, and non-market capabilities -in the form of political and social

these architectures by carrying out a single or multiple of change- and stability-oriented actions over time. We hypothesize that both types of actions differently affect firm performance and that this relationship is moderated by the predictability, segment conformity, and simplicity of firms' competitive behavior. To test our hypotheses, we created a unique dataset of airline actions that fostered either stability or change in the flight-ticket distribution architecture and assessed, as a proxy for firm performance, the change these actions cause in investors' expectations of future firm performance once an action is announced. Our findings reveal that change-oriented actions negatively affect firm performance and that this effect is further exacerbated by simplicity in firms' competitive behavior, but that stability-oriented actions have an inconclusive effect. Our findings challenge the literature's overwhelming focus on firm-driven change and its associated benefits and makes an initial effort at identifying the factors that both facilitate firm efforts to shape architecture and influence firm performance.

How Strategic Distinctiveness Contributes to Incubator Performance: Evidence from China

Author: **Hai Guo**; Renmin U. of China

Author: **Yonghui Li**; School of Business, Renmin U. of China

In this article, we extend the research on optimal distinctiveness to the business incubator context and explore how incubators orchestrate multiple strategic dimensions to manage the tension between conformity and differentiation. We develop the argument that incubators can pursue a moderately distinct position in the primary dimension to 'join the battle' and a highly distinct position in the personalized dimension to 'secure victory'. In addition, we argue that the effect of orchestration strategy on incubator performance is magnified by competitive intensity. Using a large sample data from business incubators in China between 2016 and 2018, we find an inverted-U shaped relationship between strategic distinctiveness of market infrastructure development services and incubator performance,

capabilities-, shape their ability to comply vs. arbitrage. We study the 709 international acquisitions and divestments of polluting activities of 50 French multinationals over 2005-2017. The results of our fuzzy set qualitative comparative analysis suggest that, on the one hand, some firms target countries with strict regulations when investing in polluting industries, primarily because their bundle of capabilities reduce the cost of compliance they face relative to peers, and on the other hand, some firms target countries with lax regulations because their mobility and non-market capabilities reduce the cost of regulatory arbitrage. Thus, our paper contributes to research on firms' responses to environmental regulations, speaks to the resource based view of the firm and to non-market strategy research.

Host-Country Institutions and Emerging Market Multinational Enterprises' CSR Performance

Author: **Jiang Wei**; Zhejiang U.

Author: **Ding Wang**; Zhejiang U.

Author: **Yang Liu**; School of management, Zhejiang U.

Grounded in the institutional knowledge perspective, this study explores the mechanisms through which and the conditions under which exposure to high-quality host-country institutional environments can affect emerging market multinational firms' corporate social responsibility (CSR) performance. In doing so, we propose a three-stage institutional knowledge learning process model, namely institutional knowledge acquisition, assimilation and exploitation. We argue that high quality of host-country institutions will enable the institutional knowledge acquisition process, but may hinder assimilation process, thus exhibiting an inverted U-shape relationship between the quality of host-country institutions and CSR performance of emerging market multinational enterprises. Moreover, we propose that institutional knowledge base of emerging market firms can positively moderate this curvilinear relationship by facilitating the institutional knowledge acquisition, assimilation, and exploitation process. The results of analyzing a longitudinal dataset of listed Chinese firms from 2009 to 2017 support our key arguments.

and a positive relationship between strategic distinctiveness of business capability development services and incubator performance. Moreover, we show that the decrease of market concentration or the development of regional innovation environment strengthens the relationship between strategic distinctiveness and incubator performance. These findings inject fresh insights into the orchestration view of optimal distinctiveness and advance our understanding of the strategic positioning of business incubators.

Weaving My Cocoon: Business Model Configuration and Trajectory of Chinese Coworking-Spaces

Author: **Yixin Qiu**; U. of Bayreuth

Author: **Mahmood Aslam**; U. of Bayreuth

This paper investigates configuration, diversity and trajectory of coworking-space business models. Coworking-spaces are modern, collaborative and flexible workplaces where independent individuals and teams share spaces and amenities, and the assemblage further intensifies their social interaction and information exchange. When an increasing number of creative workers is transferring to coworking-spaces, crystallising various types of coworking-spaces is of significance because the contemporary workplaces shape the context for idea generation and innovation. Our qualitative study reveals four value creation components and specific value capture approaches of coworking-spaces, as well as and how they configure four different types of business models of coworking-spaces. Furthermore, our longitudinal data suggests a framework of business model trajectory that indicates a self-reinforcing process of coworking-spaces business models despite the diversified levels of openness to users. This study contributes to a comprehensive picture and understanding of coworking-spaces. The findings add to business model literature by extending extant design themes and introducing business model trajectory concept.

Impact Signals: A Study on Emerging Market Multinationals' Ownership Strategies in Advanced Markets

Author: **Ute Heinrichs**; WU Vienna U. of Economics and Business

Author: **Desislava Dikova**; WU Vienna U. of Economics and Business

Drawing on signaling and institutional theory, we perform an analysis of emerging market multinational enterprises' ownership strategies in advanced markets. Specifically, we claim that experience-related information, i.e. signals, disseminated by the acquirer will decrease information asymmetry on the target side of the deal, leading to majority acquisitions. Furthermore, we find that informal institutional distances decreases the positive impact of signals and formal institutional distance further decreases the negative impact of signals, enhancing our understanding of the boundary conditions of the signal environment as well as how emerging market acquirers can navigate their actions in advanced markets. We rely on a dataset of over 2,000 acquisitions undertaken by acquirers from emerging markets in advanced markets during the period 1999-2017.

Impact of Alliance Partner Diversity on Level and Reliability of Firm Performance

Author: Ruihua Joy Jiang; Strategy & International Business

Author: Qingjiu Tao; U. of Delaware

Author: Michael D. Santoro; Lehigh U.

Management researchers emphasize the prevalence and importance of firms' strategic alliance portfolios in determining various firm outcomes. We extend this literature by examining and empirically testing how different aspects of alliance portfolio partner diversity (defined here as industry and organizational type diversity) affect both the level and reliability of firm performance. Using the multiplicative heteroscedasticity estimation technique on a sample of 178 of the largest multinational firms in the automobile and telecommunications industries across the twenty-year time period (1995 to 2014), we demonstrate that firms with greater partner industry diversity in their strategic alliance portfolios enjoy greater levels of performance coupled with greater reliability. In contrast, firms with greater partner organizational type diversity in their strategic alliance portfolios have lower levels and lower reliability of performance.

Market Entry & Dynamic Environments (session 884)

Product Strategy in a Nascent Market: The Effect of Complementary Products on New Product Design

Author: Cameron Miller; Syracuse U.

Prior research focuses on new market entry, but ignores how firms position and design products as they enter. Evidence suggests that technologically capable firms sometimes enter with technically inferior products. To address this puzzle, I examine product design and feature choices as they enter a nascent market. Taking a demand-side view of complementarities, I propose that firms with existing products complementary to the new market will enter the new market with products that have lower technical performance, and that firms with complementarities will choose features and components that function with their complementary products and exclude features and components that do not. Examining entry into the nascent smartphone market, I find strong support for these predictions. I identify complementarities within the firm's product portfolio as an important driver of product strategy in new markets.

Predicting Entrepreneurial Performance: Simple Rules Versus Expert Judgment

Author: Michael Leatherbee; Pontificia U. Católica de Chile

Author: Paula Navarrete; Pontificia U. Católica de Chile

Author: Patricio Del Sol; -

Rational heuristics or simple rules have been theorized to aid entrepreneurial decision-making in uncertain and dynamic environments. While theoretically appealing, prior research has not moved much beyond theorizing and making

collaborative density- i.e., a high level of intra-firm collaboration- hires an employee from, or loses an employee to, a firm that also has a strong collaborative density. Access to the knowledge not developed by the mobile employee is also the greatest when both firms in the mobility dyad exhibit a strong collaborative density. Finally, when the collaborative density is high for both firms, the losing firm actually experiences net knowledge gains from losing an employee. We discuss the critical role of a firm's collaborative structure on knowledge-building activities following the mobility.

The Moderating Role of Organizational Capital Between Knowledge Acquisition and Firm Performance

Author: **Ashley Hockensmith**; U. of Massachusetts Amherst

Author: **Bruce Skaggs**; U. of Massachusetts, Amherst

Author: **Rory Eckardt**; Binghamton U.-State U. of New York

Knowledge acquisition, particularly that of highly valuable knowledge assets, is generally understood to drive professional service firm performance and lead to the establishment of competitive advantage. However, the possession of a given asset is not synonymous with its effective use, and barriers to the intrafirm diffusion of knowledge abound, stemming from, among other things, the nature of the knowledge assets themselves. Thus, the positive impact of knowledge acquisition on firm performance is far from automatic. We argue that organizational capital may bridge this gap between acquisition and performance. We develop and test the moderating effects of two modes of organizational capital – one structural, one cultural – and we find partial support for our overarching theorizing that insofar as organizational capital engenders the integration of new knowledge assets, it moderates the relationship between knowledge acquisition and firm performance such that firm performance is enhanced. Theoretical and practical implications are discussed.

[view paper \(if available\)](#)

inferences using case studies. This paper quantitatively explores the validity of rational heuristics as a strategic tool for new venture performance. We model the way in which organizations create simple rules using a machine learning algorithm that replicates the Bayesian updating process by which individuals and organizations craft simple rules for everyday decision-making. To contrast the effectiveness of our modeled rational heuristics, we compare our results against two traditional decision-making processes: expert judge based and expert econometrician based. We find that rational heuristics are systematically more successful than the other approaches in predicting new venture performance and can be applied in a quick and frugal manner, much like the theory predicts.

Intellectual Property Rights and Market Entry Incentives: Evidence from the Pharmaceutical Industry

Author: **Martin Hetu**; HEC Paris

Author: **Denisa Mindruta**; HEC Paris

Author: **William G. Mitchell**; U. of Toronto

This study investigates the impact of a sudden reduction in the strength of the intellectual property rights (IPR) environment on market entry and the launch of new innovative products by startup, diversifying and incumbent firms benefitting from different types of complementary assets and technological resources. We use a difference-in-differences empirical design relying on the exogenous invalidation of gene patents in the United States by a 2013 Supreme Court decision and the uninterrupted validity of gene patenting in European Union countries between 2005 and 2018. We find that a reduction in the strength of the IPR environment leads to an increase in entry in existing markets by startup firms, diversifying firms without specialised technological resources and diversifying firms with specialised technological resources. Moreover, the launch of new innovative products by incumbent firms appears to be moderately affected by IPR invalidation as the rate at which they launch such products remains high, but nevertheless decreases over time. Our empirical results are most

Connecting the Dots: Geography and Knowledge Sourcing Within and Across Firm Boundaries

Author: **Sohyun Park**; U. of Minnesota
Author: **Akbar Zaheer**; U. of Minnesota

We examine the innovative outcomes of knowledge sourcing within and across firm boundaries in the context of localized knowledge spillovers. Within firm boundaries, we argue that collaboration across regions through internal linkages, while costly, draws upon diverse knowledge and results in valuable innovation. In contrast, we posit that reaching out across firm boundaries to access local knowledge, while useful for producing a large volume of innovation, fails to yield high-value innovation. Using 28,639 medical device patents granted to 488 firms from 1975 to 2006, we show that cross-regional internal collaboration increases the value of patents, while relying on local knowledge spillovers decreases it. We also find support for the interaction between two knowledge sourcing approaches: cross-regional collaboration mitigates the negative impact of local spillovers. Our study highlights how firms can successfully employ innovation strategies that combine the benefits and attenuate the costs of both local spillovers and distant knowledge recombination.

How Effective are Strategy Repertoires in the Context of Environmental Dynamism?

Author: **Mirjam Goudsmit**; VU Amsterdam
Author: **George A. Shinkle**; UNSW Sydney

How does environmental dynamism influence the performance effect of different combinations of strategies? Moving beyond a predominant isolated treatment of firm-level strategy, we investigate a strategy repertoire consisting of four different strategies that may be simultaneously in play but varying in degree. We argue that repertoires exhibit different patterns based on intensity (absolute magnitude) and focus (relative magnitude). Taking an organizational learning lens, we hypothesize that the effectiveness of repertoire patterns depends on the kind of dynamic environment; exhibiting varying levels of velocity, uncertainty, ambiguity, or complexity. Hypotheses are tested via survey data from 203 firms in different industries in Australia, China, Israel, and U.S.A. Findings show strong moderating effects. Contributions to the strategy literature include providing more insight into performance effects of multiple well-known strategies in varying dynamic environments.

Multi-CEOs: Toward a Theory of Executives Leading Multiple Firms

Author: **Lorenz Graf-Vlachy**; ESCP Business School

The Chief Executive Officer (CEO) is critical to a firm's success and the position is commonly considered to be extremely demanding. It is thus surprising that some individuals are "multi-CEOs," i.e., they simultaneously hold the CEO position in multiple firms. I study four such multi-CEOs using a case-study approach to understand why and how multi-CEOs are appointed and how they conduct themselves while in office. My findings suggest that multi-CEO appointments require special circumstances regarding corporate control or CEOs' legitimacy. Boards seem reluctant to appoint multi-CEOs and may initially opt to create such arrangements only ad interim. Interestingly, making these ad interim arrangements permanent appears to not be contingent on firm performance, and helped by CEOs' prior public commitments to their first CEO positions. Further, multi-CEOs publicly bill their appointments as undesirable yet inevitable and not detrimental to firm performance. They avoid conflicts of interest by running firms that are not in competition or by following specific decision rules. Compensation schemes vary but are all highly symbolic. In their daily work, multi-CEOs respond to physical presence requirements through headquarter co-location or travel and exhibit specific patterns in their time allocation. Finally, multi-CEOs utilize Chief Operating Officers (COOs), or tend to face public pressure to do so.

Disentangling the Impact of Indirect Network Effects on Platform Growth

Author: **Ramya Krishna Murthy**; Schulich School of Business

Author: **Moren Levesque**; York U.

Indirect network effects are established as key drivers for platform growth. However, in platforms like newspapers and open source software platforms, these effects are asymmetric across the different sides. In this paper, we examine how the symmetry of indirect network effects influences platform growth trajectory. We find that platforms grow at an exponentially increasing rate only when indirect network effects are symmetric, whereas growth of platforms with asymmetric indirect network effects follows a S-shaped trajectory. Within these trajectories, we examine how the platform sponsor can improve the strength of indirect network effects. We find that the growth rate can be augmented by aligning the sources of indirect network effects?membership and usage benefits? with the marketness of the platform. We introduce marketness as a construct to refer to the extent to which platforms employ market-like value-creation systems.

Entrepreneurs on Sharing Economy Platforms in Emerging Economies

Author: **Xueming Luo**; Temple U.

Author: **Zhijie Lin**; School of Economics and Management Tsinghua U.

Author: **C. Jennifer Tae**; Temple U.

How does the platform design change emphasizing user satisfaction affect the entrepreneurs' product portfolio size on a sharing economy platform (SEP)? Individuals with idle assets can participate on SEPs to leverage economic opportunities. Because these entrepreneurs are qualitatively different from complementors in non-SEPs, it is unclear ex ante how effective the platform designs that guide complementor behavior in the latter settings will be on SEPs. Entrepreneurs reduced their product portfolio size following the change, and more so for those with higher user satisfaction. While entrepreneurs and the platform owner benefitted

and test three alternative theories for the performance heterogeneity across outside CEO appointments, predicting that experiential learning enhances performance, while negative transfer learning and negative sentiment undermine performance following their appointments. We conjecture that insiders gain more than outsiders from their executive experience and suffer less from negative transfer and negative sentiment. Analyzing data on CEO appointments in US-based public firms during 2001-2014, we find that the depth of experience of outside CEOs enhances post-succession performance, but their breadth of experience does not. The misfit between their prior corporate background and their hiring firms' characteristics undermines performance, and so does negative sentiment toward their appointments. We further find support for our hypotheses concerning the relative advantages of insiders. We conclude that in explaining performance heterogeneity among outside CEOs, much depends on their fit with the hiring firm and on the bias of the firm's stakeholders against outsiders.

Compassionate Board of Directors and Power Dynamics with the CEO

Author: **Anran Li**; Hong Kong U. of Science and Technology

Moving beyond the three roles of board of directors, this study proposes the affective and emotional impact of board on strategic decisions. We propose that a non-CEO executive's death will raise board's awareness of mortality and make them more compassionate towards CEOs. Board will thus be more likely to reduce CEO's job demands in the pay-setting process and the final compensation. We further propose that because in the negotiation process like CEO pay-setting a more powerful party will be more likely to express his or her emotions while a less powerful party will hide the emotions and affects, the main effect is contingent upon the power dynamics between CEO and board. Such effect will be strengthened if CEO has more power indicated by CEO duality and firm performance, and weakened if board is more independent. A longitudinal analysis of 1,834 firms with 8,945 firm-

from the change through increased sales, the user satisfaction of buyers, the intended beneficiary, deteriorated following the change. Our results highlight the interdependence underlying SEP participants and elucidate the trade-offs involving quantity vs. quality.

The Role of Executives in Enhancing Trust in Capitalism

Author: **R. Michael Holmes**; Florida State U.

Author: **Justin Pepe**; Florida State U.

Author: **Donald Siegel**; Arizona State U.

Trust in capitalism is declining, and many observers hold executives responsible. However, there is limited theory explaining why this decline is important and how executives' characteristics and actions can enhance trust in capitalism. In our theory development, a core premise is that executives can restore trust in capitalism by prioritizing financial and social missions equally, although dealing with this paradox represents a challenge for executives. Specifically, we recognize that placing social missions on an equal footing with financial missions is difficult, but nevertheless pivotal, to ultimately affecting trust in capitalism. Drawing on the upper echelons perspective, paradox theory, and the trust literature, we describe why executives might pursue financial and social missions equally, and how executives' actions that follow this pursuit could help shape trust in capitalism. Further, we describe the role of information asymmetry in shaping the effects of such actions. Our theoretical framework has implications for understanding executives' responsibilities and relationships with shareholders and other constituents, the origins and importance of trust, and responsible leadership. Our overall contribution is to shed light on the role that executives play in the development of trust in capitalism.

Nonmarket Strategies of New Entrants and Incumbents: Evidence from Ridesharing and Taxi Firms

Author: **Guy Holburn**; U. of Western Ontario
 Author: **Davin Raiha**; Indiana U. - Kelley School of Business
 Author: **Kartik Rao**; Ivey Business School

Technological innovations by digital platform-based firms have led to public debates about the legitimacy of new entrants' business strategies in a range of industries, prompting governments to revisit industry regulations – and triggering competition between new entrants and incumbents in the nonmarket environment in order to shape the future “rules of the game”. In this paper, we examine the lobbying strategies employed by market incumbents and new entrants to shape emerging industry regulations. Our central thesis is that the asymmetry in political resources and capabilities of incumbents and new entrants will result in them pursuing divergent lobbying strategies. Focusing on the key legislator attributes of committee assignment, seniority, and ideology, we hypothesize that incumbents will leverage their superior political experience and relationships to lobby members of industry-relevant committees and more senior legislators. On the other hand, new entrants circumvent the resulting political barriers to entry by focusing on legislators outside of the committee, those who have more recently been elected, and those who are relatively more pro-competition. We also argue that the response of firms to their rivals' lobbying will be contingent on the nature of their political support, and as such, incumbents and new entrants will respond differently to the lobbying actions of their rivals. Utilizing a novel dataset of lobbying contacts made by incumbent taxi firms and new entrant Uber with legislators in Toronto from 2014 - 2016 we find support for our hypotheses. Our findings emphasize how heterogeneous political resources drive nonmarket actions of firms when they compete with each other to influence policy outcomes.

Resource-Based Advantages: Speed, Learning, and Bottlenecks (session 880)

Task and Resource Bottlenecks: How Organization Design Informs the Microfoundations of RBT

Author: **Samina Karim**; Northeastern U.
 Author: **Chi-Hyon Lee**; George Mason U.
 Author: **Manuela Hoehn-Weiss**; Oregon State U.

We investigate the microfoundations of resource-based theory to better understand how resources are managed and used within organizations to influence their performance. To accomplish this, we draw on an organization design lens that informs us about how both resource management and task design are impactful to reducing bottlenecks in work systems. Specifically, we focus on two forms of task interdependence, namely the study of decentralization of task flow and the complexity of task interconnections, and show that both being high or low benefit performance. Our study also examines how resource fungibility and resource slack cannot improve performance each in isolation, but that together can benefit organizations. Our context is the scheduled U.S. passenger airline industry over two decades. Together, our findings have important implications for how the design of tasks and resource allocation to these tasks can influence an organization's performance.

Whether and How Does Learning Curve Uncertainty Affect Early Mover Advantage?

Author: **Michael J. Leiblein**; Ohio State U.
 Author: **John S. Chen**; U. of Florida

The existence of a learning curve, in which costs decline with cumulative experience, suggests that early entry (and production) provides learning opportunities that create competitive advantage by reducing future production costs relative to later entrants. We argue that this proposition is subject to an under-appreciated limitation — that progress down the learning curve may be uncertain. If there is uncertainty in the learning curve, then the taken-

Blinded By the Sun: Incumbent Response to Shifting Customer Demands in Regulated Electricity Markets

Author: **Carmen Weigelt**; Tulane U.

Author: **Shaohua Lu**; Santa Clara U.

Author: **Cameron Verhaal**; Tulane U.

An understudied question in the strategy literature is whether firms in regulated, monopoly-like, markets respond to uncoordinated customer preferences. Conventional wisdom would suggest that due to high barriers to entry and low buyer bargaining power in these markets, customer influence on incumbent firms is minimal to non-existent. Our findings, however, suggest that firms in regulated, monopoly-like, markets may not be as immune to demand-side customer preferences as previously thought. We draw on the competitive dynamic literature to suggest that under certain conditions, technological innovation may offer customers access to products or services previously only provided by an incumbent firm. As a result, the incumbent firm faces new competitive pressures even in monopoly markets. We find that incumbent utilities respond to customers' adoption of distributed solar. We also identify important boundary conditions that moderate this effect. We test our hypotheses on a dataset of incumbent utilities' solar investments and customers' adoption of distributed solar from 2010 to 2017 in the U.S. electric utility industry. Our findings contribute to understanding how firms in regulated, monopoly-like markets respond to demand-side influences, despite a lack of competitive pressures from rival firms.

Policy Shock and Firm Response: Integrating Corporate Political Strategy and Competitor Analysis

Author: **Xiaoyan Sun**; National School of Development at Peking U.

Author: **Hao Ma**; National School of Development at Peking U.

for-granted wisdom regarding the benefits of learning curves may over- or under-emphasize the value of early entry. We consider two forms of uncertainty — prospective (future production costs) and contemporaneous (current production costs). We demonstrate computationally that while prospective uncertainty in the learning curve enhances the learning benefits of early entry and production, contemporaneous uncertainty reduces these benefits. Further, we examine the implication of these findings for learning curve spillovers between leader and laggard firms. We conclude with implications for future research regarding learning curves and the pursuit of early mover advantage.

Increasing Demand and a Tradeoff Between Speed-Cost Efficiencies and Total Profits

Author: **Minjae Lee**; Southern Connecticut State U.

Recently, the resource-based view has achieved substantial progress in the strategic management literature by recognizing non-scale free property of resources. Building on this non-scale free resource logic, this paper examines how demand conditions within a market impact firms' strategic decisions to trade off their speed-cost efficiencies for greater total profits. Demand conditions force this trade off by influencing the opportunity costs of deploying non-scale free resources. I use an analytical model to provide two propositions : (1) when product-market demand increases, the total profit from allocating a firm's non-scale free resources to two projects becomes greater relative to that from fully using its non-scale free resources for one project, and (2) firm speed-cost efficiency is always lower when a firm chooses two inefficient projects over one efficient project. I provide three hypotheses based on these propositions in the context of liquefied natural gas industry in which demand increased rapidly resulting from energy market liberalization in 2000: (1) firms in the post-shock period (i.e., when product demand rapidly increased after 2000) have inferior speed-cost efficiencies as compared to firms in the pre-shock period (i.e., when product demand was steady and low before 2000); (2) post- shock firms lose more speed-cost efficiency as they conduct more projects; and (3) a

This article examines the effects of both a firm's political strategy and competitive strategy on its response to a government policy shock. Treating the government as an integral part of the external forces a firm has to reckon with, it extends the awareness- motivation-capability (AMC) framework, originally developed for competitor analysis, to the study of policy shock and firm response. Building on the strategic reference point (SRP) framework, it also considers the impacts of a focal firm's competitors on its response to the policy shock. Specifically, the nature of the policy shock, the relationship between the focal firm and the government, as well as the competitors' responses to the same policy shock all affect the focal firm's awareness of the policy shock as well as its motivations to respond, while its slack resources affect its capability to carry out its eventual response to the policy shock.

Ways Out of the Dead-End of RBV Dynamization: Dynamic Capabilities and Beyond

Author: **Alice Rettig**; Freie U. Berlin

Author: **Georg Schreyogg**; Freie U. Berlin

The predominant suggestion of how to overcome the static character of the resource-based-view (RBV) is the concept of dynamic capabilities, basically calling for a dynamization of organizational capabilities. Over the past two decades, the dynamic capability perspective has become one of the most influential theoretical lenses in the field of strategic management, dedicated to explain organizational adaptability and innovativeness in volatile markets. Given this broad acceptance, it is surprising enough that an analysis of the current research debate reveals that a congruent understanding of the construct is still missing and the perspective suffers from inherent conceptual contradictions. This raises the question whether we should continue to see the dynamic capability perspective as most promising template to structurally dynamize the RBV. We discuss this question along four core issues intriguing the dynamic capability debate: (1.) The role of the external environment; (2.) The role of internal agency; (3.) The underlying processes of change; and (4.) The importance of routines. Our analysis reveals a broad variety of distinct research paths and a confusing fragmentation of the research field. Furthermore, unsolved dilemmas in dynamizing organizational capabilities emerge. None of the suggested approaches designed to conceptualize dynamic capabilities seems capable of dynamizing the RBV substantially, while simultaneously preserving the original concept of an organizational capability. After all, a dynamic capability is supposed to be a capability. The last section of this paper therefore aims at reassessing the dynamic capabilities perspective and suggesting alternative approaches for dynamizing the resource-

Strategies and Drivers of Value Creation and Capture (session 881)

Strategic Product Variety Choice: Theory and Empirical Evidence

Author: **Ulrich Kaiser**; U. of Zurich

Author: **Markus Reisinger**; Frankfurt School of Finance & Management

The optimal number of products to offer consumers constitutes one of the core decision problems that firms face. In this paper, we provide a new model to investigate how firms choose their product variety in response to changes in market conditions, and empirically test the resulting predictions. While existing work on product portfolio size primarily focuses on consumer heterogeneity and entry deterrence, we consider the interaction between portfolio size and investment in customer satisfaction (e.g., through quality improvements) in an environment with imperfect competition. We show that the interaction between these decisions yields novel predictions of how market conditions shape a firm's product variety. Interestingly, we find that a higher customer profitability can lead to a reduced number of products, whereas an increase in the number of competitors or a larger share of loyal consumers might induce firms to expand their product variety. Several model extensions confirm the robustness of these results. We conduct an empirical analysis using data from the German magazine industry, which provides supportive evidence for our predictions.

Why Become an Entrepreneur and Why It Matters? Effects of Motives on Entrepreneurial Outcomes (session 892)

The papers included in this symposium aim to enrich and complement the growing literature on entrepreneurial motives from different theoretical and methodological perspectives. While all focus on understanding the links between motives and entrepreneurial outcomes, the papers apply behavioral, economic, social psychological, and cognitive lenses and use a variety of methods including qualitative, survey, linguistic, and experimental methods. Taken together, they offer evidence that the study of motives is important to enriching our understanding of several entrepreneurial processes, including employee entrepreneurship, serial entrepreneurship, business idea development, and financial and human resource acquisition. The goal of this symposium is to raise awareness and spark debate around the multiple ways in which motives matter to entrepreneurial outcomes.

Touched by Greatness: Symbolic Value Creation and the Market for Vintage Guitars

Author: **Chunhu Jeon**; Arizona State U.

Author: **Ion B. Vasi**; U. of Iowa

Value perception is a key notion in strategy scholars and practitioners as well, but existing research has paid less attention to how consumers socially construct market value of a product. Building on the consumer benefit experienced perspective, we examine how symbolic value—perception and consumption of highly-visible, prestigious consumers—is transmitted to general customers' value perception and is generalized across the market. Our preliminary analyses of the vintage guitar market between 1942 and 1988 demonstrate that consumption and authenticity perception of high-status musicians made critical impacts on market valuation of the products.

The Role of Third Parties in Value Creation and Capture: Why Michelin Stars May Not Be a Good Thing

Author: **Daniel Sands**; New York U.

This paper develops an extension of the value-based view of strategic management by incorporating third parties into value networks. The theoretical framework proposes ways in which third parties affect attention and bargaining in markets, and it highlights how third parties can promote and/or impede the creation and capture of value. Consequently, even favorable third party evaluations of a focal firm may hinder their ability to capture value. Michelin Guide's 2005 entry into the New York City restaurant market serves as the setting for examining these issues empirically. Statistical analyses indicate that restaurants receiving Michelin stars have increased likelihood of failure. A mixed-method approach, including interviews with Michelin started restaurateurs, is used to investigate mechanisms at the upstream, downstream, and organizational levels. The evidence suggests that changes in attention and bargaining at each of these levels makes it more difficult for the restaurant to capture value after receiving a Michelin star. However, the results also

Chatbots as Game Changers in Sales Management – An Analysis of the Acceptance to Use Chatbots

Author: **Tobias Heussler**; Professor of Sales Management

Chatbots enhance the efficiency of relevant customer touchpoints in terms of the customer experience and associated costs. Managers fear that they will require a high capital expenditure and result in low customer acceptance. However, research on the usage of chatbots has focused on technological aspects. By contrast, this paper contributes to a research stream that analyzes the acceptance of chatbots. According to the technology acceptance model (TAM), perceived usefulness and voluntariness of use have an impact on the intention to use chatbots. This research adds stress as an additional influencing factor in the TAM and examines the moderating role of stress on usefulness and voluntariness and their relationship on the intention to use chatbots. The results of an experiment demonstrate that managers need to consider impact of stress when employing chatbots for daily interactions with customers.

Perceived Performance as a Driver of Business Model Change: Explorative and Exploitative intentions

Author: **Oleksiy Osiyevskyy**; U. of Calgary
Author: **Dirk Libaers**; U. of South Florida
Author: **Marc H. Meyer**; Northeastern U.

Drawing on existing theories of managerial behavioral decision making within firms (behavioral theory of the firm and threat-rigidity), we investigate how managerial perception of relative firm performance influences the formation of intention to enact business model change. The developed theoretical framework distinguishes between intentions to incrementally improve the current business model along the established trajectory that provided past success (exploitative business model change) and bringing wholesale changes to the way value is created and monetized (explorative model change). The theoretical predictions of the study are empirically tested in the real estate brokerage industry during a time period of a major technological and regulatory change. We demonstrate that the strength of intention to enact explorative and exploitative business model change could be explained by different performance-related antecedents. Specifically, the relationship between a managerial perception of a firm's relative performance and intention to enact explorative business model change is inversely U-shaped. In the case of weak perceived firm performance on one hand ("we are too frightened to change our business model") and strong performance on the other ("we

The digitalization of the workplace appears to be both a curse and a blessing for organizations as the pervasiveness of digital technologies can have opposite effects on individual work performance. To be successful in the digital age, it is, therefore necessary for organizations to promote and exploit factors that enable digital work performance. However, empirical research on facilitators of digital work performance is scarce. We address this research gap by conceptualizing and testing a resource that enables employees to effectively perform in a digitalized work environment: digital fluency. Drawing on the ability-motivation-opportunity framework, we propose that employees' digital fluency, which consists of digital knowledge and digital self-efficacy, positively affects employees' digital work performance. We further argue that leaders' and coworkers' digital fluency moderates the relationship between employees' digital fluency and their digital work performance. We find support for the positive effect of employees' digital fluency on their digital work performance and the moderating effect of leaders' digital fluency in a multisource and time-lagged sample of 232 employees and 17 leaders from a medium-sized German technology company.

Job Composition and Digital Technologies: Its Effect on UK Firms in the Digital Era (WITHDRAWN)

Author: **Mabel Sanchez Barrioluengo**; Alliance Manchester Business School, U. of Manchester

This paper studies how the adoption of digital technologies has changed the occupational structure of UK firms. Drawing on an employer-employee panel survey between 2004 and 2011 in the UK, this study shows that the effect of the firms' routine exposure on labour markets varies when both the occupational mix and the adoption of digital technologies at firm-level are taken simultaneously into consideration. We conclude that the specialization in routine manual jobs without the appropriate technological adoption is not enough to generate positive effects of firms on labour markets, specifically in the manufacturing sector. However, routine cognitive jobs are a safe bet factor for firms even in the absence of digital technologies.

have no need to change our business model") we observe unwillingness to undertake explorative business model change. We also find that more incremental, exploitative business model changes are positively linearly related to relative business performance ("doing more of what we've been doing before"). Moreover, two salient factors from behavioral decision making theory (prior successful risk experience and financial slack) significantly moderate these relationships.

Optimal Profit Allocation and Leadership Assignment of Collaborative R&D in Supply Chain Networks

Author: **Changfeng Wang**; Zhejiang Normal U.

Author: **Wenbo Li**; Zhejiang Normal U.

Author: **Zongguo Ma**; Shandong Normal U.

The highly distributed and frequently changing resources, as well as the rising costs and uncertainties of developing and launching new products necessitate that firms collaborate in supply chain networks. However, management of new product development, especially the leadership assignment of the collaboration between firms, presents a new set of challenges in sharing the benefits of innovation. The present study conceptualizes and formulates a collaborative R&D project involving two supply chain firms with diverse R&D and leadership technologies and examines the optimal mechanism of profit allocation and leadership assignment that outweigh investigating them alone. These approaches are termed as the relative importance of each firm, the effectiveness of leadership technology, the degree of teamwork, and the R&D and leadership efforts and costs. These factors subtly interact with each other and jointly determine the optimal profit allocation and leadership assignment. The analysis shows that when leadership is technically impossible, the optimal profit allocation to each firm should be positively related to its relative importance in the expected returns function. In contrast, when leadership is technically possible, the optimal leadership assignment depends on the interactions between each firm's relative importance in the collaborative R&D project, leadership ability, and the

One Frame at a Time: The Dynamics of a Change Project, End-Users and Digitally Transformed NHS

Author: **Tabish Zaman**; Hull U. Business School

Author: **Anna Viragos**; U. of Leeds

Author: **Sotirios Zygiaris**; Prince Mohammad Bin Fahd U.

The importance of digitisation projects in the United Kingdom National Health Services (NHS) relates to altering the way patients engage with services and improving the overall efficiency and co-ordination of care. Although, both government and NHS have never failed to set high-level vision and goals when it comes to projects on digitising the NHS, the results have often been less positive. National Projects for Information Technology (NPfIT) being the case, which cost almost £13 billion to the UK taxpayers and as an institution, the NHS is still nursing the effect of an ambitious project gone astray. Failure or lack of desired outcomes is often measured in terms of economic values which in most cases takes away the focus from the difficulties of people who come through the process of change often bruised, disenchanted and de-motivated. As end-users, the doctors, nurses, and pharmacists experience the upheavals associated with the change project. Building on this, the paper is arguing for a multi-cognitive perspective on how change projects are framed and managed in the NHS. From a theoretical standpoint both planned and emergent approaches to change management have sought to shed the light on behavioural aspects of change, and to that we argue the need to integrate the ideas of change and project management.

To Outcomes and Beyond: Discursively Legitimizing Outcome-Based Business Model Development

Author: **Lauri Valtteri Korkeamäki**; U. of Vaasa

Author: **Marko Kohtamäki**; U. of Vaasa

In their quest to create economic and operational results to their customers by using outcome-based business models (OBM), solution providers engage in micro-processes of discursive legitimation. This study builds on the literature of OBMs and a discursive analysis of an in-depth single case study, by investigating how managers discursively legitimate the development of an OBM to provide even better outcomes for their customer. The present study contributes by finding four discursive legitimation strategies used to manage the development of an OBM: 1) trustification, 2) rationalization, 3) authorization, and 4) normalization. Additionally, the study contributes to the existing OBM literature by pinpointing the situated nature of the outcomes contracted for. For managers developing OBMs, the study offers a guideline to legitimate OBM development and an ecosystem template to initiate a search for further network-driven opportunities for co-creation.

Dominant Logic and Business Model Innovation: Resolving Cognitive Dissonance on the Component Level

Author: **Leandro Bitetti**; U. della Svizzera Italiana & SUPSI

Author: **Michael Gibbert**; U. della Svizzera Italiana

Dominant logic is generally seen as a cognitive barrier in the different steps of business model innovation processes. This particularly applies to

micro-firms, where the business owner espouses the dominant logic and at the same time plays a vital role in innovating and potentially changing it. We engaged in an action research with forty butcher's shops' owners to shed more light on the conflicts between dominant and emerging logics at every business model component (i.e. (1) value proposition, (2) value creation, (3) value network, (4) value delivery, and (5) value appropriation). Furthermore, these conflicts triggered a state of cognitive dissonance among dominant and emerging logics. To investigate how butcher's shops' owners restored equilibrium we subsequently conducted a multiple embedded case study, with four positive cases (i.e. innovative butchers), and four negative cases (i.e. non-innovative butchers). Positive cases resolved cognitive dissonance by embracing emerging logics through a set of consistent ideas supporting the emerging logic at all five business model components, assessing the limitation of the dominant logic at the value proposition, as well as on the value delivery levels. In contrast, negative cases resolved cognitive dissonance by adding elements sustaining the dominant logic at the value proposition, value creation, value delivery, and value capture levels, and by reducing the importance of factors supporting emerging logics at all five business model components. The present study contributes to the business model innovation literature, by pointing to the dual role of cognitive dissonance between dominant and emerging logics at the level of different business model components.

Author: **Dimo P. Ringov**; ESADE Business School

When are firms more likely to acquire, or be acquired, as a means of protecting the value of innovations? This paper examines how the fragmented ownership of intellectual property (IP) rights in an industry affects technology acquisitions. We theorize that the level of fragmentation has a curvilinear (inverted U-shape) effect on the rate at which firms engage in technology acquisitions, but that this relationship is weaker for firms that have a higher risk of being “fenced in” by owners of external IP rights. Firms with relatively more valuable IP rights are more likely to be acquired as fragmentation increases. Using a unique longitudinal dataset on the biopharmaceutical industry from 1986 to 2004, we test and find empirical support for our propositions.

Fast or Furious? Acquisition of Innovation on Product Recall in High- Technology Industries

Author: **Jongsoo Kim**; Hong Kong Baptist U.

Author: **Moonsik Shin**; Purdue U., West Lafayette

Author: **Joon Mahn Lee**; Korea U. Business School

Externally acquired new technology is an important resource in innovation and new product development in high-technology industries. Although the importance of balancing between external acquisition and internal development has been well documented, there has been little empirical research on the impact of an acquisition decision on new product development and its management. Are there any negative impacts of acquisitions made to obtain new innovative products from the external market? Do acquiring firms have thorough understandings of the technological features of the new products they acquire? Applying firm- and product-level analyses regarding acquisitions and product recalls in the U.S. medical device industry, we find evidence that a firm that engages in more acquisition activity experiences more product recall incidents but that the quality failure is more common when the acquiring firm is larger and when their investments

Author: **Fernando Suarez**; Northeastern U.

Platform-mediated industries have created large markets for complementor firms, resulting in vigorous intra-platform competition among them. On digital platforms, complementor competition tends to focus on products (end users often know the product name but not that of the complementor). Product strategy in platform complementor markets is therefore an important yet understudied topic. A key product strategy dimension is that of product complexity because adding features on digital platforms is facilitated by the intrinsic flexibility of software-based products and low appropriability regimes. Moreover, extant research suggests that product features are a major determinant of the level of demand for a complementor product. This paper addresses this research gap by exploring how product complexity affects the performance of digital platform complementors. We examine complementors’ performances from two perspectives, namely demand and operations, because it is the combination of the two that ultimately drives the impact on complementors’ performances. With regard to demand, we argue that product complexity has a positive association with perceived product quality, but an inverted U-shaped relationship with consumers’ product engagement. With regard to operations, we contend that product complexity increases the frequency of product maintenance while decreasing the speed of product adaptation to platform-wide changes. We test our hypotheses empirically in the context of a health and fitness application ecosystem in the Apple iOS App Store via a multi-method approach. We run panel data analyses on a manually collected dataset, supplemented with two online experiments to explore the underlying mechanisms behind our arguments, and to address endogeneity concerns.

Introduction of a New Technology and its Adoption by Competing Manufacturers

Author: **Fei Jing**; School of Management, Xi'an Jiaotong U.

Author: **Jun LIN**; School of Management, Xi'an Jiaotong U.

In a market with a technology provider and two competing manufacturers, we examine the technology introduction strategy of the provider and the technology adoption strategy of the manufacturers. For an underlying technology that improves the product quality in multiples, the provider sells the new technology to both manufacturers in case of small improvements, and sells to one of the manufacturers otherwise. Interestingly, the underlying technology provider's profit may decrease as the level of new technology improvement increases. For an independent technology that improves the quality additively, the provider always sells the new technology to one of the manufacturers. If the provider sells an underlying/independent technology to one manufacturer only, then it sells to the low-quality manufacturer for moderate level of new technology improvements. Otherwise, the high-quality manufacturer is preferred. Moreover, for each manufacturer, as long as quality of new product exceeds a critical threshold, they remove the old product from the market while introducing a new product adopting the new technology.

Firm Matching in the Market for Technology: Harnessing Creative Destruction

Author: **Pere Arque-Castells**; U. of Groningen

Extant research shows that attracting a higher number and variety of complements to the platform is related to platform's performance, as more users will be attracted to the platform. However, we do not know whether and how an increasing variety of complements affects individual performance of each complement. Our study addresses this issue in the context of peer-to-peer marketplaces. This type of two-sided platforms exhibits a high level of variety, as they rely on individuals (or providers) to bring their heterogeneous assets to customers. Using data of the monthly revenues of the total population of Airbnb listings in Spain during the period October 2014-October 2019-almost fourteen million observations, we analyze the effect of listings' variety on listings' revenues and the moderating role of the number of listings active on Airbnb. Our results show that there is an inverted U-shaped relationship between the listings' variety and the listings' monthly revenue. This relationship is accentuated when the platform's size is larger.

Platform Competition and User Generated Content: Evidence from Game Wikis

Author: **Johannes Loh**; LMU Munich

Author: **Tobias Kretschmer**; LMU Munich

Today, many platforms rely on contributions by users to create value. While they play an increasing role in today's digital economy, little is known about how dominant user-driven platforms emerge and what determines the quality and amount of the available content. We aim to extend our understanding of this phenomenon by studying the relationship between the level of competition and user activity. We argue that a platform's competitive position influences user behavior through two mechanisms: First, a more dominant position entails more favorable beliefs, leading to increased activity at the extensive margin, i.e. a higher number of users. Second, the level of competition affects the non-pecuniary benefits users can derive, impacting their activity at the intensive margin, i.e. how much and how frequently each contributes. We study these dynamics in the context of two competing game wiki platforms and exploit content updates as

Author: **Daniel F. Spulber**; Northwestern Kellogg School of Management

We develop and estimate a model of firm-to-firm matching in the market for technology between technology providers and adopters. The model provides a framework for identifying business stealing and business creation in the market for technology from the effect of technological proximity and market proximity on transaction outcomes. We create a dataset that tracks interactions in the market for technology across a broad range of exchange modes between publicly held US companies with at least one patent in the USPTO. Estimates of the matching equation imply that the probability of a match between firms is increasing with respect to technological and market proximity, and decreasing with respect to the interaction of the two. Combined with the identification framework, this sign combination implies that both business creation and business stealing exist. Our framework reveals substantial heterogeneity in the relevance of business stealing in transactions across industries, technological fields, firm size, time periods and modes of exchange. We offer recommendations for managers of companies that are either technology providers or adopters.

Building Strategic Advantages for Internationalization of Mobile Apps

Author: **Liang Chen**; U. of Melbourne

Author: **Noman Ahmed Shaheer Siddiqui**; U. of Sydney Business School

We extend current technology and innovation research in the burgeoning app economy by identifying novel positional advantages to accelerate app internationalization. While current research recommends traditional firms to build unique competitive positions based on low cost or differentiation, such strategic positions may not be relevant in an app economy where apps are usually offered for free through freemium models and even highly differentiated apps can be easily copied by imitators. We move beyond traditional strategic advantages to propose that app developers can build distinct positions for their apps by either building large user bases or delivering high user satisfaction. By tracking app internationalization across countries, we find that apps cultivating large user bases are generally slow in international penetrations but penetrate faster in countries characterized by higher network readiness. On the contrary, apps delivering high user satisfaction quickly penetrate new countries. Our study encourages researchers to advance current literature by incorporating the unique dimensions of the modern app economy while also helping app developers explore novel strategic choices to facilitate app internationalization.

Ecosystems: New Structures and Organizational Considerations (session 899)

Firms benefit by leveraging capabilities and complementarities of others, especially as they increasingly collaborate as conveners and members of business ecosystems. Scholars have used biological ecosystems as an analogy to explore interorganizational relationships for decades, yet the prevalence and increasing importance of business ecosystems across industries has sparked a burgeoning research focus in this area. In this panel symposium, we gather five scholars engaged in ecosystem-related research exploring new structures and organizational considerations from multiple disciplines and methodological domains. The five diverse yet related perspectives consider difficulties and opportunities presented by strategies where organizations interact in ecosystem structures. Though much is understood about ecosystem structures, a wealth of new research is uncovering new variants and introducing new debates that the panel will explore through a moderated, formal, interactive discussion. Discussion topics will include: 1) the nature of new ecosystem forms such as networks of ecosystems, 2) coordination structures in ecosystems, 3) international ecosystems, 4) learning to cooperate in ecosystem structures, and 4) the role of government in innovation ecosystems. By discussing these topics together (actively including symposium participants), we can examine these phenomena through an integrated approach and identify new directions for research.

On the Right Tract: How Location and Certification Affect Venture Performance in Distressed Areas

Author: **Amol M. Joshi**; Wake Forest U.

Author: **Lauren Lanahan**; U. of Oregon

Author: **Ouafaa Hmaddi**; U. of Oregon

Although one in six Americans lives in an economically distressed urban or rural area, little is known about the potential competitive advantages for small businesses located in these tracts. This is especially relevant for high-tech ventures that may be catalysts for community revitalization. We investigate how a high-tech venture's neighborhood level location and certification choices in economically distressed areas affect its contracting performance. Utilizing a unique nationwide sample of firms with place-based government procurement certification carefully matched to comparable uncertified firms, we conduct a counterfactual analysis. We find empirical evidence that place-based certification yields firms a 7.8 percent higher probability of securing contracts and \$192,000 in additional revenue. Certification enhances pricing power without reducing competitive intensity among suppliers. We discuss scholarly, managerial, and policy implications.

How Do Small Businesses Utilize Public R&D Funding to Grow? Evidence from the SBIR/STTR Program

Author: **Lauren Lanahan**; U. of Oregon

Author: **Amol M. Joshi**; Wake Forest U.

Author: **Evan Johnson**; U. of North Carolina, Chapel Hill

Public R&D provides a critical resource for ventures to innovate. However, scholars have not sufficiently investigated how these firms strategically manage

R&D between hiring internally or partnering externally as they pursue growth plans. We trace first-time U.S. Small Business Innovation Research and Small Business Technology Transfer (SBIR/STTR) recipients from the five leading federal mission agencies (2001 – 2015). We set up a research design that leverages exogenous variation in R&D using state SBIR/STTR matching programs. We find evidence that additional public R&D grants decrease, rather than increase, direct employment among small high-tech ventures. Our results indicate a strategic choice whereby ventures substitute away from direct hiring toward external partnering. These results highlight tensions for ventures as they balance competing expectations of public R&D programs to advance economic growth and stimulate innovation.

Designing Knowledge Ecosystems Through Social, Mental, Material, and Moral Ecologies

Author: **Susanne Ollila**; Chalmers U. of Technology

Author: **Anna Yström**; Linköping U.

Knowledge ecosystems, where universities, public research institutions, and for-profit firms collaborate to develop new knowledge in a pre-competitive setting, have become increasingly important to address complex, societal challenges requiring creating, combining, and recombining knowledge. Still, additional insights concerning the emergence and evolution of ecosystems are needed to understand if and how knowledge ecosystems can be designed. Based on a longitudinal study of a knowledge ecosystem, this paper explores how four ecologies; social, mental, material and moral, emerging from social interaction are influencing the emergence and evolution of the ecosystem. The findings enhance our understanding of the microfoundations of ecosystems, not only through in-depth knowledge about the dynamic and emergent organization of a knowledge ecosystem and the ecologies that constitute it, but also of the collaborative work that takes place to continuously regenerate it.

Exploration of the Self-Perceived University Spinoff Competence Types: Topic Modeling Application

Author: **Igors Skute**; U. of Twente

Author: **Isabella Hatak**; U. of St. Gallen

Author: **Kasia Zalewska-kurek**; U. of Twente

University spin-offs (USOs) have been the subject of considerable interest in the literature and practice. This stems from their importance in addressing entrepreneurial opportunities and enriching universities, the business landscape and societies. Nevertheless, an important issue remains and that is to understand the heterogeneity of USOs. In this article, we argue that an analysis of grant proposals using topic modeling can remedy this weakness for USOs, and how a focus on self-perceived competences brings into focus important development issues that are neglected in prior research. Employing established unsupervised machine learning technique on 108 USO grant proposals, we develop a typology of USOs based on their self-perceived first-order technological and second-order R&D competences, and their first-order customer and second-order marketing competences. Our analysis suggests eight types of USOs. The findings have a number of implications for research and practice, enabling to identify USO types and relate them to entrepreneurial processes and expected outcomes in academic entrepreneurship as well as supporting policy makers' target-oriented design of funding instruments for academic entrepreneurship.

Who Will Stay When Crisis Strikes? VC Projected Event Schemas on Ventures in Crisis

Author: **Miranda Welbourne Eleazar**; UT Dallas

Zhejiang U.

Author: **Can Huang**; Zhejiang U.

This study investigates the organizational antecedents of the exclusivity of university licenses. We specifically posit that university prestige affects both the university's ability to conduct nonexclusive licenses and the firm's incentives for obtaining an exclusive license, thus determines the exclusivity of university licenses by shaping the joint willingness of the university and the licensee firm to license exclusively. We also examine the moderating effects of prior collaboration and geographic proximity between the university and the licensee firm. A dataset of 6,657 licensed patents owned by 118 representative Chinese universities is used to test the hypotheses. It is found that an inverted U-shaped relationship exists between university prestige and the likelihood of occurrence of exclusive license. Patents owned by universities with a relatively moderate level of prestige are more likely to be licensed exclusively than those owned by universities with a relatively high or low level of prestige. Moreover, the moderating effect of prior collaboration is supported. The turning point of the inverted U-curve shifts rightwards when the university and licensee firm established a collaborative relationship before the license. Developing a balanced framework which considers both the supply side and demand side, this study provides a deeper understanding of the resolution of the exclusive provision of university licensing contracts.

Monopoly Spotting: The Management of Openness in University-Industry Research Collaborations

Author: **Haakon Thue Lie**; Norwegian U. of Science and Technology

Author: **Knut Jørgen Egelie**; NTNU

Author: **Roger Sørheim**; NTNU School of Entrepreneurship

Industry and universities engage in collaborative research often without a clear understanding of how open the research results should be. The contractual terms of the research project document agreed on openness. The terms also decide if access

Author: **Haemin Dennis Park**; U. of Texas at Dallas

We explore how organizational cognition based on knowledge structures or schemas determines how organizations respond to adverse events that they encounter in their partners. Specifically, we develop the concept of a projected event schema to study how organizations make decisions related to crises affecting their partners. We theorize that in order to make decisions as to a partner's crisis event, the focal organization will project its event schema onto the partner. That projected event schema includes the focal organization's general experience, specific experience with the partner, and experience with similar crises. We test this concept through a study of how venture capitalists (VCs) project their event schemas on entrepreneurial ventures experiencing a lawsuit in the VCs' decision whether to continue to invest in the ventures. The context is particularly relevant given the limited resources that entrepreneurial ventures have and the advice, legitimacy, and financial resources that VCs provide to those ventures, especially when the ventures face a crisis. In our empirical study incorporating 528 VC investment decisions, we find support for VCs' projected event schemas on ventures involved in lawsuits. Our work contributes to the literature on cognition, entrepreneurship, and crisis management.

Dispersion of Entrepreneurs' Power and Venture Performance After Initial VC Investment

Author: **Manuel Hess**; U. of St. Gallen

Author: **Charlotta Agneta Siren**; U. of Queensland

Author: **Joakim Wincent**; Luleå U. of Technology

Author: **Dietmar Grichnik**; U. of St. Gallen

Previous research has debated the consequences of venture capital (VC) entry into ventures. Building on the power literature, this study uses a two-stage model that, first, develops and tests how initial VC investment reduces entrepreneurs' power structures in new venture boards, and, second, explores how such power dispersion affects venture performance through the mediating role of financial slack resources. We develop the argument that financial slack is the core element indicating how

through licensing will be exclusive to a few, or available for the many in open innovation. However, collaborative research agreements are complicated with entangled terms. We applied a novel method for analysing such agreements on 484 publicly sponsored projects in different industries. Placing the projects in the method's two-by-two matrix, we found that around 20 per cent of the projects, across all industries, have agreements that allow knowledge monopolies to form. We find a positive association between the openness of the research results and the projects that are climate and transport-related. For organisations, research managers and policymakers, the method can be used on a single project or a portfolio of collaborative projects to better align with research policy.

May the Force Be with Them: Exploring Strategies to Overcome Challenges of Co-Created Citizen Science

Author: **Julia Suess-Reyes**; Ludwig Boltzmann Gesellschaft

Author: **Katie Hyslop**; Ludwig Boltzmann Gesellschaft

Author: **Susanne Beck**; Ludwig Boltzmann Gesellschaft & Copenhagen Business School

Author: **Marion Kristin Poetz**; Copenhagen Business School

Author: **Tanja Krasnikov**; Copenhagen Business School

Author: **Alissa Prinsloo**; Copenhagen Business School

Crowd and citizen science projects have been on the rise for more than 20 years, involving citizens in a diversity of scientific projects. While this seems to address the policy-makers' call for more public engagement, most citizens' contributions remain limited to low-complexity tasks with minimal decision rights such as data collection, processing or analysis (i.e., they are contributory). Collaborative and co-created projects that leverage citizens' knowledge at eye level, however, are in the minority, which might be related to specific challenges these projects face (e.g., higher coordination costs and task complexity). Hence, these projects require

entrepreneurs' resource discretion changes in VC-funded firms. Our results show that initial VC investment decreases entrepreneurs' discretion and their power over financial slack resources, which in turn has a negative effect on performance. Our analysis informs our understanding of how venture capitalists introduce governance mechanisms and how these mechanisms can have deleterious effects on venture performance. We discuss our contributions to the larger theoretical discussions about the effects of changing entrepreneurs' structural power and the determinantal implications of venture capitalists' standard governance mechanisms on venture performance.

How Institutional Logics Affect the Continuance of the Investor- Entrepreneur Relationship

Author: **Yingzhao Xiao**; Tianjin U.

Author: **Kevin Au**; Chinese U. of Hong Kong

How to ensure continuance of the investor-entrepreneur relationship in post-investment is of central interest for both academics and practitioners. To address this question, prior studies focus either on investors, leveraging instrumental mechanisms such as contracts to design their sequential investments, or on entrepreneurs, highlighting the importance of reducing their incentives to leave. These studies, however, have paid less attention to the dynamics of the investor-entrepreneur dual after the investment was made. Departing from existing studies and drawing upon the institutional logics perspective, this study offers an alternative framework of investor-entrepreneur relationship continuance. It suggests that similarity in institutional logics facilitates interactions between investors and entrepreneurs, and logic similarity can in turn influence their relationship development. Further, it posits that the interaction foundation provided by logic similarity is triggered by situated factors of investor's motivation and entrepreneur's expertise. Empirical analyses of 2,052 deals made by 1,032 investors in 382 portfolio firms during the period 2000-2018 in the high-tech industries in China provide general support for these arguments.

view paper (if available)

additional attention from project coordinators and citizens. This paper explores specific challenges to co-created citizen science projects and proposes facilitating strategies for overcoming them based on ten case studies across different scientific fields. Our findings are summarized in propositions and depicted in a conceptual model highlighting the significance of the citizen scientists' and project coordinators' skills and attitudes, project-related, as well as contextual factors for successful co-creation. The propositions present a roadmap for future empirical research on citizen science and hold meaningful practical implications for scholars and policy makers interested in exploring the role of citizen science beyond providing inputs to data collection and/or analysis.

The Effect of Public Knowledge Transfer Programs on Scientific Production

Author: **Paul Huenermund**; Maastricht U.

Author: **Cindy Lopes-Bento**; Maastricht U., School of Business & Economics

Author: **Maikel Pellens**; UGent

We quantify the impact of publicly funded science-industry co-development programs on the production of science. These programs encourage firms to co-develop innovation projects alongside scientists, combining attributes from competitive funding programs and science commercialisation programs. Whereas traditional commercialisation programs only require scientists to reallocate efforts after a discovery is made, these programs already require such shifts in the research stage. We investigate the impact of one such program, Eurostars, on the quantity, quality, and direction of the research performed by involved scientists. To identify the causal effect of being granted funding, we make use of external variation in funding decisions driven by restrictions in Eurostar's funding allocation rules. We find generally positive results. After receiving funding, scientists in the Eurostars programme produce similar amounts of scientific outputs, but at higher quality. Shifts in scientist's research topics, as documented by the introduction of new keywords and text-based similarity measures, remain small. These effects seem to be

Shaping the Future: The Impact of Executive Roles on Transforming (ICO) Funding Success into Growth

Author: **Vanessa Rexin**; WIN Lehrstuhl RWTH Aachen

Author: **Steffen Strese**; TU Dortmund U.

Author: **Malte Brettel**; RWTH Aachen U.

Getting the necessary funding for innovative business ideas is one of the biggest challenges for young companies (Gompers and Lerner 2004). The possibility of obtaining financing quickly and easily via ICOs has simplified this hurdle for many young companies, especially in the hype year 2017. Thus, the new main challenge for ICO ventures is grow after initial funding. This paper aims to provide a new method to evaluate early-stage ICO ventures after funding. Based on the core assumption of top management team (TMT) literature that the structural decision to have occupied a functional role in top management team influences organizational outcome (Hambrick and Cannella 2004; Nath and Mahajan 2011), this paper analyses the relation between functional roles and early-stage ICO venture growth. Thus, we contribute to limited research in ICO literature after funding success. Furthermore, we extent the TMT literature and organizational theory to the field of ICOs. Our results support the thesis that ICOs face different challenges after funding and thus require different functions and tasks. How is funding success related to the subsequent successful establishment and growth of a company? What role and functions are required to transform the initial capital into growth and thus provide a basis for the long-term success of blockchain-based new companies?

Estate Taxes and Business Transfers Across the Globe: A Configurational Analysis (WITHDRAWN)

Author: Maximilian Groh; PhD Candidate, U. of St. Gallen

Author: Christine Scheef; U. of St. Gallen

Author: Thomas Markus Zellweger; U. of St. Gallen

Estate taxes on business inheritance are regularly the subject of controversial debates in business, politics and economics. However, a holistic understanding and systematic analysis of what shapes cross-national differences in estate taxes is missing. Using data from 54 countries, we present a comprehensive configurational analysis of socio-economic determinants of estate taxes. We reveal six distinct configurations of country-level entrepreneurial activity, business ownership, wealth inequality as well as cultural orientation towards individualism and the long term, which explain the presence of high or low estate taxes, and theorize around the institutional principles upon which societies draw to justify these estate taxes. Our analysis also highlights the importance of treating low and high estate taxes as separate outcomes since, for example, a country's entrepreneurial activity is less relevant than business ownership in configurations for high estate taxes, while the opposite is true for configurations for low estate taxes. Our study contributes a more nuanced understanding of the drivers of international variation in estate taxes and the particular role of entrepreneurs and business owners therein.

Empirical Insights on Entrepreneurial Process (session 837)

Different Roads Lead to Rome: A Behavioral Analysis of New Venture Ideation Strategies

Author: Zorica Zagorac-Uremovic; Swiss Federal Institute of Technology Zurich, ETH

Behavioral research on the origins of new ventures —i.e. ideas or opportunities—predominantly focus on unique entrepreneurial attributes, such as specific cognitive and creative abilities, or unique cognitive processes, suggesting that there is one best way to derive at new venture ideas. Although some scholars have highlighted the notion that there are different ways to identify valuable new venture ideas, surprisingly little is known about the micro-foundations of different, potential new venture ideation strategies. This qualitative study investigates how thirty-two start-up founders have generated their new venture ideas. Comparison of the new venture ideation processes shows, first, that four different strategies of new venture ideation exist. These strategies are characterized by a specific set of cognitive-behavioral patterns that are rooted in different information interpretation and information transformation styles. Second, the findings suggest that these cognitive-behavioral patterns co-evolve with idea triggers; conjointly shaping differences in new venture ideation. Third, the four new venture ideation strategies appear to fit to specific types and qualities of ideas. Building on previous works, I develop a theoretical framework to characterize the four different ideation strategies and by that, expand current thinking on the micro-foundations of new venture

**State-Administered Prices and Innovation:
Evidence from the Wheelchair Industry**

Author: Kurian George; Syracuse U.

Integrating insights from the product life cycle literature with research on the influence of regulations on innovation, we explore the uncharacteristic innovative behavior that emerges in a mature industry in the presence of administered prices. We suggest that the resulting loss in price flexibility reduces the relative importance of process innovations vis-à-vis product innovations as a competitive strategy. Using data on the US wheelchair industry, we test and find some support for our argument. Our results also show that this shift towards product innovations penalizes otherwise highly innovative entrants more than incumbents. This is because administered prices are normally coupled with product specification guidelines that limit the opportunities to make radical product innovations, in which entrants have a competitive edge.

Poverty Reduction Versus Wealth Creation: Income Pyramid and Financial Rewards of Entrepreneurship

Designated as a "Best Paper" for ENT
Author: Yiyi Su; Tongji U.

Drawing upon the literature of entrepreneurship and poverty reduction, we investigate how entrepreneurs' financial rewards vary with their economic position in the four-tier income pyramid in China (namely, the abjectly poor, the relatively poor, the middle class and the top of pyramid). We propose that neither lower nor upper tiers of the income pyramid guarantee entrepreneurial financial returns: such effects are moderated by entrepreneur type and regional marketization. Data from 4,946 individual-year observations from nine provincial regions in rural China across six data collection waves show that, whereas opportunity-based entrepreneurship is more beneficial for individuals from the upper tiers of income pyramid, necessity-based entrepreneurship works for the relatively poor. For the entrepreneurs from the top

ideation, suggesting more appreciation for individual and situational variability.

Invisible Defense Mechanism: Qualitative Research on Strategy of Entrepreneurs Swimming with Sharks

Author: Sachiko Hata; Kyoto U.

Author: Yasuo Sugiyama; Kyoto U.

This research explores how entrepreneurs deploy defense mechanisms when facing the potential misappropriation of their own resources by established corporate partner "sharks." The prior literature has examined legal and timing defenses, along with social defenses that utilize the network structure of investment relationships with power imbalances between young firms and large corporations. By conducting qualitative analysis based on 41 semi-structured interviews with entrepreneurs' firms, broader and more detailed defense strategies were identified, including seven (invisible) defense mechanisms, such as "control of competitive state," "resolution of information asymmetry," "capability of idea execution," and "choice of composition," which were not immediately identifiable as defense mechanisms.

How Bricoleurs Go International: A European Study about the Moderating Role of Governmental Programs

Author: **Tobias Kollmann**; U. of Duisburg-Essen

Author: **Simon Hensellek**; U. of Duisburg-Essen

Author: **Philipp Benedikt Jung**; U. of Duisburg-Essen

Author: **Katharina De Cruppe**; U. of Duisburg-Essen

Author: **Karl Lucas Kleine-Stegemann**; U. of Duisburg-Essen

Research increasingly suggests that innovativeness and internationalization are two intertwined pathways to growth for entrepreneurial ventures. However, both ways are resource intensive and therefore challenging. This is why theory points to the emerging concept of entrepreneurial bricolage to explain how resourceful behaviour helps entrepreneurial ventures to thrive despite facing the challenges associated with growth. In another research stream, recent studies have investigated the effectiveness of governmental entrepreneurship support programs (GESPs) for growth. By using a unique dataset of 681 European entrepreneurial ventures, we emphasize a moderated-mediation model including entrepreneurial bricolage, product/service innovativeness, the degree of internationalization, and GESPs. Specifically, our results show that entrepreneurial bricolage is an important means for entrepreneurial ventures that are targeting foreign markets as it nurtures product/service innovativeness and thereby enhances a venture's degree of internationalization. Our findings emphasise that GESPs do not affect the link between bricolage and innovativeness but do influence how innovativeness translates into greater degrees of internationalization. Implications for both theory and practice are discussed.

Innovativeness and Legitimacy in Equity Crowdfunding

Designated as a "Best Paper" for ENT

Author: **Kazem Mochkabadi**; U. of Wuppertal - Schumpeter School of Business and Economics

Author: **Simon Kleinert**; Maastricht U., School of Business & Economics

Author: **Diemo Urbig**; Brandenburg Technical U. Cottbus

Author: **Christine Katharina Volkmann**; U. of Wuppertal

In this study, we examine the link between new venture innovativeness and legitimacy. While legitimacy research often assumes that all new ventures suffer in the same way from the liability of newness, entrepreneurial ventures may differ substantially in their degree of innovativeness, introducing either highly new or relying on established technologies. We argue that radically innovative new ventures face severe liability of newness and therefore are less successful when raising early stage equity financing. Further, we argue that this negative effect should turn positive if the new ventures are able to showcase legitimacy. An observational and a complementary experimental study support our arguments. Surprisingly, for non-innovative or incremental innovative ventures establishing legitimacy seems to provide little gains. Keywords: New ventures;

Entrepreneurship and Culture (session 840)

Beyond Cultural Values: Innovating Through Entrepreneurial Learning

Author: **Tianjiao Xia**; U. of East Anglia

Author: **Xiaohui Liu**; Loughborough U.

It is widely acknowledged that cultural values either discourage or encourage firm innovation. Although both are collective embodiments of individual values and assets, little is known about the individual level mechanisms through which cultural values have more influence on the likelihood to innovate of some firms than others. We argue that entrepreneurial learning acts as an entrepreneurial firms' strategy to respond to institutional pressures arising from cultural values and formal regulations to engage in innovation activities. Our multi-level analysis of entrepreneurs and their firms from 20 countries between 2006 and 2011 suggests that entrepreneurial learning capacity is an important strategy and serves as a mediator through which entrepreneurs maximize the innovation related benefits of cultural values to their firms. Our findings also suggest that formal regulations strengthen the mediating effect of entrepreneurial learning capacity.

Family Firm: Governance (session 839)

An Agency Theory Perspective of Active Versus Passive Family Involvement in Public Companies

Author: **Todd Alessandri**; Northeastern U.

Author: **Kimberly A. Eddleston**; Northeastern U.

Author: **Richard John Gentry**; U. of Mississippi

Author: **Clay Dibrell**; U. of Mississippi

Whether family involvement benefits or harms outside shareholders in publicly-traded firms continues to be debated. Recent research highlights the need to consider the different types of family involvement in understanding the nature of agency conflicts in family firms. In this research, we focus on the level of control over strategic and operational decisions as a driver of agency conflict. We suggest that active family involvement, which involves managing daily decision-making through family participation in top management positions, provides for greater potential agency conflicts, leading to a family firm discount. In contrast, passive family involvement through voting rights and monitoring from ownership and board membership will reduce potential agency conflicts, resulting in a family firm premium, due to greater alignment with outsider shareholders. Furthermore, we explore the moderating effects of industry munificence and strategic nonconformity with industry practices that may alter shareholder concerns of agency conflicts. We test our arguments on a sample of 318 publicly-traded family firms from the S&P 1500 over 15 years. We find that active family involvement through family TMT members is negatively associated with firm value. Passive family involvement is positively associated with firm value. Finally, we find partial support for the moderating effects of both industry munificence and strategic nonconformity. Our findings suggest support for family control over decision making as a driver of

Entrepreneurial activity varies substantially across countries. Although a large literature has argued that national entrepreneurial culture plays an important role in explaining the international variation in entrepreneurial activity, the existing empirical evidence is mixed and evidence for a causal effect of culture is lacking. We study the importance of culture for entrepreneurship by examining the self-employment choices of second-generation immigrants. We argue that entrepreneurship is influenced by deeply held intergenerationally transmitted values and that second-generation immigrants are more likely to become entrepreneurs if their parents stem from countries characterized by a strong entrepreneurial culture. Using a sample of 55030 second-generation immigrants from 40 countries of ancestry who were born in the United States, we find that entrepreneurial culture is transmitted intergenerationally and has a significant positive effect on the likelihood that individuals are entrepreneurs. Our results are robust to a number of alternative non-cultural explanations such as the potential relevance of differences in resource holdings, discrimination, and labor market frictions. Our analysis highlights the durability, portability, and intergenerational transmission of culture as well as the profound impact of culture on entrepreneurship.

Examining Family Firm Succession from a Cultural Perspective: A Literature Review

Author: **Sara Davis**; Mississippi State U.

Author: **James J Chrisman**; Mississippi State U.

A source of heterogeneity in the family firm is the cultural environment in which the business was founded and operates. Because significant differences exist between cultures, research findings cannot necessarily be generalized to all contexts. As such, culture is impacting theoretical and empirical research decisions. To gain an appreciation of culture's impact on the family firm succession process, a cultural framework is used to systematically review 82 empirical articles on family firm succession. The elements of the family firm succession process that vary or remain constant across cultures are identified and future research directions are presented.

For Better or for Worse: The Influence of Non-Family Blockholders and Directors on Strategic Change

Author: **Zied Guedri**; UQAM U. of Quebec in Montreal, Canada

Author: **Asma Fattoum**; John Molson School of Business, Concordia U.

Author: **Celina Smith**; EMLYON Business School

Drawing on the impact of a major economy-wide shock we investigate the influence of non-family blockholders and non-family directors on strategic change in family firms. To date, research has focused primarily on strategic change in family firms during stable economic conditions or when it has been induced by firm-specific or industry-specific factors. Using a sample of 203 French listed firms caught up in the 2008 – 2009 financial crisis, we

with social cognitive theory. Using a sample of 33 countries that result from matching GEM and GLOBE datasets and employing a multi-level model, this study examines the interaction of country-level culturally-endorsed leadership theories with individual socio-cognitive traits in explaining differences in the levels of opportunity entrepreneurship across countries. The findings suggest that societies that endorse both charismatic and self-protective leadership ideas are more likely to have higher levels of opportunity entrepreneurship. The results show that these two culturally-endorsed leadership ideals increase the level of new venture creation. However, the results also show that the endorsement of self-protective leadership does not increase or decrease the effect of socio-cognitive traits, while the endorsement of charismatic leadership increases the positive effect of self-efficacy on entrepreneurial action and increases the negative impact of the fear of failure. These new insights have relevant implications for both researchers and policy-makers.

Impact of Institutional Overlap on Family Firm Governance: An Institutional-Agency Perspective

Author: **Stone Han**; I-Shou U., Taiwan

Author: **Hsi Mei Chung**; I-Shou U., Taiwan

This study examines how institutional overlap of business and family influences the use of governance in family firms. Due to institutional overlap, family firms pursue business-centered economic (BCE) as well as family-centered noneconomic (FCNE) preferences. Drawing on actor-centered institutionalist framework and agency theory, we argue that owing to this overlap, formal family governance is needed to mitigate FCNE goal conflicts between family shareholders and family managers; and formal family governance and board of directors are complementary mechanisms. Based on a 26-country survey of 960 family firms, we find that the use of formal family governance is determined by the extent business decisions take FCNE goals into consideration, agency relations between family shareholders and family managers, and board characteristics (number and ratio of family board and board activeness). These findings lead us to conclude that formal family governance is actually a form of corporate governance mechanism. This study contributes to a social theory of agency and suggest a way for corporate governance literature to bridge macro vs. micro and economic vs. social divides.

ENT

Global 1 (session 838)**Early and Rapid Internationalization as Means of Entrepreneurial Experimentation and Learning**

Author: Hirokazu Kano; Oita U.

Early and rapidly internationalization is by nature a dynamic phenomenon. However, the extant literature on international entrepreneurship (IE) has less paid attention to the processual aspects of this phenomenon. In particular, little research has examined how early and rapidly internationalization is related to subsequent international expansion. We attempt to bridge this gap by drawing upon the judgment-based view of entrepreneurship. This paper proposes that early and rapidly internationalization can be understood as means of cross-border entrepreneurial experimentation and learning under genuine uncertainty. Through earlier initiation of commitments to foreign markets, entrepreneurs can quickly experiment with their judgments on novel cross-border combinations of resources and markets and thereby refine and extend their judgments along with the accumulation of experience, potentially facilitating subsequent expansion. We hypothesize that the choices of operation mode and foreign location have an effect on these entrepreneurial processes. The results of our longitudinal studies of 105 firms over an 18-year period (2000-2018) suggest that equity-based operation mode experience promotes the subsequent expansion of geographic scope rather than the extent of foreign operations. Furthermore, we found that experience in high-quality regulation host countries and host countries outside the home region positively moderate the relationship between experience and subsequent expansion.

Mental Health and Entrepreneurship 2 (session 845)**Fatal Attraction: A Meta-Analysis on the Dark Triad and Entrepreneurial Intention and Performance (WITHDRAWN)**

Author: Katie Ingram; Indiana U. - Kelley School of Business

Author: Jeffery S. McMullen; Indiana U., Bloomington

Author: Ernest O'Boyle; Indiana U.

Using meta-analytic techniques, relations among the Dark Triad of personality traits – Machiavellianism, narcissism, and psychopathy – and two entrepreneurial outcomes – intention and performance – are reviewed from 35 independent samples (N = 10,119). We find that Machiavellianism positively correlates with entrepreneurial intention ($rc = .17$) and negatively correlates with entrepreneurial performance ($rc = -0.22$), narcissism positively correlates with entrepreneurial intention ($rc = 0.21$) and entrepreneurial performance ($rc = 0.09$), and psychopathy positively correlates with entrepreneurial intention ($rc = 0.17$) and negatively correlates with entrepreneurial performance ($rc = -0.08$). Amid conflicting empirical results and theoretical viewpoints, we invoke the theory of planned behavior and Nietzsche's will to power philosophy to offer meaningful insights into how and why the Dark Triad of personality traits influences the initiation and performance of entrepreneurship.

Entrepreneurship tends to attract individuals who are dispositionally higher on dark personality

Decisions

Author: **Jiaju Yan**; Baylor U.

Author: **David W. Williams**; U. of Tennessee

Author: **Richard Hunt**; Virginia Tech

Uncertainty plays an essential role in both entrepreneurial and internationalization decision-making processes. International entrepreneurs often face greater levels and varieties of uncertainty when making foreign market entry decisions. Yet, existing Entrepreneurship and International Entrepreneurship (IE) literature lack theoretical explanations on the role of uncertainty in entrepreneurs' internationalization decision-making. Although both literatures treat uncertainty as precursor to entrepreneurial activities, in general they view uncertainty as the roadblock for substantial entrepreneurial commitment such as entrepreneurial internationalization. This does not adequately account for the fact that international entrepreneurs constantly face uncertainty and, thus, they often must embrace uncertainties rather than avoid or ignore them. By applying real options reasoning (ROR), we re-examine the role of uncertainty in entrepreneurs' internationalization decision making process and propose an uncertainty leveraging perspective. We employed a 2 by 2 randomized between and within-subjects mixed design experiment on a representative sample of 181 U.S. international entrepreneurs. The findings suggest that entrepreneurs mostly align their thinking with ROR to leverage changing level of uncertainty by strategically bundle level of investment commitment and local relations development. This work contributes to entrepreneurship literature on uncertainty, further unpacks the micro-foundations, and establish the boundary conditions of real options reasoning (ROR).

Understanding the Internationalization Process of Family Firms: A Multi-Case Study

Author: **Moritz Feninger**; Doctoral Candidate - WHU Otto Beisheim School of Management

Whereas family firm research is becoming increasingly mature, research on family firm

characteristics. However, existing studies have provided little insight into how dark personality characteristics manifest themselves in the entrepreneurial process. In this study, we investigate how entrepreneurs' dark triad—a composite of narcissism, Machiavellianism, and psychopathy—influences one of the first strategic choices in venture creation: what opportunity to pursue? We propose and find that in their decision making about pursuing a potential opportunity, entrepreneurs with higher levels of the dark triad place more emphasis on the financial gain and less emphasis on the environmental impact of a potential opportunity. Furthermore, we find that the negative relationship between entrepreneurs' dark triad and the emphasis on the environmental impact of a potential opportunity is mediated by a motive to extract value through venture creation.

The Role of Distinct ADHD Symptoms for Entrepreneurial Behavior

Author: **Jarno Stappers**; Ghent U.

Author: **Petra Andries**; Ghent U.

Recent academic work and popular press have been advocating that individuals with symptoms of Attention Deficit Hyperactivity Disorder (ADHD) may be particularly well equipped to conduct entrepreneurial activities. This study investigates the link between the two main symptoms of ADHD ? namely attention deficit and hyperactivity/impulsivity symptoms ? and entrepreneurial behavior. Integrating the person-environment fit literature and analysing a unique dataset of Flemish individuals, it demonstrates a positive link between hyperactivity/impulsivity symptoms and attention deficit symptoms on the one hand, and entrepreneurial intentions on the other hand. However, it also shows that, unlike hyperactivity/impulsivity symptoms, symptoms of inattentiveness hinder the transition of these intentions into actual entrepreneurial behavior. These results imply that the current discourse on ADHD in the entrepreneurship literature is overoptimistic and that a more careful interpretation is needed.

view paper (if available)

internationalization management processes and the influences of the family on their international orientation remains under-researched. This lack of research is surprising because insights on the international orientation and the behaviors of the family might help explain why some firms (operating in their global niche or not) follow international paths despite potential resource constraints, limited market knowledge, and an aversion to lose control over their firm. Therefore, we provide new insights on the internationalization of family firms based on a qualitative multi-case study. We find that despite the experienced market pressures to internationalize, a family's motivation, goals, and governance situationally deviates from the rather objective need to opt for a more global growth. First, the internationalization initiative undertaken follows a motivation resulting on emotions and a trust-based relationship with the respective responsible person that internationalizes, serving as the initiator. Second, the motivation to penetrate a new market resides on the pressures by loyal and long-standing customers. Third, the interviewed family firms all follow a product quality-based strategy, without including the market position within their goals. Thus, a firm with highest product quality standards seems to lead towards (niche) market leadership. Forth, despite the family firm constraints and limits, the firms do not possess a fully developed governance structure due to a lack of formulated quantitative and measurable goals.

Untangling the Nexus of International Entrepreneurial Orientation and SME International Performance

Author: **Alexis Catanzaro**; U. of Saint-Etienne
Author: **Waleed OMRI**; EDC Paris Business School, OCRE Laboratory, Courbevoie, France

This article extends knowledge of international entrepreneurial orientation (IEO) by examining IEO influence on of small- and medium- sized enterprises (SMEs). We enhance understanding of international performance of SMEs by taking into account the effect of IEO and each of its sub-dimensions, as well as the moderating role of the start of internationalization, i.e. early

Entrepreneurs' Mental Well-Being and Microfoundations of Ambidexterity in New Ventures

Author: **Davide Hahn**; U. of Bergamo

Author: **Tommaso Minola**; U. of Bergamo

Author: **Martina Battisti**; U. of Portsmouth

In this study, we investigate the individual origins of ambidexterity by focusing on how entrepreneurs' subjective vitality impacts on the new ventures' simultaneous engagement of both exploration and exploitation, and how this relationship is moderated by the context in which the entrepreneurs are embedded. To do so, we take advantage of a sample of 15,561 student entrepreneurs, defined as university students who run an entrepreneurial activity. Student entrepreneurs represent an appropriate setting for our study since they are socially embedded in two contexts, the family and the university, which offer resources and norms uniquely influencing entrepreneurial behaviors. Data are obtained from the GUESSS ('Global University Entrepreneurial Spirit Students' Survey') project. We find that subjective vitality is positively related to new ventures' ambidexterity and that such effect increases at higher levels of vitality. Moreover, at low levels of vitality, the positive association is amplified for student entrepreneurs whose parents are majority owners of a business; conversely, at high levels of vitality, the vitality-ambidexterity relationship is magnified by a favorable university climate towards entrepreneurship.

Opportunity Attitude: Moving Beyond Cognitive Evaluation of Entrepreneurial Opportunities

Author: **Binyam Zewde Alemayehu**; U. of Adelaide

Author: **Paul Steffens**; U. of Adelaide

Author: **Scott Gordon**; U. of Adelaide

Opportunity belief is a central concept in entrepreneurship, yet our understanding is incomplete due to the cognitive centric approach taken within the extant literature. We develop a new construct, opportunity attitude, which moves beyond cognition to include affect and conation. We present opportunity attitude as a dynamic, multicomponent construct that represents all the three aspects of mind. Thus, opportunity attitude is a congruence of opportunity evaluation across cognitive, affective and conative faculties. We claim that our conceptualisation provides a more complete account of the way in which entrepreneurs evaluate entrepreneurial opportunities and form an attitude towards entrepreneurial opportunities. We discuss how the components interact with each other in both the formation of and change in opportunity attitude over time. Mechanisms underlying these change processes are identified and discussed.

The Temporality of Opportunity Formation – The Role of Future Thinking

ENT

Serial Entrepreneurs, Portfolio Entrepreneurship, and Dynamics (session 843)

Portfolio Entrepreneurship: A Multilevel Review of the Literature

Author: **Tobias Kutzewski**; VU U. Amsterdam

Author: **Marc Bahlmann**; VU Amsterdam

Author: **Wouter Stam**; Vrije U. Amsterdam

The successful identification and exploitation of commercial activities in a market place is demanding and subject to several potential pitfalls. However, some entrepreneurs choose to do so effectively on even more than one premise simultaneously. Prior research found evidence that many entrepreneurs deploy portfolio activities (Westhead et al. 2003), and that new high-growth ventures frequently arise through portfolio activities of portfolio entrepreneurs (Rosa and Scott 1999a). Furthermore, those portfolio ventures are more likely than both nascent and serial entrepreneurs to report high levels of exporting activities (Robson et al. 2012a), and innovation (Robson et al. 2012b). As a consequence, we need to understand what enables portfolio entrepreneurship (henceforth PE) to succeed. The literature has shown that PE is characterized by unique challenges related to the founding, growth and management of multiple ventures simultaneously (Carter and Ram, 2003). Therefore, it is critical to integrate existing knowledge on these challenges and ways that PE reconcile these challenges. However, prior work has most often focused on contrasting PE with other

Author: **Gundula Lücke**; Uppsala U.

For almost two decades the concept of opportunity has been at the forefront of research on entrepreneurship and entrepreneurial processes. While a temporal orientation towards the future is innate to entrepreneurship as the realization of opportunities lies in the future, explicit consideration of the assumptions about the future and their implications on opportunity formation are underdeveloped. The purpose of this paper is, to place opportunities and their formation within a temporal framework and to explore the role of individual capacities for 'future thinking' for opportunity initiation and formation. We suggest that the existing insights into entrepreneurial processes of opportunity formation can be fruitfully complemented by considering the entrepreneur's mental activities of future thinking to balance the frequently past and present-oriented theoretical perspectives on opportunities with future-oriented processes. Specifically, drawing on the literature in management, philosophy, and cognitive- and neuroscience, we explore how different modes of future thinking facilitate the formation of discovered, created, or imagined opportunities and discuss the implications for the temporal understanding of opportunity initiation and formation processes such as their conception of the future and temporal flow.

Opportunity Evaluation Under Uncertainty: Psychological Capital as Impetus and Inertia

Author: **Chris Welter**; Miami U. Ohio
Author: **Alex Scrimshire**; Xavier U.

This paper aims to describe why entrepreneurs choose to act, and continue to do so, given the lack of information in uncertain contexts. We incorporate the concept of psychological capital to explain why entrepreneurs positively evaluate opportunities in both risky and uncertain contexts. Further, we describe how psychological capital can act as a double-edged sword by motivating initial actions and creating inertia toward an uncertain future. However, we posit that perspective-taking can act as a brake on that inertia enabling entrepreneurs to incorporate feedback from customers. We

forms of entrepreneurship (Westhead et al. 2003). What we need is a dedicated review of the PE field that provides an understanding of antecedents, mechanisms and outcomes across the multiple levels within portfolio entrepreneurship.

Sensation-Seeking and Workaholism: Implications for Serial Entrepreneurship

Designated as a "Best Paper" for ENT
Author: **Sharon Simmons**; U. of the Virgin Islands
Author: **Jon C. Carr**; North Carolina State U.
Author: **Dan K. Hsu**; North Dakota State U.

Some entrepreneurs are sensation seekers who get pleasure from their engagement of entrepreneurial activities. Other entrepreneurs are workaholics who are motivated to finish what they start but have low work enjoyment. Recent studies theorize that both groups may engage in excessive or compulsive entrepreneurial activities, irrespective of their prior performance or the success or failure feedback. This paper provides the first empirical tests of the direct effects of sensation seeking and workaholism and the moderating effects of performance feedback on serial entrepreneurship intentions. We conduct two studies. Study 1 is a randomized virtual experiment that uses a sample of 161 university students. Study 2 is a survey of 189 former entrepreneurs, who had sold, shut down, or discontinued a prior business. We found that sensation-seeking and workaholism positively predicts serial entrepreneurship intentions, independently of prior business performance. Additionally, the effects of sensation-seeking and workaholism were stronger for entrepreneurs with negative prior performance. Our study provides new insights into the neurological and psychological diversity of entrepreneurs and the implications for serial entrepreneurship.

ASYNCHRONOUS

PAPER SESSION

Author: **Frederic Delmar**; EMLYON Business School

We argue that the matching model, which suggests individuals self-select themselves into a career in which they have relative advantages, may explain serial entrepreneurship. To test this theoretical argument, we propose to investigate the qualitative differences of prior entrepreneurial experience. In particular, we believe that prior entrepreneurial experience can be decomposed into three dimensions: (1) venture success experience (i.e., the extent to which an individuals' previous venture was financially successful), (2) venture managerial experience (i.e., managerial expertise individuals have developed through leadership experience in their previous entrepreneurial spell) and (3) venture industry experience (i.e., venture industry expertise individuals have developed specific to the target industry in their previous entrepreneurial spell). While some experience dimensions are more transferrable to wage employment (i.e., venture industry experience), leading to higher financial payoffs, some are more specific and useful in entrepreneurship (i.e., venture success experience and venture managerial experience). Individuals with more transferable experience may prefer to become wage-employed, but those with more specific experience may self-select to return to entrepreneurship. Testing from the sample of 16,888 entrepreneurs who were at risk of making a career choice between serial entrepreneurship or wage employment partially confirms this conjecture. Our study then provides a fine-grained view for the motivation of serial entrepreneurship.

Ethical Leadership and Ambidexterity in New Ventures: Examining the CEO-TMT Interface

Author: **Yan Ling**; Oakland U.

Author: **Michelle Hammond**; Oakland U.

Author: **Liqun Wei**; Hong Kong Baptist U.

To enrich the knowledge of CEO ethical leadership and its influence on firm-level outcomes, we take technology-based new ventures as the research context and theorize through the lens of CEO-TMT interface whether and how founder-CEOs' ethical leadership influences new ventures' ambidexterity. We argue that founder-CEOs' ethical leadership can enhance new ventures' ambidexterity through promoting new venture team members' advice-seeking behavior and team satisfaction. Data from a multi-source and time-lagged survey of founder-CEOs and new venture team members in 81 technology-based new ventures supported our predictions. We discuss the theoretical and practical implications of our study to the extant research.

reconcile two seminal economic theories of entrepreneurship: the static Lucas (1978) model, which predicts that the share of entrepreneurs in an economy depends on the distribution of entrepreneurial ability in the labor force, and the dynamic Jovanovic (1982) model, which predicts that over time, efficient firms grow and survive whereas inefficient firms decline and fail. We reconcile these two theories by relaxing some of the assumptions of the Lucas (1978) model, and assuming sequential stages of the entrepreneurial process. Our theory development leads to a number of hypotheses which we empirically test and confirm using a multi-country data base. We are thus able to reconcile both theories which greatly improves our understanding of how entrepreneurial economies function.

Women's Entrepreneurship and the United Nations Sustainable Development Goals (session 847)

Entrepreneurship is applauded globally by governments and international agencies including the United Nations (UN) as a potential solution for a multitude of global challenges addressed within the UN's 17 sustainable development goals (SDGs). Entrepreneurship is upheld as a significant pathway for reducing unemployment and achieving sustainable development and prosperity, and is seen as a potential transformational driver of achieving the SDGs crafted by the UN in 2015, and envisioned to be achieved by 2030. However, their achievement remains a rocky road where most goals will not be met by the 2030 deadline. Largely ignored by policy makers, women's entrepreneurship can be a means to maximizing and accelerating the achievement of the UN SDGs to benefit individual entrepreneurs and their communities. The proposed panel symposium brings together engaged leading scholars focusing upon women's entrepreneurship from diverse perspectives and contexts, to discuss how women's

Connecting Uncertainty, Hybrid Entrepreneurship, and Performance Through Real Options Reasoning

Author: **Lauren Atkinson Zettel**; U. of Louisville

Author: **Mikael Samuelsson**; U. of Cape Town
Graduate School of Business

Author: **James Fiet**; U. of Louisville

Recent theoretical work has suggested that hybrid entrepreneurship may be an effective strategy for managing uncertainty because it embodies the use of real options reasoning. This research project utilizes principles of real options reasoning to develop and test hypotheses related to the antecedents and outcomes of hybrid entrepreneurship. As evidenced by the curvilinear relationship between uncertainty and the likelihood of hybrid entry into entrepreneurship, our results show that entrepreneurs appear to employ some form of real options logic in decision-making, as it relates to managing uncertainty. Furthermore, although those who start as hybrid entrepreneurs maintain involvement with their ventures longer than do those who enter self-employment on a full-time basis, the sales of the ventures of hybrid entrepreneurs grow more slowly. Perhaps the primary insight is that the use of real options logic under conditions of uncertainty necessitates adopting a long-term perspective by entrepreneurs, policy-makers, and potential resource providers. Aligning the perspectives of these three groups may help hybrid entrepreneurs to be more successful over time.

While taking the knowledge-based view of the firm (KBV) as the theoretical background, this study examines the way two intellectual capital dimensions (entrepreneurial capital and external relational capital) interact with two knowledge management processes, namely knowledge sharing and absorptive capacity, leading to organizational performance. With the purpose of enriching the robustness of conclusions and contributions, we applied a mixed methods approach by using sequentially a quantitative method (PLS-SEM) and a qualitative method (fsQCA). Additionally we used data from SMEs in two different countries, an emergent country and a Western Europe country, Brazil and Portugal, respectively. The study uses a sample of 314 SMEs. The results show that both dimensions of intellectual capital are interrelated with knowledge sharing and absorptive capacity. Furthermore, there is evidence of a positive relationship between knowledge sharing and absorptive capacity. Coherent results between the qualitative and quantitative approaches identify entrepreneurial posture and absorptive capacity as antecedents of organizational performance. Despite the environmental differences between the SMEs of each country, there are similar results regarding the net effects and main determinants of organizational performance. Such findings suggest a uniform phenomenon across the two countries.

Author: **Weize Huang**; School of management, Zhejiang U.

Author: **Yongyue Wang**; Zhejiang GongShang U.

Author: **Jiangpei Xie**; Zhejiang GongShang U.

Author: **Yanghua Jin**; Zhejiang GongShang U.

Over the last decade, employee entrepreneurship has been an emerging area of investigation within the strategic management literature. However, due

to the long fragmentation of the literature on strategic human resource management and entrepreneurship, no coherent theoretical framework has been developed to help us fully understand how an employee in an established organization progresses towards starting a new venture. Drawing on the knowledge spillover theory of entrepreneurship, this study addresses this research gap by investigating whether, how and when perceived investment in employee development is associated with employee entrepreneurship. The findings of two empirical studies reveal that perceived investment in employee development has a positive impact on employee entrepreneurship through the mechanism of employee creativity, and these relationships are regulated by perceptions of the institutional environment for entrepreneurship and the corporate entrepreneurial environment as well as the interaction between the institutional environment for entrepreneurship and the corporate entrepreneurial environment. In doing so, this study suggests a departure from the traditional mindset implied in prior human resource management practices-employee turnover literature and affords new and refined insights on the antecedents of employee entrepreneurship.

Founder Gender and Investor Pitch Assessments: An fMRI Multivariate Pattern Analysis Investigation (WITHDRAWN)

Author: **Sebastiano Massaro**; Surrey Business School

Author: **Will Drover**; U. of Oklahoma

Author: **Moran Cerf**; Northwestern U.

We extend recent conversations on gender differences in entrepreneurship by examining investors' neural responses to pitches made by male versus female founders. We conduct an experiment that assigns a series of male and female entrepreneur pitches to prospective investors, while undergoing functional magnetic resonance imaging (fMRI) scanning to investigate differential neural activations. We find that investor's neural activity in the left posterior temporal fusiform cortex is significantly enhanced when presented with pitches from male versus female entrepreneurs. Moreover, using machine learning methods we can reliably decode the gender of the entrepreneur from both multivariate neural activation patterns of investors (71% accuracy) and investing interest (86% accuracy), thereby exposing a possible association between neural mechanisms and behavioral attitudes towards male entrepreneurs. Collectively, this paper is one of the first-known investigations that experimentally advances the neuroscience research agenda in entrepreneurship, uses multivariate pattern analysis as methodology, and sheds new light on the neural-based underpinnings of differential gender evaluations in entrepreneurship.

The Power of Expressed Humility: Investors' Reaction to Humble Entrepreneurs

Designated as a "Best Paper" for ENT

Author: **Laurent Vilanova**; U. Lyon 2 (Coactis)

Author: **Ivana Vitanova**; U. Lyon 2 (Coactis)

We propose a randomized experiment examining how an entrepreneur's expressed humility affects venture capitalists' willingness to support the venture. While high humility is often associated with effective leadership and constructive behavior, it may also inhibit entrepreneurial action and generative behavior. Our findings show that early-stage investors perceive that humble entrepreneurs have higher constructive qualities and are more compatible with investors than non-humble entrepreneurs. Expressed humility has an overall positive effect on investors' evaluations of the venture's likelihood of success and their willingness to support the venture. This study extends knowledge on which aspects of entrepreneurial personality favor resource acquisition in early-stage ventures and contributes to the growing literature on the role of leaders' humility in the formation of firm performance.

Investor Personality and Success in Venture Capital

Author: **Silja Spreng**; Technical U. of Munich

Author: **Reiner Braun**; Technical U. of Munich

Author: **Andranik Tumasjan**; Johannes Gutenberg-U. Mainz

Our study introduces venture capital (VC) investors' personality as a new perspective on investment performance. We assemble a sample of 911 VC investors with 8,258 investments and apply novel text analysis methods to assess investors' personality traits based on their Tweets. Drawing on interactionist perspectives of the personality– performance relationship, we develop and empirically test theory on the impact of VC investors' personality traits on investment success. We find that extraversion relates positively, while agreeableness and conscientiousness relate negatively, to the likelihood of a successful exit. By disentangling treatment and selection effects, we find that personality is primarily related to investors' ability to create more value for the venture post-investment rather than select higher quality ventures ex-ante.

Angels in the Crowd: The Role of Social Homophily and Peer Influence in Angel Investment

Author: **Fei Qin**; School of Management, U. of Bath

Author: **Tomasz Marek Mickiewicz**; Aston Business School

Author: **Saul Estrin**; London School of Economics

Business angels are financial providers, investing their own money into high-risk entrepreneurial assets, with a different set of motivations (more intrinsically motivated) and behaviours (more actively involved) from institutional investors. We offer a conceptualization of business angels as entrepreneurial decision-makers; individuals, whose actions are socially embedded. We investigate how the choice to engage as a business angel is affected by individual experience, the corresponding social experience of peer groups, and the interplay of the two. We test a multi-level model using a large dataset containing 1,287,997 individuals across 92 countries and 15 years. Our analysis reveals that meso-level peer influence has a significant effect on the likelihood that an individual becomes a business angel. It also acts to compensate for lack of individual entrepreneurial experience.

Nevertheless She Persisted (session 264)

Women academics face challenging circumstances in their professional lives. Relative to their male colleagues, they can expect longer review times (Hengel, 2016), less credit for their research contributions when working in a team (Sarsons, 2017), biased evaluations of their teaching from students (Mengel, et al., 2017, Boring, et al., 2016), and cultures that are more likely to frame men through a professional lens and women through personal and physical lenses (Wu, 2017; Wolfers, 2017; Rivera, 2017). In the face of this rough terrain facing women in academia, it can be easy to lose sight of the institutionalized barriers to success as a woman academic and personalize negative experiences. Through this PDW, we offer a three- pronged approach to helping women academics and allies broaden their sight to develop and grow a feeling of community, support, and self- efficacy. This approach has proven effective in overcoming barriers that prevent clear understanding of bias in business schools: barriers of isolation, ignorance, shame, and silence. This PDW builds off the success of the past two years of “Nevertheless She Persisted” PDWs to bring focus on how we may broaden our sights to better meet the needs of women in the Academy.

Artificial Intelligence and Innovation Ethics (session 271)

This symposium examines key questions posed by teaching ethics to artificial intelligence for business settings. A general question is how to balance the benefits and risks of AI, which is a significant concern with technological change. That concern is made more severe by the large-scale implications of AI on human life, including our understanding of what it is to be a human being and what entities can be properly treated as right holders. More specifically, several topics arise in the intersection of AI and Ethics that this panel will address. Fairness in the use of AI for business: When AI is used at a large scale for business, there is always a concern that it may also lead to drastic and large scale discrimination against some groups of people. For example, deep-learning systems may deny mortgage loans to members of certain groups when others with comparable financial resources receive loans, and this may occur even if none of the training data indicate group membership. It is thus crucial to design tools that can monitor the AI's performance to continuously test for bias. A second crucial goal is to design methods to mitigate any such biases to the maximum extent possible. This research direction will involve both making fundamental contributions to AI and statistics in terms of developing these tools, and impactful use in business in many applications. A large ethics literature has carefully analyzed concepts of fairness, and this body of thought can be applied to AI. Many statistical measures of bias have been proposed, some of which are inconsistent with others. An ethical analysis can help evaluate whether measures have normative justification. Ethically grounded value alignment: Deep learning systems are frequently designed to reflect human values so as to avoid recommending decisions inconsistent with these values. Values are typically ascertained, however, in the much the same empirical way as facts and predictions - in this case, by analyzing large datasets that reflect human beliefs and preferences. Yet the AI community is

coming to realize that a purely empirical approach can reflect biases and prejudices as well as acceptable moral values. There is no substitute for grounding value alignment in ethical principles that are independently derived, a manoeuvre that avoids the philosophically famous “naturalistic fallacy” of deriving ethical conclusions from purely factual premises. The deontological tradition in ethics provides the intellectual resources to develop rigorously defined and grounded principles that can be used to screen training sets or otherwise direct learning procedures. Human-Centered Explainable AI (XAI): Many industry experts have pointed out the critical need for human oriented explanation by AI systems. According to an IBM survey, about 60% of 5,000 executives were concerned “about being able to explain how AI is using data and making decisions.” However, the most successful algorithms in use today are not transparent. All of these models are fundamentally “black boxes” that include many layers of complex, typically nonlinear, transformations of inputs. It can be quite difficult for anyone to understand the algorithm’s output and/or why the model makes key predictions. Given these challenges, efforts to develop more interpretable, explainable, or intelligible algorithms comprise a key area of current research. The explainability of an algorithm plays a key role in detecting, enabling, and improving auditability, fairness, trust, and reliability. However, the definition of interpretability and desiderata of what makes a good explanation remain elusive and different researchers use different, often problem- or domain-specific, definitions. More alarmingly, this XAI research rarely involves systematic investigation of human responses with regard to a “What is a good explanation for machine learning output?” AI generates a variety of ethical questions at three interconnected levels. The first is the legal dimension: what laws should be enacted to govern AI? Should some particular aspect of AI be subject to legal regulation at all? Do we need to fashion specific legislation to address AI issues or rely on more general legal standards? The second is the social dimension, which raises questions about the social morality that should be cultivated concerning AI. What sort of culture will develop in response to AI? A third level is concerned with issues that arise for individuals and associations in their engagement with AI. That connects with corporations and

associations, which still need to exercise their own moral judgment.

Dark Side Case Competition (session 266)

The session brings together four teaching cases for our traditional Dark Side Case competition, as well as one article dealing with organizational malfeasance that open various forms of engaging with the organizational Dark Side.

Dark Side Case: Elizabeth Holmes and the Rise and Fall of Theranos Inc.

Author: **Debapratim Purkayastha**; ICFAI Business School, IFHE, Hyderabad

Author: **Sanjib Dutta**; ICFAI Business School, IFHE, Hyderabad

Author: **Shubhanjali Chakravarty**; ICFAI Business School, Hyderabad

The case narrates the rise and fall of Theranos Inc. (Theranos), a US-based healthcare startup, founded by in 2003 by a 19-year-old Stanford dropout – Elizabeth Anne Holmes (Holmes). The company promised blood testing for medical investigations using just a finger prick of blood, making blood testing more accessible, affordable, and less painful. By 2014, Theranos was being regarded as a revolutionary healthcare unicorn of Silicon Valley, and enjoyed a market valuation of US\$9 billion. Holmes too attained a near iconic status, as she was widely feted as a woman leader and the youngest self-made female billionaire. This was before whistleblowers inside the company revealed alleged unethical and deceptive practices at Theranos. Holmes was accused of lying and faking test results as well as falsifying financials of the company. Faced with increased scrutiny from media and regulators, and lawsuits from investors, business partners and customers, Theranos became defunct in September 2018. Analysts wondered how Holmes had been able to pull off such a massive deception for more than ten years. It also raised critical questions: Is it a necessity for entrepreneurs to lie or stretch or twist the truth to gain legitimacy in order to acquire resources needed for firm survival and growth? Should startups be held to the same standards as we now hold the most mature public companies? Do

ODC

Looking at Change Through Work Studies (session 269)**Maze, Cloister, Silo, or Showcase? The Role of Collaborative Spaces in Collaborative Innovation (WITHDRAWN)**

Author: **Carlotta Cochis**; U. of Modena and Reggio Emilia

Author: **Paula Ungureanu**; U. of Modena and Reggio Emilia

Author: **Fabiola Bertolotti**; U. of Modena and Reggio Emilia

Author: **Elisa Mattarelli**; San Jose State U.

Author: **Anna Chiara Scapolan**; Dep. of Communication and Economics, U. of Modena and Reggio Emilia

Using the lens of boundary work, this study investigates the role of collaborative spaces as organizational support for two types of innovation: internal innovation through cross-functional teams and open innovation with external stakeholders. While innovation literatures have adopted a configurational approach to explain when participants' diversity of backgrounds and interests benefits or damages innovation outcomes, little is known about how differences are overcome to achieve collaboration for innovation. Moreover, since literatures on internal and external innovation have remained separate, we know little about the mechanisms and support tools that allow organizations to pursue both simultaneously. We conducted a qualitative study in an organization that set up a collaborative space for collaborative product development. Our findings describe collaborative spaces as tools for multiplex (i.e., simultaneous internal and external boundary management) in collaborative innovation-projects and highlight how expectations and experiences about such tools shape employees' ability to perform multiplex boundary work. We document an affording role of the collaborative space for expectations about hands-on collaborative innovation (i.e., laboratory), but also a set of collaboration constraints generated by discrepancies between expectations and actual

the alleged lies and actions by Holmes even qualify as legitimacy lie as she and her close confidante Ramesh Balwani have been indicted for “massive fraud”?

Dark Side Case: The Derailment - A Role-Playing Case of On- and Off- Duty Conduct(or)

Author: **Jim Grant**; Acadia U.

Stephanie Katelnikoff was conductor of a CP Rail freight train loaded with lentils and fly ash when it derailed. Less than one month later, she was terminated for breach of policy on reporting injuries related to the derailment and for talking to a reporter about the derailment. She was reinstated with back pay by an arbitrator only to be terminated again less than two years later. Her employer argued the dismissal was based on comments made about CP and photos on company property, both posted to social media. The case – which is disguised – and associated notes consider employment relations, human resource management, and gender issues in managing performance, misconduct, and discipline in a male-dominated workplace. The case can be used as a problem and decision-oriented role-playing exercise, a pair of linked decisions in which students must defend what they would do: dismiss, discipline, or nothing at all. The case can also be used to examine issues such as discrimination and gender from an evaluative perspective. It examines the workplace critically, as a site of inequality and gender discrimination, as well as of oppression and harassment. Students should find this case challenging in that making decisions and recommendations require them to balance the employer’s prerogative to determine the composition of its workforce with the creation of gender-inclusive workplaces and worker rights. This case is suitable for undergraduate, graduate, and executive education in employment relations, human resource management, business ethics, gender and diversity studies, and organizational behaviour.

Legitimacy Work in Organizations: Securing the Existence of a Novel Change Agency Unit

Winner of ODC Division Rupert F. Chisholm Best Theory-to-Practice Paper

Designated as a “Best Paper” for ODC

Author: **Alaric Bourgoin**; HEC Montreal

Author: **Alexis Laszczuk**; ESSCA School of Management

Author: **Ann Langley**; HEC Montreal

We report the results of a longitudinal case study depicting how a novel change agency unit justifies its existence in the politically adverse context of a major French administration. We explore how and with what effects this new unit engages in “legitimacy work” to establish its mission and secure its survival within the organization. Adopting a dynamic perspective focusing on how actions of legitimacy seekers and judgements of legitimacy granters play out over time, we offer a cyclical process model of legitimacy work. We identify a set of seven legitimacy work practices that the new unit engages in according to its interpretations of the challenges it faces. Our study develops insight on the legitimation process of an internal change agency unit by highlighting three “paradoxes of legitimacy work”: the self-promotion paradox, the outside-out paradox and the appropriation paradox.

Developing Work Passion Through the Culture of Play: Ethnographic Exploration

Author: **Ivana Milosevic**; College of Charleston

Author: **Karen Landay**; U. of Missouri - Kansas City

Performing one’s work with passion is challenging but a rewarding experience. How organizations may create contexts for development of work passion is, however, insufficiently understood. We conducted ethnography to understand how work passion emerges through the culture of play. Our findings

Dark Side Case: "Makeup Naive?"

Dark Side Case Award is sponsored by Sobey School of business

Author: **Caterina Bettin**; Saint Mary's U., Canada

Author: **Jean Helms Mills**; Saint Mary's U., Canada/
U. of Jyväskylä, Finland

The case is written from the perspective of a 16-year-old white middle class girl living in North America that makes makeup and, more broadly, the belonging to the online beauty community the centre of her meaning and identity construction. The trope of the teenage girl having strong conflicts with her mother is used throughout the case as a narrative device to present a series of ethically questionable practices relative to the beauty industry and to its increasing leaning on social media influencers or "beauty gurus" as means to create never-ending consumption needs. Broadly, the case surfaces questions of ethics in the marketplace and of the relationship between consumerism, ethics and identity works. More specifically, the case offers the possibility to discuss ethical topics such as the use of questionable promotional techniques (eg. deception, lack of transparency, exploitation of parasocial relationships, promotion targeted to teenagers etc.), the environmental impact of beauty products, consumerism, consumer sovereignty, ethical problems in the supply chain, power relationships between influencers and followers and power relationships between the beauty industry and influencers.

Tapping on the Rumor Mill: Rumor and Gossip as a Resource in Post-Merger Integration

Author: **Kenneth Lim**; U. of Edinburgh

Author: **Thomas Stephen Calvard**; U. of Edinburgh

Author: **Ishbel McWha-Hermann**; U. of Edinburgh

Extant literature has portrayed a negative image of rumor and gossip. Particularly in situations of radical organizational change, such as Mergers and Acquisitions (M&As), rumor and gossip are often considered undesirable byproducts of organizations that ought to be systematically overcome. Despite recent calls from scholars to place more emphasis on the positive characteristics of rumor and gossip, these aspects have remained underdeveloped. This paper explores how rumors and gossip following a merger can be viewed as a resource affecting employees' reactions to and understanding of organizational change. We draw on the literature of mergers and acquisitions, organizational change and communication to analyze an in-depth case study of a recent merger between two professional services organizations in the United Kingdom. Through 27 interviews with affected employees, we examine how rumor and gossip help employees better deal with and respond to the uncertainty created by the merger. Our findings suggest three ways in which rumor and gossip act as a purposeful and productive resource: responding to shock, decoding information and synthesizing realities. This paper contributes to management literature by recognizing the positive virtues of rumor and gossip and extending knowledge of their roles as a resource during mergers and change. In ways

founded around 30 years ago and employs approximately 100 people. The new generation of management has concentrated on developing processes, technologies and productivity extensively in the company during the last decade. One of their missions has been to improve employees' productivity by pushing end enabling them to develop their physical condition and health. As part of their strategy, they launched strict smoking restrictions as the first step towards a smoke-free company. Unfortunately, disagreements between employees and management has increased alongside these actions. Many of the workers smoke, and as a result, smoking restrictions implemented by top management were one of the last nails on the coffin that inflamed the atmosphere in the company. This case leads us to examine the dynamics behind the chasm between owners & top management and employees and to consider different approaches and managerial practices that could mitigate the tensions and contradictions in the case company. Pedagogically, it particularly develops competencies that students need in working life: critical thinking, analyzing skills, communication skills, and problem-solving capabilities. It is an application of an in-basket exercise, where students need to gain understanding of a messy situation with contradicting views. In the assignments, students will consider ethical paradoxes, power structures and dilemmas of inclusiveness.

Reviving the Liability of Foreignness: Liability of Foreignness Research in the Semi-Globalized Era (session 279)

The liability of foreignness is that foreign multinationals pay higher costs of doing business abroad than to domestic firms due to their lack of social embeddedness and lack of institutional knowledge; this has been one of the most important research topics in international business and has drawn a great deal of scholarly attention because of its theoretical and practical implications for multinational enterprises operating in foreign host markets. Even though the liability of foreignness has been one of the most fundamental theoretical pillars in international business, it is also true that, more recently, the liability of foreignness has been theoretically and empirically challenged for three main reasons: (1) the theoretical construction of the liability of foreignness is too broad and thus not clear, (2) less attention has been paid to strategies to effectively overcome the liability of foreignness, and (3) the liability of foreignness is neither applicable nor valid any more in a more globalized era. Thus, in this symposium, we aim to address these challenges while further validating the existence of the liability of foreignness. Furthermore, we also attempt to suggest an interesting future research agenda about the liability of foreignness. In particular, the four papers included in the symposium by renowned scholars in the field would provide an interesting intellectual and theory-driven conversation on the topic, and thus help to suggest a meaningful future research direction for studying the liability of foreignness.

Nationalism and Institutions: Perspectives and Opportunities for Future Research (session 276)

After the fall of the Soviet Union in 1991, scholars predicted the “end of history” – in terms of the confrontation of pro-market and pro-state ideas – and the gradual evolution of the world into a “global village.” However, it has become increasingly clear that rather than the century of free-trade and a borderless world, the 21st century may become the century of a resurgence of nationalism. Management scholarships has recently started recognizing the importance of the resurgent nationalism for businesses and managers. The proposed symposium seeks to advance our understanding of this phenomenon by discussing novel ideas about the linkages between nationalism and institutions. We seek to contribute to the AoM conference theme “Broadening our Sight” by showing that different strands of institutional theory and concepts from different disciplines and areas of study allow us to grasp the multiple ways in which nationalism and institutions interact and shape firm strategies and practices. We thus seek to identify new perspectives and opportunities for future research.

Rare is Beautiful? Rare Technological Resources and Value Implications

Designated as a "Best Paper" for OSCM

Author: **Jeongsik Lee**; Drexel U.

Author: **Hyun Ju Jung**; Korea Advanced Institute of Science and Technology (KAIST), College of Business

Author: **Hyunwoo Park**; The Ohio State U. Fisher College of Business

We examine firms' choice of rare R&D topics and the development of technological resources by substantiating how the development of a rare technological resource leads to the creation of valuable resources. In particular, we conceptualize and empirically operationalize economic value and its sustainability at the resource level, highlighting the sequential link between technological resource development and value creation, a critical source of competitive advantage. We build our theory exploiting the fundamental tension in the technology factor market, where firms obtain others' technological resources to develop their own

Behavioral Strategy, Process and Change (session 278)

Peering into a Crystal Ball: Foresight During Periods of Industry Change

Designated as a "Best Paper" for STR

Author: **Rahul Kapoor**; The Wharton School, U. of Pennsylvania

Author: **Daniel Wilde**; The Wharton School, U. of Pennsylvania

Managers are frequently confronted with new technologies and business models that could transform their industries. However, making sense of these disruptive changes is an inherently challenging task. What makes some managers better at identifying the trajectory of industry change? To explore this question, we consider heterogeneity among individuals in terms of their initial cognition about industry change, and in terms of whether and how they adjust their initial cognition as the industry evolves. Such an adjustment involves a sensing process in which individuals identify and interpret new relevant information. We argue that this sensing process will

ones while simultaneously striving to isolate their resources from those of competitors. We argue that the degree of the rareness of a technological resource has an inverted U-shape relationship with the economic value of the resource and the sustainability of that value, as reflected by temporal duration and breadth of adoption. We apply the text analysis method to over 6,000 U.S. nanotechnology patents to capture the rareness at the time of resource development. Our results provide robust support for our hypotheses. Our study contributes to R&D project management and more broadly, operations strategy literature by addressing the conceptual and empirical conflation between resource characteristics and resource-generated values.

Untangling Drivers for Supplier Environmental and Social Responsibility

Designated as a "Best Paper" for OSCM

Author: **Veronica Haydee Villena**; Pennsylvania State U.

Author: **Miriam Michiko Wilhelm**; U. of Groningen, Faculty of Economics and Business

Author: **Chengyong Xiao**; U. of Groningen

This study unpacks the environmental and social dimensions of supplier responsibility and links each dimension to distinct drivers. We distinguish between two main types of drivers: stakeholder pressures (i.e., from government, NGOs and customers) and relational drivers applied by Western buying firms (i.e., through lean training and trust). The results of a multi-method study of Philips Lighting and 144 of its Chinese suppliers show that supplier environmental responsibility can be fostered through both stakeholder pressures and relational drivers. In contrast, supplier social responsibility is harder to address, and suppliers respond only if they perceive eminent threats to their business. Our study provides a nuanced perspective on the development of supplier environmental and social responsibility in China and the specific challenges for Western buying firms seeking to improve it.

[view paper \(if available\)](#)

be more beneficial under higher levels of uncertainty and when individuals have a weaker initial cognition (i.e., without a definitive belief about the trajectory of industry change). We also consider characteristics of the sensing process as those conforming to Bayesian behavior such that an individual updates her cognition without disregarding her initial cognition or the relevance of new information. We argue that a Bayesian sensing process will be more effective, but that its effectiveness will diminish at higher levels of uncertainty. The data for the study were collected from three successive year-long forecasting tournaments conducted between 2016 and 2019, focusing on the dramatic shifts in the automotive industry involving electric and autonomous vehicles. Evidence from more than 21,000 forecasts made by over 3,500 individuals who participate in a leading crowd-based forecasting platform offers strong support for our theory. The study offers a novel account of how managerial cognition could operate during periods of industry change, and expands on the cognitive underpinnings of dynamic managerial capabilities.

A Behavioral Perspective of Search in Nonprofit Organizations

Designated as a "Best Paper" for STR

Author: **Horacio Enrique Rousseau**; Florida State U.

Author: **Philip Bromiley**; U. of California, Irvine

Author: **Pascual Berrone**; IESE Business School

In this paper, we extend the behavioral theory of the firm to nonprofit organizations. Nonprofits hold multiple goals, including financial and higher-priority nonfinancial performance goals. We term the latter programmatic performance as it relates to program spending directed to fulfill a social mission. We hypothesize that, while financial performance above aspirations decreases fundraising, programmatic performance above aspirations increases fundraising efforts. We also explore moderators in the relations between programmatic performance and fundraising efforts. We theorize that factors that reduce dependency on donations or increase confidence in fundraising success influence the extent of fundraising as a response to attainment

Which Supplier to Select for Product Development? A Node, Dyad, and Network Level Investigation

Designated as a "Best Paper" for OSCM
Author: **Yingchao Lan**; U. of Nebraska, Lincoln
Author: **Tingting Yan**; Wayne State U.
Author: **Brett Massimino**; Virginia Commonwealth U.

Despite of the increasing trend of distributed product development in innovation, little is known about the factors that drive supplier selection decisions when developing a new product. Further, extant studies typically incorporate factors at only one level of analysis, failing to consider a rich, multilevel set of predictors. Addressing this, we empirically investigate the influences of three factors on product-level supplier selections: (1) supplier historical product performance (node-level), (2) buyer-supplier geographic and language difference (dyad-level) and (3) buyer-supplier structural equivalence (network-level). Analyzing a directional, longitudinal product development network dataset in the Electronic Video Game (EVG) industry, we show that a game developer with lower publisher-specific game performance, greater geographic distance, different primary language from the publisher, and a less structurally equivalent position with the game publisher, is less likely to be chosen for the development of a new game. Comparative analysis further shows that, out of the three predictors, structural equivalence has the dominant influence on the final selection. These results show the importance of going beyond node- and dyad-level factors to consider a supplier's relative network position when making supplier selection decisions for innovation activities.

External Representations in Strategic Decision Making: Understanding Strategy's Reliance on Visuals

Designated as a "Best Paper" for STR
Author: **Felipe Csaszar**; U. of Michigan
Author: **Mana Heshmati**; U. of Michigan
Author: **Nicole Alexandra Rosenkranz**; Ecole hôtelière de Lausanne, HES-SO / U. of Applied Science Western Switzerland

Visual representations pervade strategic decision making. However, the strategy literature has been mostly silent about why visual representations are so pervasive and about how they affect strategic decision making. We address the "why" question by building on ideas from cognitive science to identify four cognitive functions on which strategic decision making relies and that are improved by the use of visuals. We address the "how" question by developing a conceptual model and propositions describing how decision quality is contingent on characteristics of the task environment, the visuals, and the managers. Our work extends the understanding of boundedly rational search by explaining how visual representations affect the search process. Among other theoretical implications, we show that a problem space's size and "satisfiability" depend on: (i) the ability of managers to select an appropriate visual representation and (ii) the extent to which that visual representation is both usable and malleable. We close by detailing some implications for users, designers, and teachers of visuals in the field of strategy and by suggesting directions for future research.

[view paper \(if available\)](#)

Author: **John-Patrick Paraskevas**; Farmer School of Business, Miami U.

Tariffs have taken a prominent role in the recent news cycle as politicians around the world have increasingly enacted protectionist trade policy in order to incentivize reshoring and local sourcing. However tariffs are not new, supply chains have always had to cope with the impact of tariffs and other trade barriers. Our study seeks to understand what impact tariffs have on inventory levels and inventory leanness. We also explore the moderating impact of three dimensions of supply base complexity on the relationship between tariffs and inventory. In order to conduct our analysis we utilize a unique database of automobile product categories which are imported to the United States. Our data span a 14 year period, 122 countries, 14 product categories, and result in 707,336 observations. Our findings indicate that tariffs are associated with higher inventory levels and supply chains which are less lean. We also find that there are several complexity manipulating strategies managers have available which can reduce the impact of these tariffs.

Optimal Resource Allocation to Exploration and Exploitation in Hierarchical Structures

Designated as a "Best Paper" for STR

Author: **Tiberiu Sergiu Ungureanu**; Ohio State U.

Ambidexterity literature presents conflicting theoretical perspectives regarding the optimal resource allocation of resources to exploration and exploitation in face of environmental turbulence. One perspective suggests that because circumstances in which the organization finds itself have changed, the existing knowledge is less valuable and search for new knowledge is necessary. The other perspective claims that exploration in turbulent times is less valuable than exploitation, because there will be no time to benefit from the newly found knowledge before the environment changes again, but the firm will incur the opportunity cost of exploration. We develop a computational model based on the canonical multiarmed bandit formulation of exploration and exploitation to understand the mechanisms by which environmental change influences how much and at which hierarchical level should exploration take place in firms

Behavioral Microfoundations of International Business: A Literature Review and Research Agenda

Designated as a "Best Paper" for IM
Author: **Stephen Chen**; U. of Newcastle
Author: **Nidthida Lin**; Macquarie U.

Focusing on linking micro-level factors to macro-level outcomes, the microfoundations perspective has become one of the most discussed movements in strategy and organization theory. Despite some initial attempts, microfoundational research in international business has been lagging behind other fields. This study provides a comprehensive examination of the behavioral microfoundations of international business research using a combination of text mining analysis and a systematic review of the literature by experienced international business researchers. Our analyses provide an overview of the theoretical concepts and empirical methods used to examine microfoundational research questions in the field. We also examine the evolution of the field over a ten-year period. Based on these findings, we identify missing research themes and potential areas for future research. The findings suggest that more research on the emotional and cognitive aspects as well as the relationships between individual, group and firm behaviors, coupled with the use of a greater range of rigorous methodologies, is needed to further advance research using a behavioral microfoundations perspective in international business.

Self and Other: How Female Entrepreneurs in Beijing, Berlin, and London Manage Role Expectations

Author: **Sonja Kristin Franzke**; Georg-August-U. Göttingen
Author: **Fabian Jintae Froese**; U. of Goettingen

Female entrepreneurs, while making up an increasing proportion of business owners worldwide, still face various obstacles during the founding process such as gender role expectations that create a double burden for women, having to combine family and career. Drawing from role congruity theory, this study investigates the stereotypes both men and women hold about female entrepreneurs and how women develop strategies to respond to arising conflicts caused by these self- and other-expectations. Interviews with 75 entrepreneurs in the male-dominated IT start-up industry in Beijing, Berlin, and London, reveal similarities and striking differences across countries. While many Chinese female entrepreneurs are aware of different stereotypes and use these stereotypes to their advantage, most German entrepreneurs try to compensate for stereotypes by behaving in a more masculine way, lastly, UK women try to be resilient and ignore stereotypes by staying in a female "bubble". We discuss theoretical and practical implications.

The Shape of Us - Incorporating Gender Identity and Entrepreneurial Practice

Author: **Monique Boddington**; Cambridge Judge Business School

Varying according to time, gender informs the expectations of society and culture for all. Those who do not align to social expectations encounter increased barriers to entrepreneurial practice (Micelotta et al 2017) and thus impacts

This paper investigates the impact of host country ethnic and religious diversity on the deal completion of cross-border acquisitions (CBAs). Our analysis of 49,306 CBAs deals (2000-2016) shows that the CBA deal is less likely to be completed when host country has high-level of ethnic/religious diversity. Such negative effect is exacerbated when host country political competition exhibits strong ethnic favoritism, and when host country has greater freedom of media. Moreover, acquirer's prior CBAs experience in host country can help reduce such negative influence of ethnic/religious diversity on CBA outcome. Our framework and findings provide useful implications for diversity literature and CBAs literature.

How Cultural Distance Shapes the Effect of New Ventures Distinctiveness on International Performance

IM Division HKUST Best Paper in Global Strategy Finalist

Designated as a "Best Paper" for IM

Author: **Jonas Janisch**; U. of Siegen

Author: **Alexander Vossen**; U. of Siegen

We examine how distinctiveness of new ventures affects their performance when expanding to international markets. In line with strategic differentiation literature, we propose that the effect of distinctiveness on international performance follows a curvilinear form that depends on the relative strength of losing legitimacy versus attenuating competitive pressure. We show that both are significantly impacted in context of international growth, arguing that legitimacy loss is amplified by the negative liability of foreignness, while the attenuation of competitive pressures is fostered by positive consumer cosmopolitanism. Using data on 7,610 products offered by 888 new ventures in 7 different markets over 211 weeks, we show that the effect of distinctiveness on international performance follows an inverted U-shaped form as additional increments of legitimacy loss induced by liability of foreignness outweigh additional increments of erasing competitive pressures fostered by consumer cosmopolitanism

entrepreneurial practice. Gender also shapes our own individual identities, which in turn impacts entrepreneurial practice. Gender, identity and practice are all contingent upon each other. This paper considers how gender as a system plays out within an entrepreneurial context and provides a conceptual model of how the factors of gender and identity within entrepreneurial practice are entwined and in process. These findings contribute to existing theory by indicating how the gendering of practice not only constraints entrepreneurial practice but how individual's identity offer a lens for the reframing of acceptable practice within a morphogenesis system.

Visual Discourse and Role Modelling in On-Screen Representations of Women Entrepreneurs

Author: **Bronwyn Elizabeth Eager**; U. of Tasmania

Author: **Naomi Birdthistle**; Griffith Business School, Griffith U.

Author: **Sharon Grant**; Swinburne U. of Technology

The purpose of this study is to examine the gendered nature of films featuring female entrepreneur protagonists. Key findings were obtained through a thematic narrative analysis of visual discourse and plot, and illustrate the prevailing gender stereotype of females in on-screen entrepreneurship. Findings highlight that there is much ground to be made in film to correct the long-held position of males as normative entrepreneurship actors. This study is novel in its examination of entrepreneurship film narrative as a window to gendered discourse, and its focus on media-messaging as a potentially limiting factor in female entrepreneurship career and venture growth.

Do I (Want to) Fit In? Women Entrepreneurs' Journey from Imposter Fears to Authenticity

Author: **Ingrid Chadwick**; Concordia U.

Author: **Alexandra Dawson**; Concordia U.

for increasing distinctiveness. However, this effect is highly contingent on the cultural distance of the international market. For new ventures that explore culturally close markets the inverted U-shaped effect steepens, mitigating the liability of foreignness, yet also severely limiting benefits from consumer cosmopolitanism. However, new ventures that explore culturally distant markets, positive consumer cosmopolitanism effects unfold to such an extent that they outgrow liability of foreignness. Consequently, if new ventures intend to rely on their distinctiveness, they are advised to grow into culturally distant markets.

United or Divided? Antecedents of Board Cohesiveness in International Joint Ventures

IM Division CGIO Best Paper in International Corporate Governance Finalist

Designated as a "Best Paper" for IM

Author: **Rene Olie**; Erasmus U. Rotterdam

Author: **Elko Klijin**; Old Dominion U.

Author: **Hugo Leenders**; PhD student at Old Dominion U.

We combine board process research with the literature on international joint ventures (IJVs) by investigating the antecedents of cohesiveness of IJV boards of directors. Even though that corporate governance scholars have frequently emphasized the crucial role of cohesiveness for board effectiveness, cohesiveness has received limited research attention. We investigate the determinants of board cohesiveness by specifically focusing on an understudied organizational form, namely the IJV. IJVs are formed by two or more independent parent organizations originating from geographically dispersed home countries with disparate cultural backgrounds. We argue that the inherent features related to the international and partner-specific context of these governance arrangements affect board cohesiveness. Our study contributes to the corporate governance board process literature as well as the IJV literature by being the first to directly investigate cohesiveness in boards, and to serve as the initial study on board processes within IJVs.

Research has established that entrepreneurship is a masculine domain in which women experience a 'lack of fit', yet we know surprisingly little about women entrepreneurs' own perspectives on the role of gender in the entrepreneurial process. The goal of this qualitative investigation was to further our understanding of how women perceive and manage their gender as entrepreneurs. Our findings, based on an interpretative analysis of rich data from interviews and focus groups with 64 participants, offer a more nuanced perspective on the impact of gender in entrepreneurship, which appears to change over time. More specifically, we find that gender evolves from being seen as a potential hindrance that makes women feel like imposters to becoming more of an advantage in enabling women to succeed authentically as entrepreneurs. We contribute to entrepreneurship literature by analyzing differences among women and highlighting their heterogeneity (rather than comparing them to men) and to role congruency theory in the context of entrepreneurship by considering the effect of time. We also elaborate on these findings and what they mean for women's unique challenges in entrepreneurship with the goal of making entrepreneurship more inclusive.

The Impact of Acquisitions on Clinical Decisions: Evidence from PPMCs

HCM Division Best Paper

Designated as a "Best Paper" for HCM

Author: **Ambar La Forgia**; Columbia U.

Mergers and acquisitions are rapidly transforming the organization of physician services in the United States, raising concerns over the cost and quality of health care. This paper studies how medical practice acquisitions by Physician Practice Management Companies (PPMCs) impact physician behavior and patient health. PPMCs market themselves as providing physicians the economic benefits of a larger organization while preserving their autonomy over the clinical and operational decisions of their medical practices. PPMCs, however, use a variety of incentives to align physician behavior with the commercial and clinical interests of the PPMC. I analyze the effect of acquisitions on physician treatment decisions by linking hospital discharge records to hand-collected data on PPMC practice acquisitions between 2006 and 2014. Identification of difference-in-differences estimates comes from variation in the timing of acquisitions. I find that when PPMCs only incentivize financial performance, physicians increase the use of high-revenue, low-value procedures, resulting in less clinically appropriate care and worse patient outcomes. The opposite result is found when PPMCs incentivize both financial and clinical performance. This research provides new insights into how the managerial choices of health care organizations affect clinical decisions and the quality of care.

Social Identity and the Patient Engagement Experience in Quality Improvement Teams

Designated as a "Best Paper" for HCM

Author: **Mariam Krikorian Atkinson**; Harvard U.

Author: **Sara Singer**; Stanford U.

As health systems grow increasingly complex, the need to understand how to effectively engage patients on quality improvement (QI) teams is more important than ever. Existing studies demonstrate how patient roles on QI teams can be viewed as a continuum across multiple levels of involvement and influence. Building on this work, our research shows the process by which patients move through this continuum and effectively engage QI projects. Study participants were members of QI teams from 3 health systems in a patient safety learning lab. Each team had 5-10 members: clinicians, engineers, health system staff, and patient(s). We observed weekly team meetings from January 2016 to April 2018, conducted 17 semi-structured interviews, and refined our findings through a patient focus group. A grounded theory approach was used to analyze field notes and transcripts. We developed a framework showing how patients moved through distinct social identity stages: informant, partner, and active change agent. The change in social identity happens through an evolutionary process undergirded by critical components. First, patient and team member perceptions of the patient's role influences their respective behaviors. Specifically, patient's perceptions of self impacts their enactment of their role, while team member perceptions of the patient impacts team activities by activating, directing, framing, and sharing. Both patient and team member behaviors influence patient contributions on the team, which can redefine patient and team member perceptions of the patient's role. Our framework highlights the unique manifestation of these components of the patient's evolution in social identity at each stage. These research findings have implications for how QI teams can better prepare, anticipate, and support the evolving role of engaged patients. Specifically, we show how QI teams and patient members can address perceptions and behaviors that would overcome barriers to effective patient engagement.

Assembling the Team: An Analysis of Partner Selection and Performance in Robot-Assisted Surgery

HCM Division Best International Paper

Author: **Marco Tonellato**; LMU Munich

Author: **Daniele Mascia**; Luiss Guido Carli U.

Author: **Alessandro Lomi**; U. of Lugano

Author: **Jürgen Lerner**; U. of Konstanz

Similarity, competence and familiarity are recognized team assembly mechanisms – general principles that individuals adopt to choose others with whom they want to work. According to the principle of similarity, individuals are more likely to choose partners that are similar to themselves along contextually relevant dimensions. According to the competence principle, social selection is driven mainly by an evaluation of compatibility between individual skills and requirements of the task. Finally, the principle of familiarity implies that people who have worked together in the past are more likely to repeat their collaboration in the future. In this paper we use data that we have collected on Health Care Action (HCA) teams composed by one main and one assistant surgeon to explore how the effects of the team assembly mechanisms implied by these generic principles: (i) are embedded in known network self-organizing mechanisms that link internal team members to shared external partners, (ii) are contingent on the complexity of the task that the team faces and (iii) affect team performance. Relational event models estimated on more than one thousand surgeries provide evidence that, while similarity and familiarity-based mechanisms affect partner selection, the strongest predictor for team performance is represented by a variety of competence-based factors. The analysis also reveals that the effects of social selection mechanisms on performance outcomes are contingent on the complexity of the team task, which in our sample is determined by the clinical conditions of patients entering surgery. We discuss

implications based on the mismatch between team assembly heuristics and effective configuration strategies.

Evidence-Based Management to Management-Based Evidence: Mobilizing Evidence Through Managerial Work

Designated as a “Best Paper” for HCM

Author: **Rachel Manning**; Warwick Business School

Author: **Jacky Swan**; U. of Warwick

Author: **Harry Scarbrough**; City U. London

Evidence-based management (EBM) encourages managers to draw upon evidence in decision-making. It is increasingly clear, however, that doing so often involves multiple actors, mobilizing multiple evidences, towards different, and often political ends. In the present paper, we focus on how those managing change in the delivery of healthcare services actually work to purposefully mobilize evidence. Specifically, we present a processual analysis of service redesign projects in eight Clinical Commissioning Groups in the English National Health Service to better understand what managers do to and with information such that it becomes evidential and mobilizes (or not) a change in practice. Our findings draw attention to specific managerial work entailed in EBM. Specifically, they show that work with evidence entails framing, advocating and engaging others in its co-production, and that this plays a critical role in how evidence is used, or not.

Organizing the Future of Food: The Grand Challenge of Coordination (session 282)

In this symposium, we propose to broaden our sight: in line with this year's theme, we believe that we can advance the organizational and managerial understanding of the grand challenge of food consumption and production from a coordination perspective. Despite the key role that food plays in the history of humankind and in our daily lives, organizational and management scholars have paid limited attention to the interconnected coordination challenges around food as a fruitful object of inquiry. This is not to say that food has no place in our work; many scholars provided us with studies that are situated in a foody context, yet typically without taking interconnected coordination challenges into account. We argue that there is a disproportionate imbalance between the amount of research on the topic and its relevance, which is evidenced by the Sustainable Development Goals (SDGs) of the United Nations. Moreover, we will also argue during this symposium that this grand challenge requires a re-orientation of the line of work around the coordination that is required between food-sector organizations and consumers, and the problems that can result from it. The panelists will engage with the future of organizing food from different coordination perspectives: the non-financial costs of global food supply chains, the temporality of food innovation, coordinating collaboration towards the distant future, coordination and negotiation in food packaging, and the role of values in coordinating for food production. With this symposium, our aim is twofold: present relevant research on the food grand challenge we depict, and develop rigorous analyses of industry-wide and global organizational coordination problems.

Digital Product Innovation in Emerging Economies: Examining the Roles of Institutional Change Speed

Designated as a "Best Paper" for IM

Author: **Pengxiang Zhang**; Darla Moore School of Business, U. of South Carolina

Author: **Chao Niu**; The Chinese U. of Hong Kong, Shenzhen

Author: **Sali Li**; U. of South Carolina

Author: **Scott F. Turner**; U. of South Carolina

Recently firms in emerging economies have been actively engaged in digital product innovation. Given the economic importance of this nascent sector, there have been frequent shifts in the related regulatory and policy environment, which are having a considerable impact on firms in emerging economies. In examining this important phenomenon, our study builds upon a dynamic institution-based view to investigate how the speed of institutional change affects digital product innovation. We argue that firms tend to reduce digital product innovations when encountering fast institutional changes. Using a sample of 1,533 firms from 20 major emerging economies in the mobile app industry, our empirical results provide support for our main hypothesis. We also argue and find that different diversification strategies may limit or amplify the effect of institutional change speed on digital product innovation, given the implications of diversification for how firms navigate through the changing institutional environment. This study offers important contributions for understanding this timely and prominent innovation phenomenon in emerging economies.

Emerging Market Institutional Co-Evolution, State-Owned Firm Globalization, and the Resource Curse

IM Division GWU-CIBER Best Paper on Emerging Markets Finalist

Designated as a "Best Paper" for IM

Author: **Charles Funk**; Northeastern Illinois U.

Author: **Len Trevino**; Florida Atlantic U.

Author: **Juliet Oriaifo**; North Carolina A&T State U.

We explore the effects of the natural resource "curse" on co-evolutionary relationships between emerging economy institutions and the internationalization of their state-owned enterprises. We discuss how these relationships challenge and extend prior institutional research because of three predominant resource curse characteristics (their boom-and-bust cycles and related public discourse and their "Dutch Disease,"-associated manufacturing sector investment crowd-out). In such an environment, state-owned enterprise ties with emerging economy regulative, normative and cognitive institutions moderate the firm's internationalization over the emerging economy's resource curse cycle. We use natural resource (e.g., oil and gas) and manufacturing sector examples in three propositions to describe this process. Finally, we discuss managerial/policy implications, limitations and future directions of our work.

Productivity Spillovers of FDI in an Emerging Market: The Role of Foreign Firms' Local Innovation (WITHDRAWN)

Designated as a "Best Paper" for IM

Author: **Jiasi Fan**; U. of International Business and Economics

Author: **Yu Li**; U. of International Business and Economics

Author: **Zijie Li**; The U. of International Business and Economics

Author: **Wenlong He**; U. of International Business and Economics

Author: **Zhu Zhang**; U. of International Business and Economics

In this study, we examine the productivity spillovers of foreign direct investment (FDI) to domestic firms sourced from foreign firms' local innovation. Based upon a panel dataset on manufacturing firms in China over the period from 1998 to 2007, we find that local innovation undertaken by foreign firms in an industry can spill over to and benefit domestic firms in the same industry. Further, we find that this positive productivity spillover is significantly stronger when foreign firms have higher intangible asset intensity, share longer overlapping years and densely co-located with domestic firms.

Defending Firm Knowledge in Foreign Countries

IM Division HKUST Best Paper in Global Strategy Finalist

Designated as a "Best Paper" for IM

Author: **Heather Berry**; George Washington U.

Author: **Roisin Donnelly**; Tilburg U.

This paper explores the decisions of firms to defend their locally and globally generated knowledge in foreign markets to better understand the knowledge management and protection strategies of MNCs across country markets. Building on the knowledge management and competitor dynamics literatures, we explore both why firms may be more likely to defend some types of innovations over others and how industry characteristics influence the litigation activities of firms in foreign markets. Empirical results from an analysis of firms in high tech industries from Orbis merged with patent data from Patstat and litigation data from Lex Machina show that foreign firms are more likely to defend patents that are locally-generated, that have a wider scope of use across countries, and for firms in industries with a higher knowledge concentration.

Feedback on Multiple Goals and OFDI Location Choices for Emerging Economies Firms

Designated as a "Best Paper" for IM

Author: **Alex Junyi Fang**; School of Economics & Management, Tongji U.

Author: **En Xie**; Tongji U.

Author: **Xin Chen**; Xi'an Jiaotong U.

In recent years, performance feedback models have been increasingly used to explain firms' OFDI activities. In this stream of studies, scholars often identify performance feedback relative to some performance target as a risk trigger and then examine how firms adapt their OFDI as a response to the discrepancy between realized performance and the selected aspiration level. Though the stream of studies sheds helpful light on associations between performance feedback and OFDI, it largely overlooks the possibility that firms may make investments to different overseas locations as responses to feedback clues relative to different reference points. In this study, we aim to investigate how performance feedback on two goals including return on assets (ROA) and sales growth (SG) influences firms' OFDI in developed and developing countries. With data collected from listed Chinese firms during a period from 2007 to 2017, our findings indicate that performance feedback relative to ROA and SG indeed results in firms' OFDI in different locations. Explicitly, performance discrepancy relative to

ROA, no matter below or above, drives firms to make OFDI in developed countries. However, though negative performance feedback relative to GS impels firms to make more OFDI in developing countries, positive feedback will not change OFDI level significantly.

Social Entrepreneurship: Considering Resources (session 284)

Societal Impact at the Nexus of Community and Entrepreneurship: Taking Stock and Looking Ahead

Designated as a "Best Paper" for ENT

Author: **Sophie Catherine Bacq**; Indiana U. - Kelley School of Business

Author: **Christina Julia Hertel**; École Polytechnique Fédérale de Lausanne

Author: **G. T. Lumpkin**; U. of Oklahoma

A consensus has emerged around the importance of entrepreneurship to generate societal impact. Yet, there is also increasing recognition of the inability of ventures alone to address the grand societal challenges the world is facing. Attention is shifting to communities as important players in tackling these challenges. For management scholars in general, and entrepreneurship scholars specifically, this calls for a better understanding of the nature of these communities, and the roles they play at the intersection of entrepreneurship and societal impact creation. Yet, community-related research is scattered across the management sciences and lacks a clear framework to guide further inquiry. To address this gap, we conduct a systematic review of the literature published at this intersection in a core set of management, entrepreneurship, and organization sociology journals. Based on this review, we describe how societal impact is generated by entrepreneurial efforts for, in, with, through, and by communities of place, identity, interest, and/or practice, and identify a set of associated roles. Our review identifies trends and omissions in the extant literature, and sets for an evidence-based agenda for future research on the topic. This review yields implications for the field of entrepreneurship, as well as the literature streams on social entrepreneurship, cross-sector collaborations, and community-based entrepreneurship.

Too Emotional to Succeed: Entrepreneurial Storytelling in a Prosocial Setting

Author: **Asma Naimi**; ESADE Business School / Ramon Llull U.

Author: **Daniel Arenas**; ESADE Business School

Author: **Jill R. Kickul**; USC Marshall School of Business

In a prosocial crowdfunding setting, the ability of entrepreneurs to mobilize support through their stories is crucial since their livelihoods often depend on it. We examine how cognitive and emotional appeals in stories affect resource mobilization outcomes in a sample of 2098 entrepreneurs in 55 countries who requested a loan via a prosocial crowdfunding platform. Our study suggests that using analytical language in entrepreneur stories mobilizes support attracting more resources and using affective language in entrepreneur stories is detrimental attracting less resources, especially in the case of negative emotions. Our study contributes to the entrepreneurship and social entrepreneurship literatures by showing the effectiveness of cognitive and emotional appeals –distinguishing between positive and negative emotions– in mobilizing support in a context that combines aspects of traditional crowdfunding and social entrepreneurship.

Social Entrepreneurs' Personal Network, Resource Bricolage, and Relation Strength

Author: **Zhen Liu**; Shandong U.

Author: **Shiyao Jiang**; Nankai U.

Author: **Hu Shuang**; Shandong U., China

This study proposes personal network of social entrepreneurs as a key antecedent factor of their resource bricolage to understand the mechanisms underlying social entrepreneurial practices before the founding of social enterprises. In addition, this study develops a theoretical framework that draws upon two dimensions of social capital, namely, "ownership" and "use," to explore relationships between personal network, resource bricolage, and relation strength. With data from 227 social enterprises in China, empirical results suggest that personal network of social entrepreneurs, that is, the "owned" social capital, shall be transformed by the intermediate role of resource bricolage into relation strength, that is, the "used" social capital. The relationship between resource bricolage and relation strength is positively moderated by the marketization degree and social class of social entrepreneurs. Moreover, implications for theory and practices are discussed.

Co-Creation in Social Ventures in China: A Missing Link in the Effectual Logic-Performance Relation

Author: **Xiaoming Yang**; U. of Nebraska, Omaha

Author: **Erin G. Pleggenkuhle-Miles**; U. of Nebraska, Omaha

Author: **Jianxin Ge**; Central U. of Finance & Economics, China

The mass entrepreneurship policy has introduced a new era of sustainable development in China. Yet, the policy alone does not describe how individuals and organizations might pursue this new approach to economic expansion. In this paper, we suggest that under this new policy, co-creation between social ventures and donors, beneficiaries, and government agencies serves as a form of organizing that helps social ventures navigate this new era of entrepreneurship policy. Through the lens of effectuation theory, we hypothesize that social ventures that use more effectual logic are better able to co-create social value with their stakeholders, and in doing so, will have higher performance. To test these hypotheses, we used structural equation modeling of data collected from top executives of 172 social ventures in China. The results largely support the hypotheses and the findings provide important implications for co-creation via social ventures as one vehicle for invigorating mass entrepreneurship in China.

Policy, Profiles, and Partnerships: Impacts on Community Health (session 914)

How Do Payment Reforms Affect Hospitals' Community Benefit Decisions?

Author: **Cory Cronin**; Ohio U.

Author: **Simone Singh**; U. of Michigan

Author: **Berkeley Franz**; Ohio U. Heritage College of Osteopathic Medicine

In 2014, Maryland established a global budget policy, setting limits on hospitals' spending and regulating reimbursement amounts. This study assesses whether the implementation of the policy changed the nature of hospitals' community benefit activities. Using data from the Internal Revenue Service Form 990 Schedule H, we compared the community benefit trends of Maryland hospitals with those of a state control group and found some key differences. Maryland hospitals increased their spending on clinical services but not on broader community health improvement. Payment reform does have the potential to affect hospital investments to improve health, but more focused policies may be required for greater hospital involvement in nonmedical drivers of health.

we assessed the strength of LHD-hospital collaboration within communities using data from the National Association of County and City Health Officials (NACCHO) Forces of Change Survey. Health behavior data came from the 2015 Behavioral Risk Factor Surveillance System (BRFSS) SMART dataset. For social capital we used an index developed by the Northeast Regional Center for Rural Development at Penn State. We estimated multilevel models controlling for both individual and community-level factors. Stronger LHD-hospital collaboration was positively and significantly associated with several types of health behaviors including not smoking (odds ratio, OR=1.32, 95% CI=1.11-1.58), eating vegetables daily (OR=1.29; 95% CI=1.06-1.57) and vigorous exercise (OR=1.17; 95% CI=1.05-1.30). There was some evidence of a modifying effect for social capital. Our results should spur policymakers to encourage greater collaboration between these two sectors. Additionally, social capital may play a moderating role in improving community health.

Role of Organizational Capacity in Enabling Population Health Impact for Health Promotion Programs

Author: **Amanda Brewster**; U. of California, Berkeley

Author: **Traci Wilson**; Miami U. Ohio

Author: **Leslie Curry**; Yale U.

Author: **Suzanne Kunkel**; Miami U. Ohio

Objective: To examine how organizational capacity of Area Agencies on Aging, a type of community-based social service agency, influenced their ability to achieve population-level impact through their health promotion programs. Methods: We used difference-in-difference regression models to examine how expansion of health promotion program offered by Agencies over the course of 2008-2016 was associated with change in county-level measures of health care use and spending by older adults. We examined impact separately for high capacity and low capacity agencies. Results: Offering any health promotion program was associated with a 0.94% percentage point reduction in avoidable nursing home use in counties covered by the agency (95% confidence interval = -1.58, -0.29), equivalent to a 6.5% change. Expanding breadth of program offerings was also associated

with significant reduction in avoidable nursing home use. Stratified analysis showed reductions were evident only where agencies had high implementation capacity. Conclusions: Evidence-based health promotion programs offered by Area Agencies on Aging may help older adults avoid unnecessary nursing home placement; organizational capacity for implementation appears to be a prerequisite for impact. Policy Implications: Leveraging Area Agencies on Aging to deliver evidence-based health promotion programs for older adults could help avoid expensive nursing home placements but attention to management and organizational development will be critical.

Performing in Community-Academic Health Partnerships: Interplay of Clear, Difficult and Valued Goals

Author: **Choiwai Maggie Chak**; U. of Twente

Author: **Lara Carminati**; U. of Twente

Numerous western countries are fostering healthcare projects through cross-sectoral networks. Since working in those complex settings can challenge many individuals, knowing more about the enablers of success of such networked projects can offer better support in meeting their challenges. Guided by goal-setting theory, we assumed a boundary role for goal importance in relation to the appraisal of goal difficulty, clarity and project performance among individuals working in health-promoting community-academic partnerships (CAPs). A sequential explanatory mixed-methods design was adopted. The sample for the quantitative investigation consisted of 268 participants from various CAP networks in three German-speaking countries. At the end of the survey, 209 of those respondents answered an open question, constituting the sample for the qualitative analyses. The quantitative findings reveal that, only when the perceived goal importance is high, are goal difficulty and clarity associated with high project performance. Hence, regardless of the level of perceived goal difficulty, high project performance can be achieved as long as individuals deem their set goals important. The qualitative data corroborate, illustrate and extend this finding: clear and important goals motivate people towards high

project performance even when extremely challenging goals and undesirable conditions hinder goal achievement.

Service Profiles in Substance Abuse Treatment (WITHDRAWN)

Author: **Reena Joseph Kelly**; U. of Alabama, Birmingham

Substance abuse treatment (SAT) facilities offer a number of services for the treatment and ongoing management of substance use disorders, and have emerged as the specialty treatment setting for these disorders. Consistent with established evidence-based practice guidelines, SAT facilities offer several services that address the medical, behavioral, and psychosocial needs of affected individuals. Despite the recommendations from these guidelines, individual facilities differ in terms of the number and type of services offered, resulting in gaps in service availability. This study uses a configuration theory perspective to argue that different classes of SAT facilities may exist based on service mix. The analyses found that SAT facilities systematically differ in the type of services offered. The distinct service profiles identified in this study highlight challenges as well as opportunities for practitioners and policymakers, and also raise several avenues for future research in the area of policy, organizational strategy and substance abuse treatment service delivery.

The Dynamics of Place and Organizational Identity in a Homeless-Serving Organization

Author: **Asma Zafar**; Brock U.

Author: **Trish Reay**; U. of Alberta

In this ethnographic study of a homeless-serving organization, located in a Western Canadian city, we ask, 'how do place-oriented environmental disruptions influence organizational identity change?' We capture the organization's response to a geographical disruption that created a push for the organization to move out of its home of three decades. Findings generated through a rigorous inductive analysis reveal that place is a strong yet overlooked aspect of organizational identity. In particular, upon experiencing the push to relocate, members experienced a strong sense of affiliation with the organization's place (a phenomenon we term, 'organizational territoriality'), leading them to defend their place. In this process, Better World's identity changed such that the organization emerged as a stronger and more prominent entity. We offer two primary contributions through this study. First, we establish the very material notion of place as a fundamental aspect of organizational identity, thereby extending our existing understanding of organizational identity. Second, we develop the concept of 'organizational territoriality,' and theorize that place informs members' sense of organizational identity through organizational territoriality.

"I was Just in Shock": Identity Work by European Skilled Migrants Following the Brexit Referendum

Author: **Claudia D. Jonczyk**; U. of Neuchâtel

Author: **David Oliver**; U. Of Sydney

Author: **Tina Miedtank**; U. of Neuchatel

This study examines how skilled EU migrants living in the UK respond to and cope with the results of the Brexit referendum in terms of their identities. Our study identifies four distinctive reaction patterns among EU migrants depending on the degree to which they interpreted the Brexit vote as a threat to their identity, and the number of national affiliations they held. We refer to these as EU Patriots, Local Cosmopolitans, Home Country Patriots, and Global Citizens. Each of these distinctive reaction patterns involves different forms of identity work and agency in skilled migrants' professional and personal spheres. Our study

contributes insights into the way in which identity impacts migrants and expatriates, as well as to the interplay between contextual constraints and agency in the face of identity threats.

The Best of Both Worlds: Strategy Formation in a Company with Hybrid Identities

Finalist for MOC Division Best Paper Award

Author: **Nicole Alexandra Rosenkranz**; Ecole hôtelière de Lausanne, HES-SO / U. of Applied

Science Western Switzerland

Author: **Elia Giovacchini**; Stockholm U.

To understand how hybrid organizations—those combining normative and utilitarian identities—devise their strategies, we conducted an indepth, longitudinal case study of a content management systems (CMS) company that embraced a commercial/open-source identity. Existing research implicitly regards the strategic and operational tensions that hybrids face as internal. Yet, the hybrid organization of this study embraced two identities, one of which was symbiotically tied to, and could only be validated by, an external entity: the open-source community. We complement research on how organizations devise strategies that speak to their hybrid nature; specifically, we uncover an ecosystem strategy approach. Following the 15-year trajectory of a hybrid organization allows us to broaden our understanding beyond static single-event resolutions towards dynamic process accounts. Ultimately, we propose that there is a third form of identity management beyond the ideographic and holographic, which we term heterographic identity—a way of combining integration and separation mechanisms that deliberately creates interdependence between normative and utilitarian identities. In sum, our ecosystem-strategy model refocuses research away from internal mechanisms of sustaining hybridity, thereby contributing to a broader conceptualization of hybridity and its implications for the way organizations devise their strategies.

Field Position and Sensemaking: Prospective Sensemaking of Change by Professional Actors

Author: Harsh Kumar Jha; Newcastle U. Business School

Periods of field change are marked by contention and ambiguity, leading to extensive sensemaking and sensegiving by the actors involved. However, though the relevance of sensemaking during change is well acknowledged and extensively studied, most of the work has been focused at the individual and organizational levels. Further, comparatively less attention has been paid to prospective sensemaking, even though research suggests that prospection is integral to interpretation of ambiguous change. Even less studied is the relationship between actors field position and their sensemaking. This is surprising, as prior research suggests that fields are highly hierarchical and variegated structures and interpretation of issues may vary substantially across actors in a field. Even in research which explicitly explores the influence of field position on interpretation, field position has typically been treated as a unidimensional construct, e.g. based on Bourdieu's notion of capital. In this paper I address these gaps in our understanding of the influence of actors' field position on sensemaking by drawing on two dominant sociological theories of field – Bourdieu's and Fligstein & McAdam's – and developing a multidimensional conceptualization of actors' field position. I specifically ask the following question: how does actors' prospective sensemaking of change evolve over time and what is the influence of actors' unique field position on prospective sensemaking. I undertake this research in the context of market based reforms in English legal services and enactment of Legal Services Act, 2007. LSA 2007 drastically transformed the fundamental structure of the legal profession in England as it challenged the three key pillars of an established profession – allowing entry barriers to non-professionals, removing professional control of professional organizations and challenging professional self-regulation. Such a contentious change provides a rich context for exploring the relationship between actors' field position and sensemaking. To do so, I define actors' field position based on two dimensions: structural position or capital (central versus peripheral) and membership of the proximate client field (individual versus

corporate) and identify the unique field positions held by the four key professional actors as central—individual (Barristers), central-corporate (corporate law firms), peripheral-individual (small law firms) and peripheral-corporate (in-house lawyers). I examine actors' sensemaking based on the coverage in legal trade media during the period of 2001-2006, coding 327 articles in total. My inductive analysis presented two aggregate theoretical dimensions of prospective sensemaking of change in the legal profession: schema of change and problematization of change. I find that actors' schemata of change is expressed through three different mechanisms: change outlook, affective response to change and market opportunity construction. I also induce three different mechanisms through which change is problematized – public interest, professionalism and bureaucratic inefficiency. My analysis shows that actors' schema of change varies substantially based on the membership of the client field (individual versus corporate), whereas, their locus of problematization of change varies substantially based on the position in the legal services field (central versus peripheral).

Reimagining the Past: Towards a Theory of Routine Encounters with Organizational History.

Designated as a "Best Paper" for MOC

Author: **Matthew C. Lyle**; U. of Colorado, Colorado Springs

Author: **Ian Walsh**; Bentley U.

Scholars have explained how organizational history might be sought out, revised and used for strategic purposes, but have yet to examine the more routine ways through which organization members encounter organizational history. Drawing from a field study of a home healthcare agency, we develop theory that explains how organization members discover, interpret and animate an organization's history in ways that sustain its influence. We demonstrate how newcomers' recognition of organizational imprints during socialization experiences spur sensemaking processes through which members express, revise and endorse shared understandings of an organization's history. We close with a discussion of the implications of our

Spaces of Becoming: Toward a Better Understanding of How Modern Work Environments Make us Who We Are (session 928)

In this symposium, we bring together scholars from various disciplinary backgrounds and explore the experiences of a range of individuals embedded in “less traditional” organizational contexts. Such environments include a training program for aspiring entrepreneurs, a makerspace, a “lonely” workplace, and an innovation hub located within a larger firm. We ultimately consider how these various environments impact, and in turn how they are impacted by, their members. This focus allows us to reflect on the physical, social, as well as on the psychological structures that underpin today’s organizing, surface the lived experiences of various groups of modern workers, and ultimately shed light on the mechanisms by which various types of environments influence their inhabitants, and vice versa.

Examining Best Practices in Fostering Refugees’ Careers and Labor Market Integration (session 903)

Displaced by violence, war, and persecution, millions of refugees seek shelter abroad. Host country agencies and researchers in turn wonder how best to integrate these people into society and the workplace, given the financial and psychological benefits of work for refugees and host country societies alike. When trying to obtain employment, refugees often face barriers to their professional advancement, find themselves disadvantaged when searching for work and end up unemployed, underemployed, or placed into temporary work; all of which jeopardize both their well-being and integration into society. Yet vocational research on refugees is still in its infancy. Scholars lack in-depth insights into this diverse yet distinctive migrant group and into the roles, responsibilities, and actions of different actors involved in the process of managing refugees’ vocational integration. This symposium addresses this complexity and responds to calls to (1) further study refugees’ vocational integration and (2) integrate multilevel perspectives to examine the factors that affect refugees’ vocational integration management. Incorporating insights from six countries, we contribute conceptually and practically to refugees’ career development and labor market integration across contexts and governmental systems. First, we extend career research by exploring refugees’ agency and career-related activities, the means to enhance their job search, and the potential of and cross-cultural variations in refugee entrepreneurship. Second, we further diversity and HRM research by unraveling how a diverse group of

Newcomers as Wedges: Bifurcating Effects on Incumbents' Networks and Performance

Author: **Evelyn Ying Zhang**; U. of Toronto, Rotman School of Management

Studies investigating how newcomers influence incumbent group members have shown equivocal performance outcomes. To disambiguate these effects, I propose and test the idea that a high-performing newcomer's impact on incumbents' performance flows through changes in incumbents' communication networks. Using a proprietary dataset from a large retail bank that includes employees' personnel records, monthly performance, and meta email communications, I argue and find that the arrival of a high-performing newcomer has differential effects on high- vs. low-performing incumbents. Specifically, following the entry of a high-performing newcomer, low-performing incumbents communicate with a smaller and more concentrated network of colleagues and subsequently perform worse than before the newcomer's arrival. By contrast, high-performing incumbents communicate with a more extensive and diverse network and subsequently perform better. This paper draws out a mechanism underlying intra-group performance variation that is not considered in prior research: incumbents' communication networks change following inbound mobility and subsequently exaggerate intragroup performance disparities.

Proactive Career Behaviors (session 901)

Proactive Personality and Organizational Career Growth: When and Why Proactive Individuals Stand Out

Author: **Qingxiong Weng**; U. of Science and Technology of China

Author: **Muhammad Imran Rasheed**; Uni of Sci and Technology of China and Islamia U. of Bahawalpur Pak

Author: **Zhang Yue**; China U. of Petroleum

Integrating person-environment fit theory and job characteristics theory, we develop a theoretical model to investigate when and how proactive employees are more likely to stand out in their current organizations. We propose that the relationship between proactive personality and organizational career growth is mediated by P-O fit and P-J fit and moderated by job characteristics. Results based on data collected in three waves from a sample of 175 employees nested within 45 groups from 5 organizations fully supported our assumptions. Our findings suggest that proactive individuals are more likely to fit into their organizations and job positions, particularly when the jobs are embedded with a high level of core job characteristics such as variety, autonomy, and feedback. Implications for career development and management theory are discussed.

Enhancing Team Member Proactivity Through Career Calling and Mentoring: A Time-Lagged Study

Author: **Wenjing Cai**; Vrije U. Amsterdam

Author: **Sabrina El Baroudi**; Vrije U. Amsterdam

Author: **Xu Binfeng**; U. of Science and Technology of China

Team member proactivity has become increasingly important for contemporary teams that seek to improve how they function. However, for team

cross-race mentoring relationships to support their career goals. Existing literature has found that mentoring relationships may increase the chances for women and racial minorities to gain access to mentors. While an extensive literature on mentoring relationships exists, there is insufficient attention to the outcomes of mentoring relationships. Specifically, not much is known about the mechanisms that enable mentoring relationships to continue, nor about those that cause these relationships to end. Some mentoring relationships barely get off the ground, and even when mentoring relationships work, the average duration is only about 3 years. My research examines the progress of cross-sex and cross-race mentoring relationships within the context of academia. I consider how mentoring relationships develop, are transformed, and when and whether they end.

Differential Returns from Networking Behaviors for Men and Women: A Longitudinal Study

Author: **Hans-Georg Wolff**; U. of Cologne

Author: **Klaus Moser**; Friedrich-Alexander U. of Erlangen-Nürnberg

While recommending women to develop their networking behaviors is common, studies found that the career benefits from investments into networking differ for men and women. This leaves the question whether this recommendation is reasonable. Moreover, theorizing based upon social networks suggests that there might be alternative routes to networking for men and women. Based upon Ibarra's (1997) suggestions that women may have to develop networks beyond organizational boundaries and Burt's (1992) proposal that women benefit from powerful sponsors, we examine whether effects of networking behaviors on career success for men and women depend on internal vs. external networking. Using data from an eight-year longitudinal study (N =229), we use hierarchical linear modeling to examine how internal and external networking behaviors affect salary growth. Analyses provide support for the homophily account, showing that men benefit from internal networking, whereas women benefit from external networking. Our findings suggest that men and

members, this proactive team-oriented behavior requires risk taking and a great amount of effort; therefore, organizations must encourage persistence in this behavior. This is the first study to propose that organizations can enhance team member proactivity when they help team members live out their individual callings by offering them mentoring. Our hypotheses are tested by using a multi-source and time-lagged study design with a sample of 296 Chinese employees and their direct supervisors. The results demonstrate the importance of adding career calling constructs as antecedents to the team member proactivity literature and suggest that organizational resources such as mentoring are needed to facilitate the link between team member proactivity and career calling.

Exploring the Use of ICT in Job Crafting

Author: **Lisa Handke**; Technische U. Braunschweig

Author: **Giverny De Boeck**; Centre for Transformative Work Design / Curtin U.

Author: **Simone Kauffeld**; Technische U. Braunschweig

While job crafting has been widely acknowledged as an effective form of individual work redesign, less attention has been devoted to the concrete behaviors by which individuals craft different aspects of their job. Given the ubiquitous presence of technologies in modern workplaces, the aim of the current research was to explore the role of information and communication technologies (ICT) in individuals' job crafting behaviors. In Study 1, we interviewed 17 research associates with regards to their strategic use of ICT in influencing demands and resources at work. Applying a blend of qualitative content analysis and concept mapping, this approach yielded ten distinct job crafting strategies drawing on ICT. In Study 2, we set out to validate the 10-factor structure of these strategies in a broader sample of 215 employees and link these to work engagement, job satisfaction, and well-being. The results of Study 2 corroborated the existence of seven of the ICT-related job crafting strategies identified in Study 1, while also showing their relevance by linking these strategies to work

women might consider different strategic approaches to networking behaviors to maximize returns in terms of salary.

What Do Mentors Learn? The Role of Protégé Role Behavior and Relationship Quality in Mentor Learning

Author: **Stacy Lyn Astrove**; John Carroll U.

Author: **Maria Kraimer**; Rutgers U., School of Management and Labor Relations

Mentoring is defined as a reciprocal relationship between a less experienced individual (protégé) and a more experienced individual (mentor) that has consistent, regular contact over a period of time and is intended to promote mutual growth, learning, and development within the career context (Haggard, Dougherty, Turban & Wilbanks, 2011; Kram, 1985). Inherent in this definition of mentoring is that individuals learn, develop, and grow from their mentoring interactions. Despite this, limited research explores the learning that occurs from mentoring relationships. Drawing on the relational mentoring perspective (Ragins, 2012) and social learning theory (Bandura, 1971, 1977), the purpose of this study is to examine what mentors learn from mentoring experiences and how these experiences relate to mentor outcomes. The outcomes include mentoring self-efficacy, mentor learning, and mentor behavioral change intentions. We tested our assertions in a mixed methods study of 204 professor mentors. We found that mentors gained mentoring-specific, occupational-specific, and relational knowledge from mentoring their protégés. Additionally, mentors identified specific changes they wished to make to their mentoring behavior from their experiences with their protégés. Furthermore we found partial support for our mediated model which suggests that protégé role behaviors relate to mentor learning outcomes through mentor-protégé exchange.

[view paper \(if available\)](#)

engagement and job satisfaction. Taking everything together, this paper provides insights into the process by which individuals can effectively manage their individual work design using ICT. By virtue of integrating research on job crafting and ICT use, we thus contribute towards a more process-oriented perspective on job crafting while further shedding light on the positive effects of ICT on individual outcomes.

How Can Job Crafting Be followed? The Trickle-Down Effect of Job Crafting from Leader to Employees

Author: **Xun Xin**; Southwest U. of Political Science & Law

Author: **Ledi Zang**; Renmin U. of China

While many researches have indicated some leader factors (e.g. leaderships) affect employees' job crafting, whether the job crafting of leaders themselves has a trickle-down effect on their subordinates' job crafting remains unclear. To fill this research gap, drawing upon the conservation of resources theory, this study explores the explanatory mechanisms and boundary conditions under which the transmitting effect of job crafting from leaders to their subordinates could occur. We examined a multi-level moderated mediation model by collecting the leader-subordinate paired data from 64 work teams in several Chinese companies over 2 time periods. We found team leaders' job crafting was positively associated with their team members' job crafting and team leaders' job resources mediated this relationship. Contrary to our prediction, it is interesting to find that team leaders' empowering leadership positively predicted team members' job crafting in general but negatively moderated the mediating effects of leaders' job crafting on employees' job crafting through leaders' job resources. These findings offer interesting implications for research on the trickle-down effect of job crafting from leader to their followers and for the management of employee crafting in teamwork.

Proximal Benefits of Providing Mentoring Support in Developmental Networks

Author: **Andrew Dhaenens**; UNSW Sydney

Author: **James Vardaman**; U. of Memphis

Although research widely acknowledges that mentoring has career benefits for protégés, the mentor's perspective has been notably understudied. Little is known about the ways in which mentors gain career benefits from providing mentoring support to others, particularly in developmental networks where mentoring is sourced from multiple individuals in an organization. With insights derived from social capital theory, we suggest that mentors create stores of social capital through which proximal career benefits are accrued. With respect to proximal benefits, we evaluate the unique effect of providing mentoring to others within a developmental network over mentoring received and other pertinent career criteria. Using a time-lagged study design, our results indicate that providing mentoring is positively related to a mentor's satisfaction, personal learning, and external marketability with developmental network centrality mediating these relationships. Theoretical and practical implications of these findings are also discussed.

Rise After the Fall: Understanding the Process of Trust Restoration & Trust Repair (session 905)

Extant literature has shown that trust can provide both interpersonal and organizational benefits. Entities, however, do not necessarily start or continue to possess high trust in their relationships. Thus, understanding the process of restoring and repairing trust has both theoretical and practical implications. The purpose of this symposium is to showcase research on ways to improve low trust in relationships, which may result from low initial trust,

In order to make the study of team conflict tractable, scholars have historically assumed that intragroup conflict exists primarily at the team level. Emerging evidence suggests, however, that perceptions of intragroup conflict are oftentimes not uniform, shared, or static. This more dynamic and differentiated view of intragroup conflict raises questions about the origins of intragroup conflict and whether conflict emerges at the individual level, or in the space between the group and the individual (e.g., the dyad or the subgroup) and the performance implications of these different points of origin (i.e., individual, dyad, subgroup, and group). We address these questions in a field study investigating task and relationship conflict in manufacturing teams. The results reveal that only a small percentage of teams experience team-level task or relationship conflict, instead intragroup conflict commonly exists in that middle space at the dyadic-level, followed by the individual and subgroup-level origins. Additionally, only individual and dyadic task conflict origins positively predict team performance. In contrast, traditional measures of intragroup task conflict averaged to the group level negatively predict team performance. The results challenge current methods and theory in the team conflict literature and suggest that researchers must go beyond team-level conceptualizations of conflict.

Victorious and Hierarchical, Defeated and Flat: When Team Hierarchies Change Following Success (WITHDRAWN)

Author: **Christopher To**; Northwestern Kellogg School of Management

Author: **Taiyi Yan**; U. of Maryland R.H. Smith School of Business

Author: **Elad Netanel Sherf**; Kenan-Flagler Business School, U. of North Carolina at Chapel Hill

Hierarchies emerge as collectives attempt to organize toward successful performance. Consequently, the relationship between team hierarchies and team performance has been widely explored. However, extant research has conceptualized hierarchies primarily as static entities, examining how a hierarchy at one point in

recent trust betrayal, or long-standing low trust. As a group, the papers that comprise this symposium highlight the process and mechanisms of trust restoration (after low initial trust) and repair (after betrayal) at the individual and organizational level and in different contexts (such as police and nonprofits). With these papers, this symposium aims to extend the existing literature on the development and repair of trust and encourage more research in the field.

SYMPOSIUM

ASYNCHRONOUS

time relates to team performance at a later point in time. This approach tends to neglect a fundamental reality about hierarchies: they change. In this paper, we develop a theory about the dynamic relationship between team hierarchies and performance by suggesting that performance also serves as an important input that actively shapes hierarchies. Drawing on the exploration and exploitation framework, we argue that successful (unsuccessful) performance triggers exploitation (or exploration) which leads to an increase (decrease) in the degree of a team's hierarchy, an effect that is especially strong when the team already has a high degree of hierarchy. Utilizing recent advances in behavioral sensors as a proxy for team processes, we exploit fine-grained passing data from the National Basketball Association (NBA) to test our hypotheses. We observe how a team's hierarchy changes on a game-by game basis based on prior performance. Winning is associated with an increase in hierarchy, and this relationship is stronger among teams already high in hierarchy. We then explore the full cycle of performance-hierarchy-performance by testing how hierarchy affects subsequent performance. We conclude by highlighting how our theory and findings extend prevailing discussions in the hierarchy literature.

Intra-Team Hierarchy Triggers Inter-Team Competition: The Impact of Hierarchy on Team Negotiations

Author: **Sarah Doyle**; U. of Arizona

Author: **Seunghoo Chung**; Ohio State U.

Author: **Robert B. Lount**; Ohio State U.

Author: **Roderick Ingmar Swaab**; INSEAD

Organizations rely on teams to negotiate over the division and allocation of scarce resources (e.g., two departments discussing budget, space, and personnel needs). These teams are often organized hierarchically, such that they have a clear and designated leader with greater decision-making authority than the rest of the team. Existing work suggests that such hierarchical teams suffer from greater intra-team competition. However, it remains unclear from this research how hierarchical differentiation within teams affect the team's ability to compete and cooperate effectively with other

teams. Combining insights from the literatures on negotiations and social hierarchies, we propose that hierarchical differentiation within teams promotes a more competitive negotiation strategy between teams, which undermines joint gain and leaves valuable resources unused. We tested these predictions in two laboratory experiments involving 554 negotiating teams and find that hierarchical teams achieved lower joint gain than egalitarian teams because they adopted a more competitive strategy during the negotiation itself.

Top Management Team Faultlines: Examining the Faultline Activation and Transition Process

Winner of CM Division Best Student Paper Award

Author: **Ge Liu**; U. of Edinburgh

This study is to examine Top Management Teams' (TMTs) behaviour in the conflict escalation and conflict transition processes. It firstly examines the interplay between existing conflicts (i.e., task conflicts and relationship conflicts) and faultlines. The findings answer the question regarding under which conditions task conflicts and relationship conflicts may result in faultlines in TMTs. By creating a typology of triggers that activate faultlines and lead team members to polarise in TMTs, this study then identifies what the specific situations are in which faultlines are involved and how senior managers polarise based on their different interests and purposes.

Author: **Nicholous Mark Deal**; Saint Mary's U., Canada

Business cases are a featured pedagogy in many business schools. They are used in order to familiarize students with business problems, decision-making, and organizational best practices (Ellet, 2007). While cases are considered by many to be the gold standard for learning, long used by Harvard Business School (Bridgman, Cummings & McLaughlin, 2016), there has been an increasing focus in recent years on the lack of diversity in many popular cases (Symons & Ibarra, 2014). In this paper, we review a number of best-selling business cases produced by a Canadian case publisher in order to critically consider how diversity emerges in cases. We use an intersectional approach to surface the ways cases lack diversity from an intersectional perspective. We find that the cases lack diversity across six core ideas of intersectionality: inequality, relationality, power relations, social context, complexity and social justice (Collins & Bilge, 2016). We also reflexively discuss our research process throughout, and consider how we, as business school instructors, can problematize the use of normative cases in our classrooms.

Transformative Nature of Silence and Silencing of Emotions Within Family Business Context

Author: **Natalia A. Vershinina**; Audencia Business School

Author: **Peter Rodgers**; U. of Leicester

Author: **Kiran Trehan**; U. of Birmingham

In this paper, we demonstrate the transformative nature of silence and silencing of emotions within the organisational setting of family business. Whilst extant literature has focused narrowly on how silence represents manifestations of withdrawal, absence or resistance, we showcase the more productive aspects of silence, highlighting how individuals use silence strategically as a purposeful mechanism to continue engagement within a family business. Taking a conceptual lens of narratology, we build on Foucauldian discourses about power relations embedded in conversation infrastructure. Methodologically, using data generated from a

longitudinal, qualitative dataset of four family businesses, we uncover how individuals articulate the consumed meta-narrative of family business, which is inherently embedded within the power dynamics of their organisational setting. We argue that family firms are arenas in which power and emotions are intertwined and that family members find ways to accommodate commitment to the family and family business, through the strategic use of silence, which over-rides their own individual needs.

Turning Disability into a Business: Entrepreneurs with Disabilities' Anomalous Bodily Capital

Author: **Eline Jammaers**; U. Catholique de Louvain

Author: **Jannine Williams**; Queensland U. of Technology

In a time and place where being impaired is equated to being of lesser economic value, some people with disabilities take matters into their own hands by creating their own job and converting their bodily difference into bodily capital. This paper presents the stories of twelve such entrepreneurs with disabilities. Through a Bourdieuan lens and a focus on narratives, it theorizes when and how people come to see their embodied difference as a business advantage. Their entrepreneurial stories reveal how they respond to the demands of having to stand out through a novel offering, by mobilizing anomalous bodily capital, and fitting in, through enacting an entrepreneurial habitus, in order to be recognized as credible entrepreneurs. This analysis raises questions about which structural conditions favor the conversion of bodily into symbolic capital and which turn it into a negative, devaluating factor hampering business growth. Contributions are made towards existing literature by differentiating new forms of capital for a deeper understanding of inequality and examining the possibility of 'disability ghettoization'.

Senses of the Subject: How Confidence Acts as a Sublime Object of Neoliberalism

Author: **DARREN Thomas BAKER**; U. College Dublin
Author: **Deborah N Brewis**; U. of Bath, United Kingdom

Confidence has become an important, almost ubiquitous, part of organisational parlance and practice. Prior postfeminist critiques identify confidence as a highly gendered discourse that retrenches inequality, inciting women to focus on changing themselves rather than dismantling unfair structures of the gendered organization. This paper makes a contribution to this discussion by theorising the reasons why, despite going against the interests of women, confidence holds such a grip in the contemporary workplace that idealises gender equality. Drawing on the psychoanalytic ideas of Slavoj Žižek, the paper argues that confidence functions as a 'sublime object' within the neoliberal fantasy. In our analysis, we show how women become invested in confidence as it functions to cover over the traumatic Real of capitalism by promising its subjects relief from the anxiety of conflict between neoliberal logics and those of equality. We show that confidence provides a form of enjoyment (jouissance): a sensual return that sustains the possibility of recognition for women as neoliberal subjects. In parallel, traumatic senses of fear and disgust are projected onto Others who are perceived to transgress the logic(s) of confidence, and who thus threaten to reveal the contingencies of neoliberalism. By suturing the Real, confidence disarms political critique of the structural dimension of gender inequality. The paper concludes with a discussion of the implications of the sublime object of confidence for individual women, for gender equality, and for society and ethical modes of being.

Intersections of Gender and Age for Women's Restricted Career Progression in Indian ICT Sector

Author: **Aparna Venkatesan**; U. of Sussex

A plethora of studies have documented that women in Western contexts often do not choose to pursue computing education or enter ICT careers (Trauth, 2006). However, research on India offered a

different perspective that Indian women are increasingly choosing to study computing and enter ICT occupations (Gupta, 2015). Though masculine cultures of engineering observed in the Western contexts that are often cited as the main reason for women's turnover from ICT careers (Adya, 2005; Ahuja, 2002; Trauth, 2006) are not replicated in the Indian contexts (Gupta, 2015; Dhar-Bhattacharjee and Richardson, 2017); yet studies point that almost 48% of Indian women choose to exit ICT careers during junior to middle management transition (Gender diversity Benchmark (2011)). It is not clear as to why Indian women choose to exit ICT workforce (Ravindran and Baral, 2013) despite viewing ICT as gender neutral in the Indian context (Gupta, 2015). This study adopts an intersectional approach to understand the reasons behind Indian women's decision to exit ICT careers during junior to middle management transition. The study adopted qualitative methodology to interview 30 women participants who left ICT careers during junior to middle management transition. The study suggests that the women experienced less developmental opportunities due to 'life-course events clock', 'achieving career plateau due to minority religion status' and 'difficulties in approaching male mentors due to concerns for respectable femininity'. The study contributes to the literature suggesting the term 'life-course events clock' to be one of the important barriers for women's career in Indian context.

Gender Diversity in Entrepreneurial Teams and Entrepreneurial Failure

Author: Kyoung Yong Kim; City U. of Hong Kong

Author: Riki Takeuchi; U. of Texas at Dallas

A majority of new entrepreneurial ventures go out of business within five years. Past studies have focused on factors that lower failure in new

psychology field using student samples, research on implications of this phenomenon for working professionals and work-related outcomes has started only recently. Across two samples of full-time employees, this research explored gender differences in the IP and its implications for job negotiations. Study 1 found that women experience impostorism more than men, and only women's propensity to negotiate a job offer was affected by the IP. Study 2 identified perceptions of their negotiation counterpart's competence as the underlying mechanism in the IP and negotiation propensity relationship. Higher levels of IP are associated with lower negotiation propensity. This is the first known research that identifies the IP as an antecedent to the initiation of negotiation and competence perceptions of the counterpart as a psychological mechanism.

Inequality in Hiring Decisions: Evaluating Recruitment Decisions with Discrete Choice Experiments

Author: **Inge Marije Brokerhof**; Vrije U. Amsterdam
Author: **Koen Füssenich**; PhD Researcher

Individual characteristics, such as gender, health and nationality, have often shown to influence recruitment decisions. This study employs the use of discrete choice experiments to investigate how different individual characteristics influence hiring decisions for equally qualified job candidates. Two-hundred-and-fifty-five HRM students in The Netherlands participated in fifteen trials where they had to choose between randomly-generated applicant profiles, which differed on: gender, age, nationality, mental health and physical health status. Afterwards, open questions assessed their experiences with the decision-making process. Results show that older age and stigmatized illnesses (e.g. having recurrent depressions; being HIV- positive) constitute the largest disadvantages for hiring decisions. Participants openly confessed to age-discrimination. This study sheds new light on inequality in hiring decisions and the value of discrete choice experiments to assess this.

ventures. One less-examined but vital element of new entrepreneurial survival is the role of gender in entrepreneurial teams. Bridging two different perspectives on gender diversity – the social categorization view and cognitive models of variation – and based on the gender leadership literature, we investigate the influence of gender diversity on entrepreneurial failure and its boundary conditions. Using panel data of 3,499 entrepreneurial ventures (N = 22,246), we found that gender diversity of venture teams was negatively related to entrepreneurial failure. However, in support of our predicted three-way interactions, primary owner gender (i.e., female) moderated the gender diversity-entrepreneurial failure relationship, and this moderating effect was further influenced by team size or male equity ownership. Specifically, gender diversity reduced the probability of entrepreneurial failure when the primary owner was female and team size was large or male equity ownership was high. Theoretical and practical implications are discussed.

When Words Matter: Communal and Agentic Language on Men and Women's Resumes (WITHDRAWN)

Author: **Linnea Ng**; Rice U.

Author: **Juan M. Madera**; U. of Houston

Author: **Stephanie Zajac**; -

Author: **Michelle Hebl**; Rice U.

Although significant advancements have been made, gender disparity in the form of unequal pay and underrepresentation of women in leadership positions and STEM fields still exists today. Research has shown that gender stereotypes can act as barriers for women aspiring to traditionally prototypically male or leadership positions, and the way women are portrayed by others (i.e., in line with gender stereotypes during the hiring process) can result in negative career-related consequences (e.g., Madera, Hebl, & Martin, 2009). However, we know little about how men and women portray themselves during the hiring process. That is, do men and women describe themselves in line with gender stereotypes? If so, how does this impact career-related outcomes? To address these questions, the aims of these studies included (1) to examine if differences exist in the communal and agentic language that men and women use on their resumes, and (2) to determine if language differences result in consequences for applicants. Findings provide a pattern of results that suggest that women use more communal language than do men when writing about themselves on their resumes. Furthermore, communal language use can negatively impact perceived leadership ability and hireability for women applying to prototypically male jobs.

Entrepreneurship

Author: **Nhu Nguyen**; McGill U. - Desautels Faculty of Management

Author: **Ivona Hideg**; Schulich School of Business, York U.

Author: **Yuval Engel**; U. of Amsterdam

Female-led ventures tend to receive lower funding than male-led ventures, but the reasons for this gap require further attention and understanding. Drawing on the ambivalent sexism theory, we examine the effect of investors' benevolent sexist attitudes – their affection, idealization, and protectiveness toward women – on funding allocations for female- and male-led ventures. Specifically, we postulate that the more investors endorse benevolent sexism the less they are likely to view female-led ventures as viable, which, in turn, undermines funding allocations. Our findings in two experimental studies show that investors' benevolent sexism differentially impacts entrepreneurial outcomes of female- and male-led ventures, but in a slightly different manner than theorized. In Study 1 using a sample of undergraduate business students with entrepreneurial experience, we found that participants' benevolent sexism was related to greater viability perceptions for male-led ventures, but unrelated to viability perceptions of female-led ventures. In turn, these greater viability perceptions for male-led ventures were associated with higher funding allocation. In Study 2, using a sample of potential non-accredited investors in the US general public we found that this pattern of results was stronger among male than female investors. This research demonstrates that benevolent sexism subtly undermines gender equality in entrepreneurship by giving an advantage to male-led ventures, while the same advantage is not conferred to female-led ventures. We discuss implications for theory, practice, and male-centric approaches to the study of gender equality.

PAPER SESSION

ASYNCHRONOUS

points out to a different perspective indicating women's increasing participation in ICT education and careers (Gupta, 2015). Scholars studying women's careers in the Indian ICT's have argued that women view ICT as gender-neutral (Gupta, 2015) unlike the western contexts (Adya and Kaiser, 2005; Kelan, 2007a; Lewis et al., 2007). Indian women are also argued to obtain high parental support in studying computer education and entering ICT careers (Gupta, 2015; Raghuram, 2004). Although studies point out that women occupy 38% of the entry-level ICT workforce (Raghuram et al., 2018), research indicates that women are increasingly opting out from the ICT workforce especially during junior to mid-career stages. For example, recent research notes that almost 48% of the Indian women are choosing to opt-out during junior to middle-management transition (Gender Diversity Index, 2011). Ravindran and Baral (2013) cite that it is not clear exactly for what reasons women choose to opt-out, although scholars widely point out to the social and structural barriers to be the reasons for women's restricted career progression (Srinivasan et al., 2013). This is particularly intriguing considering the fact that Indian women experience an equal footing with men while entering the ICT sector (Catalyst, 2011). This study, therefore, aims to address this problem by exploring why Indian women decide to opt-out of ICT careers very early (Ravindran and Baral, 2014: 31; Srinivasan et al., 2013). This study adopts an intersectional approach to understand the reasons behind Indian women's restrictive progression in ICT careers during junior to middle management transition. The study adopted a qualitative methodology to interview 30 women participants who left ICT careers during junior to middle management transition. The study finds that intersections of gender with age have severely restricted women's access to structural opportunities that are crucial for their career development during junior to middle-management transition. Thus, the study contends that gender alone does not dictate women's restricted career path in the Indian ICT's, and that the intersections of gender with age equally restrict the women's access to crucial opportunities. The study contributes to the literature suggesting the term 'marriage-age penalty' to be one of the important barriers for women's career progression in the Indian context.

Inclusion and Discrimination (session 911)

The Google Memo Gate: Negotiating Organizational Exclusion Under the Banner of Inclusion

Author: Milena Leybold; U. of Innsbruck

Author: Laura Dobusch; Radboud U.

Author: Leonhard Dobusch; U. of Innsbruck

While many large and well-known companies publicly advertise their commitment to values of diversity and inclusion, their sheer number of applicants forces them to continuously negotiate both premises for and actual exclusion decisions. By looking at a particularly public membership negotiation process at the company Google, we thus investigate the question how organizational exclusion is negotiated in the context of ideals of inclusion? Applying a 'communicative constitution of organizations' perspective, we find that de-/legitimization struggles of exclusion revolve around references to different inclusion ideals that are part of an overarching 'inclusion paradigm'. At the same time, our study highlights the relevance of inclusion ideals constituted outside and with only marginal contribution by individual organizations publicly committing to ideals of diversity and inclusion for their membership-related decision-making.

been reached in terms of what is involved in inclusive leadership. Grounding on mechanisms that often cause senses of difference/similarity and inclusion/exclusion, we theorize inclusive leadership as concerning including differences in information, identity, and status. We further apply a paradox perspective to elucidate potential paradoxical tensions in each of the three pillars of inclusive leadership. Specifically, leaders may enact potential tensions between encouraging information heterogeneity and developing shared mental models when including information differences; between fostering a superordinate identity and affirming subgroup identities when including identity differences; and between promoting equality and providing differential treatment when including status differences. Moreover, these three sets of paradoxes are often interlocked so that triggering one set of tensions is likely to enact other tensions. We offer strategies to manage these tensions. The conceptualization contributes a novel perspective to research on inclusive leadership, diversity management, and organizational paradoxes.

Why Benefiting from Discrimination is Not Seen as Discrimination

Designated as a "Best Paper" for GDO

Author: **L Taylor Phillips**; NYU Stern

Author: **Sora Jun**; U. of Texas at Dallas

Discrimination continues to plague organizational life, creating inequities that harm workforce diversity, employee commitment, and organizational performance. While existing research has debated the roles of implicit and explicit prejudice in perpetuating discriminatory decision making in organizations, we offer an overlooked, complementary explanation for its persistence: favoring- framed discrimination is not recognized as discrimination. Specifically, we integrate research on inequity frames and the attribution to discrimination framework to theorize that discriminatory decisions that are described as favoring candidates, compared to disfavoring candidates, are less likely to be recognized as discrimination, because such decisions are perceived to be motivated by positive

intentions. We find support for our theory across a qualitative survey, an experience-sampling study, and two large-scale experiments (Studies 1a-3), investigating a wide range of contexts including race, gender, and citizenship status. We find that even trained experts in human resource management are less likely to recognize discrimination when described as favoring (Studies 4a-b), and the framing of the same discriminatory decision affects potential job applicants' job pursuit intentions (Study 5). This work contributes to a nascent perspective that advantaging mechanisms in organizations are critical: because individuals do not recognize favoritism as discriminatory, favoritism may especially contribute to the persistence of inequity.

Survival of the Fittest: The Role of Negotiated Inclusion

Author: **Caitlin Ray**; Darla Moore School of Business, U. of South Carolina

Author: **Patrick Flynn**; North Carolina State U.

Attention to inclusive practices, climates, and leadership has increased in recent years and we now understand that inclusion influences important outcomes such as organizational commitment, well-being, creativity, and job satisfaction. Although this research has shed light on the importance of inclusion as a topic, a focus on "top down" decisions designed to promote inclusion has meant that little attention has been given to how individuals actively navigate their environment to feel included. Our objective with this research is to explore this active individual process we coin "negotiated inclusion" defined as the dynamic process individuals take to satisfy their own needs for belongingness and uniqueness in desired groups. By integrating intersectionality and optimal distinctiveness theories, we use a unique qualitative data source to explore different profiles which illuminate the unique ways inclusion is achieved by individuals.

Sexual Orientation (session 908)**A Gay Male Leadership Advantage? How Agency Affects Evaluations of Gay and Straight Male Leaders**

Author: **John Morton**; Colorado State U.

The current research contributes to the ongoing debate of the effects of demographic characteristics on leadership evaluations, focusing on sexual orientation. As attitudes toward sexual minorities have rapidly changed in recent years, a more thorough understanding of the workplace experiences of sexual minority employees has become essential. The current set of studies examines perceptions of gay male leaders as a function of their agency or communality, which are two traits important to effective leadership evaluations. The three experiments considered whether gay male leaders displaying agency led to a gay male leadership advantage, as predicted by expectancy violation theory. In Study 1, participants rated gay male leaders as more agentic and less communal than comparable heterosexual male leaders. Study 2 showed that agentic gay male leaders were evaluated more positively than agentic heterosexual male leaders. No differences emerged for evaluations of communal gay or heterosexual male leaders. Study 3 showed the same pattern of results as Study 2, using a different type of leader (i.e., a political leader). The results of these studies support the existence of a qualified gay male leadership advantage. Implications are discussed in terms of expectancy violation theory and leadership opportunities for sexual minorities.

HRM and CSR (session 920)**Walk the Talk: The Effects of Firms' Multidimensional CSR on Worker Effort**

Author: **Nicolas Tichy**; LMU Munich

Author: **Lena Göbel**; LMU Munich

Author: **Steffen Burkert**; LMU Munich

This paper attempts to extend CSR scholarship by taking a fresh look at the multidimensionality of CSR: CSR has a corporate mission ("talk") and project ("walk") dimension, and entails economic, social, and environmental objectives. Based on signaling theory and the concept of "alignment", we hypothesize that worker effort is dependent on a firm's willingness to "walk the talk", i.e. to substantiate a CSR mission claim with a costly CSR project. Moreover, we expect stronger CSR effects when the mission and the project are aligned, such as when an environmental responsibility mission is supported by a project that focuses on environmental objectives. We present a pre-registered real effort field experiment with 406 workers on Amazon MTurk (AMT). We do not find significant differences between a number of CSR treatments and the control group, although manipulation checks reveal that the majority of the participants perceived and understood the treatments as intended. We discuss our findings in the light of previous research, draw implications for future CSR research, and discuss the adequacy of AMT as a research platform for CSR scholarship.

Internal CSR and Blue-Collar Workers' Attitudes and Behaviors in China

Author: **Nick Lin-Hi**; U. of Vechta (Germany)

Author: **Xiaohan Gao-Urhahn**; U. of Mannheim

Author: **Irmela Koch-Bayram**; U. of Mannheim

A plethora of studies demonstrate that corporate social responsibility (CSR) is beneficial for organizations. While these studies typically adopt a

and diversity literatures by proposing a model incorporating minority stress, non-traditional social supports, and psychological capital. It is suggested that lesbian and gay (LG) leaders have typically accumulated high levels of psychological capital (resilience, optimism, hope, and efficacy) due to the stigma-based stress they endure in their work and nonwork lives. The presence of non-traditional social supports in the form of same-sex spouses and the LGBT community further develop the leaders' psychological capital through the process of enrichment. The presence of high psychological capital is what allows for LG leaders to engage in authentic leadership.

Disclosure and Stereotype Congruence Among Gay and Lesbian Employees

Author: **Timothy Carsey**; Portland State U.

Author: **Lauren Sarah Park**; Portland State U.

Author: **Larry R. Martinez**; Portland State U.

Author: **Kelly Hamilton**; Portland State U.

Author: **Megan Snoeyink**; Portland State U.

Although past research has examined disclosure of sexual orientation in work settings, this work has yielded contradictory findings. The present research provides a clearer understanding of this phenomenon by acknowledging that one's gender expression (e.g., "butch," "fem," "masc") affects decisions to disclose, disclosure strategies, and others' reactions to disclosure. Our findings suggest that employees whose gender expressions are congruent with sexual orientation stereotypes (e.g., "butch" lesbians) disclose more readily and are believed more than stereotype-incongruent employees. Alternatively, stereotype-incongruent employees (e.g., feminine-presenting lesbians) signal their identities more, come out more formally, and are met with more resistance/disbelief than their stereotype-congruent counterparts (e.g., masculine-presenting lesbians).

[view paper \(if available\)](#)

Western perspective on CSR and are centered on white-collar employees, very little is known about Chinese blue-collar workers' reactions to CSR. In two studies, we investigated the outcomes of internal CSR (i.e. activities that serve the well-being of employees) for blue-collar workers in the manufacturing industry in China and show that internal CSR affects work-related attitudes and behaviors. In a cross-sectional study, we found that perceived internal CSR is positively related to job satisfaction, trust in management, and perceived supervisory support. To further disentangle cause-and-effect relationships, we conducted a field experiment. The results show that internal CSR information increases performance quantity and lowers complaints, but also lowers performance quality and does not affect workers' voice behavior. Our results further reveal that workers' attitudes toward ethics and social responsibility are an important moderator which strengthens some of the hypothesized effects.

CSR, Entrepreneurial Orientation, Citizenship, and Innovative Work Behavior

Author: **Sanjay Kumar Singh**; Abu Dhabi U.

Author: **Abdul-Nasser El-Kassar**; Lebanese American U.

Author: **Elissar Abdul Khalek**; Adnan Kassar School of Business, Lebanese American U., Beirut, Lebanon

This study examines how favorable employee work behavior can be achieved through their firms' engagement in socially responsible activities. Specifically, this study exploits employees' perception of support by their organizations and their inclinations to identify with their companies to explain the relationship between firms' engagement in socially responsible practices and employees' entrepreneurial orientation as well as their citizenship and innovative work behavior. The results show that engagement in socially responsible activities by firms leads to employee work citizenship and innovative behavior through their perception of support, identification and entrepreneurial orientation. This study deepens management academics' understanding of the fostering of employees' entrepreneurial orientation

The Role of Success Information in Changing Stereotypes of Gay and Lesbian Managers

Author: **Frank D. Golom**; Loyola U. Maryland

Author: **Isabel Bilotta**; Rice U.

Author: **Benjamin E. Liberman**; Columbia U.

Author: **Mateo Cruz**; Bentley U.

The purpose of this paper is to examine whether success information changes the nature of gay and lesbian managerial stereotypes. Previous research in the “think manager, think male” tradition has examined the content of gay and lesbian managerial stereotypes, with several studies finding that stereotypes of gay male managers, in particular, are seen as least leader-like compared to stereotypes of heterosexual male managers, heterosexual female managers, and lesbian managers. We report the results of an investigation examining participant ratings of these four target groups combined with success information on a number of stereotype trait dimensions. Findings indicate that the inclusion of the “successful” label changes the stereotype content of all four main target groups, with the greatest positive change being for ratings of gay male managers. Implications for research and practice are discussed.

Pay & Performance: Individual, Group, and Organizational Perspectives (session 917)

PFP Perception in Multi-PFP Form Environments and the Implications for PFP System Effectiveness

Author: **Sanghee Park**; Hongik U.

Author: **Michael Sturman**; Rutgers U.

Compensation research has generally considered pay-for-performance (PFP) perceptions in terms of how people feel and react to only a single PFP form or PFP systems as a whole, regardless of the complexity of the compensation system pertaining to the individual. Synthesizing construal level theory

suggest that organizations can leverage their star talent within the recruitment process—one of the most urgent problems faced by organizations today (Ployhart, 2006). The current study seeks to examine if and how stars may enhance organizational recruitment efforts. In a 2 (star present versus absent) × 2 (average salary or above average salary) factorial research design (n = 184), we find that the presence of a star employee signals organizational reputation to potential applicants in the external labor market which, in turn, increases applicants' attraction to the firm and the likelihood they will pursue the application process further. These results provide evidence that star employees can trigger signaling-based mechanisms early on in the recruitment process, leading to desirable organizational-level recruitment outcomes.

Rethinking the HR Architecture: Fiat Outside the Firm and Retained Decision Rights Inside the Firm

Author: **Oded Shenkar**; Ohio State U.

Author: **Alison Mackey**; Clarkson U.

Strategic HR scholars argue that workers who are core to a business should (1) be brought inside the firm in a traditional full-time employment relationship, and (2) be willing to submit to hierarchical fiat as a cost to being brought inside the firm. However, these arguments may no longer match current realities that reflect an increasing gap between core workers who are scarce in the external labor market and those who are not. Globalization and modularity of work decrease the bargaining power of core workers who are not scarce in the labor market, such that firms have begun attempting to push these traditional workers into external third-party roles. At the same time, organizational ecosystems, upskilling of work, and professionalization increase the bargaining power of other core workers who are often brought inside the firm yet are free from hierarchical fiat. These sociotechnical forces create new distinctions between strategically valuable workers, creating high- and low-power bargaining groups of core workers, where one group loses autonomy and stability, while the other gains both. We propose new views of governance mechanisms for managing

and expectancy theory, we provide insights into how employees develop complex conceptualizations of PFP when they have more than one PFP form at a time. We propose that (1) individuals shape PFP perceptions at different levels of mental construals, ranging from more abstract to more concrete; (2) concrete conceptualizations lead to specific, detailed, multidimensional perceptions of PFP form elements (i.e., expectancy, instrumentality, and valence) while abstract conceptualizations lead to more general perceptions with fewer perceived dimensions; and (3) the levels of the construals developed by individuals have different implications for PFP system effectiveness at the individual and organizational levels. We also discuss how this theoretical approach provides a structure for enhancing our understanding of modern pay practices that helps to close the gap that currently exists between compensation theory and practice.

Cognitive Implications of Over-Met and Under-Met Bonus Expectations

Author: **Xiang Zhou**; Nanyang Technological U.

Author: **Shuisheng Shi**; Hong Kong Polytechnic U.

The authors draw on expectation and emotion research to develop a model showing how bonus-relative-to-expectation (i.e., bonus pay above or below expectations) relates to emotions and cognitive performance. Two online experiments show that when bonus pay exceeds expectations, recipients feel more joy but not less hostility, but when bonus pay falls below expectations, they feel more hostility and less joy. Joy and hostility are then inversely related to cognitive performance. Behavioral activation systems (BAS) and behavioral inhibition systems (BIS) moderate the effect of emotions on cognitive performance, but confidence about expectations does not moderate the effect of bonus-relative-to-expectation on emotions. Organizations are advised to manage employee expectations so that bonus pay yields positive effects without interfering with cognitive functioning.

Selecting for Retention: The Interactive Role of Coupledness and Mobility Frequency

Author: **Heidi Wechtler**; U. of Newcastle

Author: **Will Felps**; UNSW Business School, Australia

Author: **Colin Idzert Sarkies Lee**; Amsterdam Business School, U. of Amsterdam

Author: **Thomas W. Lee**; U. of Washington

It is valuable when making hiring decisions to be able to use objective biographical data from job applications to predict who will leave quickly – i.e., to select for retention duration. However, such objective factors do not play a prominent role in most turnover research or theory. We address this issue by drawing on theories of job embeddedness and career scholarship to develop hypotheses about how retention duration is predicted by mobility frequency (also known as “physical career mobility”), coupledness, and their interaction. Based on a sample of 7,830 employees, we find that retention duration is predicted by mobility frequency (negatively), coupledness (positively), and their interaction. Retention duration is also predicted by a number of other objective biographical variables – e.g., education, gender, and employment gap. Implications for research and practice are discussed.

When Leader Departures Invoke Employee Turnover

Author: **Peter Hom**; Arizona State U.

Author: **Wei Shen**; Arizona State U.

Author: **Rory Eckardt**; Binghamton U.-State U. of New York

Human capital is an important resource that supports organizations to achieve a competitive advantage and superior firm performance. Extant research includes strategies and approaches for human capital acquisition; however, there is a room for research on how acquiring human capital from different labor markets affects the individual-level implications of human capital. This manuscript introduces the nontraditional labor markets idea and explores the human capital differences between nontraditional labor markets and traditional labor markets. We hypothesize individual-level outcomes of hiring from these labor markets and test our hypotheses with a unique dataset on Major League Baseball franchises. We find that selecting human capital through nontraditional labor markets is a slightly risky decision; however, these individuals need less human capital development time than individuals hired through traditional labor markets and hiring from nontraditional labor markets provide slight benefits with respect to reducing human capital acquisition costs. Future directions for research in human capital acquisition literature are discussed.

Whom Should You Recruit? New Hires, Task Interdependencies, and Firm Performance

Author: **Amit Jain Chauradia**; Indian School of Business

Author: **Daniel Tzabbar**; Drexel U.

Author: **Di Tong**; Drexel U.

External hiring infuses organizations with new skills and abilities, but also disrupts the firm's existing routines, both of which may have implications for the inclusivity of a firm and its subsequent performance. Since the relationship between recruitment and performance is not straightforward, we undertake a more nuanced examination of the impact of external recruitment on a firm's performance in two distinct empirical contexts: basketball teams and law firms. We theorize that the effect of external recruitment on a firm's performance depends on the type of recruit (rookie

Author: **Debra L. Shapiro**; U. of Maryland

Author: **Richard A Guzzo**; Mercer U.

Author: **HAIG NALBANTIAN**; Mercer U.

Extending Shapiro, Hom, Shen and Agarwal's (2016) theory on how voluntary departures by leaders initiate turnover among followers (aka "leader-departure [LD] effect"), we investigated the robustness of the LD effect and its potential moderators. Using Big Data (sampling over 100,000 employees across ten years), Cox regression (controlling a multitude of covariates) revealed that subordinates' turnover hazard increased fivefold when leaders quit. We also determined that leader effectiveness strengthens the LD effect. By contrast, we found that subordinates who received higher performance reviews, were recently promoted, or earned higher total compensation more likely to quit when leaders exit. Our findings sustain Shapiro et al.'s model, while disputing job embeddedness theory as leader embedding actions failed to attenuate LD effects.

The Roles of Transformational Leadership and Collective Turnover on Employee Turnover Decisions

Author: **Jinuk Oh**; U. of Guelph

Author: **Nita Chhinzer**; U. of Guelph

The present study attempted to address three questions that are part of the ongoing theoretical and empirical research on employee turnover: 1) Does transformational leadership act as a pull-to-stay factor? 2) Can turnover intention predict actual turnover behaviour? and 3) Does collective turnover act as a boundary condition for the link between turnover intentions and turnover behaviours? The data were generated from a survey questionnaire administered to salespeople working at dealerships of a Korean car brand in the Seoul Capital Area. To test our hypotheses, we used the Latent Moderated Structural equation approach. The results show the negative relationship between transformational leadership and turnover intentions and the positive relationship between turnover intentions and turnover behaviour. In addition, the results

vs. seasoned employee) and the type of task for which they are hired (core vs. non-core task). Contrary to the prevailing views suggesting that recruitment decreases performance, our findings suggest that the results vary by type of recruit, task and context. Specifically, external recruitment in the basketball context hurts a firm's performance, but it increases performance in the law context. Interestingly, across both research settings, the recruitment of rookies increases performance. The results diverge, however, when rookies are hired to conduct core tasks. In the NBA context, such hires reduce performance, while in the law firm context they improve performance. Hiring seasoned workers to perform core work subsequently reduces a firm's performance across contexts. Finally, in highly interdependent contexts, external recruitment, especially to perform core tasks, reduces performance, while for contexts with more modular work tasks, it is less disruptive.

If You Spend It, They Will Come: Recruiting Expenses, Reputation, and Human Capital Acquisition

Author: **Christopher Harris**; Texas Woman's U.
Author: **Lee Warren Brown**; Texas Woman's U.
Author: **Patrick Wright**; U. of South Carolina

In this paper we examine the role that recruitment expenses, organization reputation, and managerial reputation play on a firm's ability to acquire high quality human capital. Relying on signaling theory, we suggest that firms investing in recruitment expenses are better able to signal competence and quality to their recruits and that this will increase their ability to acquire high quality employees. Using a sample of NCAA football teams over a five-year period of time we find that recruitment expenses and organizational reputation do in fact have a direct effect on the organizations ability to acquire high quality human capital. Specifically, the results of multilevel analyses indicate that recruiting expenses predict year-by-year changes in the quality of human capital acquired and the team-level (between team) variable for current team success (organizational reputation) is a significantly better predictor of the quality of human capital acquired

demonstrate empirical support for turnover contagion as a mechanism for translating turnover intentions into turnover behaviour in the workplace. The successful investigation of these three questions has made timely and novel contributions to the areas of leadership and employee turnover.

Potential Negative Consequences of Leadership Development: Employee Withdrawal Behavior and Conflict

Author: **Stephen Woods**; U. of Liverpool Management School
Author: **Ying Zhou**; U. of Surrey
Author: **Sara M. Ahmed**; U. of Surrey
Author: **Filip Agneessens**; U. of Trento

This study examines potential negative human resource consequences of leadership development. To address the need for theoretical explication of such effects, we frame our study against a transformation-distribution model, in which we propose that the risk of negative outcomes is heightened when leadership development is transformational from an organizational perspective (i.e. results in organizational change), and is distributed widely in the organization (i.e. the proportion of leaders undertaking training is high). We examine the effects of the implementation of a leadership development programme with transformational objectives across a whole organization, analysing data on incidences of withdrawal (absenteeism) and conflict (formal grievances) over a four-year period. Our findings indicated that increases in the proportions of leaders undertaking development in nineteen service units of the organization over this period predicted increases in absenteeism and grievances raised by staff. Implications for theory in leadership development, and the management of development initiatives are discussed.

Family Friendliness Wins Over Potential Applicants?

Author: **Regina Dutz**; Technical U. of Munich

To be competitive and leverage their full innovative potential, organizations are in need to attract the best talents. Previous research indicates today's young professionals highly appreciate family and work-life related benefits, and that signaling family friendliness (e.g., in job advertisements) increases potential applicants' job pursuit intentions. However, why signaling family friendliness attracts applicants, and whether there are potential downsides and boundary conditions, has gained less attention in research so far. In this research, we investigate the mechanisms explaining effects of signaling family friendliness on job pursuit intentions. We suggest signaling family friendliness influences potential applicants' perceptions of both the organization and potential coworkers, and that effects on potential applicants' job pursuit intentions are dependent on their family and career role commitment. Our experiment (N = 382) overall supports our predictions: We find signaling family friendliness has a positive effect on job pursuit intentions via anticipated organizational support and justice, and via anticipated coworker cooperativeness; but a negative effect via anticipated coworker achievement-orientation. Participants' family role commitment enhanced the positive effect via anticipated organizational support, whereas their career role commitment enhanced the negative effect via anticipated coworker achievement-orientation and diminished the positive effect via anticipated coworker cooperativeness. Interestingly, there was no effect via anticipated coworker competence, emphasizing that anticipated competence and achievement-orientation should be treated as distinct constructs. We discuss the implications of our results.

Author: **Yeunjoon Kim**; U. of Cambridge

Author: **Tae-Youn Park**; Cornell U.

This research reveals three distinctive mechanisms through which different forms of turnover have impacts on team performance. In addition to the distinction between voluntary and involuntary turnover, the authors argue that the effects of involuntary turnover can be better understood by further classifying it into performance-driven involuntary turnover and misconduct-driven involuntary turnover. Supportive of the authors' hypotheses, the analyses of multi-source (team members, department head, archive records) and multi-wave (three waves) longitudinal data from 481 sales employees in 139 sales teams in a Korean company show that the three forms of turnover affect team performance through different mechanisms. Voluntary turnover has a negative effect on team performance via increased job demands and decreased team potency. Involuntary performance turnover has a positive effect on team performance via decreased job demands and increased team potency, whereas involuntary misconduct turnover has a positive effect via increased justice climate. The authors present implications for research and practice of their theory and empirical findings.

High - Low Engaged Employee Commitment and Citizenship Behaviour Examined with Moderated Mediation

Author: **Sangeeta Sahu**; U. of Lucknow, Lucknow, India

Author: **Madhuri Chauhan**; U. of Lucknow, Lucknow, India

This study examines the mediating and moderating variables through which human resource management practices are linked with behavioral outcomes. We developed and tested a moderated mediation model linking perceived HR practices to organizational commitment and citizenship behavior. Drawing upon the AMO framework that assumes HR bundles to influence outcomes, we explore through social exchange theory and self-determination theory the moderating effect of level of engagement and mediating effect of organizational commitment on HR practices and organization citizenship relation. The data of 401 employees working in government hospitals in India support this model. The findings suggest that the level of engagement of employees influences the relationship of HR practices on organization commitment which has been observed with the interaction effect. The implications for practitioners are discussed.

Exporting Despite Institutional Voids: The Role of Gender in Early Firm Internationalization

IM Division GWU-CIBER Best Paper on Emerging Markets Finalist

Author: **Marleen Elizabeth McCormick**; Butler U.

Prior research has emphasized that entrepreneurship is gendered and that institutions influence women's and men's entrepreneurial behavior differently (Giménez and Calabrò, 2018). For example, male entrepreneurs have been shown to be more opportunity driven, seeking to run high-impact firms, while female entrepreneurs have tended to be more necessity driven, running low-impact firms—those that do not grow on average (Davis and Shaver, 2012). Despite the vast amount of research focused on gender differences in entrepreneurship, there are still gaps in the literature. My main research question asks if there are differences in the exporting activity of emerging-market firms when there are female entrepreneurs and/or when there are female top managers as compared to their male counterparts. This research question is tested after first establishing that the firm has the means (innovativeness and size) to overcome the institutional voids.

Engaging Workers Broadening Work Meaningfulness: Social Purpose, Job Satisfaction, and Performance

Author: **Rita Bissola**; U. Cattolica del Sacro Cuore
Author: **Barbara Imperatori**; U. Cattolica del Sacro Cuore

Despite many efforts and organizational investments, results in terms of workers' engagement are still poor and questions regarding its antecedents continue to attract researchers' attention. Leveraging the literature on engagement and the recent research development on meaningfulness, our study aims to investigate the role of the perceived social impact of work as a source of meaningfulness, which may enhance workers' engagement. This project is based on a survey of 484 workers of 24 Italian social enterprises, a privileged research context in which social mission and market sustainability are joined together. Our results, developed through a multiple regression analysis, provide empirical support for the mediated positive effects of social meaningfulness of work on job satisfaction and individual performance through job engagement. They corroborate the fruitful possibility of combining apparent dichotomies, such as work and life domains, social and economic dimensions, individual and organization perspectives. They also demonstrate the appropriateness of the role of social issues as relevant sources of work

Author: **Linda F. Edelman**; Bentley U.

Multinational enterprises draw on their resources and experience to overcome institutional distance. While emerging market multinational enterprises (EMNEs) are relative latecomers to global competition and oftentimes lack superior technologies or brands, they may have other resources at their disposal, notably skilled and relatively low-cost labor, and deep pockets. Combining institutional theory and arguments around liability of foreignness with a Penrosian perspective of resources, we test for the moderating effect of two types of firm resources, financial and human resource slack, on the link between institutional distance and foreign market entry in a sample of 171 Indian computer software multinationals over 16 years. Findings suggest that financial slack is more important for EMNEs entering an institutionally developed market, but there is only limited support for the contention that slack in the form of human resources is more important when the EMNEs is entering an institutionally less-developed market.

The Outcomes of LMXD: A Comparison of Justice and Political Climate Explanation

Author: **Hae Sang Park**; Roosevelt U.

Author: **Haeseen Park**; King's College London

Leader-member exchange differentiation (LMXD) is common in organizations, yet it has shown inconsistent relationships with employee outcomes. In the current investigation, we apply a political perspective in an attempt to unravel the mystery surrounding the way in which LMXD influences employee task performance and organizational citizenship behaviors (OCBs). Using multisource survey data collected from 304 employees working in 62 work groups, we found that group political climate mediates the negative relationships between LMXD and employee work behaviors. The mediating effects remained significant after controlling for supervisory justice climate, which has been considered as the dominant mechanism in prior studies. Furthermore, we tested moderating effects of group political climate and indirect moderating effects of LMXD via group political climate on the relationships between individual-level LMX quality and members' work behaviors. Consistent with uncertainty management theory, we found that political climate strengthens the positive relationships between individual-level LMX quality and employees' task performance and OCB toward individuals and that LMXD indirectly moderates the relationships through group political climate. Supplementary analyses further verified the differential roles of group political climate and supervisory justice perceptions in explaining the consequences of LMXD.

Innovation and International Management: Considering People (session 923)

Entrepreneur Foreign Study Experience and Firm Innovation: Institutions and Resources

Author: **Kaixian Mao**; Hong Kong U. of Science and Technology

Author: **Yaping Gong**; Hong Kong U. of Science and Technology

Research in the international business and social psychology literature has explicitly or implicitly adopted the intellectual capital or developmental perspective and demonstrated a positive relationship between entrepreneur foreign study experience and creativity and innovation. In a departure, we argue that entrepreneur foreign study experience does not necessarily benefit firm innovation. Adopting institutional and resource substitution perspectives, we examine conditions under which the positive relationship found in prior research may or may not hold. We argue that institutional forces condition the extent to which intellectual capital associated with foreign study experience benefits innovation, while resources via local connections and political participation substitute such intellectual capital. Using a unique large dataset of private firm entrepreneurs in China, we found that returnee entrepreneur participation in political system, membership in communist party, and firm Guanxi orientation weakened the positive effect of foreign study experience on firm innovation. Contrary to our prediction, local government support for private business attenuated rather than strengthened the relationship.

Innovative Models in NGO Management and Corporate Culture (session 924)

What to do and what not to do in NGO cooperation: Snapshot from the field

Author: **Pierre El Haddad**; USJ Lebanon/ISEOR IAELyon

Author: **Veronique Zardet**; ISEOR, Magellan, IAE Lyon, U. Jean Moulin

Purpose - The non-governmental sector is fast growing in the developing context of the Middle East. Despite this growth, NGOs are faced with challenges of sustainability and credibility towards stakeholders, forcing them to work together. Despite decades of civil society experience, many cooperation attempts among Lebanese organizations fell short of their goals. This paper studies the dysfunctions in NGO cooperation, and brings field induced recommendations to tackle this problem. The research findings group cooperation dysfunctions under three major groups: strategic considerations in a fragmented landscape, adaptation of procedures, and developing a common language. Pragmatic recommendations were developed with actors from the field. **Design/methodology/approach** - Essentially inductive, a specific action research called intervention research was adopted to accompany fifteen active NGOs in framing cooperation dysfunctions and developing applicable solutions. **Findings** - The research identified major inter-organizational dysfunctions grouped under strategy, procedures, and language axes, and accompanied the organizations in conceiving a series of propositions to advance cooperation among them. **Originality/value** - The main contribution of the paper is the identification of holistic cooperation dysfunctions among non-governmental organizations in the specific context of the Middle East, and the production of actionable and instantly applicable solutions.

Economices

This research investigates how business incubators perform the role of knowledge intermediary to facilitate the international evolution of start-ups. The research adopts the evolutionary perspective of the firm, by employing the concepts of variation, selection, and retention. We collected and analysed interviews and archival data from five incubators from China that have international operations. The findings show that client and market-interface activities and the internal knowledge recombination practices of the business incubators facilitate the international evolution of start-ups. Those incubators as a knowledge intermediary provide start-ups with several mechanisms, including clustering and coaching of international clients, upstream and downstream networking in international markets, and client-market match-making internally. Business incubators serve as an efficient modality of internationalization for locally bound international knowledge and network scarce start-ups.

Knowledge Sourcing by Teams in MNCs: Geographic Dispersion and the Locus of Search

Author: **Susan Anne Hill**; Cass Business School, City U. London

Author: **Luiz Felipe Monteiro**; INSEAD

Author: **Anne-Katrin Neyer**; U. of Halle-Wittenberg

Author: **Julian M Birkinshaw**; 11393

Despite their increasing importance as sites of complex, knowledge-based work, research on knowledge search in multinational corporations (MNCs) has neglected the setting of geographically dispersed teams. Drawing on social interdependence theory, we argue that whether the members of a specific team predominantly source knowledge from internal or external sources is influenced jointly by their degree of dispersion and their team goals (cooperative or competitive). Multi-source survey data from 1,475 individuals in 48 teams, spread across 30 countries, within 15 MNCs, supported our propositions. The patterns of search that we observe, in turn, create challenges for the performance of dispersed teams.

From Information Overload to a Dialogical Corporate Culture

Author: **Helena Kantanen**; U. of Eastern Finland

Author: **Salla-Mari Rönkkö**; U. of Eastern Finland

Author: **Hanna P. Lehtimäki**; U. of Eastern Finland

Author: **Tojo Thatchenkery**; George Mason U.

This paper presents a case study that demonstrates how the organization development (OD) intervention of appreciative inquiry can be used to improve employee communication through positive discourse and employee engagement in a large fertilizer company that operates in Finland and 50 other countries. Analysis of interview data collected through focus group discussions shows how focusing on the positive, drawing on the strengths of the company, and genuine future orientation may support employee engagement and knowledge sharing. The results of this study demonstrate that a genuine appreciative dialogue consists of constructive feedback, face-to-face communication, and the feeling of being heard and appreciated as a member of an organization. Furthermore, the results show that appreciative dialogue created positive energy and enhanced Appreciative Intelligence® that could be channeled into organizational transformation and innovation. The study contributes to organizational theory and communication literature by emphasizing the benefits of an appreciative approach to developing organizational communication and authentic dialogue.

Home-Ecological Imprinting and Eco-Innovation in Foreign Subsidiaries (WITHDRAWN)

Author: **Palitha Konara**; U. of Sussex Business School

Author: **Carmen Lopez**; Southampton Business School, U. of Southampton

Author: **Vikrant Shirodkar**; U. of Sussex

Research on firms' eco-innovations – i.e. innovations in developing products or processes to avoid or reduce environmental harms, has been gaining momentum. In this paper, we use institutional and organisational imprinting theories to argue that multinational enterprises (MNEs) founded in countries with stronger institutions supporting ecological performance are more likely to carry out eco-innovations in their host subsidiaries. We also suggest that the manifestation of this imprinting effect may vary depending on the choice of establishment mode of the subsidiary (acquisition vs. greenfield) and by the subsidiaries' host experience. We find support for our imprinting based hypothesis using a sample of foreign firms operating in Spain, spanning the 13-year period 2003-2015. We also find that for acquired subsidiaries, the imprinting effect is weaker at the acquisition point, and this effect strengthens with the post-acquisition experience.

Converting Inventions into Innovations in Large Firms

Designated as a "Best Paper" for MH

Author: **Natalya Vinokurova**; The Wharton School, U. of Pennsylvania

research gap exists in finding a simple and pragmatic framework for managing it. This study combines decades of management experience from global companies with thorough theoretical understanding of strategy and innovation management enhanced with organizational theory, leadership and behavioral understanding. As a result of this it characterizes caring as a dominant attribute of today's organizational culture and suggests foundation and agility as the two key dimensions for managing it. Building on the experience of the writers and enhancing it with recent theories, this study focuses on the actions needed to drive change. The result of the study, framework of caring corporate culture, helps to focus actions where it matters: Purpose, organization and individual. Purpose reflects the strategic direction of a company and ecosystem. Organization consists of leadership and management systems needed to build individual wellbeing and trust through aligned values. The framework is a comprehensive, yet simple and pragmatic tool to identify what matters in organizational culture and it can help people in all levels of the organization to take action in developing company culture towards being more caring.

CSR and Business Ethics (session 930)

Studies on CSR business ethics

Engaging Both Religions and Paradoxes in Leadership, Organization, and Society

How do large firms innovate? Strategy and innovation scholars view this process as one in which inventors generate new ideas (inventions) and managers turn these ideas into commercial products (innovations). Accordingly, studies of the inventors' role in the innovation process in large firms focus on the inventors' efficacy at generating novel ideas. At the same time, evidence suggests that many inventors also take an active role in commercializing their ideas. In this paper, we develop a perspective of the innovation process in large firms in which inventors get involved in the innovation process beyond idea generation to catalyze their firms' commercialization efforts for breakthrough inventions. Specifically, we document inventor efforts to convert breakthrough inventions into commercial products by attracting resources to their ideas. Using detailed case studies of how inventors at Xerox worked to commercialize office workstations, personal computers, and laser printers, we demonstrate how this resource-attraction process affects the conversion of inventions into innovations. We show that attracting resources required Xerox inventors to navigate through a series of organizational filters, some embedded vertically in the hierarchy and some horizontally across the different functions, and that inventors' interaction with these filters affected the commercialization of the inventions. Our findings highlight two approaches deployed by Xerox inventors—searching for organizational filters more favorable to their invention and shaping organizational filters to help promote the commercialization of breakthrough inventions. While searching leverages the heterogeneity of organizational filters in large firms, shaping requires the presence of evaluative uncertainty with respect to the appropriate filters used to evaluate a breakthrough invention.

Disentangling Tradition: How History Shapes an Organization

Author: **Carsten Christian Guderian**; Friedrich-Alexander U. of Erlangen-Nürnberg

Author: **Peter M. Bican**; Friedrich-Alexander U. of Erlangen-Nürnberg

Author: **Ali Aslan Guemuesay**; U. of Hamburg

This article engages both religions and paradoxes in leadership, organization, and society by zooming in on three types of paradoxes related to religion: paradoxes due to immanent boundaries, paradoxes due to diverse interpretations, and paradoxes due to emergent relationships. First, religion asserts an additional macro-level: transcendence. This belief, while socially constructed, offers a distinct means to engage paradoxes as it extends the boundaries of the worldly realm. Second, religion may result in contradictory interpretations among organizational members that can lead to new paradoxes amongst diverse understandings – even of the same faith. Third, religions have become global phenomena that are enlivened side by side and in new social terrains. They blend across diverse social systems and form novel emergent relationships. This creates new tensions and paradoxical encounters. The contraction and expansion of worldly, cognitive, and social boundaries then cause ex post and resolve ex ante persistent contradictions of interdependent elements.

A Missing Voice in Islamic Business Ethics: The Ulema of Islam

Author: **Farzad Rafi Khan**; Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC

Author: **Muhammad Osama Nasim Mirza**; Lahore Business School, The U. of Lahore

The Islamic business ethics (IBE) field has overlooked a major voice in Islam that has been active since its early days to the present time in articulating what many Muslims and non-Muslims consider to be authoritative positions of Islam on business and non-business issues. The voice being missed or overlooked is that of the ulema of Islam (orthodox religious scholars). To gain a more complete and inclusive understanding of Islam and business ethics we argue this voice perforce needs to include in the conversations taking place in IBE. Moreover, such an inclusion stands to enrich and extend the discussions in IBE by providing alternative perspectives that can challenge and

Tradition is the topic of intense public attention and scholarly debate, despite lacking elucidations of its constituents in management research. Precisely, tradition effects on firms are presupposed and discussed in absence of theoretical foundations. Based on historic views, we draw on sociological and philosophical research and transfer the theory of tradition to management research. We provide definitions, explanations, and examples to disentangle the components of tradition, traditum and tradere, as two distinct yet related prerequisites for the presence of tradition. We depict that traditum covers five dimensions with sixteen sub-dimensions to unfold. Tradere as the process of traditum transmission encompasses three elements over three generations. We conclude with a discussion of future research avenues and managerial implications based on our conceptualization of tradition.

The Use of History and Next-Generation Engagement in Family Firms

Author: **Andrew D A Smith**; U. of Liverpool
Author: **Nicholas Wong**; Newcastle Business School, Northumbria U.

Recent research on the Uses of the Past and Rhetorical History (Argyres, De Massis, Foss, Frattini, Jones, and Silverman, 2019) has shown that historical narratives can be powerful and persuasive tools in the hands of managers. Kammerlander and De Massis (2020) have called on “historical research” to be incorporated more fully into the theorizing process in family business research. Unfortunately, little has been written about how family firms use historical narratives, aside from the passing observation by Labaki et al. (2019, p.18) that “family myths” associated with a firm’s history can contribute to competitive advantage in family firms. We know that practitioners use history rhetorically in next-generation engagement, but we lack conceptual tools for making sense of this process. In this paper, we develop a theoretical model to broaden our understanding of how historical narratives are used in family firms to increase next-generation engagement. We identify three types of

refine the field’s understandings of what it takes to be Islam’s position on a particular business ethics topic. We demonstrate these contentions by presenting findings from a qualitative fieldwork interview based research study where we interviewed 50 ulema of Islam about their religion’s views on the ten principles comprising the UN Global Compact. Our findings reveal that orthodox Islamic scholars disagree with several principles of the UN Global Compact leading them to reject it as being compatible with Islam. These findings stand contrary to the overwhelming consensus in the IBE field that the UN Global Compact is compatible with Islam. Our findings thus illustrate the utility of including the voices of ulema in IBE research as doing so provide novel, fresh, and alternative perspectives on business ethics issues (e.g., the UN Global Compact) being discussed in this field.

Workplace Spirituality and Organisational Justice in Community Based Organization

Author: **Randhir Kumar**; Indian Institute of Management Calcutta

Author: **Biju Varkkey**; Faculty, HRM, Indian Institute of Management, Ahmedabad

Empirical studies on linking organisational spirituality and workplace outcomes in community-based business organisations is largely missing. By taking Mumbai Dabbawala Organisation (DBO) (India), as a case in point, the study highlights the role of workplace spirituality in creating a high performing work system with a unique notion of distributive justice. A well-developed spiritual workplace, such as DBO, have entirely different meaning of distributive justice, where individual level aggrandisement is replaced by larger group concerns. Workers tend to reciprocate and work towards achieving shared objective of larger societal good through their work. This research connects the distributive justice literature with workplace spirituality and argue that in community-based organisations integrating spirituality with work witness a higher commitment and performance levels of its workers.

The Civil Company: Civil Economy and Corporate Social Responsibility in Dialogue

Author: **Giorgia Diletta Nigri**; Libera U. Maria Santissima Assunta (LUMSA)

Author: **Roberta Sferrazzo**; Libera U. Maria Santissima Assunta (LUMSA)

Author: **Renato Ruffini**; U. Statale di Milano

Today there is growing need to overcome the traditional ethics of intentions and to develop an ethics of responsibility that judges the morality of a behavior considering its impact not only on the humanity living today but on the consequence bearers of the future, including all living beings and the earth. For this to occur, an integration of business ethics and spirituality in the workplace is increasingly necessary. Corporate Social Responsibility (CSR), which is intended to maximize positive societal externalities and welfare has done a good job in reducing harm, but it has only recently begun to shift toward a more holistic model that guides toward human flourishing. Companies that can cultivate this connection and are able to identify work as a human factor are able to naturally integrate Environmental, Social, and Governance (ESG) into corporate models. Starting from these premises the aim of this paper is to provide an understanding on the different Christian and Lutheran approaches of the notion of social responsibility and design an integrated framework helpful to shed new light on CSR strategies through a civil economics approach deeply linked to a Christian relational vision based on gratuitousness. To understand this idea, we analyzed the roots of the Protestant Anglo-Saxon capitalism and compared them with the Latin one. We then presented the Civil Economy approach and its historical roots, to shed light on CSR strategies from a Civil Economy perspective. We finally introduced an integrated Corporate Civil Responsibility (CCR) framework and highlighted practical implications for management and organization studies. We believe our contribution to the literature to be twofold. On one hand, we introduced a the new CCR model able to extend the knowledge on spirituality and business ethics literature related to CSR. On the other hand, we contributed to the Civil Economy debate by introducing a specific lens through which

CSR practices can be viewed.

In recent years, organizations have witnessed a formidable shift in employees' behaviors deeply rooted in a negatively charged work environment. This initiates a need for spiritual leadership to address organizational vice and challenges associated to employees' behavior. These behaviors subsequently reflect in employees' work outcomes and conform a penultimate connection of personal, environmental and behavioral factors. With this premise, our study encompasses an integrated framework of social cognitive theory and spiritual leadership theory to test the impact of spiritual leadership on employees' ethical and philanthropic citizenship behaviors through a mediating channel of professional moral courage. Data for this study is collected from four higher educational institutes (N = 320) with scales which are found reliable and valid for this context. Findings show that observed data fits the hypothesized model and conforms to criteria of model fit indices. The significance and effect size of the results indicate distinctive incremental variance in the dependent variables of ethical and philanthropic citizenship of behavior and proved the intervening effect of professional moral courage. The theoretical and practical implications along with future research directions are discussed subsequently.

Affect at Work (session 935)

Parent Affect Spin and Child Adjustment: The Role of Parent Job Characteristics

Author: **Tao Yang**; Purdue U. Fort Wayne
 Author: **Patricia Caulfield Dahm**; California Polytechnic State U.

Affect spin, or individual difference in intraindividual variability of qualitatively different affective states, has been linked to undesirable outcomes in the work sphere. Extending research on affect spin to the work-family interface, we examine the association between working parents' affect spin and their adolescent children's adjustment, with regard to psychological distress and delinquency. Drawing on genetic heredity and social learning perspectives, we propose that parent affect spin transmits to child adjustment through child modeling of parent affect spin. We further invoke resource drain theory and contend that the relationship between parent and child affect spin is exacerbated when parents work on jobs with high job demands (i.e., conflictual contact, irregular work schedule) and low job resources (i.e. low decision freedom). We test our model using multisource data of 127 dual-earner families with children (417 participants in total), in which parents' and children's affect spin are derived from a total of 13,970 experience sampling responses of affective states over seven days. Results from moderated mediation analysis largely support our predictions, but slightly different results emerge for fathers and mothers. Theoretical and practical implications are discussed.

Antecedents of Creativity (session 932)

The Role of Bricolage for Situational Constraints Affecting Daily Creativity Across Contexts

Author: **Stefan Razinskas**; Freie U. Berlin
 Author: **Matthias Weiss**; Ruhr-U. Bochum

Organizations more than ever demand their employees to be creative to ensure organizational performance and growth. Therefore, knowledge about the determinants of employee creativity is of substantial relevance. However, the literature is still inconclusive as to whether constraining employees facilitates or stifles employee creativity. We theorize that both assumptions are true, and that the consequences of constraints for employee creativity are dependent upon the individuals' personality (i.e., their tendency for bricolage) and their work context (i.e., having to work in an emerging versus developed country). To test our hypotheses, we collected cross-cultural experience sampling data in India and the United Kingdom. Results from hierarchical linear modeling (HLM) analysis of 2,405 daily observations from 310 individuals show that situational constraints facilitate (vs. hinder) creativity for those individuals who are good (vs. poor) at making do with whatever is at hand (i.e., bricolage). Moreover, our study reveals that this contingent role of bricolage for situational constraints translating into daily creativity is more critical in the emerging country context than in the developed country context. We discuss implications for theory development on employee creativity in light of these cross-cultural differences.

Disentangling the Creative Process: Differential Predictions of Radical and Incremental Creativity

Author: **Gerben Tolcamp**; Faculty of Economics and Business, U. of Groningen
 Author: **Tim Vriend**; U. of Groningen
 Author: **Bart Verwaeren**; U. of Groningen, Faculty of Economics and Business

Extending this research, we have integrated the conservation of resources theory and conflict management literature to investigate the antecedents and consequences of customer mistreatment and the boundary conditions around these effects. Specifically, we propose that when service employees have bad sleep at night, they are likely to experience negative affect in the next morning due to the loss of emotional resources, which in turn lead to their perceived customer mistreatment, and resulting in customer-directed sabotage on that day. We further propose that employees' problem-solving conflict management style could attenuate the effects of customer mistreatment on sabotage and the indirect effect of sleep quality on sabotage via negative affect and customer mistreatment such that these direct and indirect effects exist only among employees with lower (versus higher) problem-solving conflict management style. We conducted a daily diary survey to test our predictions among 88 call center employees on five consecutive working days. Our findings supported most of our predictions. Our research highlights the importance to consider employees' resource gain/loss at home when studying customer mistreatment and emphasizes the employees' knowledge and skills in attenuating the effects of customer mistreatment.

Loaded Language: Terminology Influences Attitudes Toward Emotions and People Expressing Them (WITHDRAWN)

Author: **Yochi Cohen-Charash**; Baruch College & The Graduate Center, CUNY

Author: **Manuel F. Gonzalez**; Baruch College & The Graduate Center, CUNY

Management researchers typically categorize and discuss emotions by referring to them as "positive" or "negative." This terminology may create value judgments of emotions, through which people perceive emotions and those experiencing them in a symmetrical manner (i.e., favorably judging positively-valenced emotions, unfavorably judging negatively-valenced emotions). We conducted three exploratory studies examining this assertion. In Study 1, we compared how people perceive valence-based terminology ("positive"/"negative"), relative to

Author: **Roni Reiter-Palmon**; U. of Nebraska, Omaha

Building on theories of sensemaking, in this study we demonstrate the importance of disentangling the creative process. Specifically, we show that the specific elements of the creative process (problem construction, information search and encoding, and idea generation) are differentially related to both antecedents and specific types of creative outcomes. Using survey data from employees and their supervisors from a variety of organizations, we found that leader creative expectations were more strongly related to idea generation than to problem construction and to information search and encoding. Job autonomy in contrast, was significantly related to problem construction, but not to information search and encoding or idea generation. Furthermore, we found that although idea generation is positively related to both radical and incremental creativity, problem construction is only positively related to radical creativity. We discuss implications for the study of the creative process and creativity in general.

How Does Identity Conflict Lead to Creativity? An Identity Control Theory Approach

Author: **Eren Akkan**; Ecole de Management Léonard de Vinci

Author: **Felipe Guzman**; IESEG School of Management

While previous literature has predominantly focused on the adverse impact of identity conflict for individuals and their work, we know little about its constructive influence on organizational functioning. To address this gap, we investigate how identity conflict leads people to be creative at work. Drawing on identity control theory, we propose that identity conflict sparks creativity by means of creative process engagement. We further suggest that this mediating influence is more prominent for those who have high levels of relational identification with their managers. We test our hypotheses across three studies: via an experiment, a cross-sectional survey, and dyadic survey dataset collected from the employees and their corresponding managers in three small and medium sized organizations. The

feeling-based terminology (“pleasant”/“unpleasant”) and found that valence-based terminology generally led people to evaluate things more symmetrically than feeling-based terminology, hence creating a larger value-judgment. In Study 2, we experimentally examined how using valence-based, feeling-based, or neither terminology influences perceptions of envy, anger, and the people experiencing them. In many cases, both valence- and feeling-based terminologies led to more symmetrical attitudes toward emotions and people, relative to using neither terminology. In Study 3, we investigated alternative terminologies for describing emotions. While none of the terminologies definitively mitigated value judgments, we tentatively advocate for researchers to adopt either a feeling-based (“pleasant”/“unpleasant”) or feeling-specific terminology (“pleasant-feeling”/“unpleasant-feeling”). We discuss how our findings inform managerial research, teaching, and practice, and broader implications for describing other management-related constructs (e.g., “dark” personalities) and research streams (e.g., “positive” organizational behavior).

Legacy Motives at Work: Creating Meaning and Increasing Job Satisfaction

Author: **Daniela Goya-Tocchetto**; Fuqua School of Business, Duke U.

Author: **Kimberly A Wade-Benzoni**; Duke U.

In this paper, we propose a novel and powerful way to create meaning in organizations and enhance job satisfaction by connecting two areas that have to date been studied only in parallel: the literature on meaningful work and job satisfaction, and the literature on the legacy motives. We present three studies (total N = 825) that shed light on a new mechanism for the creation of meaning and job satisfaction in organizations: the motivation to leave a legacy. In our first study, we show that the more people are motivated to leave a legacy, the more satisfied they are with their current work. In our second study, we investigate the mechanism underlying this relationship: life and especially work meaning mediated the association between legacy motive and job satisfaction. In our final study we provide experimental evidence for this causal

results support our hypotheses. Our findings contribute to the literatures on creativity and multiple identities.

We're in This Together: The Antecedents and Consequences of Creative Effort in Dyads

Author: **Jaclyn Perrmann**; Northern Kentucky U.

Author: **Amanda Christensen-Salem**; U. of Cincinnati

Author: **Suzanne S. Masterson**; U. of Cincinnati

In the past two decades, research on creativity has exploded. Creativity is regarded as essential to organizational and individual success (Amabile, 1996; George, 2007). We have learned much about how creativity is instilled in employees including which leadership styles drive creative environments, what motivating mechanisms assist in generating creativity, and what specific personality traits creative individuals likely possess (Zhou & Shalley, 2011). What seems to be missing is theory demonstrating how creativity-related encounters impact subsequent employee perceptions and behaviors. The creativity conversation has focused on "How do we increase organizational and individual creativity?" and "which factors enhance that process?" The proposed conceptual model adds to and changes the direction of this conversation by exploring dyadic relationships to examine how one partner's creativity might influence another partner's creativity, and the process through which those dyadic creative interactions influence subsequent employee behavior. This paper theorizes on the important role that dyads play in the process of expending creative effort and under what circumstances creativity between individuals may lead to differing behaviors at a future period in time. We focus on a potentially interdependent nature and examine situations under which (1) the extent to which creative effort is both an individually—through creative self-efficacy—and relationally constructed behavior, (2) the level of perceived interpersonal similarity between a partner and an actor plays a moderating role in creative effort between the two, (3) the amount of creative effort expended by one partner induces perceptions of social undermining or prosocial behavior based on

mechanism by successfully manipulating legacy motivations and showing how this manipulation led to increased levels of work and life meaning and job satisfaction. Collectively, our studies reveal that creating opportunities in the workplace to emphasize workers' contributions to future generations can be a powerful mechanism to foster meaning in organizational settings, providing new avenues for managers to create meaning and increase satisfaction in the workplace.

Daily and Collective Job Crafting (session 933)

Daily Job Crafting Helps Those Who Help Themselves More

Author: **SungHyoung Hong**; Hanyang U.

Author: **Nayoung Kwon**; Hanyang U.

Author: **WOONHONG MIN**; Hanyang U.

Not all members are engaged in job crafting behavior in the same context, yet little research has addressed boundary conditions of daily job crafting. This study addresses these important issues and how the effects of daily job crafting vary depending on the work situation. We consider job autonomy and leader support as between- person level moderators and reveal how it affects the impact of daily job crafting on daily job satisfaction. Through the experience sampling method, we collected 946 days of data from 108 members for hypothesis testing. The analysis results showed that the main effect of daily job crafting and the cross-level moderating effect of leader support were significant, and the moderating effect of job autonomy was not significant. In particular, the positive effect of daily job crafting on daily job satisfaction was strengthened for members with low leader support. These findings highlight that leader support is an important social context to job crafting, and provides insights when members can get more

OB

Follower Role Orientations (session 936)

Fight or Flight? Followership Role Orientations as Predictors of Conflict Management Styles

Author: **Melissa Carsten**; Winthrop U.

Author: **Stephanie R. Seitz**; California State U., East Bay

Author: **Laurent Lapierre**; Telfer School of Management, U. of Ottawa

This study examines the relationships between subordinates' followership role orientation and use of cooperative, competitive, or avoidant styles when addressing conflict with a manager. Using a scenario-based survey methodology, we surveyed 181 full-time employees over two time periods to collect data on followership role orientation, impulse control, and conflict management style choice with a manager depicted in a hypothetical scenario. Results suggest that individuals with a co-production followership orientation were more likely to cooperate with their manager, while individuals with passive and anti-authoritarian orientations were more likely to compete with their manager and avoid conflict altogether. Impulse control moderated the relationship between passive orientation and use of a competitive conflict management style, such that those with as passive orientation were more likely to engage in conflict under conditions of

advantages from their daily job crafting.

Job Crafting Alone or Together? : Job Crafting, Collective Job Crafting, and Creativity

Author: **Hyunju Yoon**; Hanyang U.

Author: **Nayoung Kwon**; Hanyang U.

Author: **Min-Soo Kim**; Hanyang U.

Author: **WOONHONG MIN**; Hanyang U.

There is an extensive literature on job crafting on creativity but much less is known about how their creativity affect when team with high level of job crafting work together in team context. We use the term 'collective job crafting' to capture phenomenon of team members actively changing their jobs together. We examined how job crafting affect creativity both at individual- and team-level. We tested a cross-level moderating effect of team coordination on relationship between job crafting and individual creativity. Based on a sample of 481 team members with 108 teams, our results show that individual job crafting is directly related to individual creativity. As well as, collective job crafting indirectly affected team creativity through team coordination at team level. These results highlight how job crafting contributes to performance. Implications of our finding and future research directions are discussed.

The Effect of Follower Role Orientations on Leader Outcomes: A Role-Centric Perspective

Author: **Ashita Goswami**; Salem State U.

Author: **Karoline Evans**; U. of Massachusetts, Lowell

Author: **Patrick Coyle**; La Salle U.

Author: **Gavriel Meirovich**; Salem State U.

Despite the recognition that a "follower-centric approach" is crucial to the leadership process, few studies have focused on how followers see themselves and their roles in the process. Building on followership and role theory research, we examine how different follower role orientations are associated with the development of quality social and psychological relationships between the follower and leader. In two studies, we establish a relationship between follower role orientations (co-production, passive, and anti-authoritarian) and psychological closeness with the leader and show indirect effects of types of role orientations on followers' influence on the leader and leader effectiveness. We build on these results to examine the influence of communication frequency as an important link between role orientations and psychological closeness and high-quality leader relationships. We contribute to the followership literature by showing that followers' inclusion in the process is not limited to upward influence but that role orientations are crucial to the development of relational aspects of the leader-follower relationship.

Can Anyone Lead and Follow? Leader and Follower Role Expectations among Supervisors and Subordinates

Author: **Adam J. Vanhove**; James Madison U.

Author: **Umamaheswari Kedharnath**; U. of Wisconsin, Whitewater

Leadership theory has evolved from viewing leaders as extraordinary and followers as submissive to

share with next-day job crafting and the underlying mediating mechanisms. Drawing upon the self-regulatory strength model, we predict that overnight recovery experiences and sleep quality will be positively related to next-day job crafting through next-morning resilience (i.e., mediator). We also develop a sequential mediation model within which daily recovery experiences and sleep quality predict subsequent job performance through daily resilience and job crafting (i.e., mediators). Ninety-one flight attendants responded to assessments twice a day across five consecutive days, and their job performance was measured three months later. The resultant data were used to test the proposed model. As predicted, overnight recovery experiences and sleep quality were positively associated with next-day job crafting through next-morning resilience. Furthermore, daily recovery experiences and sleep quality significantly predicted subsequent job performance (i.e., three months later) through daily resilience and job crafting.

PAPER SESSION

viewing both leaders and followers as vital contributors to the leadership process. As part of this evolution, an implicit assumption has emerged that anyone can lead. We begin to test this assumption by comparing leader and follower role expectations reported by 139 supervisor-subordinate dyads. We assess role expectations as a basis for understanding whether individuals are capable of leading and following because when an individual's expectations for a given role differ from others' expectations for that same role, the individual will be unlikely to meet the role expectations set by others. Measurement equivalence results show supervisors and subordinates conceptualize leader and follower role expectations in a similar manner. Findings also show non-significant differences between those sampled from supervisor and subordinate positions in reported follower role expectations but significant differences in reported leader role expectations, even after controlling for individual and dyadic-level variables indicative of role expectation refinement. Post hoc analyses show supervisor reports of leader role expectations to be more similar to low performing subordinates than to high performing subordinates. Follow-up analyses also show relatively stable leader role expectations when those originally sampled from supervisor positions were resampled from the subordinate position 18 months later. Together, these findings suggest that not anyone can lead. Findings have implications for leadership development and aptitude.

Supervisors' Early Perception of Newcomer Ingratiation and Relationship Development: A Dynamic View

Author: **Siting Wang**; Hong Kong Baptist U.

Author: **Haiyang Liu**; London School of Economics and Political Science

What factors contribute to the effectiveness of ingratiation in the interpersonal relationship development process has been investigated for decades. Research has demonstrated that whether ingratiation is perceived by others is the key to success. Perceived ingratiation generally results in undesirable consequences. The current study

focuses on the essential role of perceived ingratiation in the relationship development between supervisors and newcomers. Drawing from a cognitive perspective, the study proposes that supervisors are influenced by primacy effect which causes them to rely on their early perception of newcomers' ingratiation to decide whether to keep building relationship with newcomers across time. Supervisors with a strong desire to attract admirers (e.g., supervisors with high levels of self-enhancement tendency) are expected to continue interacting with newcomers whom supervisors perceived engaging in ingratiation. By conducting a four-wave longitudinal data collection of 159 supervisors and their newcomers, we used leader-member exchange (LMX) trajectory to reflect the dynamic aspect of the relationship development process. Results showed that even though supervisors' early perception of newcomers' ingratiation generally had negative effect on initial LMX, this negative effect of supervisors' perceived ingratiation on LMX trajectory could be buffered by supervisors' self-enhancement tendency. In addition, we found that controlling for initial LMX, LMX trajectory was positively related to several socialization outcomes. Limitations and future research directions are also discussed.

Pardon the Interruption: A Study of the Dark- and Bright-Side Effects of Daily Work Intrusions

Author: **Harshad Girish Puranik**; U. of Illinois Chicago

Author: **Joel Koopman**; Texas A&M U.

Work intrusions—unexpected encounters initiated by other people that interrupt ongoing work and bring it to a temporary halt (Jett & George, 2003)—are common in today’s dynamic workplaces. Prior research has focused on the task-based aspect of intrusions and cast them as negative events that harm employee wellbeing in general, and job satisfaction in particular (e.g., Keller, Meier, Elfering, & Semmer, 2019; Pachler et al., 2018). However, we suggest that apart from their task-based aspect, intrusions also involve a social component of interaction with the interrupter that can have beneficial effects for the interrupted employee. Using theory on self-regulation (e.g., Baumeister & Vohs, 2016), we hypothesize that while an intrusion’s self-regulatory demands of switching tasks, addressing the intrusion, and resuming the original task can deplete self-regulatory resources, the interaction with the interrupter can simultaneously lead to high levels of belongingness. Self-regulatory resource depletion and belongingness will, in turn, mediate the negative and positive effects of work intrusions on job satisfaction, with belongingness further hypothesized to buffer the negative effect of self-regulatory depletion on job satisfaction. Results of our 3-week experience sampling study supported these hypotheses at the within individual level. Overall, by extending focus onto the social component of work intrusions, unpacking the bright side of daily intrusions, and explaining the psychological mechanisms that transmit the dark- and bright-side effects of intrusions onto job satisfaction, we extend the current work intrusion literature by providing a more comprehensive and balanced view of work intrusions

It Runs in the Family: A Goal Orientation Perspective on Parental Influence to Leadership

Author: **Xue Zheng**; China Europe International Business School (CEIBS)

Author: **Jiing-Lih Farh**; China Europe International Business School (CEIBS)

Author: **Sebastian C. Schuh**; China Europe International Business School (CEIBS)

Author: **Katherine Xin**; China Europe International Business School (CEIBS)

The majority of extant leadership research has focused on leaders’ stable traits and experiences in adulthood to understand the antecedents of leadership behaviors. By taking a developmental perspective, our research builds on implicit leadership theory and goal orientation theory and proposes an integrated model of leadership development that specifies the link between parenting styles received by leaders while growing up and leadership behaviors exhibited to their followers in their adulthood. In a survey conducted among Chinese executives and their team members working in a variety of different organizations, we found that authoritarian parenting leads to authoritarian and autocratic leadership styles through the mediating role of performance prove-goal orientation while authoritative parenting leads to developing and benevolent leadership through the mediating role of learning goal orientation. These findings suggest that parenting styles have far-reaching effects on leadership behaviors. We hope that our study provides a platform for future research by drawing attention to the previously under-examined developmental antecedents of leadership development.

Under the Eye of the Family: Exploring Family Relationships at Work

Author: **Alina McCandless Baluch**; U. of St Andrews

Organizational scholars identify positive results from working alongside “particular” coworkers. In contrast to formal, separable relationships (e.g., coworkers, supervisory relationships), we focus on

Author: **Joseph B. Beck**; Shippensburg U.

Our research explores the possibility that team-member exchange (TMX) quality may have positive as well as negative effects upon in-role task performance, creativity/innovation, and individual-oriented citizenship behavior (OCBI); a possibility suggested by, but rarely investigated by, scholars engaged in prior research into this subject matter (e.g., Bolino et al., 2013, Mackenzie et al., 2011). Specifically we have asserted, and tested, the hypotheses that the relationships between TMX quality and the afore-mentioned measures of individual performance are curvilinear, exhibiting inverted U-shape relationships in which the various measures of individual performance initially increase as TMX quality increases; eventually however, those relationships will reverse, such that at higher-levels of TMX quality negative relationships between TMX quality and these measures of individual performance will present themselves.

Are You Listening? The Effects of Challenge and Hindrance Stressors on Effective Communication

Author: **Eryue Teng**; Harbin Institute of Technology

Author: **Li Zhang**; Harbin Institute of Technology

Author: **Ming Lou**; School of Management, Harbin Institute of Technology

Drawing upon the job demands-resources (JD-R) model, we examined the effects of challenge and hindrance stressors on effective communication and the jointly moderating effects of supervisor communication and employee's active listening. Results from a sample of 238 employee and their 50 supervisors indicated that challenge stressors were positively related to effective communication and this positive effect was amplified by supervisor communication. Moreover, hindrance stressors were negatively related to effective communication, and this negative effect was buffered by supervisor communication. More importantly, the buffering effect of supervisor communication was amplified when employees' active listening was high. Theoretical and practical implications were discussed.

inseparable relationships in our study of family relationships at work. Scholars have emphasized these family relationships as providing socio-emotional benefits. At the same time, social identity theory suggests that individuals experience a situated struggle over multiple selves at work as they try to negotiate individual and relational demands, alongside competing organizational norms, managerial prescriptions and conflicting role expectations. Against this context, we examine how individuals experience their family relationships at work and establish their 'situationally salient' self in family relations at work. Our qualitative study of 48 employees belonging to 19 family groups in the same company indicates that family relationships are distinguishable from other inseparable relationships in that they are composed of interactions based on family support. In addition, they have a monitoring function and are governed by family norms which are experienced as being "under the eye" of the family. Our findings further demonstrate that individuals seek to establish their situationally salient self in these family relationships by having an interdependent or independent self-construal. We offer a 'family at work' framework that highlights how establishing a situationally salient self results in two paths to social enrichment and theorizes the conditions under which family relationships at work can amplify rather than attenuate social enrichment.

How Humble Employees Mitigate Workplace Incivility: Role of Humility Composition and Humility Norm

Author: **Chia-Yen Chiu**; U. of South Australia
Author: **Jennifer Ann Marrone**; Seattle U.

The present study aims to explore the social oil function of humility to argue why having many humble people in a workgroup can help to diminish the occurrence of workplace incivility. Relying on the dynamic team personality theory and trait activation theory, we hypothesize that groups with a high mean and low diversity on members' humility can particularly converge a strong collective humility norm, which in turn reduces the occurrence of uncivil events. We further argue that although in general humble individuals are less likely suffered from uncivil treatments, this beneficial effect of being humble would be weakened neutralized if there is a low collective humility norm. Using a sample composed of 83 professional work teams in Taiwan, we find support to our proposed theoretical model. Our study contributes to the respective literature on workgroups, incivility, and humility by identifying both dispositional and situational antecedences of workgroup incivility and by demonstrating the joint effects these antecedents have on mitigating individuals' experienced workplace incivility. The research findings also yield important implications for team building and team management.

of Group Harmony

Author: **Robin Mengxi Yang**; School of Economics and Management Tsinghua U.

Author: **Yuying Lin**; School of Economics and Management, Tsinghua U.

Paradoxical perspective regards the seemingly opposite two sides as a harmonious whole, which sheds light on combining diversity and harmony to explore the antecedents of creativity. Therefore, an emerging line of research begins to integrate the paradoxical perspective into creativity literature. Drawing on yin-yang paradoxical perspective and social information processing theory, we develop and test the influence of paradoxical leader behavior (PLB)— leaders' seemingly opposing yet interrelated behavior that aims to meet competing demands in workplace—on team creativity through group harmony. Across analysis of multisource and time-lagged data of 224 teams with 541 employees, 224 leaders and 19 regional managers in study1 and 94 teams data with 94 leaders and 222 team members of entrepreneurship teams in China in study 2, we find that PLB is positively related to group harmony, which in turn contribute to team creativity. Moreover, ambidextrous environment (i.e., dynamic and competitive environment) moderates the indirect relationship between PLB and team creativity through group harmony. Theoretical and practical implications are discussed.

Stuck in the Past or Striving for the Future? When Leader Narcissism Trigger Team Radical Creativity

Author: **Huan Cheng**; Huazhong U. of Science and Technology

Employing a construal level framework, the current research examines how leader narcissism and leader future orientation interact to shape leader willingness to cannibalize, and the downstream implications of these effects for team radical creativity. Data from a multisource (leaders and followers), time-lagged survey of 82 teams shows that the interaction of leader narcissism and leader future orientation is associated with team radical creativity via leader willingness to cannibalize. Specifically, narcissistic leaders having future

orientation particularly prefer to cannibalize, and the willingness to cannibalize helps increase team's radical creativity as a result.

Selecting Lead Creators' Ideas for Team Creativity?
Team Learning Goal and Advice Network
Centrality

Author: **Yingjie Yuan**; U. of Groningen, Faculty of Economics and Business

Lead creators – the most creative members within a team has been viewed as an important source of team creative successes, particularly when possessing high levels of individual creativity. Yet existing studies showed that people are often reluctant to pursue highly creative ideas and teams may fail to benefit from lead creators' ideas regardless of their creativity. Little is known about when and how lead creators' ideas get adopted by teams and in turn advance team creativity. The present study integrates the motivational perspective and the social network process to propose the moderating role of team learning goals on team selection of lead creators' ideas and the mediating role of lead creators' advice network centrality, and further examines the performance impact of such selections. Based on a sample of 49 organizational teams, this study showed that: (1) team learning goals promote the positive relationship between individual creativity of lead creators and team selection of their ideas; (2) advice centrality of lead creators translates this joint impact of lead creators' individual creativity and team learning goals on team idea selection; and, (3) this joint impact on team selection of lead creators' ideas further advances team creativity.

Gatekeeper or Innovator: When do Supervisors
Ostracize Creative Employees?

Author: **Si Li**; Zhongnan U. of Economics and Law

The burgeoning research interest on evaluation of creativity have mainly focused on the assessment of

the technical content, the novelty and usefulness of creativity. The present study examines how the nontechnical aspect, like the power dynamics associated with creativity, influence supervisor's evaluation and reaction toward employee creativity. Drawing upon the evolutionary leadership theory and social influence theories, this study aims to examine supervisor's actual reactions toward employee creativity. The author proposes that whether supervisors will feel threatened or not depend on focal employee's political skill. Specifically, employee creativity with low political skill will positively relate to supervisor's feelings of threat. Further, supervisor's feelings of threat are hypothesized to relate to supervisor ostracism positively. Moreover, the author proposes that there also exists a moderated mediation effect of employee's political skill. A three-wave investigation with a sample of 199 supervisor-subordinate dyads supported our hypotheses. Implications of the model are described and future research directions are suggested.

Withdrawal and Turnover (session 937)

Leader Favorable Feedback and Withdrawal Behavior

Author: **Zhou Jiang**; Flinders U.

Author: **Yuanmei Qu**; Rowan U.

This study investigates why and when leader favorable feedback inhibits employees' withdrawal behaviors. Integrating affective events theory and the moral affect theory of gratitude, we propose that leader favorable feedback reduces employees' withdrawal behaviors via employees' gratitude toward the leader. We further posit that this mediation is contingent on leader-member exchange, arguing that as the quality of leader-member exchange increases, employees who feel grateful for leader favorable feedback become less

social function of contempt, we develop an emotion-based model to examine why and when abused supervisors demonstrate more interpersonal justice toward their subordinates. Across two field studies with data collected from two cultures (i.e., China and the UK) using two types of research design (i.e., dyadic design and time-lagged design), we find that experiencing abusive supervision (i.e., abusive manager behavior) induces supervisors' contempt of their abusive managers, the feeling of which further motivates those supervisors with higher moral attentiveness to morally differentiate themselves from their abusive managers and display more interpersonal justice toward their subordinates. Theoretical and practical implications are discussed.

Obsessive Work Passion as a Conduit between Work-Contingent Self-Esteem and Abusive Supervision

Author: **Marina Astakhova**; U. of Texas at Tyler
Author: **Violet Ho**; U. of Richmond

Building on self-determination theory and the dualistic model of passion, the study proposes two alternative perspectives to understanding antecedents of abusive supervision. The subordinate-induced perspective suggests that the subordinates whose self-esteem is contingent on their work performance are more likely to be obsessively passionate about work, which then makes them targets of abusive supervision. The supervisor-induced perspective proposes that supervisors whose self-esteem is contingent on work performance are also more likely to experience obsessive work passion and, in turn, engage in abusive behaviors toward subordinates. Results of mediation analyses in a supervisor-employee matched sample of healthcare professionals provided support for both perspectives. We discuss the implications of our findings for research in contingent self-esteem, abusive supervision, and work passion, as well as for managerial practice.

[view paper \(if available\)](#)

likely to withdraw from work. Two-wave, multisource field data collected from 668 employees supported our hypotheses. Specifically, employees' feelings of gratitude mediated the negative relationship between leader favorable feedback and employees' withdrawal behavior, even after controlling for employees' positive affect as an alternative pathway. The negative effect of gratitude on withdrawal behavior was stronger under higher levels of leader-member exchange, as was the indirect effect of leader favorable feedback on withdrawal behavior via employees' gratitude. These results contribute to a social exchange-based understanding of the moral emotional mechanism underlying the feedback and withdrawal relationship and provide important practical implications for managers.

Creating Your Own Survival Guide to Becoming an Employee Downsizing Survivor (WITHDRAWN)

Author: **Michael Halinski**; Ted Rogers School of Management

Author: **Janet Boekhorst**; U. of Waterloo

Author: **Jessica Good**; York U.

This research investigates how employees' motives and behaviors can affect their chances of becoming a downsizing survivor. Drawing on resource allocation and social exchange theories, we propose a serial mediated relationship between self-concern and employee downsizing survival via creativity (i.e., incremental, radical) and, in turn, job performance. This conceptual model is tested using a unique four-wave, three-source dataset (n = 186) where data were serendipitously collected months before a major unexpected layoff. Linking this survey research to data that identified those who were downsized revealed that self-concern exerts (a) a positive, indirect effect on employee downsizing survival via incremental creativity and subsequently job performance, and (b) a negative, indirect effect on employee downsizing survival via radical creativity and subsequently job performance. Theoretical and practical implications of how employees' motives and behaviors can provide opposing influences on their downsizing fate are discussed.

Turning a Blind Eye: Why and When Abusive Supervision Goes Ignored within Organizations

Author: **Hongcai Li**; West Texas A&M U.

Author: **Trevor Watkins**; West Texas A&M U.

Author: **David Charles Howe**; Texas A&M U.

Author: **Ping Shao**; California State U. Sacramento

Author: **Hongjiang Lv**; School of Economics and Management, Southeast U.

Author: **Quan Lin**; Shantou U.

The predominant paradigm in the abusive supervision literature has focused on the abusive supervisor-subordinate relationship. However, abusive supervision does not happen in isolation. Other figures in the organization—particularly an abusive supervisor’s manager—might influence its occurrence. In this manuscript, we develop and test a model centered on the managerial choice to ignore abusive supervision. In contrast to a common perception of ignoring as an agnostic response, we suggest that a manager’s decision to ignore abusive supervision involves an implicit approval of the supervisor. In a series of eight studies, we demonstrate that a lack of manager dutifulness is associated with managerial approval of the abusive supervisor and the subsequent choice to ignore the behavior. We further find that this effect is stronger when a manager attributes an injury motive to the supervisor’s behavior. Our findings offer an important explanation of why managers ignore abuse and under what conditions they are more likely to do so.

When Talent Cares About Time: Perceived Organizational Support and Turnover Intention

Author: **YU-CHEN WEI**; National Taipei U. of Education

This study integrates self-determination and social exchange theories to test the effect of the three-way interaction between human capital, perceived organizational support (POS), and future time perspective (FTP) on turnover intention. A sample of 586 engineers and their immediate supervisors working in Taiwanese high-technology companies is used to examine the hypothesized relationships. Research results indicate that human capital with high POS has a lower turnover intention compared with human capital with low POS. The study also finds a three-way interaction between human capital, POS, and FTP, showing that human capital predicts lower turnover intention when both POS and FTP are high. The findings suggest that managers should consider hiring high-human capital employees who are predisposed toward FTP, and provide strong organizational support to employees via the human resource system.

bibliometric review provides a systematic perspective by portraying the landscape and developmental trajectory of abusive supervision research over time both in Asia-Pacific region and other contexts. Based on the co-citation and co-occurrence analyses, we detect the landmark documents, major themes with multiple theories, the developmental trajectory, intellectual structure and research trends within the abusive supervision literature. We also find abusive supervision confronts with cultural adaptability and has different evolving trajectory in Asia-Pacific region. Thus we provide a quick and comprehensive understanding of what happens in abusive supervision area, how it evolves over time and where we are going in future according to the bibliometric review.

Algorithmic Reconfiguring of Service Ecosystems Through New Forms of Multilateral Surveillance

Author: **Anna Essén**; House of Innovation

Author: **Eivor Oborn**; U. of Warwick

Author: **Michael Barrett**; U. of Cambridge

Research has explored how algorithmic processes reshape individual tasks in organizations. But less work has explored their implications on the wider service ecosystem. Using data about the “DAS” algorithms in the Swedish rheumatology setting between 1995 and 2019, we examine how the use of algorithms can reconfigure service delivery across the service ecosystem. We identify two algorithmic translation processes that enabled the incorporation of consumer self-evaluations in the multiple service nodes of the studied ecosystem. These processes implied new forms of multilateral surveillance, which had implications on the service delivery and the values that were generated by the ecosystem. By showing how concealed algorithms can make

Knowledge Sharing and Collaboration (session 948)

Who Shares Knowledge on Online Platforms and When?

Author: **Katsuhiko Yoshikawa**; Shanghai Jiao Tong U.

Author: **Hyun-Jung Lee**; London School of Economics

Author: **Chiahuei Wu**; Leeds U. Business School

Organizations are increasingly introducing online platforms to facilitate knowledge sharing within the organization. Nevertheless, not all employees actively participate in knowledge sharing on online platforms. This study aims to identify who (i.e., employees with specific individual characteristics) are more likely to engage in knowledge sharing on the platform and when (i.e., boundary conditions) they are likely to do so. To guide our investigation, we draw on social exchange theory and the idea of generalized exchange, which research has found plays a pivotal role in facilitating interactions on online platforms. Specifically, we propose that

consumers' voice watch-able and action-able across multiple nodes in the ecosystem, our work challenges traditional conceptualizations of algorithmic black-boxing as reducing human agency. We further theorize algorithmically mediated multi-actor surveillance, in which service nodes are both being watched and watching others, thus also challenging the view of surveillance as involving one "invisible" controlling many visible actors. These results open up new avenues of inquiry about the role of algorithmic processes in enabling new forms of multilateral surveillance that in turn condition value creation in service ecosystems.

Analyzing the Online Word of Mouth Dynamics: A Novel Approach

Author: **Xian Cao**; Ball State U.

Author: **Hongfei Li**; U. of Connecticut

Author: **Ruoqing Zhu**; U. of Illinois at Urbana-Champaign

At least three challenges hinder the analysis of online WOM. First, the process of transform unstructured online WOM data can generate many variables, increasing the need for dimension reduction. Second, the volume and valence of online WOM may dramatically change in a short period before and after an incident. Third, important events might trigger symmetric or asymmetric reactions in online WOM across rival products or services. We introduce a new method—multi-view sequential canonical covariance analysis to solve the myriad WOM conversational dimensions, detect WOM dynamic trends, and examine its concurrent effects across multiple firms. This new method also provides greater computational efficiency, and thus can be referred as a more advanced manifold optimization approach. We illustrate the advantages of this new method through an empirical example—the 2017 United Express Flight 3411 incident. We find that United Airlines and its rivals all experienced a sudden increase of negative emotions and a sudden decrease of positive emotions because of the Incident, yet the magnitudes of the changes were more dramatic for United Airlines. This new method provides a novel insight into the online WOM dynamics and can contribute to a wide range

employees with higher levels of generalized exchange orientation are more likely to engage in online knowledge-sharing behavior, but only when they need to use a wide variety of knowledge to complete their jobs (i.e., knowledge variety) and when they interact with a partner who previously worked in the same office (i.e., past collocation history). Using a longitudinal dataset spanning six months among 100 users on an in-house online platform of a professional service firm, we find support for the three-way interaction hypothesis. We discuss implications on knowledge sharing on in-house online platforms.
